172. There were 1,178 prisoners in custody on the 31st March, 1904, being an increase of one hundred and eleven above the number in custody on the same date in 1903. The committals to prisons and lock-ups during the year amounted to 5,099, against 4,540 in the previous year, an increase of 599. This notable increase has occurred since the hurricane and has continued since the 31st March, so that, at the present time, the capacity of the prisons is strained and the expenditure for supervision and maintenance markedly augmented.

Debility of many convicted of praedial larceny.

173. As to the condition of many of those so sentenced, the appended list,* recently submitted by the Medical Officer of the St. Catherine's District Prison, of inmates recommended for exemption from hard labour, speaks for itself, and no comment of mine could strengthen its significance in relation to which I have written above.

Expenditure.

174. The gross expenditure for the General Penitentiary and for the St. Catherine's District Prison (for short term prisoners) was in the year £19,087. The actual earnings of the two prisons were £5,475, which included £257 produced by the St. Catherine's Prison Farm. The total estimated value of the labour yielding no return in money was £6,105

VII.—POST OFFICE AND TELEGRAPHS.

175. Considerable attention has been devoted during the last two years to the reorganisation of the postal and telegraph services and the improvement of its efficiency. The Postmaster's report on the year is important and interesting. The following paragraphs are largely transcribed from its pages.

Financial.

176. The cash collections for the year were as follows:—

Postal	£28,051	17	9½
Telegraphs	5,194	12	6
	£33,246	10	3½

while the estimates called for:—

Postal	£24,000
	5,000
	£29,000

* Appendix VIII.

Comparative collections.

The revenue collections for 1903-4 compare with those of the two years preceding as follows:—

—	1903-4.	1902-3.	1901-2.
	£	£	£
Postages	26,326	26,234	22,337
Commission on money orders	637	539	446
Commission on postal orders	690	698	615
Telegraphs...	5,195	5,522	5,010
Miscellaneous	398	112	112
Total	33,246	33,105	28,520

177. The collections on account of postages and commissions on postal orders constitute a very good test of the general conditions of trade during the periods embraced in the above table, and the conclusion drawn from examination is that the effect of the hurricane on the year's transactions was to altogether discount the advancement which prevailing conditions would under normal circumstances have produced, and to leave matters much as they were in the year preceding.

178. The telegraph revenue shows a falling off in 1903-4 of £327 when compared with the yield in the year previous, but putting aside service messages, the cost of which is charged to the several public departments using the telegraph, the falling off in general business is represented by the sum of £448. This branch of the Department's business does not exhibit progress, the average yearly collections during the last ten years contrasting unfavourably with the similar collections during previous decades, notwithstanding increased facilities. This unfavourable result is in part due to the increase of postal facilities, many more offices than formerly enjoying a daily service, and in part to the fact that the United Fruit Company, which, in other circumstances would be a valuable client, makes use of long distance telephones under licence from the Government.

179. The progress of the business of the Department as measured by the collections in the last year of five successive decennaries is thus stated:—

—	Postages.	Commission on money orders.	Commission on postal orders.	Telegraphs.	Miscellaneous.	Total.
		£	£	£	£	£
1863-4	11,067	115	—	—	171	11,353
1873-4	14,021	504	—	-	132	14,657
1883-4	16,232	250	—	4,512	386	21,380
1893-4	19,429	354	432	6,256	219	26,690
1903-4	26,326	487	690	5,195	398	33,246

In forty years postage revenue has increased by 126 per cent., notwithstanding the decrease in the rate of ocean letter postage

from a shilling to a penny and on inland rates from 3*d.* or 4*d.* (according to distance) to a penny, considerable abatements having also been made in respect of second class mail matter. The increase in postal order commissions indicates a rise in ten years of 60 per cent. in circulation, but telegraph revenues have only improved by 15 per cent. when compared with the results of 20 years ago, and exhibit an actual falling off in comparison with the figures of 10 years ago.

Comparative expenditure.

180. The expenditure in 1903-4, compared with the expenditure in each of the two preceding years, is thus stated:—

—	1903–4.	1902–3.	1901–2.
	£	£	£
Personal emoluments	15,745	15,581	15,096
Mail conveyance	11,436	13,198	12,291
Services	7,331	5,580	5,501
Maintenance of telegraph lines	1,705	1,135	1,027
Total	36,217	35,494	33,915

The increase in personal emoluments is mainly due to re-opening of certain district post offices and to employment of two messengers in the Mail Coach and Parcels Post Office. The decrease in cost of mail conveyance is attributable to the readjustment of our arrangements with the Imperial Post Office, whereby the annual claims for a special contribution to loss sustained consequent on joining the Postal Union, and for a proportion of our packet postages, are merged in our annual contributions to the Royal Mail subsidy. The increase in expenditure under the head of services is almost wholly accounted for by larger charges under the item "Manufacture of Stamps and Post Cards," partly the result of expenses in connection with the new issue of stamps and also in a measure due to the ordering of increased stocks to meet larger demands. The item of maintenance of telegraph lines is administered by the Public Works Department, and the increased cost was due to the work of the cyclone.

Retrospect of expenditure.

181. The following figures show the expenditure of the island on account of its postal and telegraph service for each tenth year under the principal heads of charge, viz.:—

—	Personal Emoluments.	Mail Conveyance.	Services.	Maintenance of Telegraph Lines.	Total.
	£	£	£	£	£
1863–4	3,656	6,818	588	—	11,062
1873–4	5,386	9,784	604	—	15,774
1883–4	9,431	10,940	1,692	1,630	23,693
1893–4	12,467	13,224	4,718	1,994	32,403
1903–4	15,745	11,436	7,331	1,705	36,217

This summary, besides showing the expansion of the Department during the forty years embraced in the review, will, when considered in relation to the like summary of revenue given in paragraph 179, show that the Department has continuously had to make drafts on the general taxpayer for its maintenance, a circumstance which is not infrequently overlooked by applicants for new post and telegraph offices and for the extension in other directions of postal facilities.

182. No new post offices were opened during the year, but seven which had been closed for various reasons were reopened.

At the close of the year there were 159 post offices throughout the island serving the needs of the public, giving an average of an office to every 26.4 square miles of area and to every 4,720 of the population. According to tables of international postal statistics published by the Bureau of the International Postal Union, Jamaica would, both as regards numbers of offices to area and number to population, take high rank among Union countries. On this showing, the Postmaster considers that it may, with considerable force of reason, be claimed that the advisable line of progress lies not in the direction of the further multiplication of small offices, but in the improvement of the service to large communities.

Of the total number of 159 offices, 93, or nearly 60 per cent., enjoyed a daily service at the end of the year, this facility having been extended to 13 offices within the year. The number to which parcels could be sent owing to their being served by horse post was 86, the list having been augmented by four since the preceding year.

183. The systematic inspection of district offices is an essential feature in the administration of a service constituted as is the post office, and I am glad to say that during the year under review it was found practicable to inspect all but four of the district offices once, and a few twice. With one exception, the result of the inspection was generally satisfactory, but the exception disclosed shortcomings of sufficient gravity to justify the inspecting officer in at once relieving the postmistress of duty and temporarily closing the office.

184. There has been a fivefold increase in thirty years in the volume of correspondence handled, the increase being slightly greater in the inland circulation than in the oversea exchanges.

Ocean mail conveyance.

185. The following statement gives the particulars of oversea mails despatched and received during each of the last three years:—

—	Outwards.						Inwards.					
	1901-2.		1902-3.		1903-4.		1901-2.		1902-3.		1903-4.	
	Vessels.	Mails.	Vessels.	Mails.	Vessels.	Mails.	Vessels.	Mails.	Vessels.	Mails.	Vessels.	Mails.
Kingston – Contract ..	78	807	78	807	81	790	104	1,008	104	1,029	112	1,092
Non-contract ..	315	768	321	779	257	421	437	840	363	781	258	665
Outports— Non-contract ..	30	31	30	31	94	94	94	357	138	273	109	246
Total ..	423	1,606	429	1,617	432	1,305	690	2,205	605	2,083	479	2,003

It will be observed that although there was an increase of three in the number of vessels by which mails were despatched, when contrasting the figures of the past year with those of 1902-3 there was a decrease of 312 in the number of mails made up, and the statistics of mails received show a decrease of 126 in the number of vessels carrying mails and 80 in the number of mails received. The temporary dislocation of the fruit trade had the natural effect of largely reducing the number of opportunities for interchange with the United States and Europe, but the utilization of the ships of the United Fruit Company, in addition to those of the Royal Mail and Hamburg-American lines for the carriage of mails to the Republics of Central America has prevented an equally marked decrease appearing in the number of outward opportunities.

186. The number of oversea mails despatched averaged during the past year 4.3 per working day, and those received 6.6. These figures show how favourably the Colony is situated in the matter of extra-insular mail opportunities; most of these opportunities are not regular, but intermittent; and the resulting work is mainly centred on the Kingston staff.

187. The cost of the ocean mail service during the year as compared with the cost during the year preceding was as under:—

—	1903–4.	1902–3.
	£	£
Contributions towards Imperial Contract with R.M. Steam Packet Company.	2,100	2,161
Sea and Territorial Transit Rates paid to other countries.	150	150
Ship letter gratuities	1,093	1,067
	3,343	3,378

Rate for ship letters excessive.

The last item only shows a tendency to grow, the expenditure under this head having increased in a year witnessing a serious extraneous check by £26. The rate of payment for the carriage of mails by non-contract vessels was settled at a penny per letter so far back as 1877, and it is an anachronism that the period of time which has witnessed a reduction in ocean postage from a shilling to a penny and a reduction in the cost of the trans-Atlantic service from £3,500 to £2,100 should not also have seen a commensurate reduction in this service. The estimate of the proportion of the oversea correspondence conveyed by contract and by non-contract vessels, considered in connexion with the proportion of the subsidy falling on the Post Office Department, shows that the cost to the island of contract service per piece of first class mail matter was only a halfpenny for 5,000 miles of sea transit, whereas the rate of gratuity allows a penny per letter for what is, in practice, only 1,500 miles sea transport.

188. A consideration of the foregoing figures will show that the equities of the situation suggest a reduction by at least half of the rates paid for ship letter gratuities, and overtures were made to the several agents of steamship lines with a view to effect such a change without resort to legislation, but without result. In the course of these negotiations information was sought as to the conditions prevailing in neighbouring Colonies, and the following particulars represent those conditions:—

Barbados—

For every five letters sent to places included in the Imperial Penny Postage Scheme	1*d.*
For every five letters sent to other places ...	2½*d.*
For every five articles other than letters ...	¼*d.*

There is no law bearing directly on the subject of the carriage of mails by these steamers.

British Guiana—

For every ten letters sent to New York by the Quebec and Armstrong Lines ...	1*d.*
For every twenty newspapers and books ...	1*d.*

The local law makes it compulsory on masters of vessels to take mails tendered to them, and allows the Postmaster under regulations, to pay gratuity in respect of them. In practice, and outside of the two lines named, mails are made up for every steamer leaving the port, and signifying its willingness to take a mail, and for these no gratuity is paid.

In Trinidad no gratuity is paid for the carriage of either first or second class mail matter, nor does the local ordinance make it compulsory on non-contract vessels to carry mails.

189. The Postal Authorities at Washington have it in contemplation to endeavour to make arrangements to materially reduce the postage to those countries with which the United States of America have large commercial relations, but it is clear that Jamaica cannot participate in these advantages unless we are able in the meantime to make more economical arrangements for sea transit. The Government has therefore entered into communication with the United States Post Office, with a view to devising steps to ensure the carriage of mail matter by steamers on more reasonable terms.

190. The several services of the Postal Department have been rendered throughout the year without other interruption than the restriction of opportunity resulting from the hurricane. The steamers of the subsidized lines, especially those of the Direct Imperial Steam Service, have not always been punctual to schedule time in their arrival, and the default, besides entailing additional labour on the staff and irritation to correspondents, has resulted in extra charges on the Department for special mail conveyance approximating £278.

Inland mail services.

191. By a rearrangement of the time table of the East-bound mail coach it is scheduled to connect with the out-going train at Port Antonio on Mondays, Wednesdays and Fridays, and to collect a mail from all offices on the route for conveyance by train, and on the return journey to distribute a Kingston mail conveyed by train on the days which alternate with the departure of the regular tri-weekly mails, thus all the offices on the main east end line are afforded a daily service.

A similar rearrangement has given the northside main line a daily service, and all offices within easy reach of the railway had already been served daily. In addition to the main line offices referred to, arrangements were completed during the year for placing the following on the daily schedule, viz., Hampstead and Clonmel in St. Mary and Hayes and the Alley in Clarendon. Proposals are under consideration for a general daily service, but I am afraid the general unsuitability and difficulties of accommodating the railway time table to postal purposes, and the expense, may operate to delay their execution.

192. Except in the east end route the necessity for subsidizing mail coaches, *qua* mail coaches, has practically passed away, competition having brought livery stable rates down to the level of those fixed for the coaches.

Telegraphs and telephones.

193. Having regard to the very sparse population served by some of the district telegraph stations, the lack of any tendency on the part of such communities to expand, the small advantage taken of the service, and the relative cost of its maintenance, the question has arisen whether the legitimate needs of such communities may not be fitly met by a less expensive telephone service linked with, and bringing feeders to, the trunk telegraph lines. I have long been of opinion that the interests of the

general community would be better served by development of trunk lines with telephone connexion than by the multiplication of small unremunerative district telegraph offices on branch lines.

The effects of the cyclone.

194. The hurricane of the 11th August last, for a time, paralysed the machinery of the Department, especially that appertaining to the telegraph branch. On the morning of the 12th Half Way Tree was the only district office in communication with Kingston; on the 13th Up Park Camp was added, and Port Royal and Stony Hill on the 15th. By the 21st of the month, or within ten days, communication had been restored with all but six offices, and by the opening days of September work was in full operation at all offices except Myrtle Bank, where the line was not replaced, owing to local circumstances, until some time afterwards. The record is one which reflects much credit on the several Superintendents of Public Works and on the Superintendent of Telegraphs and his assistants, and it affords practical testimony of energy and devotion to duty.

195. The offices at Bowden, Manchioneal and Rio Bueno were completely wrecked, and the business at Bowden and at Rio Bueno is still carried on in temporary premises.

In the postal service the disorganization consisted rather in delays than in actual suspension.

Retirement of Mr. Pearce from postmastership

196. Mr. G. H. Pearce, the late Postmaster, retired from the public service in October last, after a service extending to 38 years, during which period he bore a large part in the building up of the Department, and some idea of the scope and value of the labour performed will be gathered from a consideration of those portions of this report in which I have indicated the growth of business by making comparisons at decennial periods. Mr. A. H. Miles was appointed Postmaster in Mr. Pearce's place.

197. Arrangements were made during the year for putting the head office staff establishment, auxiliary and subordinate, on a proper footing of organization, without incurring additional cost.

VIII.—PUBLIC WORKS.

198. I quote the following extracts from the report of the Director of Public Works for the year:— *Expenditure.*

a. "The total expenditure amounted to £129,514 2*s.* 6*d.*, summarised under the following heads:—

I. Establishment—		
Salaries and other charges		£13,873 16 10
II. Works, Departmental—		
1. Roads and bridges, maintenance...	£55,116 6 4	
2. Roads and bridges, new works ...	8,220 9 4	
3. Public buildings and telegraphs, maintenance	13,383 7 1	
4. Public buildings, new works ...	2,524 18 6	
5. Lighthouses, maintenance... ...	1,518 12 7	
6. Rio Cobre irrigation, maintenance	1,794 8 10	
7. Spanish Town water works, maintenance	519 17 1	
8. Special relief works on parochial roads	11,006 0 8	
9. Falmouth harbour improvements...	1,733 2 6	
		95,819 2 10
III. Work done for other Departments—		
10. Parochial Boards		8,373 4 0
11. Vere Irrigation Commission		7,722 17 7
12. Miscellaneous		3,725 1 3
Total		£129,544 2 6

199. *b.* "This total expenditure is £11,505 7*s.* 10*d.* more than that of the preceding year, which is approximately the same amount as was spent on the special relief works in the impoverished districts consequent on the hurricane of the 11th of August, 1903. But the actual expenditure on relief works and the repair of damage to the roads and public buildings caused by that hurricane, very greatly exceeded this sum; the expenditure on the maintenance of main roads, public buildings, and telegraphs having been £12,200 more than in the previous year, chiefly owing to that disaster.

200. *c.* "The staff of the Department is very small relatively to the work done. The Vote for salaries, omitting that of the electrical assistant whose duties are quite outside of the work of the Department, being only 4 per cent. in excess of that for the year 1888-89; whereas the length of main roads has during the interval been increased by about 250 per cent., and the number of public buildings has been increased by about 150 per cent. The total expenditure of the Department on works in the year under review, has been about 40 per cent in excess of that in 1888-89. That year was the second after my appointment as Director of Public Works, and I take it for comparison because it was the last year before I began the reorganisation of the Department. In the year 1895-96, the last before the era of enforced retrenchment commenced, the expenditure of the Department was 43 per cent. more than in the year under review, and the salaries amounted to £16,104, or about 50 per cent. more than in the latter year. It must at the same time be borne in mind that the work of the executive officers of this Department is not at all in direct proportion to the expenditure on the works under their charge, but is more dependent on the distances they have to travel, which vary *Staff.*

but little with their expenditure. Of late, these officers have been working at high pressure, and this cannot be carried too far without serious results. The staff at the head office has also been somewhat below the required strength, owing to which, work is apt to get inconveniently in arrear.

Main roads. 201. *d.* "The total length of main roads at the close of the year was 1,930 miles, 52 chains, having been increased during the year by 14 miles and 36 chains. Excepting for about a week after the hurricane of the 11th of August, the main roads in the island were generally maintained in good order throughout the year. Only on the sea coast road, between Port Maria and Oracabessa, was any very serious damage done by the hurricane; the complete repair of this was postponed, and, had it not been necessary to provide, by making uncontemplated improvements on roads in Portland and St. Mary, relief work for the labourers, male and female, deprived of the means of subsistence by that disaster, there would probably have been no excess, and, possibly, a saving on the Vote for maintenance. This necessity led to the undertaking of certain works of improvement. This has caused an excess of £2,590 6*s.* 4*d.* over the Vote.

e. "The expenditure for new works on main roads, for which £4,991 was voted on the Estimates, and £3,430 on Supplementary Estimates, was curtailed; the total actual expenditure being as shown above.

f. "Road works to the value of £1,805 was carried out at the charge of funds borrowed under Law 17 of 1890.

g. "The construction of the driving road from Gordon Town to Mavis Bank, authorised by Law 13 of 1885, was commenced, from the Mavis Bank end, as a relief work for impoverished labourers in that district, and carried on during the remainder of the year and thereafter, the expenditure which at the end of the year amounted to £1,417 1*s.* 4*d.*, being provided for out of the loan raised under the above-mentioned law.

h. "The sum of £2 2*s.* 9*d.* was expended on a footbridge over the Negro River in St. Thomas, out of the unexpended balance of the loan raised under Law 7 of 1881.

Buildings. 202. *i.* "The total expenditure under this head was £4,481 7*s.* 1*d.* in excess of the total vote. By the postponement of all work that could be deferred, a saving of £2,559 8*s.* 1*d.* was effected on the items in Part III. of the estimates for the year. The restoration of public buildings and telegraphs destroyed and injured by the hurricane altogether amounted to £7,040 15*s.* 2*d.* summarised under the various heads as follows:—

A. Churches	223	1	7
B. Courts and public offices	1,432	14	2
C. Prisons, reformatories, and police stations...	928	14	9
D. Hospitals and asylums	2,045	4	1
E. Miscellaneous	2,411	0	7
F. Rent, taxes, and rates...	Saving.		
G. Furniture	Do.		
	£7,040	15	2

Telegraphs. 203. *j.* "The length of the telegraph lines remained the same as the year before, viz., 695 miles. Up to the time of the hurricane they were in fair order, and portions of the line in Portland had been reconstructed at a cost of £49 18*s.* The lines in the parishes of Kingston, St. Andrew, St. Thomas, Portland, St. Mary, St. Ann, Trelawny, and St. Catherine were extensively damaged. The lines along the sea coast suffered most. Repairs were speedily effected and communication was restored within the course of a few days; but the permanent repairs were not completed

until much later. The total cost of making good the hurricane damage was £695 3*s.* 11*d.*

204. *k.* "It was found necessary during the year to carry out several works, the necessity for which was not foreseen when the estimates were submitted to the Legislative Council, and which were subsequently specially authorised. The total expenditure on these specially authorised works was £1,002 0*s.* 10*d.*; but by the postponement of certain items included in the estimates, the non-completion of others, and savings on others, the excess over the Vote was reduced to £148 0*s.* 8*d.* *Special works.*

l. "The 'A' ward of the new female lunatic asylum was completed and fitted up for occupation; and the work of completing and equipping the 'B' ward was put in hand; the expenditure was met out of the unexpended balance of the loan raised under Law 6 of 1893. Out of the same fund, an overseer's house, storeroom, and watchman's hut were built on the prison farm of St. Catherine's district prison.

m. "Under the power of Law 9 of 1904, the premises between East Queen Street and the Sutton Street police station, and between East Street and George's Lane were acquired, a sum of £50 being paid on account pending the preparation of the title.

205. *n.* "All the lighthouses were maintained in good condition and efficiently worked throughout the year. The outbuildings at Plumb Point, Morant Point, and Folly Point suffered damage from the hurricane; the cost of making good the damage and replacing stores amounted to £106 4*s.* 10*d.* Saving were, however, made on other items, and the total expenditure was only £37 12*s.* 7*d.* in excess of the Vote. *Lighthouses.*

o. "The new residence and kitchen for the Superintendent at Morant Point were completed before the hurricane; which was fortunate, as the old house was blown down.

206. *p.* "The dam, headworks, main, and branch canals were maintained in good order throughout the year. The cost of maintenance was £220 less than the estimate; and the expenditure on new works was £175 11*s.* less than the estimate; a total saving of £395 10*s.* 2*d.* on the Vote is thus shown. The total expenditure was £1,794 8*s.* 10*d.*; the earnings were £8,039 4*s.* 5*d.*, and the revenue collected was £7,939 12*s.* The earnings were thus £143 11*s.* 1*d.*, and revenue collected £383 1*s.* 7*d.* more than the previous year, in which, however, a large amount of arrears were paid up. Owing to losses by the hurricane, many consumers were unable to make prompt payment. *Rio Cobre Irrigation Works.*

q. "Details of the acreage irrigated, and of the water consumed for each description of cultivation on the 31st March, 1904, are given below:—

Cultivations.	Acreage of land irrigated.	Water taken for irrigation.	
		Cubic yards per hour.	Cubic yards per hour per acre.
Bananas	6,850	10,796	1.6
Sugar estates	800	1,200	1.5
Pens in Guinea grass	3,000	1,824	.6
Provision grounds...	270	117	.4
Oranges	600	300	.5
	11,520	14,237	1.2

"The average consumption of water per acre was the same as in last year.

r. "Three hundred and fifty more acres of land were under irrigation at the close of the year than at the close of the previous year, and these were cultivated in bananas.

Relief works. 207. *s.* "On the occurrence of the hurricane, it became evident that the almost total destruction of the banana, cocoanut, and other crops in the eastern part of the island must throw thousands of labourers out of employment for many months, if not a whole year, and that unless relief were given by the Government, these men and women would in a short time be unable to obtain sufficient food to keep themselves in health, and, in many cases, from starvation. In any case, such large numbers of idle and destitute people, even if supported by public and private charity, would become a menace to the community. The only remedy for this was evidently to provide work, by which these labourers, male and female, would be able to earn sufficient money to provide themselves and those dependent on them with food; but, at the same time, to so limit their possible earnings that other employers of labour should not be prejudiced, and that those who owned land should not be enticed away from the cultivation of it.

t. "The only means of providing such work appeared to be the improvement of existing roads, and the construction of new ones in the districts affected. The Acting Director of Public Works, Mr. D'Aeth, made a tour through the eastern part of the island, and made a very valuable report on the subject. Very considerable savings had been made by the labouring population, pecuniary assistance was at first afforded by the parochial authorities and from public subscriptions in the island and elsewhere; and so long as these savings and the native food products held out, the pressure was not serious.

u. "I returned to the island along with the Colonial Secretary early in September, and we set to work to organise relief works on main roads and on parochial roads where and when a demand for work manifested itself. Mr. Olivier devoted all his energies and a great part of his time in travelling over the affected districts, selecting roads to be taken up, deciding on the sources from which funds were to be obtained for each work, and advising and assisting in every possible way. He was ably seconded by Mr. D'Aeth, the Assistant Director of Public Works, who took special charge of this service, and by the respective Superintendents of the affected parishes.

v. "It was decided to give employment to all labourers who were willing to work at two-thirds of the normal rates; that is, at rates that would enable each man to earn a shilling a day, and each woman, ninepence. At first, very few were willing to accept work at these rates, showing that the pinch was not yet felt; they also were imbued with a foolish idea that money had been sent by the King for distribution among them. Gradually, as money became scarcer and food dearer, the numbers increased, and at the end of October there were 1,252 at work. By the end of December, 4,025, and the maximum of 4,873 was reached at the end of January; from this point the numbers gradually decreased, in February to 4,533, and the last week of the financial year, the numbers were 4,017. It then seemed probable that the necessity for relief works would cease about the end of July.

w. "Relief works on main roads were provided for, partly from the residue of the loans raised under Law 17 of 1890 and Law 13 of 1895, and were otherwise charged to Part I. of the Estimates, 'Maintenance of Main Roads.' The residue of the Parochial Road Reserve Fund provided for a certain portion of the works on parochial roads. Particulars of these will be found in their proper places in this report. But for the greatest part of the relief works on parochial roads, it was necessary to provide funds by a special, and until the end of the year undefined, grant

from General Revenue. The total amounted at the end of the year to £11,006 0*s.* 8*d.*, made up as follows:—

St. Andrew	£153 18 3
Portland	4,811 7 2
St. Mary	5,109 12 1
St. Catherine	931 3 2

x. "On the whole, I think the island will in the end prove to have got good value for the expenditure incurred; although this large expenditure, at a period when the revenue of the island is at a low ebb and collected with difficulty, is doubtless much to be regretted. I think, too, that the minimum amount of harm has been done in the way of retarding the cultivation of the land in the hands of the peasantry, or making them look to the Government to provide them with work. A certain amount of this kind of mischief is, I imagine, in such circumstances inevitable, but it will in the present case soon pass off.

"The total expenditure by this Department during the year under review, attributable to the effects of the hurricane on the 11th of August, may be summarised as follows:—

Repair of damage done to main roads		£2,766 13 7	
Public buildings	£6,526 4 3		
Telegraphs	695 3 11		
		7,221 8 2	
Lighthouses		106 4 0	
			£10,094 5 9
Work undertaken as Relief Work—			
Main roads, maintenance		£7,457 7 8	
Do. new works		904 1 3	
Do. Law 13 of 1895 ...		1,417 1 4	
Parochial roads, Parochial Road Reserve Fund		1,708 12 8	
Special grants from General Revenue...		11,006 0 8	
			22,493 3 7
Total...			£32,587 9 4

"But, on the other hand, it must be acknowledged that, had no such disaster occurred, the year would have almost certainly been one of great prosperity, and that consequently there would have been little or no hesitation in carrying out all the work provided for on the Estimates, and it would therefore seem fair that the estimated value of the works not carried out, less, say, 10 per cent. for uncompleted items and savings on estimates. These omitted works amounted to the following:—

Main roads, maintenance	£2,513 13 9
Do. new works	3,425 13 0
Public buildings, maintenance...	2,619 14 2
Do. new works	854 0 2
	£9,413 1 1
Less 10 per cent.	941 6 1
	£8,471 15 0

"The net expenditure in the year attributable to the hurricane may thus be taken to have been £24,115 14*s.* 4*d.*

208. *y.* "The Government having decided to remove the several rocks which obstructed this harbour and the entrance to it, provided that the *Falmouth Harbour Improvements.*

work could be done at a cost not exceeding £12,000, tenders for the work were invited in the island, in the United States, and in Canada; and on the 1st of August a contract was concluded with Mr. A. J. Laymon to carry out all the work for the lump sum of £11,775, payable in specified sums on the removal of the rocks to which they are respectively allotted.

"Shipping has already benefitted by the progress made in the work. It is expected that all the work will be completed by the end of the year 1904. The expenditure to 31st March, 1904, was £1,709.

Work done for other departments.

209. *z.* "*Parochial Boards.*—These works consisted of the following:—

Construction and re-construction of roads for which grants were made from the Parochial Road Reserve Fund	£6,856 19 10
Drainage of Coke Street, Sav. la Mar	72 16 2
Repairs and alterations in Poor House, Falmouth...	194 3 9
Widening and re-constructing West Street, Port Antonio	1,154 13 10
Linstead water works	94 10 5
	£8,373 4 0

Vere Irrigation Commissioners.

210. "The construction of the works of the Vere Irrigation Canal was completed during the year. The expenditure in the year under review was £7,722 17*s.* 7*d.*

211. From close personal observation of the work that was done, and knowledge of the difficulties involved, I feel bound to express my high appreciation of the ability with which the Public Works Department organised and executed the hurricane relief works. This extensive business was dealt with by the ordinary staff, and its conduct reflects credit upon the organisation of that branch of the Service under Mr. Bell. Mr. D'Aeth, the Assistant Director of Public Works, who had the more direct contact with the works, rendered most valuable service, and the Superintendents of St. Mary's and Portland parishes especially exhibited both untiring industry and great practical efficiency and judgment.

IX.—RAILWAY.

Revenue.

212. The railway revenue for the year was £126,838, being £13,292 less than the estimate for the year, and £15,467 less than the revenue for the previous year.

Up to the date of the hurricane the revenue was in excess of that of the same period of the previous year, and the Director considers that but for that misfortune the revenue for 1903-04 would have been at least £20,000 more than it was.

Expenditure.

213. The expenditure was £92,049, an excess of £14,287 over the estimate, and of £11,705 over the expenditure of the previous year. The excess and the increase were due principally to the expenditure of £2,073 on new freight cars, put in hand when the increasing traffic appeared to call for them; £8,647 for the restoration of buildings and works damaged by the hurricane and the effects of a landslip; £797

for new and additional works; and £1,001 due to increased cost of coal, although a less quantity was used.

214. The principal decreases in receipts were under the items:—

Goods and cattle	£13,407
Passengers	2,154

In the month of March, 1904, the receipts for goods and cattle were less by £2,498 than in March, 1903. This was entirely due to the absence of banana traffic. The passenger traffic in that month yielded £384 less than in March, 1903. The wharf receipts showed a diminution of upwards of £300, owing to the failure of the banana trade.

215. The repair of damage done by the hurricane and by the landslip at Bog Walk was not fully completed at the close of the financial year, and the traffic receipts of the railway have continued very unsatisfactory almost up to the date of this despatch. Improvement is now, however, beginning to show itself.

Profit and loss.

216. It will be observed that the profit on the working account of the railway was only £34,789. The annual debt charge borne by General Revenue for the railway is £121,745, of which £89,597 is for interest and £32,149 for sinking funds. The net cost to General Revenue Account of the railway in this year was, therefore, £86,956.

Condition of line and stock

217. The great improvement made in the condition of the line and of the rolling stock under the present Director and Locomotive Superintendent has been maintained and carried further during the course of the year under report. Indeed, one partial compensation for the damage done by the hurricane has been that the decrease of traffic has enabled all the locomotives of the railway to be put into thorough repair, and where necessary reconstructed, so that the locomotive power is now in a higher state of efficiency than it has been at any previous time in the history of the railway. The improvement in the condition of the permanent way and works has been evidenced by the decrease in the number of small slips and failures, and in the infrequency of derailments, which gave considerable trouble for some time after the line was taken over by the Government. The steady and solid progress made in establishing the railway as a sound asset of the Government has been chronicled in the reports of previous years, and is only temporarily interrupted by the depression now indicated. The work of the Director of the Railway has been to get the line and the rolling stock into efficient order, and this heavy task has, I think it must be recognised, been efficiently accomplished. He has continuously introduced economies where economy was possible, and very great savings have been accomplished in the cost of working the traffic. The railway

nevertheless still fails to pay the interest on its cost to its possessor—the Government. This circumstance has rendered it impossible for the Government, especially during the earlier period of its ownership of the railway, when its expenditure was heavily taxing its other sources of income, to take up and deal progressively with a policy for bringing the railway to its highest potential utility. Something has been done in this direction in the course of the year under review, and in previous years so far as means have allowed, by the construction of roads to feed railway stations or sidings, the provision of sidings, and the granting of facilities for the buying and storing of fruit at railway stations. The railway from Spanish Town to the north side crosses the island in a direction roughly parallel to roads which were previously the sole thoroughfares for bringing produce down to the shipping ports, and on the north side the railway has to compete especially with roads running parallel to it to the ports of Port Maria and Annotto Bay, the latter of which has also a station on the railway. During the course of the year under review three important roads were undertaken to feed the three successive inland stations of Troja, Richmond, and Highgate Siding. Two of these roads were carried out mainly as relief works for persons suffering from the results of the hurricane. The roads to Troja and Highgate will relieve the traffic over the main road to Port Maria, saving much of the high cost of upkeep on this very expensive road, and giving much greater facilities to fruit-growers throughout the immediate neighbourhood. The new road to Richmond Station comes from the other direction, and when completed to the distance contemplated, will be useful in a similar manner on that side of the railway. Roads have been surveyed to feed Albany Station between Port Maria and Annotto Bay, and to feed Catadupa and Cambridge Station at the west end of the island, as well as a siding which it is proposed to make between Catadupa and Ipswich. Money was voted to improve the road from Rio Magno to Riversdale Station; but the expenditure was countermanded after the hurricane for the sake of economy. These roads, when completed, will open country which has at present no satisfactory outlet either by road or rail, and which, though highly fertile, is consequently as yet undeveloped. The prosecution of these works has been suspended, owing to the financial exigencies arising out of the hurricane. Experience shows, however, that money judiciously laid out on such roads is soon repaid through the increase of indirect taxation yielded by the exports of fruit and other produce. From time to time it will, doubtless, be found advantageous to continue the survey and construction of such roads, and the provision of additional sidings. A siding has of late been pressingly called for to be constructed at Annotto Bay to enable fruit to be taken off the railway and shipped at that port. It has appeared very questionable whether it would pay the railway to do this. The fruit to be

shipped at Annotto Bay would be carried only comparatively short distances, and for the railway it is considered more economical to take all fruit to be shipped at Port Antonio, 25 miles further on even at a lower proportional rate.

Questions of railway policy.

218. Under the improved conditions which had manifested themselves for some time before the hurricane, it appeared that the time had come when a certain amount of risk might be faced in connection with the railway receipts, for the purpose of enabling experiments to be made in a more liberal policy with the object rather of developing the export trade of the island than of making the highest possible returns out of the traffic. For example: in the autumn of last year it was represented by the orange growers of Manchester that whereas when the demand for oranges was brisk the rates charged for such freight might not be excessive, yet when the American fruit came into the market, Jamaica fruit could not be moved at such rates, and the trade must cease altogether, whereas if the rates were lowered, although the profit to the railway might be cut very low, yet it might be that shipments would, under such conditions, continue, and the public revenue as well as the growers and shippers would continue to be benefitted. The experiment was, therefore, tried of granting a special low rate for the period during which the price of fruit was cut by the competition of California and Florida: the rates to be raised again from the 1st of August, when Jamaica fruit would begin to be in high demand. A similar policy in regard to rates has been urged for the carriage of bananas, the price of which in the spring months averages £12 10*s.* per 100 bunches, but only £5 after the 1st of August.

219. The question of rates on this railway can be dealt with from two points of view. The first is, taking the railway as an independent commercial or revenue earning concern, how best to get profit out of it, or to avoid loss within the compass of its own accounts?

The other is that which the Government must occupy as the administrator of an estate having an interest in all the other business of the island. It may be profitable from this point of view to give rates which a railway administration pure and simple would be justified in refusing in order to facilitate internal and export trade, which will yield revenue from other taxation besides increasing the general prosperity of the population. It may well be the case that particular articles can bear a high rate, and that no increase of traffic would result from any reduction. This is the case with oranges and bananas during the seasons of high prices. But the price of bananas is always reduced in the autumn and winter months, owing to competition of other fruit in the markets of the United States of America. The export of our bananas is the principal factor in producing our Customs and Excise Revenue, that is to say, it affects these revenues more substantially and more immedi-

ately than any other industry. It may, therefore, be good political economy to give a merely nominal rate for the carriage of bananas if such nominal rate would allow them to be exported at a time when the ordinary rate would stop exportation. I am of opinion that if a moderate reduction of rate in the poor season will enable bananas to be moved, which would otherwise remain unsold, it is advisable to so modify rates. Of course, the rates must be so adjusted as not to give away money to the fruit growers on shorter hauls. The rates to be reduced should be those on longer distances. Conversely, we might schedule somewhat higher rates than the present for the good season when the traffic can bear it. The difference of advantage to the island and to the public revenue between a state of things in which fruit can be moved, and one in which it cannot, is exceedingly great. It is in recognition of the indirect advantage of encouraging such movement and export that we make ordinary roads, the traffic over which pays nothing at all. It pays us to do so from the point of view of the revenue returns. Much more would it seem likely to pay us to keep bananas moving at any price which will bring us even a small profit in freights. From the point of view of this line of policy, such a question as that whether a siding should or should not be made at Annotto Bay, is really only slightly affected, and not at all to be determined by the fact that it may pay the railway better to carry fruit to Port Antonio and to close all other shipping places. If the whole island were the private estate of the Government it would appear unnecessary to carry bananas to Port Antonio when they could be shipped at Annotto Bay. No estate owner who makes a railway through his own property makes it longer than he can help, in order to show bigger traffic returns from that department in his books. He would obviously be losing in doing so. The Government has to look to its position as a Collector of Revenue, and as such it, of course, does not get the whole advantage of shipping bananas at Annotto Bay, rather than Port Antonio; but if by refusing facilities at Annotto Bay the shipment of fruit should be stopped (because it can be carried so far, but cannot pay the full freight to Port Antonio, even though it may get a longer ride for the cost per mile), it might very well be that the Government would lose heavily as a Revenue Collector by such a policy. It would not only lose the freight receipts, such as they are, but it would lose the Import Duties and the Excise Duties on the consumption paid for by this export, just as it loses them when there is no cart road to carry bananas. I believe it is worth while to enable fruit so to be moved, although from the point of view of the railway accounts it might result, though I doubt if it would result, that so much traffic would be withdrawn from Port Antonio as to counterbalance the additional receipts on freight sent to Annotto Bay.

220. I have thought it expedient without attempting to prejudice the facts of any particular question of this character,

which can only be ascertained on the advice of those specially responsible, to put on record the foregoing opinions as to the principles to which my experience here has induced me to think it would be of advantage that the Government should have regard in matters of railway policy. I would even go so far as to suggest that as soon as, and possibly even before, the railway earns interest on its capital the attempt to make it yield further profits in aid of the repayment of the capital should be relaxed, and the improvement of desirable fuller facilities arrived at without regard to their direct and immediate money return.

X.—MILITARY.

Militia.

221. On the 31st March, 1904, the strength of the Jamaica Militia was 600 (Artillery 146, Infantry 454), being practically the same as on the 31st March of the previous year. It has not been found practicable to increase the artillery up to its full strength of 206, but an attempt to do so will be made during the ensuing financial year. The infantry is still considerably under strength, which is mainly due to two causes, the almost entire cessation of recruiting on account of the introduction of what turned out to be an unpopular uniform, and the continued elimination from the force of men of poor physique, and of the very bad shots. A new uniform has now been devised, and it is hoped that as a result of this and of the increased attention that is now being paid to musketry, the force will shortly improve both in numbers and in efficiency.

During the year the designations of the corps were changed to the "Jamaica Militia Artillery" and the "Jamaica Militia Infantry."

XI.—GENERAL OBSERVATIONS.

Results of last five years' finance.

222. The writer of this report was, in December, 1899, specially detached from the Department of the Secretary of State for the Colonies to serve for a period not exceeding five years in this island on account of the then difficult situation of the finances and the interest which the Imperial Treasury was considered to have in their stability, through the loans which it was contemplated on the recommendation of Sir David Barbour, K.C.S.I., K.C.M.G., should be made by the Imperial Government to the Colony. It will, therefore, perhaps, not be out of place that I should compare the present financial situation with that then obtaining, and should briefly review the measures that have been taken to bring the finances into a sound position in the period during which I have been the principal financial adviser of the Government. Having administered the Government for some months in 1900, and again in 1902,

and having had the duty of reporting on the affairs of those years, I have already reviewed somewhat fully some of the steps that have been taken.

223. The deficit on the General Revenue Account of the Government on the 31st of March, 1899, was £153,722. The excess of expenditure over revenue in the year then ended was £30,431. In view of this situation Sir David Barbour, who visited the island in 1899, for the purpose of reporting on its finances, had recommended that the Imperial Government should make a loan to the Colonial Government in aid of its deficit, to be repayable in ten years. A loan of £150,000 was authorised, and the necessary legislation passed. On investigating the financial position on my arrival it appeared to me that it would be quite unnecessary to borrow so large an amount since, although the liabilities of the Treasury so greatly exceeded the assets there was no proportionate call for immediate payments, and the available cash balances and incoming revenues appeared likely to be sufficient to enable the business of the Government to be carried on, provided that the expenditure of monies already borrowed for roads and public buildings were suspended until a more prosperous period. It would not, I believe, have been necessary to incur any obligation at all to the Imperial Government on this account. Through a misunderstanding, however, the sum of £20,000 in excess of what the Colonial Government had applied for was advanced by the Imperial Treasury as part of an authorised loan of £105,000 for the Kingston General Commissioners. When this mistake was realised it was decided to transfer the £20,000 to the credit of General Revenue Account as though it had been raised under the Deficit Loan Law. The amount outstanding on this loan was repaid out of General Revenue in the financial year 1902-03, and the account closed.

224. By the operation of the revised Customs Tariff introduced by Sir Augustus Hemming in March, 1899, and by the schemes of retrenchment instituted by him before I came to the Colony, and steadily followed out up to the present time, the insufficiency of the revenue to meet the expenditure was progressively reduced. The Customs Tariff is high, and will doubtless be revised when the term of seven years, for which it was intended to stand, expires in 1906. The permanent expenditure of the Colony on establishments has been substantially reduced, and retrenchment has now reached a limit below which it cannot be carried without provoking dissatisfaction on the part of the taxpayers and their representatives in the Legislative Council, who demand, and are presumably willing to pay for the maintenance, and in various directions, the extension of the services now rendered by the Administration. These demands are especially concerned with education, the agricultural department, the medical department, railway facilities, postal facilities, and roads and bridges.

225. Previous reports have recorded the improving fortunes of the island which have enabled the deficit of £153,722 to be converted into a surplus of £67,791 on the 31st March last, an improvement of £221,513 in five years. The improvement in the position of the Treasury is really greater than appears by these figures. A careful examination of the balance sheet in 1900 led me to consider that it indicated a position more favourable to the credit of the Government than could be held to be warranted, and steps were taken to eliminate unreal assets, and to bring concealed liabilities into account. The amounts thus written off for unsound assets and brought to account for concealed liabilities totalled £25,565. The actual total improvement in the position of the Government has thus been £247,078 in five years, of which £146,684 has been realised as between actual revenue and expenditure, and £100,394 by the transfer of the Widows' and Orphans' Pension Fund recorded in paragraph 84 of this report.

226. Great difficulties have had to be overcome throughout this period. In the year 1899 Sir Augustus Hemming and his advisers had to face the anxious and unpopular duty of increasing taxation, and severely reducing expenditure and public establishments. In the following year the Colony had to take over the Jamaica Railway and its liabilities, adding enormously to its load of debt and to the charge upon its annual revenues. The railway debt created was £1,449,300 three and a half per cent. stock, imposing an annual charge of £65,218. An Imperial Loan of £198,000 was also necessitated, of which £110,000 was for railway repairs and equipment, and £88,000 for payment of outstanding interest liabilities of the railway company. The annual charge assumed for this Imperial Loan was £13,004. Had it not been for the occurrence of the hurricane it was the intention of the Colonial Government, in view of the transfer of the Widows' and Orphans' Pension Fund, to pay off last year the balance outstanding of the loan of £88,000. In the year 1900-01, the island had also to pay £9,760 for the expenses of the issue of the Railway Inscribed Stock. This amount was defrayed by a transfer from the balances of accumulated quit rents in the Parochial Reserved Fund. A sum of £48,706 had to be paid for arrears of interest on that stock due for the previous year, and £2,365 for debts of the railway company. The cash balances to the credit of the railway company taken over with that undertaking did not fully suffice to meet these obligations. In the following year provision had to be made for a permanent increase of £20,000 a year in the expenditure of the Colony for the subsidy to the Direct Imperial Mail Service. In the same period the complete reorganisation of the system of taxation on houses and lands had to be undertaken, and was carried through with an ultimate reduction in the amount of such taxes carried to General Revenue.

227. The finances of the Parochial Boards have also been placed on a sound footing. In 1899 Sir David Barbour con- *Position of parochial finances.*

sidered that the condition of their funds at that time threatened insolvency. On the 31st March, 1899, the debt of the boards to General Revenue Account was £108,645. On the 31st March, 1904, their debt was £58,599, a reduction of £50,000 in five years. By a series of Legislative enactments the accounts of the boards have been simplified by the amalgamation of funds and their sources of income by the revision of taxation above described. The annual estimates of the boards are carefully controlled by the Government, and their financial history for several years past leaves no reason for any apprehension as to their continued solvency.

The improved position of parochial finances is, as I explained in the full review which I made on the subject of direct taxation in my despatch on the Blue Book for 1901-02, due in great measure to the resolute discharge by the Collector-General's Department of the unpopular duty of collecting fully the taxes due from all persons liable to pay them.

228. This brief survey, and the observations that I have made on the financial history of the year under review justify, I think, a confidence that under normal conditions the position and prospects of the Government of Jamaica may be regarded as soundly established, and that a much less anxious task is before Sir Augustus Hemming's successor in this Government than the late Governor and his financial advisers had to encounter.

229. The following figures may suffice to give some indication of the cost inflicted on the island by the cyclone. The estimates are strictly moderate:—

Financial.

Loss to General Revenue—	
Customs (nett)	£30,000
Excise and Inland Revenue	15,000
Railway	20,000
Postal, Stamp Duties nnd other Revenues ...	5,000
Total loss to General Revenue	£70,000
Additional expenditure—	
Public Works (restorations)	10,094
Relief Works from General Revenue Account	19,367
Relief Works from other Funds	3,126
Railway	7,300
Public Gardens	500
Buoys and Beacons	145
Medical, Hospitals, &c.	2,500
	£43,032
Total for Island Exchequer	113,032
Approximate cost to Parochial Exchequer ...	12,000
Total cost in year to Public Finances, say... ...	£125,000

The cost to the public finances is not exhausted. There will be a deficit on the General Revenue Accounts of the year which can scarcely be less than £35,000, owing to failure of revenue and railway traffic, and the continued necessity for maintaining relief works. Parochial finances will also suffer for some time to come.

The loss to the community is more difficult to compute. But the returns show a loss of at least £750,000 in exports within the year, and the loss in the current year will be quite as great. This makes a total of £1,500,000 for the two years, and the results of the damage will not even then be exhausted. The destruction of products, which would have been consumed in the island, was also enormous. The total loss by destruction of crops cannot reasonably be estimated at less than £2,000,000. The destruction of houses, buildings, roads, fences, timber, clothes, and other private property must also be taken into account. I do not think this would be overstated at £250,000. The loss to the business community, and the loss of shipping business to the United Fruit Company, to the Direct Steamship Company and others engaged in the banana trade must have been at least another £250,000. These estimates give a minimum of £2,500,000 as the cost of the hurricane to the island.

Summaries of conclusions as to losses by cyclone.

230. I think it may be useful that I should attempt to sum up as best as I can the results of th xperien es of the past year which may serve in some degree or guidance in dealing with the situation likely to be created should this island have again the misfortune to be visited by a hurricane. It is improbable that any more serious and complete devastation can be suffered on any future occasion than was inflicted on the 11th of August, 1903. It has appeared that the island (assuming that such a blow does not fall upon it immediately after some previous disaster) has in itself fully sufficient resources to carry it through the resulting crisis. I have estimated the immediate destruction of property caused by the cyclone at not less than £2,500,000. To alleviate the resulting situation the Colony received through the generosity of its friends and sympathisers the sum of £12,786, an amount magnificent as a charitable donation, and most gratefully appreciated in itself, but insignificant in proportion to the calamity it was designed to mitigate. I have explained that there is reason to consider that notwithstanding the most judicious efforts on the part of the Government, the press, and the Committees who took the leading part in administering this assistance to prevent misapprehensions and impossible expectations as to its amount and its intended destination, the result of the creation of this small fund was to cause a loss to the island which, measured in money, would represent a far larger sum, as well as enduring evil results in particular districts. Looking at the matter then as simply as possible I conclude that it is not worth while for this

island to seek help from abroad under such circumstances. Even if the subscription had approached an amount sufficient to restore only the houses destroyed, which it did not, I believe that the mischief done would still have outweighed the benefit. I should, therefore, commend the following views of the situation for guidance in any future emergency.

231. The native resources, savings, and credit of the island of Jamaica may be relied on as sufficient to maintain its people even after so great a destruction of supplies and property as was wrought by the last cyclone. The organisation established for the relief of the destitute poor under the Parochial Boards and the Board of Supervision is, with temporary reinforcement of staffs, sufficient to deal with all cases in which even after such a calamity it is necessary that destitute and feeble persons should receive gratuitous support. If, as has not proved to be the case in this instance, the amount of such destitution should be so great as to overstrain the pecuniary resources of any parish, the situation can, and may, fairly be relieved by special grants in aid from the General Revenue of the island.

232. The assistance of able-bodied persons by the offer of public employment can be organised without difficulty, and will suffice to provide for those who cannot find wages-labour on estates. The difficulties which were experienced in promptly arranging for relief works in certain districts on this occasion may be avoided by having surveys made in advance of such roads as it is recognised it would be desirable to improve or to construct on such an emergency arising in any district. There are very few parts of the island where such work could not be done with economic advantage. Such a policy of foresight is established in India, and enables relief works to be undertaken to the best advantage at any date, and in any district where the rigours of famine may call for them. With regard to the reconstruction of houses it is plain that such assistance as was given from the relief fund could, without appreciable embarrassment, have been provided out of the public resources of the island, and I think with much less undesirable effect on the island's general credit abroad. It would be better, in my judgment, if such aid should on any future occasion be demanded, to give it in part, at any rate, by means of loans, and the loans might, in that case, be of amounts approximately sufficient to be a real help in reconstruction, instead of a merely nominal dole in aid, as they were in most cases last autumn. An organisation is requisite whereby on such emergencies loans may be made available to cultivators, especially of the small settler class. It is possible for such accommodation to be, as it has been in this instance, administered by the Colonial Government, but it is well worthy of consideration whether an effort should not be made to establish more permanent arrangements for agricultural banking accommodation, which should serve in ordinary times,

as well as in such a crisis. In order to avoid some of the difficulties that were met with on the present occasion in getting the machinery necessary for relief into working order, it might be advisable to provide by legislation for arrangements which could, on the occurrence of such an emergency, be brought into force by Proclamation of the Governor in Council.

233. I would suggest that under such conditions the ordinary disabilities attaching to the receipt of poor relief should be suspended, and that it should be allowable to grant relief to persons temporarily destitute and incapable without forfeiture of such house and ground as they may possess. It should also be understood that it would be the duty of the Parochial Board on the issue of such Proclamation to reinforce their staff by the appointment of additional assistant inspectors of poor.

234. I have thought it my duty to comment in what it is possible may appear an ungracious manner upon some results of the generous assistance which was so promptly offered by those who sympathised with the calamities of the island. Such energetic kindness as was shown by the West India Committee, by our friends in other Colonies, and by private sympathisers elsewhere is a thing to be thankful for, and cannot fail to be of value in strengthening good feeling between the communities of the Empire. It may even be thought—it is thought by many—that the exercise of the virtue of charity is so necessary and valuable a duty between human beings that its merits must outweigh any ill results it may appear to produce. In the sequel of the present hurricane it did appear beyond question that there was a class of sufferers who might without any demur be assisted by charitable relief, owing to the destruction of their clothes, their tools, and other means of subsistence. A number of such special cases was dealt with very carefully by the Central Relief Committee on the recommendations of the Parochial Boards, and a sum of £1,063 was so distributed. This amount, however, was less than the total of the subscriptions contributed in Jamaica itself. I conclude therefore that there was really no need to make an appeal outside the island even on behalf of these cases, and I cannot but think that had it not been for the assumption that the island was to be largely helped from abroad, the subscriptions made within the island itself would have exceeded the somewhat meagre sum of £2,292.

235. If any appeal can with advantage be made on behalf of an island of the size and resources of Jamaica to the charity of Great Britain, it seems to me that such an appeal might wholesomely be restricted to requisitions on behalf of religious denominations to sympathisers outside the island for assistance in rebuilding churches and denominational schools destroyed. But I trust that on no similar future occasion will there be any

disposition to apply for the opening of a relief fund by the Lord Mayor of London or any other such almoner.

236. Having regard to the enormous damage that was done by the storm in the destruction of exportable produce, home food supply, permanent plantations, houses, estates, buildings and other property, the suspension of employment following on the dislocation of the fruit trade, the exposure and hardship which resulted from the wrecking of dwellings, the sickness and diminution of vitality which resulted from the effects of wet weather and bad feeding, having in view also the pessimistic anticipations as to the future which prevailed so widely immediately after the event—the spirit in which the community has faced its misfortune, and the manner in which it has sustained itself throughout the autumn and winter, and is now recovering its lost ground, appear to me to be as remarkable as they are satisfactory. Whatever exaggeration there may have been in some quarters, and whatever particular cases there may have been of imposition upon the charitable, it can not be ignored, and must never be forgotten that a great number of persons have suffered severe and permanent loss and a great number continuous privation and hardship. It is unquestionable that able-bodied men have, in many cases owing to weakness from insufficient food or unsatisfying food and the results of exposure, been unable to help themselves by labour on their own property, or to work for wages as they would have been able to work under ordinary circumstances. Even when it could be bought wheaten bread does not "fill" like banana porridge and yam. The increased death-rates of the autumn and winter tell a tale that must disarm all scepticism as to the reality of the privations. Nevertheless, the settled and labouring population in the district affected, even where employment was scarce, and more so in districts which had previously been specially thriving, have shown themselves possessed of resources to carry them over a period of scarcity such as I, for one, should certainly not have expected to find available. It is exceedingly satisfactory, moreover, to have found that the impression which so widely prevailed, and was expressed so emphatically, to the effect that all the banana planters were ruined, and, notwithstanding their previous prosperity, had neither cash nor credit to carry on their estates, was a misconception. The only planters working on a large scale who applied to the Government for hurricane loans have been, speaking generally, capable and reliable men of an enterprising class who are either renting land or have taken up land under mortgages which, in a few years, they would have paid off, and who had engaged all their profits in purchase of stock and extension of cultivation. None, practically, of the established land-owning planters found it necessary, or considered it worth while to come to the Government for the loans which were offered at the ordinary rate of interest, being able, owing to the good credit to which their previous operations entitled them, to find accommodation

from banks or private lenders in cases in which they had not accumulated reserves at their own command. In this connexion again it must not be forgotten that many have, indeed, had to borrow largely, and that until next year's harvest has been realized and another hurricane season safely passed through, the situation must still be an anxious one. But if neither hurricane nor drought occurs within that period, I am confident that the condition of Jamaica by that time will again be markedly prosperous.

237. Since the hurricane the seasons have been more favourable on the whole than they had been for many years past. A hurricane appears to assist in promoting the fertility of the soil. The total destruction of the banana crop and the attention compulsorily given to clearing cultivation have resulted in the yield in the last few months of a much finer grade of fruit than has been exported on so large a scale previously. This is a most important result for Jamaica fruit, which last year was markedly suffering, from the deterioration of its quality, in the markets of the United States, and was losing in competition not only with Costa Rican fruit but even with that from Cuba and San Domingo.

238. Moreover, if my information is correct, there has been a larger area of new planting put in for the spring crop of next year than in any preceding year. The fruit so planted will be fit for cutting in the early summer months of next year, when the prices are highest.

239. A wholly wrong impression of the manner in which this community was prepared to meet and has met this calamity, was produced not only by such representations of the situation as were first sent abroad after the cyclone, but also, I cannot doubt, by appeals for assistance from Mansion House or other charitable relief funds. Making all due allowance, however, for the harm which was done by the expectation of gratuitous relief, which was specially marked only in particular districts, making allowance also for the ignorance and for the lack of agricultural and technical skill in the population, it must be admitted that the poorer section of the community showed, under their difficulties, not only a commendable patience and cheerfulness, but a considerable amount of practical effort in the direction of self-help. In the classes above the poorest, after the first discouragement had passed away, and especially where the profits of banana cultivation had already been appreciated, there was put forth a large amount of genuine effort of most valuable promise to redress the situation. The more important planters and the United Fruit Company gave an excellent example of spirit and enterprise in their determination to reinstate their properties as promptly and as effectually as possible.

240. I cannot close this review of a disastrous year without bearing witness to what has deeply impressed me as a most

happy aspect of it, namely the generous and disinterested energy and sympathy displayed by all persons in a position to be of assistance and influence in their labours to redeem the situation. Few, if any, of those who had suffered heavy loss, have allowed the calls of their own interests to withhold them from devoting their time and labour unpaid to the public good. If through ignorance and helplessness the poorer classes have shown some lack of restorative industry and too great a disposition to wait for relief, it is just such public-spirited kindness and co-operation on the part of the more enlightened classes that can assist them most. Such humanity, such charity beginning at home, is infinitely more valuable and helpful than subventions of money, whether from public or private funds. And, in closing my connection with Jamaica I retain this impression as not the least valuable and gratifying to me of the many experiences for which I am indebted to this delightful island.

I have, &c.,

SYDNEY OLIVIER,

Acting Governor.

Appendix I.

APPENDIX II.

King's House,
14th August, 1903.

DEAR SIR,

The calamitous and widespread destruction caused by the hurricane of 10th instant can hardly fail, I fear, to be productive of a large amount of want and distress among the poorer inhabitants of the island. I am desirous of taking such steps as may be possible, without delay, to relieve and alleviate this distress. But in order to do this in the most practical and satisfactory manner, it is necessary, in the first place, to obtain some information as to the nature and extent of the relief which is required, with an estimate, where possible, of the sums which it may be necessary to expend.

I should be much obliged, therefore, if you would render such aid as you may be able to afford in ascertaining the number of persons in the district or parish with which you are connected who are in need of immediate relief, and the manner in which that relief can most usefully be given, whether by the supply of foodstuffs, or by assistance in the re-erection of dwellings which have been destroyed, or in such other way as may seem to you most desirable and urgent.

It should be borne in mind that the grant of indiscriminate charity is most unadvisable, and that, at all events in the first instance, relief should be confined to cases, such as those of the aged and infirm or weakly, where the recipients are unable to provide or obtain subsistence, or to work for the support of themselves and those dependent upon them. It is pretty certain that, for some time to come at least, there will be plenty of work to be obtained by those who are able and willing to perform it, and such persons should not be encouraged to look for assistance to public charity.

These admonitions may at first sight seem harsh and unsympathetic, but it must be remembered that the majority of those who may be willing and desirous to give to the help of their poorer brethren have themselves suffered great losses, and that their power to assist is therefore considerably crippled and limited.

A public meeting is about to be held in Kingston, under the auspices of the Mayor and Council, with a view to starting a subscription list for the relief of distress, and I think it probable that this example may be followed in other parishes.

I would suggest for your consideration whether it would not be advisable in consultation with the

---

to at once appoint a Committee consisting of the principal ministers of religion and other representative persons in your parish to investigate the position of affairs in their several districts, and to obtain and furnish the information for which I have asked in the earlier part of this letter, and to take such other measures as may be considered necessary and advisable.

I have, &c.,

AUGUSTUS W. L. HEMMING.

* This Law was reserved for the signification of His Majesty's pleasure and was not in operation during the year 1903-04.

APPENDIX VII.

SUPPLEMENT TO THE "JAMAICA GAZETTE."

(July 21, 1904.)

Colonial Secretary's Office,

28th June, 1904.

The Acting Governor directs the publication, for general information, of the following Report on the operations of the Jamaica Hurricane Relief Fund Committee.

By Command,

H. CLARENCE BOURNE,

Colonial Secretary.

The Committee appointed at the meeting of the 1st February, 1904, to act with the Secretary in connection with the auditing of the accounts, the preparation of a report for publication, and generally to complete the work, beg to report as follows:—

The Jamaica Hurricane Relief Fund was opened on the 15th August, 1903, and its closing announced as of the 29th February, 1904, but the account in the Colonial Bank was kept open after that date, and was closed on the 20th April, 1904.

At a Public Meeting held at the Town Hall, Kingston, on Monday, 17th August, 1903, His Excellency the Governor presiding, a large General Committee was formed to collect and administer the Fund, His Honour Sir Fielding Clarke, Chief Justice, being appointed Chairman, and a small Executive Committee was appointed, Mr. C. W. Tait, Vice-Chairman of the Mayor and Council (the Mayor being off the island) being the Chairman, to act promptly in carrying out the decisions of the General Committee.

The General Committee has held 23 meetings, and the Executive Committee had held 19 meetings until the 27th October, 1903, when it was merged into the General Committee and ceased to have an independent existence.

In the course of the transactions, the following Sub-Committees were formed:—

Collecting Committee—Dr. A. A. Robinson, Chairman.
Purchasing Committee—Mr. E. X. Leon, Chairman.
Investigating Committee—Mr. C. W. Tait, Mayor, Chairman.
Committee to prepare statement for the information of the Government:—

As to extent of damage—Mr. C. E. DeMercado, Chairman.
As to recommended amount to be allotted to each parish—Mr. C. E. DeMercado, Chairman.
As to recommend a further distribution of £4,000—Hon. S. Olivier, Chairman.
As on applications for Special Grants—Mr. C. W. Tait, Mayor, Chairman.
As to wind up the affairs of the Fund—Mr. C. W. Tait, Mayor, Chairman.

These several Sub-Committees reported from time to time to the General Committee, and their recommendations were generally adopted and their actions confirmed.

A Ladies' Committee was formed to act with the ladies of the Charity Organization Society in the distribution of clothing prepared by them

as well as what was received for the relief of sufferers, and operated successfully, being ably guided by the Rev. Canon Kilburn, who devoted much time to this part of the work, in addition to valuable service on the General and Executive Committees.

At the instance of His Excellency the Governor, Parochial Committees were formed in each of the parishes that suffered specially from the hurricane, consisting of the members of the several Parochial Boards; and Local District Committees were also formed of the most responsible persons residing in every such district, who were cognizant of the condition of the people, and competent to advise the Parochial Committees. The Parochial Committees were supplied with funds in accordance with the ascertained needs of the stricken districts, and in proportion to the amount available for distribution; and were instructed by the General Committee to distribute only to cases of helpless sufferers, necessary foodstuffs and building materials for re-housing, no money being given, only relief in kind; but after a brief period, the distribution of foodstuffs was suspended, being continued only to those entitled under the Poor Law by means of the Pauper Fund, whilst the Hurricane Relief Fund was strictly applied to the re-housing of sufferers and the restoration of the cultivations of small proprietors in accordance with the expressed wish of the West India Committee, with which the General Committee was in complete agreement.

A total amount of £11308 14*s.* 11*d.* having been thus employed, it was decided that the balance of the Fund should be used in relieving special cases of suffering of individuals who had lost their means of living in consequence of the hurricane, and this work was carefully done; all applications were received through the Parochial Committees, whose recommendations were considered; each case was decided on its merits, and in this way the sum of £1,063 2*s.* 7*d.* has been used, and has enabled poor and deserving sufferers in some measure to tide over the calamity, and to make a fresh start in life.

The West India Committee of London early opened a Relief Fund, and forwarded the largest contribution; the Gleaner Co., Ltd., started a fund, and made a magnificent contribution; the Sister Colonies have nobly helped, in some cases sending foodstuffs and clothing in addition to money; and from other, and even distant countries, contributions were received, all which kindnesses have been gratefully acknowledged.

The Colonial Bank and the Bank of Nova Scotia generously helped in the collecting of the fund; and the Colonial Bank very kindly opened Hurricane Relief Accounts with each of the stricken parishes, which enabled the Committee to make all disbursments through that Institution.

The Cash Transactions are shown in the accompanying Statement, and the accounts have been audited by Hon. Mr. L. J. Bertram, the Auditor-General of the Colony, who kindly undertook the work at the request of the Committee.

C. W. Tait,

Hector Josephs,

S. H. Samuel.

Kingston, Jamaica,
1st June, 1904.

Adopted at Meeting of the General Committee on 20th June, 1904.

C. W. Tait, Mayor,

Vice-Chairman, Presiding.

C. T. Burton,

Secretary.

No. 454.

TURKS AND CAICOS ISLANDS.

GOVERNOR SIR J. A. SWETTENHAM to MR. LYTTELTON.

King's House, Jamaica,
30th June, 1905.

SIR,

I HAVE the honour to transmit to you a copy of the Blue Book of the Turks and Caicos Islands for the year 1904, together with a copy of the Commissioner's Report thereon.

I have, &c.,

J. A. SWETTENHAM,
Governor.

1000 Wt 23792 8/1905 D & S 5 22251 A 2

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1904.

FINANCIAL.

The total revenue of the Turks and Caicos Islands for the year 1904 amounted to £6,466, and the expenditure to £8,001 10*s.* 11*d.*, leaving a deficit of £1,535 10*s.* 11*d.*, which has been met out of the surplus balances of the Dependency.

The revenue of the year was £2,259 below the average revenue of the Dependency for the previous five years. Of this falling off, £1,794 is due to a short salt yield, owing to the exceptionally unfavourable salt-making weather throughout the greater part of the year, and £350 to less sales of postage stamps.

The following table shows the receipts in 1904, compared with the average of those of the previous five years:—

Receipts.

—	1904.			Average, five years 1899 to 1903.		
	£	*s.*	*d.*	£	*s.*	*d.*
Import Duties	3,128	10	5	3,510	10	3
Royalty on Salt	1,466	1	3	2,571	17	4
Port Dues	494	17	2	801	17	9
Licences and Internal Revenue ...	302	15	4	239	9	3
Payments for Specific Services ...	99	15	4	200	3	2

Total	6,466	0	0	8,725	6	9

* Three quarters.

EXPENDITURE.

The expenditure during 1904, under the several heads of service, is shown in the following table compared with the average expenditure of the previous five years:—

Expenditure.

—	1904.			Annual Average, five years 1899 to 1903.
	£	s.	d.	£
Pensions...	662	4	3	432
Commissioner's Department	2,110	13	8	2,271
Judicial	517	13	2	540
Police	472	2	0	479
Prisons	196	7	3	186
Medical	556	0	0	484
Paupers	327	14	2	335
Education	600	0	0	600
Registration and Vaccination ...	26	10	8	24
Public Market	21	0	0	21
Miscellaneous	535	1	2	472
Post Office	571	14	9	576
Lighthouse Department	244	16	8	268
Public Works Department	290	14	2	339
Do. Recurrent	528	5	5	580
Do. Extraordinary	338	4	1	510
Cost of Remittances	2	9	6	3
Total	8,001	10	11	8,120

A pension, at the rate of £267 12*s.* 3*d.* a year, lapsed on the 18th December last by the death of Mr. J. C. Crisson, late Accountant and Clerk in the Commissioner's Office.

The expenditure for the past year under Public Works Extraordinary, was on the Victoria Buildings, the Memorial in these Islands to Her late Majesty Queen Victoria. The buildings, which afford accommodation for the Customs, Treasury, and Post Office on the ground floor, and a chamber above for the Legislative Board, were so far completed as to admit of their occupation towards the end of the year, when they were opened and the annual meeting of the Legislative Board held in them on the 16th November.

The buildings are estimated to cost £940, of which the sum of £870 10*s.* 2*d.* has been spent to the end of the year.

The total revenue and expenditure of the Dependency for the years 1899 to 1904, inclusive, are given below:—

—	1899.	1900.	1901.	1902.	1903.	1904.
	£	£	£	£	£	£
Revenue ...	8,032	9,190	9,030	8,693	8,673	6,466
Expenditure ...	7,644	8,052	7,989	8,006	8,910	8,001

The assets of the Dependency on the 31st December, 1904, amounted to £11,149 9*s.* 7*d.*, and the liabilities to £2,559 8*s.* 3*d.*, leaving a balance of £8,590 1*s.* 4*d.* to the credit of Surplus Funds, as may be seen from the following statement:—

ASSETS AND LIABILITIES.

Liabilities.	£	s.	d.	Assets.	£	s.	d.
Salt Pond Fund ...	202	6	3	Cash—			
Board of Education ...	248	9	2	In Colonial Chest	958	10	5
Deposits	0	8	4	Crown Agents ...	434	12	10
Money Orders ...	556	0	3	New York Agents	56	7	1
Savings Bank... ...	1,527	4	3	Jamaica Treasury	45	2	1
Pensions	25	0	0	Remittances maturing	265	8	0
				Bonds Import Duties	140	10	7
	2,559	8	3	Advances recoverable	6	14	0
				Invested Funds—			
				Government ...	7,500	11	4
Balance Assets—				Savings Bank ...	1,587	18	3
31st December...	8,590	1	4	Board of Education	153	15	0
	11,149	9	7		11,149	9	7

Of the Surplus Funds, £7,500 11*s.* 4*d.* were, on the 1st January of the present year, invested in:—

(1)	Government,	Queensland stock ...	£1,000	0	0
(2)	,,	Victoria stock	1,500	0	0
(3)	,,	South Australia debentures	1,000	0	0
(4)	,,	Jamaica stock	400	0	0
(5)	,,	Jamaica Savings Bank	1,100	11	4
(6)	,,	Gold Coast stock ...	896	2	4
(7)	,,	Sierra Leone stock ...	943	3	6
		Carried forward	6,839	17	2

Surplus Funds—cont.

Brought forward... ...	£6,839	17	2
(8) Government, Lagos, advanced against unissued stock ...	160	14	2
	7,000	11	4
(9) Cash lent out by Crown Agents at Bank rate of interest	500	0	0
	£7,500	11	4

No change was made in the Customs tariff during the year. The tariff has remained unchanged since it came into force in 1885.

The currency of the Dependency consists of British gold and silver coins, and local Government currency notes of £1 and 10*s*. American gold and silver coins are also current at a discount of 1½ per cent. on gold, and 4 per cent. on silver.

TRADE, AGRICULTURE, AND INDUSTRIES.

The total imports during the year 1904 were valued at £24,120 11*s*. 10*d*. and the total exports at £24,487 4*s*. 9*d*., compared with the average of £29,867 and £34,214, respectively, for the previous five years. The falling off in the value of the exports is due to the greatly diminished quantity of salt exported last year.

The following table shows the value of the imports and the countries from which imported for the years 1899 to 1904, inclusive:—

Year.	Value of Imports from			Total Value
	United Kingdom.	British Colonies.	Foreign Countries.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1899 ...	2,684 18 2	3,289 3 6	19,733 9 7	25,707 11 3
1900 ...	3,385 1 11	3,939 10 4	22,239 10 1	29,564 2 4
1901 ...	3,110 15 6	4,092 2 1	23,614 5 11	30,817 3 6
1902 ...	3,463 3 0	5,792 19 0	23,035 9 0	32,291 11 0
1903 ...	3,948 7 0	6,434 11 0	20,573 13 4	30,956 11 4
Annual Average	3,318 9 1	4,709 13 2	21,839 5 7	29,867 7 10
1904 ...	3,226 0 10	4,153 18 2	16,740 12 10	24,120 11 10

The total value of the exports, produce of the Islands, compared with previous years is shown hereunder:—

Year.	Value of Exports, Produce of Colony, to			Total Value.
	United Kingdom	British Colonies.	Foreign Countries.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1899 ...	—	4,650 8 1	26,871 4 10	31,521 12 11
1900 ...	291 4 0	7,384 1 1	25,714 10 7	33,389 15 8
1901 ...	—	12,290 0 6	27,461 9 1	39,751 9 7
1902 ...	2,307 5 4	5,637 9 2	24,010 4 6	31,954 19 0
1903 ...	1,774 2 3	3,348 15 2	26,755 4 7	31,878 2 0

Total ...	1,656,730	22,196	1,806,694	23,677	1,005,248	15,079

The year 1904 was the most disastrous year for the salt industry of the Islands within the experience of the oldest inhabitant. The year throughout was for the Islands an exceptionally wet one, and when an industry depends for its being on the absence of rain, it must necessarily follow that

any excess of rain must be fraught with disaster. And such was the condition of the staple industry of these Islands during the past year. It is estimated that the yield of salt for the whole Dependency during the year 1904 was no more than 686,500 bushels, compared with an annual average crop of 1,800,000 bushels. The contrast is accentuated the more by taking the returns of Grand Turk, the chief settlement, alone, where the yield for the year was 80,000 bushels, compared with an average annual raking of 700,000 bushels. In consequence of these short rakings there has been much poverty among the labouring community.

The fibre industry at East Caicos, owned by an American Company, is in a sound condition, and continues to turn out a quality of fibre commanding a good price in the American market.

The Company commenced work about 13 years ago. Their shipment of fibre in 1895 was 92,071 lbs., valued at £1,342. In 1902, their out-put increased to 189,936 lbs., valued at £2,769; in 1903, to 296,733 lbs., valued at £4,327; and last year to 462,423 lbs., valued at £6,743.

The fibre industry at West Caicos, which was closed towards the end of 1903, was again taken up towards the end of 1904 by a new Company formed in London. With careful management, the industry on this plantation should not be without success.

The total quantity of fibre exported last year from the Caicos Islands, which, practically speaking, is the output of the one plantation at East Caicos, amounted to 463,695 lbs., valued at £6,886, compared with 454,193 lbs., valued at £6,563, during the previous year, when the two plantations were at work for the greater part of the year.

The following tables give a comparative statement of the shipping, inwards and outwards, for the years 1903 and 1904:—

Entered.

Nationality.	Sailing.		Steam.		Total.

The Dependency enjoys excellent steamship communication from over the seas.

The islands are served by a fortnightly mail and passenger service from England direct, the steamers of the Imperial Direct West India Mail calling at Grand Turk on their way to Jamaica. By the "Port Kingston" of this line, the distance of 3,660 miles, between Bristol and Grand Turk, is covered in a little over 9 days, and by the other steamers of the line in 11 days.

A service has this year been inaugurated by Messrs. Elder Dempster and Company, leaving London monthly for Bermuda, Turks Islands, and Jamaica. Freight by these steamers is received here from London at the rate of 25*s*. a ton. The voyage occupies 14 days.

The Clyde Line steamers run regularly to and from New York direct, once a fortnight, carrying mails, passengers and freight, and accomplish the single journey each way in 4½ days.

There is also a monthly mail service carried on by Messrs. Pickford and Black, from Halifax with Bermuda, Turks Islands, and Jamaica; while, at the time of writing this report, a further service has been arranged for the steamers of the Canada-Jamaica line, from Halifax, to call at Grand Turk direct on their way to Jamaica *viâ* Cuba.

LEGISLATION.

Five Ordinances were passed by the Legislative Board during the year, of which The Pensions Ordinance, No. 2, The Medical Service Ordinance, No. 4, and The Savings Bank (Amendment) Ordinance No. 5, are the principal.

The Pensions Ordinance is framed on the model law drafted and sent out by the Secretary of State for the Colonies, for a uniform system of pensions in respect of offices held in His Majesty's Civil Service in the several Colonies.

The Medical Service Ordinance provides for the medical service of the Dependency. The Ordinance limits the fees to be charged by the Government Medical Officers in their private practice commensurate to the means of the people of the Dependency. Under the Ordinance a Government dispensary has been established at Grand Turk and one at Cockburn Harbour, where the Government Medical Officers are in attendance daily, and patients can receive medical advice and medicine on payment of one shilling.

The Savings Bank Ordinance abolishes the Board of Savings Bank Directors established under the principal Ordinance of 1889, and facilitates transactions at the bank. It is hoped that the bank will in future be more generally used by the public.

EDUCATION.

The average number of children on the books at the seven Government Schools in the Dependency, maintained out of the annual grant of £600 from the Public Chest, was 804, with an average attendance of 585, compared with 770 and 542, respectively, for the previous year.

At the three principal settlements, where the compulsory clauses of the Education Ordinance are in force, the school returns show a very satisfactory result of the working of the Ordinance. In 1901, the year prior to that in which the Ordinance was brought into force, there were at the three Government Schools at these settlements, 252 children on the books, with an average attendance of 178. Last year the number on the books had increased to 403, and the average attendances to 336.

GOVERNMENT INSTITUTIONS.

There were 223 depositors in the Government Savings Bank on the 31st December, 1904, an increase of 12 on the number of the previous year. The total deposits amounted to £1,492 5*s.* 8*d.* at the end of the year, a decrease of £122 18*s.* 3*d* on the amount of the previous year. The transactions of the bank for the year amounted to:—

Deposits	£547	2	4
Withdrawals	670	0	7

The assets and liabilities of the bank on the 31st December, 1904, were:—

Liabilities.	£	s.	d.	Assets.	£	s.	d.
Due Depositors ...	1,492	5	8	Government Jamaica Debentures.	200	0	0
„ Treasury ...	60	14	0	Government Jamaica Savings Bank.	1,387	18	3
Balance of Assets ...	34	18	7				
	£1,587	18	3		£1,587	18	3

CRIMINAL STATISTICS.

The prison at Grand Turk was maintained at a cost of £196 7*s.* 3*d.* for the year 1904. Twelve persons were committed to prison during the twelve months, and the daily average in prison was $1\frac{1}{3}$, compared with $\frac{8}{9}$ during the previous year.

The following table gives the number of offences reported to the police, apprehensions, convictions, and acquittals in the Courts of the Dependency for the years 1900 to 1904. It will be noticed that there were no cases before the Supreme Court during the year:—

—	1900.	1901.	1902.	1903	1904.
Offences reported to Police ...	131	69	135	143	134
Persons apprehended or summoned	128	69	135	143	129
Summary Convictions—					
Offences against the person ...	30	16	31	28	37

Offences against property ...	—	—	1	2	—
Other offences	10	—	1	—	—
Persons acquitted—					
Magistrate's Court	22	14	24	11	31
Supreme Court	3	1	2	—	—

VITAL STATISTICS.

The population of the Turks and Caicos Islands, as ascertained by the Census of 1901, was:—

—	Males.	Females.	Total.
Black	1,686	1,896	3,582
Coloured	572	791	1,363
White	150	192	342
Total	2,408	2,879	5,287

During the year 1904 there were 209 births and 117 deaths registered, and 33 marriages.

The public health of the Islands was good. There were no contagious or infectious diseases. As may be seen from the above figures, the birth-rate was 39·5 per 1,000, and the death-rate 22·1 per 1,000.

The following table gives the monthly averages of the meteorological readings for the year, and the actual rainfall, recorded at the United States Weather Bureau at Grand Turk.

Rain fell on 174 days during the year, and measured 43·79 inches, compared with 36·63 inches in 1903, 27·45 inches in 1902, 29·52 inches in 1901, and 23·59 inches in 1900. The average rainfall for the previous seven years, 1893-99, is 24·61 inches. The heaviest rain on any one day of the year 1904 was on the 28th May, when 4·34 inches were recorded at the station at Grand Turk.

Month	Means.				Actual Rainfall recorded.
	Barometer 8 a.m.	Temperature of Air 11·3 above sea level.		Wind Force. Miles per hour.	
		Max.	Min.		
	Inches.	Deg. F.	Deg. F.		Inches.
January ...	30·0	82	70	14	4·67
February ...	30·0	82	71	13	1·25
March	30·0	82	69	13	4·70
April	30·3	83	71	13	2·28
May	29·9	85	74	13	10·75
June	30·0	86	76	15	·39
July	30·0	87	74	13	1·43
August	30·0	88	75	13	1·42
September ...	29·9	88	75	12	3·14
October ...	29·8	87	75	10	6·49
November ...	29·9	81	74	11	5·82
December ...	30·0	76	70	10	1·45

Total rainfall for the year, 43·79 inches.

POSTAL AND TELEGRAPH.

There is no internal postal or telegraph service. The lock letter box system was introduced last year in the new Post Office in the Victoria Buildings, at Grand Turk, and takes the place of the primitive practice of the Colonial Postmaster, each time a mail was received and sorted, distributing the mail by calling out, in alphabetical order from the post office window, the names of the addressees.

The money order business for the year with the United Kingdom amounted to the issue of orders to the value of £2,011 12*s.* 7*d.*, and the payment of orders to the value of £85 0*s.* 7*d.* With other places the business was £1,141 1*s.* 10*d.* and £69 13*s.* 5*d.*, respectively.

The cable of the direct West India Cable Company is landed at Grand Turk. Messages to England, per word, 3*s.* The Company supply daily a news bulletin, for which they receive payment at the rate of £120 a year.

DOUGLAS YOUNG,

Commissioner,

Turks and Caicos Islands.

No. 492.

JAMAICA.

(For Report for 1903-4, *see* No. 438.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House,
Jamaica,
30th June, 1906.

MY LORD,

I HAVE the honour to submit my report on the statistics presented by the Blue Book for Jamaica for the year 1904-05.

2. Sir Augustus Hemming left the Island on the 25th May, 1904, handing over charge of the Government to Mr. S. Olivier, C.M.G., who left on the 15th September.

I landed and assumed charge on the 30th September.

3. On the 10th and 11th of June a very heavy rainfall took place, giving as much as 13 inches in some places in Westmoreland, 18 in Manchester, 15 in Clarendon, 19 in St. Catherine, and 12 in Kingston. This rain damaged roads and bridges in nearly all the parishes in the Island.

Another and more partial flood occurred in October between the 13th and 19th, chiefly in the eastern parishes.

In January, 1905, there was a short period of high wind and unusual cold, which had an evil effect on growing produce.

The cost of restoring the roads amounted to almost £7,500, of which £4,112 was met by a supplementary vote.

1125 Wt 23907 8/1906 D & S 5 25554 A 2

FINANCIAL.

General Revenue and Expenditure.

4. From 1st April, 1904, to 31st March, 1905—

The revenue was	£751,562
The expenditure was	824,816
Leaving a deficit of	£73,254

5. The year combined the lowest revenue with the highest expenditure of any of the past five years.

No additional taxation was imposed to cover the deficit. The taxes and rates on property had recently been revised (Report for 1903-4, paragraphs 73 to 80) at a loss to the general revenue, and it was thought very undesirable to make a fresh change before giving the revision a fair and sustained trial.

The Customs tariff, already too high (Report 1903-4, paragraphs 224, 118), was prospectively from 16th March, 1905, augmented by a surtax of six per cent. on the duty in the hope of preventing another deficit in the year's operations for 1905-6. No ready machinery was available for imposing new taxes and under all the circumstances it was deemed best to suffer this deficit patiently in the hope of better times hereafter.

6. The estimate for the year 1904-5 was not realised. The revenue actually collected was less than that originally anticipated by £56,069, and the expenditure proved £7,728 in excess of that anticipated.

7. The following items of revenue were the principal ones overestimated:—

Customs by	£20,422
Licences by	19,532
The Railway by	23,148

The following items of expenditure exceeded the original estimate, as follows:—

Relief works	£8,076,
reduced by savings on other public works to	4,955
Constabulary and prisons	2,800
Education	3,232
Miscellaneous	3,133

8. Owing to delay on the part of the contractor for the Falmouth harbour, a sum of £5,591, which should have been paid in 1904-5, escaped being charged to that year's expenditure.

9. In addition to the actual deficit on the general account, the immigration fund manifested a deficit estimated at £4,500, of which only £900 was charged to the year 1904-5.

10. The balance sheet of the Colony, which on 1st April, 1904, indicated a surplus of £67,791 of assets over liabilities, exhibited on 31st March, 1905, an excess of liabilities over assets of £5,463; and on the day last mentioned the Colony had overdrawn its account with the Crown Agents by the very large sum of £88,832.

11. Under "Internal Revenue," excise duties were originally estimated to yield £109,950; they actually produced £90,233 only, chiefly owing to the diminution in the consumption of rum, due to hard times.

Land taxes yielded £1,211 less than the estimate, and licences £454 less than the estimate.

The revenue from the railway was £114,851, falling short of the estimate by £23,148; compared with the previous year the shortage was almost £12,000.

12. The Post and Telegraph Department showed a gratifying increase over the estimate of £425; rents an increase of £236, and interest an increase of £772.

Land sales produced £677 more than was expected.

Port and harbour dues were less by £964 than the estimate, a disappointing result when taken with the fact that the tonnage showed a large increase and fewer ships left in ballast.

13. Under expenditure the principal excesses over the estimate (after excluding public works) were:—

Education	£3,232
Miscellaneous	3,134
Constabulary and prisons	2,800
Judicial	1,545

The principal instances of economy were:—

The Railway	£2,949
Excise, &c.	2,518
Postal and Telegraph Department ...	1,416
Military	1,117
Medical	706
Lands Department	562

The expenditure under the head of "Public Works" will be mentioned in a separate chapter.

14. The revenue accounts include an item (not in the estimates) of £3,585 transferred from the credit of the pension fund, created under Law 26 of 1892 and wound up under Law 24 of 1904, whereby deductions from salaries on account of pension are to be henceforth credited to revenue instead of being held in deposit or invested in securities, and the Government in return undertakes the responsibility of guaranteeing pensions.

The fund had also investments in London which cost the sum of £3,026, and at the end of the year it was returned as creditor of the Government by £3,171; this sum with further contributions was credited to general revenue in the next year.

The miscellaneous receipts of the Government produced £3,556 more than the estimate.

15. The Customs revenue, which had been estimated to produce £370,000, actually yielded £349,576 only—a decrease on the receipts for 1903-4 of no less than £49,407; this decrease occurred chiefly in the following items:—

Flour	£17,383
Dried and salted fish	6,348
Non-enumerated merchandise (clothing, &c.)	19,006
Intoxicating liquor	2,951
Tobacco, prepared and raw	1,144
Lumber and wood for construction ...	3,081

There was a comparative increase in a few items, the principal being pickled fish, £1,281; the price of fish locally was unusually high during the year.

Oils, £2,512; much was required to paint houses repaired or replacing those destroyed by the hurricane. The Report for 1903-4, paragraph 20, explains that the local food supply was then destroyed and there had been considerable demolition of houses.

The decrease in intoxicating liquor is probably due to the impaired purchasing power of the people.

Compared with the previous year, the rum duty showed a falling-off of £14,585. There was a decrease in imported sugar worth £706.

IMPORTS AND EXPORTS.

IMPORTS.

16. The total value of imports for home consumption was:—

—	Value.	Customs Revenue thereon.
	£	£
Paying specific duties ...	712,274	231,718
,, *ad valorem* duties	707,923	117,858
Duty free	251,971	—
Total	1,672,168	349,576

The entire duties distributed over £1,420,217 of dutiable goods indicate a tariff amounting to almost one-quarter of the value.

17. This is an extremely heavy rate, even after allowing for the fact that the value assessed for Customs purposes under Section 24 of Law 18 of 1877, is taken to be the first cost of the goods at their place of shipment without the addition of any shipping or other charges thereon.

18. Goods paying specific duties averaged a payment of 32 per cent. of their purchase value, and those rated *ad valorem* 16⅔ per cent. until 16th March, 1905, and 17 per cent. thereafter—the additional one-third per cent. for sixteen days yielded £929.

19. The aggregate value of the total imports (including those re-exported) was £1,682,355.

During the past ten years, once only, viz., in 1900-01, has the aggregate value been as low as during the year under review.

20. The average value of imports for home consumption for each of the ten years ending with 1903-4 was £1,742,055.

Taking averages for five years in succession, the value of such imports per head of calculated population has been:—

Years.	Amount.		
	£	s.	d.
1890-1 to 1894-5	2	19	3
1895-6 to 1899-1900	2	9	10½
1900-1 to 1904-5	2	3	2

I am unable to attribute the falling off to any notable growth of local manufacturing enterprise, except in the case of tobacco, the manufacture of which is flourishing.

21. Compared with the previous year the proportion from the United Kingdom of the whole imports diminished, while that from the United States increased a little.

22. The total value of imports was shared as follows:—

	per cent.
United Kingdom	21
United States	58
Canada	16·4
Other countries	4·6

Exports.

23. The exports for the year were valued at £1,436,725, of which goods worth £1,334,619 were produced or manufactured in the Colony, the remainder being of extraneous origin.

At no time during the past ten years has there been so short an export in point of value.

24. The average value of exports for each of the ten years ending 31st March, 1904, was £1,781,565, so that last year was £344,840 below the average.

The value of the export of fruit for 1904-5—£601,816—was the lowest since 1st April, 1897. The following table shows the export of bananas:—

1902-3 ...	14,660,582	stems	value	£1,134,750
1903-4 ...	7,803,243	,,	,,	585,243
1904-5 ...	8,903,739	,,	,,	514,191

The proportion of the whole which went to England was almost 10 per cent.; in 1902-3 it was 8·1 per cent.

25. The figures for last year fell far short of expectation and estimate. Compared with the preceding year there was a diminution in value of exports under the following heads, principally:—

Bananas	£71,052
Logwood	35,249
Coconuts	32,702
Ginger	15,232
Oranges	10,206
Sugar	5,356
Honey	5,265
Rum	4,452
Fustic	3,789
Grape-fruit	2,353

26. There was an increase of value in the following:—

Pimento	48,122
Logwood extract	16,060
Goat skins	4,431
Cattle	2,326
Tobacco—Cigars	1,620
Cigarettes	1,056
Leaf	30

In the quantity of cocoa and kola nuts exported there was a gratifying increase, but no increase in value.

27. Taking averages for five years and computing the usual increase of population, the value of exports per head appears to have been:—

	£	s.	d.
1890-1 to 1894-5	2	14	9
1895-6 to 1899-00	2	4	4
1900-1 to 1904-5	2	4	5

28. The destinations of the exports of the Colony during the year under review were:—

Exports.	Destination.
In respect of 18·8 per cent. of the total ...	The United Kingdom.
" 53·4 " " " ...	United States of America.
" 8·8 " " " ...	Canada.
" 19·0 " " " ...	Other countries.

The exports to Canada have increased considerably.

29. Of the principal products of Jamaica, sugar valued at £116,366 was exported. The average value of the export for the previous ten years was £164,175, and in no year did the value fall so low as in the one under review.

Rum exported was valued at £92,576, the average for each of the previous ten years having been £133,257.

The exports of coffee were valued at £85,173, or less than half of the average of the previous ten years (£187,478).

30. Dyewoods, oranges, and pimento are generally sown by nature, and the export of the farmer is governed not only by the market price, but also by the pecuniary needs of the landed proprietor, who can generally augment the average export from his still uncut reserves. In the year under review wood worth £78,226 was exported in addition to logwood extract worth £63,689—total £141,915—the average for the antecedent ten years being £169,149.

The pimento exported was worth £136,969, the highest value attained in the decade; the average of the previous ten years was £97,658.

31. The tobacco trade has progressed very satisfactorily in the past eleven years; Jamaica cigars and cigarettes have gained a very enviable reputation, and the manufacture is well established.

The returns of exports for the past eleven years are as follows:—

	Value.
1894-5	£9,005
1895-6	7,648
1896-7	11,363
1897-8	18,090
1898-9	17,230
1899-1900	16,659
1900-1	22,679
1901-2	15,960
1902-3	20,411
1903-4	19,567
1904-5	22,408

For everything but leaf tobacco, foreign States are our best customers. For leaf tobacco there is a steady demand in England, and the quantity grown is not sufficient to supply that demand after supplying the local manufactures.

32. Under the head of "Minor Products" are classified exports other than sugar, rum, coffee, dyewoods, pimento, and fruit.

The principal items were:—

Cocoa (including beans)	£40,798
Ginger (including preserves and wine)	27,346
Bees-wax and honey	15,464
Hides and skins	16,963
Turtle; shell, skins, and dried flesh...	6,197
Woods	8,940
Horses and horned stock	4,970
Lime juice	3,897
Straw hats	3,119

33. The proportion to the whole of minor produce has risen from 11 per cent. in 1902-3 to 22 per cent. in the year under

review, value £318,158. The average of the previous ten years gave £163,488.

34. Two small exports deserve particular notice, they are tea, worth £60, and copper ore, worth £21.

The tea plantation in St. Ann, belonging to the Honourable the Custos, has proved successful, and as long as the Colony charges an import duty of one shilling per lb. and imports nearly 60,000 lbs. a year from abroad, the local market must be so good as almost to preclude exportation.

The export of copper ore is interesting, because one of the principal rivers in the Island was called by the Spaniards the Rio Cobre (Copper mine river).

Perhaps the most notable feature in the exports is shown in the following table:—

Sugar exported.

Destination.	Year 1902-3.	Year 1903-4.	Year 1904-5.	Percentage in 1904-5 of total export.
	£	£	£	Per cent.
To the United States of America.	134,165	39,980	2,561	2·2
To Canada	8,744	48,792	87,153	74·9

35. The existing system whereby the values for import are assessed, renders nugatory all comparison between the values of imports and exports.

36. Of local manufactures, sugar takes the first place, with rum derived from the same product.

The local manufacture of logwood extract, worth £63,689, facilitates the export of the dye, and it has been so successful that a second factory is projected.

The local manufacture of lime juice is capable of great expansion; hardly any place in the world is so well adapted as this for the growth and manufacture of this product.

37. The local manufacture of what are classed as straw hats has developed considerably. The hats are made not from straw but from a small palm tree—*Carludovica jamaicensis*—locally named Jippi-jappa (the orthography whereof varies considerably), and they strongly resemble the expensive hats, misnamed Panama hats, which come from Colombia. The export figures (£3,119) do not indicate the total export, as tourists and visitors

buy many on the spot and take them away as private wearing apparel. The spread of this industry is very creditable to the enterprise of the more industrious of the peasantry, the remuneration is high and the work not difficult; all that is now required is to secure a steady supply for export, the demand for which exceeds the supply.

38. It is very desirable that other handicrafts, such as spinning and weaving, should become popular amongst the peasantry of the Island.

SHIPPING.

39. While the tonnage of sailing vessels visiting the Island decreased by 8,459 tons, there was an increase of no less than 100,426 tons in British steamships and of 81,139 in foreign steamers visiting the Island, compared with the previous year.

The extensive work going on at the Panama canal zone tends to increase the visits of ships.

MUNICIPALITIES AND BOARDS.

40. There are fifteen parish boards in the Island, one for each parish, and Kingston has a City Municipal Council, as well as a corporate body called the General Commissioners.

41. This last-named body is responsible for the supply to Kingston of water, gas, slaughter-houses, markets, and for certain street improvements, and the sewerage system. Its revenue was £37,366 and its expenditure £35,796.

42. The City Council had an income of £32,418; it has managed its affairs with success and economy, and has reduced the total rates from 4*s.* 5*d.* in the pound of rental value in the year 1901-2 to 4*s.* 2½*d.* in the pound in the year under review.

43. The city and parish boards are elected by a limited franchise, there being in all 16,256 registered electors out of a population approaching 800,000 souls. The General Commissioners hold office either by nomination or *ex-officio.*

44. The aggregate revenue of the parish boards was £99,469.

Their aggregate debt (all due to the Government) was £50,118. This debt has been greatly reduced of late years; on 31st March, 1902, it was £73,023.

The parish general rate, which is their principal source of revenue, varied as follows:—

Trelawny St. James	fixed 1*s.* 5*d.* property tax per £10 capital values.
St. Andrew Hanover St. Thomas Portland St. Mary St. Catherine	fixed 1*s.* to 1*s.* 5*d.* property tax per £10 capital values.
Westmoreland Clarendon St. Ann	fixed 9*d.* to 1*s.* property tax per £10 capital values.

Manchester fixed 8½*d.* property tax per £10 capital value.

St. Elizabeth fixed 7*d.* property tax per £10 capital value.

In Port Royal, the circumstances of which are exceptional, the tax was 1*s.* 10*d.*

45. In no case did the tax exceed that levied in the preceding year, and the boards all seem duly impressed with the necessity for promoting economy; in three parishes the tax was reduced.

PUBLIC DEBT.

46. The gross public debt stood at the end

of the year at	£3,456,111
the sinking funds on which aggregated	317,104
the redemptions aggregated	125,898
leaving outstanding	£3,013,109

47. Besides the above figures the following should rank as debt:—

Rectors and curates' fund	£41,582
Funded debt under Act 28, Vic. ch. 29	77,416

and the Government guarantees certain loans contracted by the Kingston General Commissioners—capital, £377,100, less sinking funds, £33,859; and redemptions, £11,638; nett, £331,603—and by the Vere Irrigation Commissioners, £40,000.

The total nett liability including guarantees is, therefore, £3,503,709.

48. The debt is an exceedingly heavy one for so small a Colony, and it furnishes a sufficient explanation of the extremely high Customs tariff already mentioned.

49. Since 1902 the debt has been diminished by £212,613, and the 3½ per cent. inscribed stock of the Colony is quoted almost at par on the Stock Exchange.

MILITARY AND NAVAL.

50. During the year under review the Naval Establishment at Port Royal was withdrawn.

Port Royal has formed a naval station since the days of King James II. It comprised a coaling station with wharves, naval stores, a naval establishment, and a remarkably fine, well-fitted naval hospital; all in charge of a commodore of the Royal Navy.

The stores were removed, the hospital dismantled, and the buildings were placed in charge of the Director of Public Works.

51. This step involved a shrinkage of payments in wages, pay, &c., exceeding £40,000 a year; it also cut off from promising Jamaican mechanics a desirable career in the naval yard, and it led to the North American Squadron paying fewer visits to the Colony.

At the same time it was rumoured that a reduction in the European troops in the garrison was in contemplation.

CONSTABULARY.

52. The Police Force was maintained at the usual strength throughout the year, and did very good service in detecting and suppressing crime.

The Government and the Force sustained a very serious loss by the death of Mr. E. F. Wright, C.M.G., the Inspector-General, who had, since assuming duty in 1899, improved the discipline and efficiency of the Force in a very marked degree. His death was the consequence of a cowardly outrage committed at Montego Bay in 1903, from which his friends hoped he had completely recovered. His place has been taken by Major Kershaw, head of the Cyprus Police Force.

PUBLIC WORKS.

53. The financial prospect for the year necessitated great economy in this department. The expenditure on public buildings was curtailed, and the only items on which increased expenditure took place were those for special relief works, due to the hurricane of 1903, on which £13,235 was spent, and the Falmouth harbour improvements, which cost £6,184 on account of an estimate of £12,000, and were left unfinished at the close of the year owing to the delay on the part of the contractor.

54. In the original draft estimate nothing was proposed for relief works, but in the revised estimate a sum of £9,500 was inserted for this object; as the year went on, it was seen that this sum would be exceeded, and a supplementary vote of £4,160 was granted. The total expenditure proved to be £13,236.

55. I regret to write that owing to the necessity for stopping expenditure which the Government had no funds to meet, about twenty per cent. of the relief work expenditure will yield little or no immediate benefit unless and until work can be resumed, and a question will arise when the financial difficulty of the Government has been surmounted, whether unfinished works, undertaken not as the best for all purposes but as the best for the purpose of affording temporary relief to necessitous persons in certain localities, should take preference of works more desirable in other respects for the public benefit.

56. In one case—the road from Gordon Town to Mavis Bank through Guava Ridge—the work was begun not from the end which joined a high road but from Guava Ridge in the centre. The result is that the £1,636 spent cannot be utilised until some £7,000 more is available for completing the road. The road was constructed from the proceeds of a loan under Law 13 of 1895, and the funds remaining are insufficient to complete the work, even if the unexpended balance had been available, but like the funds mentioned in paragraph 70 of the Blue Book Report for 1901-2 they have been employed to support the Treasury balances in lieu of borrowing to satisfy the deficit between revenue and expenditure.

57. The expenditure of many items (thirty-one) under the head of new works was necessarily deferred for more prosperous times.

58. The Director of Public Works gives the total sum expended from general revenue for hurricane relief works 1903-5 as £41,273, chiefly in four parishes.

59. A sum of £430 was expended for the Vere Irrigation Commissioners in reconstructing part of the works. There is

always trouble when channels have to be taken across new earthen embankments; no matter how well the channels may be puddled, the earthwork continues to sink by the natural process of consolidation, and the water has to be shut off to preserve the embankment. The usual expedient of making the embankment one-ninth higher than its intended final level, is impracticable when it has to carry water, as water will not flow up hill. Those interested in such works require abundance of patience, and it is impossible not to share their disappointment.

GOVERNMENT HOUSES.

60. The King's House near Kingston was maintained as usual for the Governor's residence, and electric light was installed therein in November in all rooms except the ball-room.

The King's House at St. Jago de la Vega, twelve miles from Kingston, is under lease to a private tenant.

LEGISLATION.

61. The legislation during the year under review included laws for temporary loans which the Crown Agents' good management subsequently rendered unnecessary; for issuing currency notes of small value, which was not put into force from considerations of expense; for amending the Emigrants Protection Law, in view of the increasing demand for Jamaicans as emigrants; and for protecting rum—one of the principal productions of the Island, by sending, partly at the expense of those interested, a special officer to England to endeavour to check the sale of rum produced elsewhere as pure Jamaica rum.

One of the sugar-planting community was chosen and was commissioned to take up the work.

PUBLIC INSTRUCTION.

62. The over expenditure in this department was due to two factors: one a decision arrived at by the Government some years ago, but delayed in the expectation of a more favourable financial season, to make the grants-in-aid of aided schools payable in twelve instead of fifteen monthly instalments; the second was the expenditure of grants for replacing schools injured by the hurricane.

63. One of the consequences of the hurricane of 1903 was to cause a great diminution in school attendance; this diminution was disguised in the total returns for the year 1903-4 because the attendance in the first four months preceding the hurricane was remarkably good. Compared with 1903-4 the average attendance for the varying school year of 1904-5 indicated a falling-off of 5,325, and the percentage of the numbers enrolled which made average attendance was 60·3 against 63·3 in the previous year. The number of scholars on the roll fell off from 88,381 the previous year to 83,894 in 1904-5, and the average attendance was only 50,612. This must have caused great discouragement to all interested in the schools. With returning prosperity the attendance will, no doubt, improve.

64. There was an improvement in the practical teaching of agriculture and horticulture, the grants for which have been as follows:—

1900-1	£34
1901-2	47
1902-3	77
1903-4	105
1904-5	171

65. The Hope Industrial School suffered from the illness of the Master during part of the year.

66. The Industrial School and Reformatory at Stony Hill increased in numbers during the year by 71 boys and 8 girls, and at the close of the year there were 264 inmates.

67. In the Shortwood Industrial School there was an increase of four children; in the Alpha Cottage School an increase of one boy and three girls; and in the Belmont Orphanage an increase of one girl.

68. A new industrial school was certified under the Law at Happy Grove, Hectors River, where eight orphans of East Indian parentage are being taught and cared for.

CURRENCY.

69. The Currency Note Law, No. 27 of 1904, was not brought into operation on account of the expense it would have caused to the Government. It was intended to supply currency notes of the value of ten shillings each, and when the cost of providing such notes in England was calculated and the cost of frequently renewing such notes, which soon become fit for withdrawal, it was found that the comparatively small proportion of the money to be paid for such notes which the law permitted to be invested would hardly produce sufficient interest to repay the cost of the undertaking.

It is a fact, however, that an unlimited tender of silver is in practice inconvenient.

70. The note circulation returned by the banks for the year 1904-5 is as follows:—

Colonial Bank	£113,340
Nova Scotia Bank	18,196
Total	£131,536

71. The quarterly returns of the Colonial Bank show that their weekly average circulation fell off from £173,650 in 1896 to £105,813 in 1905.

The falling off is accounted for by the quantity of gold which now finds its way to Jamaica by tourists and other means.

72. The Colonial Bank makes the following return of gold and silver coin imported and exported:—

—	Imported.	Exported.
	£	£
1896	36,800	26,076
1897	21,200	9,492
1898	10,200	38,848
1899	56,800	10,632
1900	—	74,377
1901	—	72,499
1902	—	17,738
1903	—	32,362
1904	—	74,743
1905	—	35,867

73. The above figures seem to suggest that if the legal tender of silver were limited gold would remain in circulation and the half-sovereign would fulfil the purpose aimed at by ten-shilling

notes. Gold is at present in circulation in Jamaica to some extent, and proves extremely convenient. The Canal Administration at Panama has recently begun to pay the labourers there, of whom Jamaicans form a majority, in gold, and the result is said to be that the labourer has become more thrifty.

LANDS DEPARTMENT.

74. The Surveyor-General reports:—"From 1st January, 1897, to 31st March, 1905, a total of 3,288 applications have been received for 34,283 acres, of which 3,192 have been satisfied covering 31,189 acres.

"Of the total of 31,189 acres that have been allotted nearly 3,000 acres held by 252 lot holders have reverted to the Crown by reason of default in payment of instalments of the purchase, or about ten per cent. of the lands allotted. Most of the defaulters complain of hurricane and hard times; but while the hurricane may in many cases have caused the default, in others it is an excuse for evading payment. So far as can be foreseen, a much larger area of land allotted will eventually revert to the Crown, as while purchasers are always ready and anxious to pay down their deposits in order that land may be allotted them, they cannot be relied upon to keep faith and pay their subsequent yearly instalments of purchase money. It is with great difficulty and only by the expenditure of an amount of anxiety and labour out of all proportion to the result, that payments of instalments are now secured from purchasers."

75. Notwithstanding this discouraging experience I think that sales should continue on the instalment plan, except in localities where the purchasers have combined to resist both payment and eviction for default. In his relations with the Government, the Jamaican peasant is not over punctual when it is incumbent on him to discharge his obligations, and he is generally encouraged by vague expressions of sympathy from people who seem to think it a duty of the Government to countenance, and frequently to pardon, laxity.

76. It is good policy to locate peasant proprietors on land of their own, provided always that such persons punctually and scrupulously pay their debts.

77. If they have not this virtue then they cannot retain the land, and it is not good policy to sell it to them. If they were given as a gift as much land as they could beneficially occupy, they would by subsequent default in paying taxes or in paying their debts to their neighbours lose the property. It would be of great service to the railway if some of the large uncultivated tracts, now in private hands next the line, were cut up and sold to small settlers for cultivation.

78. The large areas of Crown land selected by the West India Improvement Company and transferred to that Company under the railway contract are now in the hands of the Administrator-General. They aggregate from 70,000 to 75,000 acres, most of which is entirely undeveloped and not easily accessible by existing roads. Want of funds has prevented the Government from making a firm offer for the property which is now beginning to become liable to taxation.

AGRICULTURE.

79. The portion allotted to Jamaica of the grant of £250,000 made in 1902 by the Imperial Parliament to assist the West Indian sugar industry to maintain itself until September, 1903, was £10,000.

80. With the sanction of the Imperial Authorities this sum was devoted to defraying the cost of experiments connected with sugar-growing and the production of rum and sugar, conducted scientifically under the auspices of the Island chemist.

81. Under the approved scheme the funds allotted should suffice till April, 1910.

An experimental distillery has been started, and the Island chemist hopes to be able to supply selected yeasts in a vigorous state to start the first vat of the season in all estate distilleries which need such assistance.

82. Irrigated nurseries for growing promising varieties of sugar cane have been started at Hope Gardens, desirable canes have been imported and close observations are being made of the comparative value of various fertilisers.

Seedling canes of various varieties are supplied to the estates which require them.

83. A very important feature in the scheme is a course of six weeks' training which is given to such distillers on the sugar estates as desire to undertake the study; the response to invitations to join the course has been very gratifying, and it may be hoped that in time distillation and its products may be greatly improved by the scientific knowledge thus imparted.

84. A locked still has been established on a private estate at a cost of £380, and it is reported to be successful.

85. The Brussels Convention has given decided encouragement to the sugar industry, and planters seem confident that cane sugar can for the future compete successfully with sugar

produced from beetroot. Schemes were being promoted during the year for consolidating sugar properties and manufacturing at central factories. The two principal sugar-producing districts of Jamaica are on the north-west of the Island and on the south-west. Each has now a Planters' Association, but they do not combine, because on the north side the principal product is rum and on the south it is sugar.

86. Vigorous steps were taken to induce cultivators and others to grow cotton.

In April, 1904, an expert (Mr. Seabrook) visited the Colony and gave practical lessons in cotton ginning.

The travelling instructors employed by the Government continually impressed on the people the desirability of giving this product extensive cultivation.

87. In November Messrs. Oliver & Stancliffe were deputed by the British Cotton Growing Association to visit the Colony and give advice and assistance, and they met those locally interested at a meeting at which the Governor and Colonial Secretary were present. There the cultivators expressed a strong desire to ratoon cotton (*i.e.*, to take more crops than the first from the same stock by leaving the plants in the ground), which was strongly opposed by Mr. Oliver, both on account of the alleged inferiority of ratoon cotton and the risk of breeding and encouraging insect pests.

Hand gins were supplied by the Cotton Growing Association and Paris green as an insecticide by the Government.

88. The result was rather disappointing—an export of cotton of 14,466 lbs., worth £546, to the United Kingdom, and of cotton seed, worth £20, to the United Kingdom and United States.

The prices realised were decidedly good, and the cotton grown was of very high quality.

89. It is well known that after the American war of independence many loyalists left the United States for Jamaica and Berbice, where they planted cotton with great success, and it is disappointing to find that with so much in favour of the cultivation it has not been pursued with more energy in this Colony.

90. Amongst the causes for this unsatisfactory state of things I may mention the ratoon difficulty, which, however, could be avoided by a rational system of rotation of crops, wherein cassava and the local peas (red peas and cow peas) or grain should take their places, and the existence of animal pests, which require extermination at some expense and trouble, and the want of skill on the part of local pickers. This last difficulty would, of course, vanish with practice.

91. A company is engaged in growing cassava on a large scale for the local manufacture of starch. Great attention was paid to this product at the Hope Gardens, where many experimental plots were devoted to ascertaining which kinds were the most profitable to grow.

92. An experimental growth on a considerable scale of wrap or Sumatra tobacco, under coarse canvas, was undertaken at Hope Gardens and proved very successful, the valuation being so good as to demonstrate the enterprise would pay well.

93. Fruit generally, and bananas in particular, are recovering from the effects of the hurricane, but it will take many years before the coconut resumes its old position amongst exports.

Ten millions of nuts was the diminution shown in the exports of 1904-5 compared with the previous year, which had also suffered from the hurricane, and in its turn exhibited a diminution exceeding ten millions compared with the export of 1902-3. The growing of this tree is very lucrative, the nuts command a high price in the United States, and it is to be hoped that extensive new plantations will be formed.

94. It is remarkable that notwithstanding the high tariff on rock oil (sevenpence half-penny per gallon imported) the local manufacture of cocoanut oil is so small—only 565 gallons were exported, valued at almost 2*s*. a gallon.

A disease, thought to be fungoid in its nature, has been damaging the trees in Hanover parish to the extreme west of the Island.

It is a remarkable fact that the coconut grows better on the north side of the Island than on the south, where it would find a warmer climate and often a more sandy soil.

95. The oranges of Jamaica are, all but some two or three per cent., sown by nature, and before the tariff of the United States included them, a very profitable export took place to that country. Even now, with an adverse tariff, more than half the exports go to the United States, and more than one-quarter to the United Kingdom. The total export of oranges was valued at £62,095, and grape-fruit at £9,346. Much depends on getting the oranges to market at times when there is least competition, and growers in Jamaica are giving great attention to the matter, especially growers of regular plantations. It was represented to the Government that exporters being permitted to use any number of different trade marks led to carelessness in gathering and packing, and imperilled the good name of the Colony, but a meeting of those concerned did not reveal a majority in favour of restriction.

96. The pineapple exports were worth £1,138, the greater share going to Canada.

97. Coffee grows to great perfection in large tracts of Jamaica from 500 to 5,000 feet above the sea, and it is disappointing to observe how sadly neglected are the trees in most places; not only is the weeding neglected, but also the pruning, and it is rare to find a new plantation, though the country could easily export four times the present value (£85,173) exported. The trees in Hope Gardens bear very good crops, simply because they receive proper attention. The five agricultural instructors make a point of recommending this cultivation, but their hearers are very slow to follow their advice.

98. Of rubber, for which there is such a keen demand at the present time, Jamaica possesses only a few small plantations of *Castilloa elastica* (some damaged by the hurricane) which are not on a commercial scale, but would afford seed enough for any enterprising planter desirous of planting a large area.

99. Of camphor no plantation has been made.

100. The great want of the Colony is the plantation on an extensive scale of its large properties, which at present are used for pastures or allowed to grow up in brushwood.

Unfortunately, there is a want of confidence in the application of capital to land, except in certain favourite ways, such as banana planting.

PRISONS.

101. The year was remarkable for the unusual amount of crime. During the four years ended 31st March, 1905, the following statistics are recorded:—

—	1901–2.	1902–3.	1903–4.	1904–5.
Offences reported to the police ...	2,030	2,108	2,187	6,339
Convictions in Resident Magistrates' Courts—				
1. For offences against the person	432	422	415	512
2. For prædial larceny	1,137	651	1,359	2,672
3. Other offences against property	1,222	1,130	1,268	1,652
4. All other offences	1,375	1,598	2,332	2,668
Punished in Resident Magistrate's Courts by—				
1. Fine	1,368	1,498	1,660	2,014
2. Imprisonment without option of fine.	2,337	1,965	2.653	4,325
3. Imprisonment for default of fine	53	71	155	143
4. Whipping	186	116	397	336
Number of prisoners in all the prisons 31st March.	1,110	1,067	1,178	1,402

102. The year 1902-3 was a very prosperous one; it will be seen that in it were the fewest prisoners and the fewest convictions for offences against property and prædial larceny. The year 1904-5 was the least prosperous of the four, and it had the greatest number under the heads above mentioned. The daily averages throughout the year in the two convict establishments were:—

Kingston (Penitentiary)	838
Spanish Town (St. Catherine)	553

The accommodation being:—

Kingston cells ... ... (excluding association wards).	660
Spanish Town cells ... ... (excluding association wards).	536

Both prisons were somewhat overcrowded during the year, but the deaths were less by 20 than in 1903-4.

103. A remarkable feature in Jamaica is the large number of criminals recommitted; of those under sentence in the two convict establishments 528 had been convicted once, 340 twice, and 877 twice or more.

The courts do not punish habitual criminals as severely as in some other colonies, and in many instances the interval between discharge and recapture was surprisingly short. It may also be that the hard labour enforced in prisons is not sufficiently deterrent. In a recent case a prisoner only a few days after his discharge burglariously entered the prison in which he had been confined in order to steal tools from it.

ASYLUMS AND HOSPITALS.

104. In the lunatic asylum the number of patients increased from 1,000 to 1,034, the daily average being 1,021; in 1892 it was 579 only. This rapid increase caused considerable overcrowding, and after the close of the year steps were taken to complete some new wards which had been built but left unused for want of funds.

105. The leper asylum contained 118 inmates at the beginning of the year and 115 at the end of the year; there is accommodation for 127, which was the actual number of inmates in 1897-8. The Government hospitals admitted during the year 14,980 patients, the daily average under treatment in hospital was 732.

106. The Government also maintains a lying-in hospital, mainly for the instruction of nurses. This institution had an

average of 21 inmates daily, and 655 patients were admitted during the year. The proportion of illegitimate children born there was three out of four.

107. One case of yellow fever was reported at Port Royal; the patient, a soldier, recovered.

108. The Superintending Medical Officer reports that the child population is fairly well vaccinated, but more revaccination among adults is very desirable.

109. A Bill to adopt for Jamaica the new and more rational system of quarantine recommended by the Colonial Conference held at Barbados in April, 1904, was put before the Legislative Council and passed by the casting vote of the Governor after the close of the year.

110. The quarantine stations and buildings need very considerable improvement.

The matter is one of great importance, because of the great and increasing tourist traffic to Jamaica.

The year under review was, I am informed, the best year for tourists which Jamaica has yet experienced.

Large numbers arrived from America and the United Kingdom, and the hotel accommodation was fully occupied.

POSTAL AND TELEGRAPH.

111. The postal and telegraph department inaugurated and carried out a daily mail service throughout the Island very successfully and economically. The revenue of the department exceeded the estimate, and the expenditure fell short by a considerable sum of that allotted to it.

112. In expectation of the termination of the contract on the 30th June, 1905, for ocean carriage of mails with the Royal Mail Steamship Company fresh tenders were called for.

113. The Royal Mail Company demanded a higher sum than they had been receiving, and their tender was consequently rejected. A subsequent offer on advantageous terms from the Direct line of steamers aroused considerable opposition in Jamaica, due partly to fear of a monopoly of the carriage of mails and perhaps of freight vesting in the hands of the contractors for the Direct line, and partly to a sentimental feeling for the older contractors.

It was finally decided to have no contract at all.

114. The postal work at Kingston is carried on under great disadvantages, having quite outgrown the local office accommodation. In this, as in other urgent matters, improvement has been delayed for want of funds.

POLITICAL.

115. Emigration from Jamaica to the Panama canal zone continued on a large scale throughout the year.

116. The Cayman Islanders suffered considerably from being deprived by the exclusive claim set up by Nicaragua of the unrestricted right of a free turtle fishery on the Mosquito banks and among the Mosquito cays, which they had been enjoying for upwards of a century.

GENERAL OBSERVATIONS.

117. The state of the Treasury, which ended the year owing to the Crown Agents a debt of £88,600, necessitated the most rigid economy in all departments, and the Government was compelled to defer not only all improvements, but even many administrative expenses very desirable for better carrying out public duties.

118. The empty Treasury brought out very strongly a curious feature in past legislation, viz., the many laws which have been passed designed to weaken the control which the Government and Legislature of the day ought always to be able to exercise over public expenditure, passed, too, on the unquestioned assumption that there would always be found in the Treasury ample funds for almost all purposes which called for public expenditure.

119. For example, Laws 14 of 1873, 9 of 1874, 28 of 1889, and 21 of 1894 authorise the Governor to advance to parish boards whatever sums (without any limit) may be applied for, for local sanitary works, markets, poor-houses, waterworks, and cemeteries, and only one of these, viz., Law 7 of 1886, gives the Governor a discretion to refuse, the others give none.

Law 30 of 1879 compels the placing on the public estimates of each year of double the subscriptions collected each year for a sailors' home.

Law 19 of 1894 makes the cost of erecting private telephone wires a charge on the Public Treasury.

Laws 31 of 1890, 31 of 1893, and 32 of 1896 compel the Treasury to make advances for reconstructing streets and for maintaining and repairing sewers in certain localities. They also compel the expenditure from general revenue of £200 a year on streets, and enforce provision being made for that sum on the annual estimates.

Law 14 of 1891 casts upon the Treasury the burden of extinguishing all deficits on the Immigration Fund.

120. It seems never to have been contemplated that the Treasury might some day be exhausted, or that occasions might present themselves when there was too small a balance to meet all these irregular and often unlimited demands.

121. I use the word irregular as meaning a demand which no taxation has been devised to meet, and for which no funds have been provided.

I have, &c.,

J. A. SWETTENHAM,

Governor.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

TURKS AND CAICOS ISLANDS.

(For Report for 1904, *see* No. 454.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House,
Jamaica,
8th August, 1906.

MY LORD,

I HAVE the honour to transmit to you a copy of the Blue Book of the Turks and Caicos Islands for the year 1905, together with a copy of the Commissioner's Report thereon.

I have, &c.,

J. A. SWETTENHAM,
Governor.

1125 Wt 23907 9/1906 D & S 5 25829 A

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1905.

* Police and Prisons Departments amalgamated.

From the above tabulated statements it will be seen that the receipts amounted to £6,242 17*s.* 0*d.* and the disbursements to £7,278 13*s.* 7*d.*, leaving a deficit of £1,035 16*s.* 7*d.* on the year's transactions. This deficit has been met out of the surplus balance of the Dependency which in consequence became reduced on the 1st January, 1906, to £7,579 4*s.* 9*d.*, of which amount £7,028 1*s.* 4*d.* is invested in approved securities.

Compared with the previous year (1904) the receipts of 1905 were short only by £200—more than accounted for by less importation of spirits—but when compared with the annual average of the previous five years (1899-1903) they show a shrinkage of about £2,500. This fall in revenue may be attributed in great part to the disastrous salt year of 1904 and the short yield of salt at Grand Turk during the past year. At Salt Cay and Cockburn Harbour the salt yield may be viewed as satisfactory. The yield of salt is estimated for Salt Cay at 440,000 bushels, and for Cockburn Harbour at 686,000 bushels, but for Grand Turk at no more than 141,000 bushels as compared with an annual average of 700,000 bushels. The crop at Grank Turk was wasted by rain more or less throughout the year.

With regard to the revenue, there was, as compared with the annual average of the five years ended 1903, which may be regarded as normal years, a falling off under—

	£
Import Duties	570
Royalty on Salt	1,170
Port Dues	324
Post Office	228

Turning to the disbursements for 1905 the total expenditure, £7,279, is about £850 less than that of the average of the five normal years ended 1903, and about £700 less than the amount (£8,000) provided for the service of the year. The expenditure was kept down to the lowest possible figure.

TRADE, AGRICULTURE, AND INDUSTRIES.

The total imports during the year 1905 were valued at £28,230 and the total exports at £24,022, compared with the average of £29,869 and £34,214, respectively, for what may be termed five normal years, 1899-1903, and as against £24,121 and £24,487, respectively, in 1904. The exports of salt fell in value even below those of 1904, considered the most disastrous on record, being £14,604 as compared with £15,079 of the previous year. Again, the export of fibre, the most important subsidiary industry, fell from £6,886 to £5,862.

As the past year was even more unfavourable than 1904 to the salt industry, the following tables may be of interest as showing how much the yield of salt has fallen within the two years in consequence of the unusual rainfall:—

Whither Exported.	1903.		1904.		1905.	
	Bushels.	Value.	Bushels.	Value.	Bushels.	Value.
		£		£		£
Canada ...	175,266	2,854	128,207	2,341	138,115	2,558
St. Pierre ...	85,510	1,425	10,096	252	22,113	406
United States America.	1,483,394	18,602	807,229	11,481	735,641	10,669
Miscellaneous.	62,424	796	59,716	1,005	65,430	971
Total ...	1,806,694	23,677	1,005,248	15,079	961,299	14,604

The quantity of salt exported from the three settlements of the Dependency was:—

	Bushels.
Grand Turk	110,475
Salt Cay	361,412
Cockburn Harbour	489,412
	961,299

In 1904 the yield in Grand Turk had been only 80,000 bushels, as compared with an average annual raking of 700,000, so that the low export of 1905 had a deplorable effect upon the industry.

Again, the chief subsidiary export, sisal fibre, fell in value from £6,886 to £5,803, which added to the general depression.

SHIPPING.

The following table gives a comparative statement of the shipping cleared for the years 1904 and 1905:—

Nationality.	Sailing.		Steam.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
British	134	10,784	34	34,215	168	44,999

Total 1905 ...	193	24,064	93	141,731	186	165,795
Total 1904 ...	216	24,895	72	112,646	288	137,541

CIVIL ESTABLISHMENT.

The Commissioner, Mr. W. D. Young, was absent from the Dependency from the 30th August to the 13th December, during which period the Judge, Mr. G. P. St. Aubyn, performed the duties of that office.

The Judge, Mr. St. Aubyn, was on leave from the 12th May to the 24th August, and during his absence the Commissioner acted as Judge of the Supreme Court, and the Assistant Commissioner of Grand Turk, Mr. A. W. Harriott, as auditor.

Dr. T. R. Robertson was appointed Assistant Commissioner and Government Medical Officer of Salt Cay on the 25th February, 1905, and was on the 18th August promoted to the office of District Commissioner and Medical Officer of the Caicos Islands, vice Dr. W. H. Clements, transferred to British Honduras.

Dr. G. S. S. Hirst was appointed Assistant Commissioner and Government Medical Officer of Salt Cay on the 18th November, vice Dr. Robertson, promoted to the Caicos Islands.

Mr. B. H. Roberts was appointed Lighthouse Keeper on the 23rd January, vice Mr. A. G. Wynns, deceased.

LEGISLATION.

The Hon. Walter Stanley Jones was appointed Member of the Legislative Board on the 3rd July, 1905, vice the Hon. C. R. Hinson, deceased.

The following Ordinances were passed by the Legislative Board during the year:—

The Supplementary Appropriation Ordinance, No. 1.
The Custody of Infants Ordinance, No. 2.
The Police Ordinance, No. 3.
The Prisons Ordinance, No. 4.
The Appropriation Ordinance, No. 5.
The Customs Tariff Ordinance, No. 6.

The most important of these were Nos. 3 and 4, amalgamating the Police and Prisons Departments, and No. 6, revising the tariff. The amalgamation of the Police and Prisons Departments will effect economy and increase efficiency. The Customs Tariff Ordinance, while avoiding levying higher duties on imported foodstuffs of the labouring population, will, it is hoped, raise the revenue to such an extent as to effect financial equilibrium.

EDUCATION.

The average number of children on the books at the seven Government schools in the Dependency was 798, with an average attendance of 598, compared with 770 and 542 in 1903 and 804 and 585 in 1904, respectively. There were also 187 children of school age attending private schools which had been approved of by the Board of Education. The total expenditure of the Board for the year amounted to £587 17*s.* 9*d.*, as against £599 0*s.* 10*d.* in the previous year. A balance of £267 6*s.* 3*d.* was carried forward to the credit of the Board on the 1st January, 1906. The public schools were inspected in May and June by Mr. H. H. Hutchings, who reported that the primary subjects were efficiently taught and that good work in sewing was shewn.

CRIMINAL STATISTICS.

During the year the prisons and police were amalgamated with a view to economy and increased efficiency. Twenty-one persons were committed to prison during the year, and the daily average in prison was $3\frac{1}{91}$, as against $1\frac{1}{3}$ and $\frac{8}{9}$ in 1903 and 1904, respectively. The following table gives a comparative statement of the criminal statistics of the Dependency for the years 1902 to 1905:—

—	1902.	1903	1904.	1905.

METEOROLOGICAL OBSERVATIONS.

The following readings and statistics were from observations taken at the United States Weather Bureau Station at Grand Turk, latitude 21° 21′ N., longitude 71° 7′ W., at a height above mean sea level of 11·3 feet.

Rain fell on 156 days during the year and measured 41·97 inches, compared with 43·79 in 1904, 36·63 in 1903, 27·45 in 1902, 29·52 in 1901, 23·59 in 1900, and an average rainfall of 24·61 for the previous seven years, 1893-99. The heaviest rain on any one day during the year was 5·34 inches on the 12th October, while the wettest months were February, June, October, and November with 5·01, 8·45, 8·08, and 7·88 inches, respectively.

The coolest and hottest months were January and August, with mean readings of 71·3 and 84·4, while the mean temperature for the year was 79·2. On the 20th August the thermometer rose to 93, while on the 25th February it fell as low as 61·8. There were 173 days with clear sky and 192 days overcast. The wind blew as follows:—

As I have been for so short a time in the Dependency, I am not in a position to report personally upon the year under review, and I have to record my obligations to Mr. L. Lea Smith, the Commissioner's Clerk, for valuable assistance in the preparation of the Blue Book.

F. H. WATKINS,

Commissioner of the

Turks and Caicos Islands.

28th June, 1906.

DEC 12 1908
D. of D.

No. 524.

JAMAICA.

(For Report for 1904-5, see No. 492.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House,
1st May, 1907.

MY LORD,

I HAVE the honour to transmit my report on the statistics presented by the Blue Book of Jamaica for the year 1905-6.

1125 Wt 24282 6/07 D & S 5 28552 A 2

FINANCIAL.

General Revenue and Expenditure.

The total amount credited to general revenue of the year was £865,696, but for purposes of comparison with other years an extraordinary item of £24,602 (to be explained presently) should be deducted, leaving the ordinary revenue as £841,094.

The total amount charged to expenditure of the year was £821,611, but from this again may be deducted for purposes of comparison the above sum of £24,602, which was expended in reducing that portion of the funded debt of the Colony which comes under the head of "Railway Annuities."

The normal expenditure was thus £797,009.

There was consequently a surplus of revenue over expenditure of £44,084 after reducing the funded debt by £23,360 and paying the interest which had accrued on that sum.

The extraordinary item of revenue of £24,602 is explained as follows:—By an agreement between the Government and the promoters of certain railway extensions all proceeds of certain railway bonds were to be placed in some bank agreed on between the parties to the joint credit of the Governor and of the Railway Company, to be paid out only on their joint signatures, and the Colonial Bank was selected.

When the Governor claimed to withdraw a sum of £21,912 remaining to the credit of that account, the Bank objected to pay, claiming to retain that amount on the ground that they had a prior claim on the fund for what was due to them from the promoters which would more than exhaust the entire amount. From March, 1897, till July, 1905, the matter was in dispute or litigation, and finally the High Court gave judgment in favour of the Government for the whole sum claimed with interest.

As the Government had been compelled to borrow on railway annuities a sum of £110,000 to defray charges to which the fund was applicable, the nett proceeds of the judgment were appropriated towards paying off that debt.

The Table I. (Appendix A) shows the state of the finances from year to year since 1890.

The surplus of the year under review, £44,084, was not sufficient to counterbalance the deficit of the antecedent year, which was £73,254.

On the 31st March, 1906, the balance of assets on the general revenue account was £38,621. Compared with the same date on the previous year there had been recovered on hurricane loans the sum of £27,988, and the assets had been increased by a new item of £35,030 for investments on account of miscellaneous deposits in partial fulfilment of a pledge given to the Legislative Council as consideration for passing Law 32 of 1903.

The overdraft on the Crown Agents had been reduced from £88,832 to £23,376, and was more than covered by remittances of £45,000 in transit on the 31st March, 1906.

Compared with the original estimates for the year there were excesses of £19,516 on Customs, £7,415 on licences and excise, £7,158 on fees of office, &c., £3,928 on post and telegraphs, £4,307 on miscellaneous receipts, and £713 on land sales.

The only items which did not come up to the estimates were railway £2,930, and interest £672.

Under expenditure some heads showed considerable economies, for instance:—

Pensions	£1,019
Excise, &c.	1,650
Judicial	1,367
Medical	1,483
Constabulary and prisons	1,430
Education	1,186
Military	1,485
Works and Buildings	4,254
Railway	9,553

A few others showed considerable excesses, for instance:—

Immigration	£2,306
Miscellaneous	2,895

The railway returned a profit over working expenses for the year of £56,099; the debt charges (in interest and sinking fund) amounting to 4½ per cent. on £1,493,400, being £67,203, or £11,104 in excess of profits.

The parish general funds had an increase of income compared with the previous year of £5,080, but their road fund income fell off by £1,116. Compared with the original estimates, the general fund realised an increase of £3,054, and the road fund a deficiency of £1,148.

The parish administration was well and economically conducted as a rule. At the end of the year the parishes collectively owed the Government £45,642, while their deposit accounts with the Treasury amounted to £32,151.

St. Catherine still owed the Government the comparatively large sum of £12,786 at the end of the year.

The Parish General Rates were as follows:—

	s.	*d.*	
Port Royal	1	10	property tax per £10 capital value.
Trelawny	1	5	
St. James	1	5	
St. Andrew	1	3½	
Hanover	1	3	
St. Catherine ...	1	2	
St. Thomas	1	1	
Portland	1	0	
St. Ann	1	0	
St. Mary	1	0	
Westmoreland ...	0	11	
Clarendon	0	10	
Manchester	0	8½	
St. Elizabeth ...	0	7	

The Kingston City Council levied rates aggregating 4*s.* 2½*d.* in the pound of rental value. Their income was £30,684, and expenditure £29,219. They had no debt.

The Kingston General Commissioners, who manage the sewerage system of Kingston, its water supply, gas supply, markets, and slaughter-houses, and execute street improvements, had a revenue of £17,841 from water, £7,148 from gas, £3,525 from markets, £1,232 from the slaughter-house; and collected £1,999 in repayment of advances made for house-sewer installations.

Their aggregate debt at the end of the year was £295,949.

No street improvement was undertaken during the year. Out of £23,769 advanced for connecting private houses with the sewerage system, £13,742 remains outstanding for collection.

CUSTOMS.

Imports

The estimate for Customs receipts under the normal tariff had been £370,000. Under Law 3 of 1905 a surtax of 6 per cent. was imposed from 16th March, 1905, which was calculated to yield £22,000 if continued in force till 31st March, 1906; but the revenue proved sufficient to enable the Government to cease collecting the surtax on the 27th February, 1906, and the total collection, under the normal tariff and surtax combined, proved to be £389,516 for the year.

Compared with the previous year there was an increase in the yield of *ad valorem* duties amounting to £21,821, and a decrease on articles reckoned as food stuffs amounting, approximately to about £7,000.

The total imports exclusive of coal, coin, and bullion were valued at £1,825,961 for customs purposes, being an increase of £237,299 on the previous year's value, chiefly due to increase in prosperity.

Of coal, the value imported was £82,234, a decrease of £11,960, due in some measure to the abandonment of Port Royal as a naval station.

The exports of the Colony were valued at £1,843,180, being an increase on the figures of the previous year of £406,455.

The principal increases were under the following heads:—

Bananas		£328,498
Coffee		49,110
Oranges	£28,573	
Grape fruit	2,764	
		31,337
Cattle	£13,306	
Horses and mules	1,712	
		14,018
Cocoa		12,056
Coconuts		11,172

Certain woods—		
Ebony	£422	
Fustic	8,005	
Lignum vitæ	1,094	
		£9,521
Rum (accompanied by decrease in quantity of 103,808 gallons)		6,347
Sugar		5,962
Yams		4,192
Annatto		4,106
Turtle		2,885

Under logwood there was an increase of the prepared extract worth £4,591, and a decrease of the raw material valued at £5,945.

Under tobacco there was a decrease in exports of leaf, £367, and cigarettes, £2,039, but an increase of cigars to the value of £1,940.

Limes and limejuice fell off by £759, and pimento by the large sum of £56,701. Lancewood and bitter wood by £3,267.

The increased exports of cattle and horses are very gratifying, as they show a good demand for the superior animals bred in the Colony. The export of yams is due to the demand at Colon.

The proportion of trade with various countries for three years is shown below, reckoned in percentage of the total trade done by the Colony:—

IMPORTS.

—	1903-4.	1904-5.	1905-6.
United Kingdom	47·0	46·8	48·9
United States of America	42·6	42·8	39·0
Canada...	7·2	5·9	8·1
Other countries	3·2	3·5	4·0

EXPORTS.

—	1903–4.	1904–5.	1905–6.
United Kingdom	18·8	18·8	19·3
United States of America	59·4	53·4	57·4
Canada...	5·4	8·8	6·1
Other countries	16·4	19·0	17·2

The United States of America have lost 56 per mille, the United Kingdom has gained 24 per mille, and Canada and other countries each 16 per mille in the three years under review.

The trade with the United States would have been far larger but for the tariff on citrus fruits.

The value of imports per head, reckoned on a population estimated at 800,000, was, taking values entered for home consumption only and excluding coal, coke, coin, and bullion. £2 5*s.* 7½*d.*, as against £2 3*s.* 2*d.* for the previous five years.

The value of exports per head (excluding foreign produce) was £2 4*s.* 2½*d.*, as against £2 4*s.* 5*d.* for the previous five years.

Sugar to the value of £122,328 was exported, of which 59 per cent. went to Canada, and ½ per cent only to the United States of America.

Tea grown in the island was exported to the United Kingdom to the value of £139.

AGRICULTURE AND AGRICULTURAL SERVICES.

The general agricultural condition of the Colony has shown steady improvement during the year under review.

The seasons have been unbroken by any very exceptional weather, and have been on the whole favourable to the agriculturist.

The rainfall for the whole island—78·43 inches—has been about the average (77·76 inches).

In the south and south-western parts the reaping of the sugar crop was somewhat retarded and made more expensive by unusual rain in the winter and early spring. Some damage was done in the north-east by heavy winds, and on the north side there was a shortage of rain which reduced the sugar and other crops in that district. These, however, may be regarded as ordinary fluctuations.

It continues to be true that while there is some scarcity of labour, particularly in the banana districts, and, at certain times, in the sugar districts, complaints come of want of work from several parts of the island. Perhaps in time some means of adjusting supply and demand in our labour market may be evolved amongst those directly concerned. In the meantime, some planters maintain that a proportion of immigrants is as indispensable to them as it has hitherto been for steadying the supply of agricultural labour. No further effort has been made in the experiment initiated in the year 1902 of utilising the Immigration Department as a Labour Intelligence Office for enabling labourers desiring employment to meet the requirements of employers in other parishes. The experiment, as far as it went, was not a success. The rate of wages of agricultural labourers continues much as heretofore—men from 1*s.* to 1*s.* 6*d.* per day, and women 6*d* to 9*d.*; at task work they are said to be able to earn more, sometimes as much as 50 per cent. more.

In July, 1905, the steamship "Indus" brought 789 East Indian immigrant adults, the majority of whom were located on the banana plantations in St. Mary and Portland, and the sugar estates in Vere. In January, 1906, the "Erne" sailed for India with 593 returning immigrants. These repatriated East Indians took home with them savings in bills or coin estimated at an average of nearly £15 a head.

The experiment of offering to the East Indian immigrant a grant of ten acres of land in lieu of a free return passage was continued during the year, and 30 allotments (aggregating 311 acres) were made, but the arrangement has not been successful in its principal objects. Apparently, only those who would have remained under any circumstances have taken the grants of land, for the proportion of return passages has continued undiminished; and the Immigration Fund has been burdened with the expense of making the allotment. The experiment will, therefore, be discontinued.

The property now owned by East Indian immigrants who have settled in the island (and can be identified) is reported as amounting to 7,489 acres of the value of £35,060, or, including live stock, of over £40,000. The health of the indentured immigrants has been fairly good, allowing for the large number of new arrivals who have had to pass through the process of acclimatisation.

Whatever effect the emigration of labourers may have on our labour market later on when the operations in the Canal Zone extend, it has produced little effect so far. During the year 8,293 emigrants, mostly of the labouring class, have left Jamaica for the Isthmus and 2,240 for Costa Rica, where they find employment on the banana cultivations, mostly under the auspices of the United Fruit Company. There appears to be a good deal of ebb and flow in this migration; for against the number reported as having left we have to set 3,821 reported as having returned from the Isthmus during the year, and 1,930 from Costa Rica. The proportion of arrivals from these places is even larger during recent months.

In the matter of crimes affecting agriculture, prædial larceny and the larceny of ground provisions principally invite comment. Under the head of "Police" we have noted a reduction in both classes of offence. With improvement in the general agricultural situation and the circumstances of the rural population, and with the removal of many of our habitual offenders by emigration, we may anticipate further reduction and a return to normal rates. The system of agriculture in the Colony, and particularly the small settler's custom of cultivating a provision field far away from his home, must cause this particular offence to figure largely in the criminal returns, so long as we have a considerable proportion of the population very little removed from a condition of vagrancy, and indifferent or averse to regular means of livelihood.

As a result of strong representations to the Government that the system under which agricultural produce was bought by itinerant and unscrupulous purchasers (under a small two shilling agent's licence) was working injuriously both in lowering the quality of the produce and in facilitating the prompt disposal of stolen goods, an amending Produce Protection Law has been passed, abolishing the objectionable agent's licence and increasing the duty for a dealer's licence from £1 to £2. Under the same amending Law exporters of packed fruit have been limited to the use of a single Registered Trade Mark, the object being to discourage careless exportation by making the consequences more certain for the persons responsible.

A reference to the Collector-General's report for the year shows that while if we go back to 1902-3 (the last year before our recent lean years began) we find that in many points we have not yet reached the figures which that year showed we have in most of our exports considerably improved on last year's returns.

In a few things we have actually exceeded the output of 1902-3. Thus, annatto (mostly a peasant's crop) shows an increase of over 110,000 lbs. exported; kola nuts an increase of 42,754 lbs.; bananas an increase of 796,770 stems; cigars. an increase of £2,721, in value (though 1,562 lbs. less in weight was exported); leaf tobacco, a small increase of 1,730 lbs. In the logwood extract there has been an increase in value of £34,917, which more than compensates the diminished value of the export in wood (£27,371).

But comparing the Collector-General's returns for the year under review with those for 1904-5, as he compares them in paragraph 23 of his report, the results are much more encouraging.

Increase in quantity and in value is exhibited in the following principal items of agricultural exports:—

—	Increase in Quantity.		Increase in Value.
			£
Annatto	199,660	lbs.	4,106
Cocoa	7,608	cwt.	12,056
Cocoanuts	2,845,817	No.	11,172
Cattle	1 993	"	13,306
Coffee	29,152	cwt.	49,110
Fruit, bananas	6,077,406	stems.	328,498
" grape	9,769	pkgs.	2,764
" oranges	1,450,443	No.	28,373
Honey	835	cwt.	501
Horses and mules	141	No.	1,712
Kola nuts	19,389	lbs.	508
Sugar	40,623	cwt.	5,962
Tobacco, cigars	4,888	lbs.	1,940
Yams	—		4,192

Principal items of Agricultural Exports—cont.

—	Increase in Quantity.		Increase in Value.
			£
Divi divi	1,833	cwt.	575
Hides	55,274	lbs.	2,601
Sheep, wool	2,051	"	237
Wood, ebony	211	tons.	422

" bitter	800	tons.	1,050
" logwood	455	tons.	5,945
Skins, goat	14,202	lbs.	1,242

The following table, which is also an extract from the Collector-General's report, shows the relative importance of the Colony's chief agricultural exports in the last official year as compared with the two years preceding, in the form of percentage:—

Chief Agriculturul Exports.

—	1903–4.	1904–5.	1905–6.
	Per cent.	Per cent.	Per cent.
Sugar	8·2	8·1	6·9
Rum	6·5	6·4	5·6
Coffee	7·6	5·9	7 6
Dyewoods	7·9	5·4	4·5
Fruits	45·3	41·8	55·0
Pimento	6·0	9·5	4·5
Minor products	18·5	22·9	15·9

Annatto is almost entirely the production of the peasant class or small cultivators. In the last year the export reached the very respectable total of 457,248 lbs., and was of the value of £5,715. This is nearly three times as much as the highest previous record.

Cocoa also shows very satisfactory advance, viz., 31,066 lbs., as compared with 23,458 lbs. in the previous year, and 39,953 lbs. in 1902, which was our previous best record. As a considerable number of young plantations, which have been established in conjunction with bananas, is coming into bearing, we may look forward to a much more rapid development in this most desirable cultivation. It is to be regretted that a still larger proportion of the banana growers do not adequately realise the profitable opportunity which in so many places banana cultivation offers for establishing cocoa, almost free of cost. In the western parts of the island the criollo variety, distrusted in many places on account of its delicate constitution and poor yield, is reported to thrive very well, and its produce is among the best in value. The agricultural instructors and the local branches of the Agricultural Society devote a good deal of attention to much-needed improvement in the curing of the cocoa amongst the small settlers.

About 3,000,000 more cocoanuts were picked than in the preceding year, but the number was only about a third of what it was before the hurricane, and it will take years before this crop returns to its former proportions. It is satisfactory to know that the devastated groves have received the attention they needed, and there is likely to be considerable extension of cocoanut cultivation in the future. Disease amongst cocoanut trees is causing some anxiety in the western parishes.

Coffee is a crop which fluctuates much in bulk from year to year. This year the quantity exported is a good deal larger than last year, and the high mountain coffee, which comes largely from established estates, maintained its reputation and high value. But with the discouraging markets of late years the cultivation of coffee has considerably deteriorated and diminished amongst the peasantry who supply the bulk of the

island's produce. The rise in the rate of exchange in Brazil is likely to diminish the output of coffee in that country, and any considerable reduction in production, along with increased consumption, may in a few years give opportunities for realising profits of which we should be ready to take advantage. Even with present prices our output should be much larger than it is, and improved cultivation and curing and grading will certainly mean enhanced value. To this point also the attention of the agricultural instructors is being specially directed.

Amongst the exports of fruit, bananas of course hold the principal place, and the output for the year reached a total of 14,981,145 bunches of the reported value of £842,689. This is our best record so far, and exceeds the output of 1903 by 796,770 bunches, though the reported value was £292,061 less. To the United Kingdom we shipped 1,217,901 bunches, and 13,703,363 bunches went to the United States of America, while Canada took 57,611 bunches. The export to the United Kingdom was 522,949 bunches more than in 1904-5, and 941,446 bunches more than in 1903-4. To the United States of America we shipped 5,510,393 more bunches than in the previous year, and 6,239,480 more than in 1903-4. A larger quantity of fruit was shipped during the slack season (late summer, autumn, and early winter), during which time in previous years there has been much waste of fruit; and there has been steady increase in the production of bananas in the north-western parts of the island, for which small cultivators are principally responsible.

The export of oranges to the United Kingdom has considerably increased, being 21,640,730, as against 18,683,600 the year before, while the numbers exported to the United States of America, where there is a high import duty to face and also the competition of oranges from Florida and California, have correspondingly decreased, the numbers being 44,801,671 (1905-6), 47,441,518 (1904-5), 64,225,690 (1903-4). The export of oranges to Canada was 7,479,875, and shows steady increase during the last three years.

Special effort has been made to induce early maturity, as the earlier market in August, September, October is the best, and it is hoped that the restriction of shippers to a single registered mark will secure greater carefulness in the selection and handling of the fruit.

The exportation of grape fruit has materially increased, amounting to £9,109 as against £6,345 in the preceding year, and it was almost the same as in 1903. Increased familiarity with this delicious and wholesome fruit is certain to increase its popularity abroad, but for its proper appreciation not a little depends on the manner in which it is eaten.

The exportation of other fruit, mangoes and pineapples, continues to show somewhat disappointing decline.

The exportation of ginger has continued to diminish every year for the last four years; the fall in prices is no doubt the explanation, and, perhaps, absorbing attention to bananas. This is unfortunate, as the crop is one not liable to damage by wind except from fallen trees. In the exportation of lime-juice, also, similar decline during the last five years is apparent. In the past year the dry weather in St. Anns caused considerable failure in the crop.

Kola nuts continued to exhibit steady increase in the quantity exported—last year 63,811 lbs.—but the value of this export (last year £1,063) is not sufficient to attract attention from more profitable crops to its serious cultivation.

With regard to sugar it will be noted that while showing a positive increase of 40,623 cwt. in the quantity, and of £5,962 in the value exported, as compared with last year it declines from 8·1 to 6·9 in the percentage of relative importance amongst the island's exports. The year records considerable activity in the extension of cultivation and also in the cheapening of production by improvements in machinery and by the amalgamation of estates as central factories. In the Parish of Clarendon already three central factories are in process of formation, and on the north side at least two more are in contemplation. Cane-farming, *i.e.*, the growth of canes by large or small landowners on lands adjoining sugar estates for sale to the estates for manufacture, annually takes a more definite place in the industry, and with the lessons that have been taught by experience in other places will no doubt prove a very valuable auxiliary for increasing the output of sugar. It is clear that increased confidence has characterised the sugar industry as a whole, both in the operations of the planters and in the introduction of capital. It is estimated that in one parish not less than £38,000 worth of new machinery has been imported during the last four or five years. The successful working of the two recently established Planters' Associations in the island is in itself an encouraging symptom, seeing how little has been successfully attempted in the way of co-operation in the past, and how much may be effected by discreet combination.

Rum, while showing a decrease of 103,808 gallons, has brought a higher price, the increase in value over last year being £6,347. The efforts that have been made to protect the genuine article from imitation and from the competition of spurious compounds put on the English market as Jamaica rum have met with considerable success, and the appointment of a special officer to take the necessary action in the United Kingdom has been entirely justified. A three weeks' course for the scientific instruction of rum distillers was held in August at the Government Sugar Experiment Station, and ten gentlemen engaged in this work on sugar estates attended it. Experimental investigations in rum manufacture have

been zealously prosecuted during the year at the Sugar Experiment Station and at the Government Laboratory, with the object of standardising our rum at a standard of ethers, and of increasing its flavouring power by the utilisation of material which is at present wasted. These experiments are having the advantage of being tested on a commercial scale in the actual working of an estate. The Island Chemist is confident of very advantageous results.

The condition of the tobacco industry is disappointing. Last year we exported 40,325 lbs. of cigars valued at £20,312 (as compared with 35,437 lbs. valued at £18,372 the previous year), 6,554 lbs. of leaf tobacco valued at £245 (as compared with 15,775 lbs. at £612 the previous year), 11,261 lbs. of cigarettes, value £1,250 (as compared with 23,791 lbs., value £3,289, the previous year). The total value therefore of our export of tobacco, £21,807, is somewhat less than last year, £22,273, and although our export of cigars is considerably larger, it is certainly not as large yet as one might reasonably expect; and we should have a large export in tobacco leaf. But the cultivation must be on a large scale if the trade is to attract the dealers, and we have yet to find the means of developing largely the production of good tobacco amongst the peasantry, and of making the cultivation attractive and profitable to large growers. Attempt has been made to place our tobacco on the market as a pipe tobacco; the prospects are not discouraging, but at present supply is not equal to demand.

Pimento, like coffee, is a very fluctuating crop, and last year it was a small one, 91,725 cwt., as compared with 154,335 cwt. in 1905. This island being the only source of supply, the value usually varies inversely with the size of the crop. An attempt has been made to regulate and raise the price by a combination amongst the growers, with what permanent results remains to be seen.

The export of cotton amounted to 75,307 lbs. of lint, as against 14,210 lbs. the previous year. Insect pests have been favoured by the weather conditions and have considerably diminished the crop. The failure of cotton-growing enterprise in one or two localities has also been a discouragement, though the causes of failure have been special rather than general, and should not be in any way a permanent deterrent. The question of a suitable rotation of crops on land devoted to cotton cultivation has received a good deal of attention. Considering the place the island once occupied amongst cotton-growing countries, it is to be hoped that the cultivation of cotton on a much larger scale than has so far been attempted here will soon give it an important place in our agricultural records.

The export of animals and animal products has been relatively considerable during the year:—Cattle, 2,769 head, value £16,579, as against 776 head, value £3,273, the year before;

horses and mules, 237 head, value £3,408, as against 96 head, value £1,696, the year before; hides, 375,324 lbs., value £8,061, as against 320,050 lbs., value £6,000; sheep wool, 42,287 lbs., value £572, as against 40,236 lbs., value £335, the year before. Cuba has principally offered this outlet for cattle. The total number of cattle reported in the island exceeded the previous year by about 4,000 head, including working stock, but the number of horsekind "for breeding purposes" shows decrease to almost the same extent. There is, however, considerable increase in the number of horsekind used on roads. The number of sheep given in the Collector-General's return shows a reduction of 3,260 head, and while there is complaint that mutton is scarce, there is also complaint amongst producers that it is difficult to sell. As compared with some years ago, the general health of stock has been good, and no serious or widespread epidemic has been reported. The average price per head of the cattle exported, which included a good many young stock, is given at about £6; of the horses and mules exported, about £14. With the present methods of pen-keeping in Jamaica, which involve much supervision and care in consequence of the ticks that are prevalent during certain seasons of the year, our cattle can scarcely compete abroad with the cheaper cattle exported from South America, and have but little opportunity except when special breeds are required or stock of better quality for breeding purposes.

Crosses of Indian cattle are now found in most parts of the island, and have done much to improve the size and vigour and endurance of the native stock; and sanction has been obtained for the introduction of animals direct from India when opportunity is offered by ships bringing East Indian immigrants; such importations, though they are not likely to be numerous, will be of great benefit by bringing in fresh blood. The number of cattle imported during the year is given as 57 head, and the average value (nearly £20 a head) indicates that these have been animals of good quality. The same may be said of the horsekind imported (17 head, reported value £2,092).

With regard to dyewoods, improvement in demand has made the export of fustic (4,689 tons, value £10,551) much larger than in the preceding year (1,144 tons, value £2,546). Ebony and lignum vitæ also show considerable increase; bitter wood shows decrease. Logwood, with reduced prices, stands in about the same position as last year in the quantity exported, but was about £6,000 less in the value. The export of logwood extract, however, has continued in steady annual increase, and shipments to the value of £68,280 were reported last year. A second factory for the preparation of logwood extract in the island has been established in St. Elizabeth since the close of the year.

The steady increase in the items grouped together as minor products is satisfactory. In 1903-4 their value was £218,726,

in 1904-5 £223,520, in 1905-6 it had climbed to £280,242. The operations of the Agricultural Society and the agricultural instructors are to receive the credit for much of this improvement. Amongst the minor products exported we note that yams to the value of £5,328 were shipped last year, the average export trade in this vegetable for the previous four years being under £150. The export, of course, has been in response to the demand of West Indian labourers at the Isthmus for their accustomed food. The crop is almost exclusively produced by small cultivators and chiefly in the Parish of Hanover. There are indications that during the construction of the canal there will be a very considerable demand for vegetables from this island. Rubber does not yet find a place calling for special notice amongst the exports, but commencement has been made in cultivation, and the prospects are encouraging. The export of sarsaparilla also is of increasing value, and it is likely to be a useful addition to the list of products profitable for peasant cultivation.

The following imports of agricultural products during the year 1905-6 deserve mention. While the increase that is reported in most points is welcome evidence of increased purchasing power amongst the people, it suggests very seriously the need for increased local effort to supply the local demand:—

—	Quantity.	Value.
		£
Bacon and Hams	243,670 lbs.	7,332
Salt Beef and Pork (wet)	13,087 barrels	37,868
Butter and substitutes	796,176 lbs.	22,542
Cheese	190,111 „	5,544
Milk, condensed	44,847 cases	28,590
Lard	163,846 lbs.	2,389
Corn	201,183 bushels	30,177
Meal	31,922 barrels	22,026
Peas and Beans	15,845 bushels	5,545
Rice	9,841,923 lbs.	44,289
Tea	55,911 „	2,795
Leaf Tobacco	59,614 „	993
Tobacco, manufactured, and Cigarettes	117,075 „	12,668

In all the above, except lard, butter, meal, peas and beans, rice, and tea, increase is shown on last year's figures.

Amongst the local efforts to develop manufactures for export or for the supply of local demand (in addition to the sugar factories and the new logwood factory in St. Elizabeth, already referred to) may be mentioned the continued growth of the jippi jappa hat industry. The plant which produces the straw for this manufacture grows readily in most parts of the island, and in several places classes for instruction in hat making have been established, which promise to encourage a remunerative

industry for women. The demand for the hats still considerably exceeds the supply. In the Parish of Clarendon two starch factories are now in operation, and in St. Andrew there is a new factory for canning fruit. The establishment of a creamery in Manchester and of successful processes for curing bacon and hams in St. Andrew also deserves mention. The increase in the output of cigars has already been noted. The tea plantation in St. Anns has extended its cultivation, and its produce improves in quality. Benefiting as it does by the high duty of 1*s*. per lb. on imported tea, now that the possibility of successful production is demonstrated, it will no doubt grow in importance amongst the local enterprises. Perhaps I may add to this list of developing industries (which I would wish to see a much longer list) the brick manufacture at the General Penitentiary, as the output has now become so considerable as to allow of some export.

While the returns of the agricultural exports show us the crops harvested during the year, the returns which deal with the acreage under cultivation guide us as to what we may expect in the future. It is satisfactory to note that the Collector-General's figures under this head are equally encouraging, and indicate considerable progress in the Colony.

The total acreage under tillage is given as 246,373 acres, as against an average for the four preceding years of 217,896 acres. Towards this total increase of 28,477 acres cane cultivation (chiefly in the Parishes of Clarendon and Westmoreland) contributes 980 acres, coffee 542, bananas 23,112, cocoa 1,600, ground provisions 2,379, and minor items 1,192 acres.

There are now reported 22,415 more acres in bananas, and 3,043 more acres in cocoa than the returns for 1902-3 give. This increase denotes considerable agricultural activity in these products and a complete recovery from the effects of the hurricane of August, 1903. But the effect of the hurricane is still very noticeable in the case of cocoanuts, which must take several years to recover. Possibly, however, there would hardly be as large a difference as that reported, viz., 4,078 acres (comparing 1903 with 1906), if young plantations were given in as in cocoanuts.

The area in minor products includes 609 acres in oranges (an increase of 401 over the four years' average) and 480 acres in cotton (an increase of 472 acres) and 165 acres in rice (an increase of 42 acres), 259 acres in ginger (an increase of nine acres), corn exhibits a decrease of nine acres, and tobacco of 74 acres. Rubber makes its appearance for the first time and registers five acres; the Botanical Department has distributed a considerable number of rubber plants.

The acreage assigned to pasture land of different sorts shows an increase of 23,878 acres over the previous four years' average, and this includes an increase of 2,731 acres in guinea grass, which is our most valuable grazing.

These figures do not claim to represent accurately the exact distribution of the cultivated land in the Colony. Often two or more cultivations go on together, *e.g.*, bananas and cocoa, and the statistics are compiled from the voluntary ingivings of taxpayers and do not immediately affect revenue. But they are fairly reliable as indicating tendency, and the tendency which they indicate is in the direction of improvement and is satisfactory.

The Board of Agriculture controls the work of the Botanical Department, such of the work of the Government Laboratory as is connected with agriculture, and the sugar experiment scheme.

On the suggestion of the Board an Advisory Committee was appointed early in the year to co-operate with the Island Chemist in the management of the sugar experiment. This Committee consists of four experienced sugar planters. It was found necessary, by an amending law (3 of 1906) to remove some restrictions which it was thought existed under the law establishing the scheme (45 of 1903) and might prove inconvenient, and to extend the discretion of the Board of Agriculture subject to the sanction of the Governor in Privy Council. Out of the Imperial grant of £10,000 made by Parliament in aid of the sugar industry in 1903, a sum of £3,000 had been devoted to capital expenditure, allowing £1,000 to the Sugar and Fermentation Laboratory buildings, fittings, and appliances; £1,000 to the Experimental Distillery and its appliances; £1,000 to alterations and new plant on estate distilleries, such as the experimental processes, which the Board of Agriculture might initiate or desire to control, would demand. Of this £3,000 only £447 15*s.* 9*d.* now remains unexpended. Out of the Imperial Grant £7,000 was devoted to annual expenditure, and the portion of this now remaining unexpended is an estimated balance of £5,606 9*s.* It is estimated that this will adequately finance the scheme until April, 1910.

The report of the Director of Public Gardens and Plantations covers the experimental cultivation (which has chiefly been at the Hope Gardens) of tobacco, cassava, sugar cane, cotton, rubber, cocoa, coffee, fodder plants, fruit plants, and ground provisions; also some educational agricultural work; also the work of the Department in connection with the Library and Herbarium at Hope, the maintenance of the Garden at Hope, Castleton, King's House, Kingston, and the Hill Gardens; and the distribution of plants to private growers.

The experiments in the cultivation and curing of Sumatra and Havana tobacco were continued during the year for the sake of fuller experience in cultural requirements and in the cost of cultivation. From the report of the experts, to whom samples of the tobacco were submitted, it appears certain that tobacco of the very best quality for use as a pipe tobacco,

particularly when blended with other sorts, can be grown; and also wrapper tobacco "equal to most in the world."

The Gardens have continued experiments in cultivation of local and imported varieties of cassava, and the Government Laboratory has tested the results. The different varieties prove to be very variable under different conditions of soil and locality, not only in the yield of tubers but in their starch content and period of profitable growth. The experiments need to be continued, and this is being done. Already, however, cassava has been grown without irrigation on a soil and with a rainfall which without irrigation would certainly not give good crops of sugar cane; and it has produced a yield of starch greater than has ever been recorded before of any starch-yielding plant. There is thus the prospect of large areas of land at present yielding little or nothing becoming useful for the cultivation of cassava for starch manufacture. In Clarendon, 400 acres are now reported as under cultivation, and two starch factories have been established.

The experiments with cotton cultivation have chiefly aimed at determining the question of suitable rotation, and attention was also given to the insect pests to which the weather conditions of the year have been eminently favourable.

In sympathy with developments elsewhere, several plantations of rubber have been started in different parts of the island, some of them on a rather experimental scale. Castilloa plants to the number of 4,359 and 5,642 Para rubber plants were distributed to planters during the year.

The effects of the hurricane have proved the practical value of recent experiments in the budding of cocoa trees which bear inferior fruit or have had their main trunks damaged. Experiment has also been made in removing the tap roots of cocoa trees, when they fail on reaching a layer of uncongenial soil.

Experience in the growing of alfalfa, which is not only very valuable as a fodder plant but materially improves the subsoil by the penetration of its roots, seems to indicate that the artificial inoculation of soil with bacteria, which is required elsewhere, may be dispensed with in Jamaica.

Experiments in growing gram were to a great extent frustrated by caterpillars, which damaged the plants, and the birds and rats which plundered the grain, but they will be resumed next year.

The date palms have borne good fruit, pollenisation having been effected artificially by tying bunches of pollen-bearing flowers over the bunches of the female flowers as soon as the spathes opened, and several young date palm suckers have been distributed in suitable localities. The collection of varieties of pineapples has been enlarged by fresh importations, and experiments in cross pollenation have been continued with the object of combining good carrying qualities with all that is esteemed in flavour and appearance—a combination of virtues which no one variety at present adequately possesses.

The collections of varieties of bananas and mangoes have also been considerably augmented, but the attempt to procure several new plants from Singapore by the steamship "Indus" was unfortunately not a successful one. Native and imported varieties of sweet potatoes, cocoes (or eddoes), tanias, and yam continue to be grown for experimental purposes. The Bulletin of the Botanical Department has been published monthly (the periodical distribution within the island being reported as 1,696 copies), and has contained a number of papers dealing with agricultural matters of local or general importance.

During the year 69,400 economic plants and 14,133 ornamental plants were sold from the Hope Gardens, while 171,810 plants of economic or medicinal value or useful as timber or shade trees have been distributed free.

The agricultural work conducted at the Government Laboratory covers a considerable field. A great many samples of soils, foodstuffs, cassava tubers (for starch), milks and fertilisers were analysed, and some injurious insects studied.

Amongst the interesting results reported, corn grown in the island has been found much richer in albumenoids than the corn imported from the United States of America, of which we import £30,000 worth without reckoning the £22,000 spent on imported meal. The high food value of guinea corn has been demonstrated by analysis, and much more of it should be grown. Meals from the sweet potato and coco (or eddoe) were also proved to be useful food products.

The results of experiments with cassava show an increase in the yield of starch from 3½ tons to 5½ tons to 7½ tons at 12 months, 15 months, and 21 months' growth, respectively.

Another interesting investigation was as to the expediency of utilising for fibre the stems of the banana trees which ordinarily are left to rot in the fields. The manurial value of 200 stems from an acre was found to be £2 (potash being the principal constituent). This is lost to the land if the stems are sold. If an abundant yield of good commercial fibre can be got, the pecuniary return would justify the corresponding loss of humus and manure, but not otherwise.

The chief interest of the year at the Sugar Experiment Station has been in the rum manufacture, and particularly centres round the question of the possibility and the expediency of standardising rum according to ether contents, and of increasing ether contents as a means of raising the market value of the spirit.

There have also been field experiments carried out under the direction of the Experiment Station to test the effect of manures in conjunction with soil analysis, and the value of specially selected seedling canes. Cotton, coffee, and tobacco have been similarly experimented with, and about 100,000 tops and cuttings of selected seedling canes were distributed.

The instruction imparted to teachers with the object of stimulating and improving agricultural teaching in the elementary schools may best find place in the educational section of this report, but the special opportunities afforded for technical instruction from which commercial advantage may be directly looked for, and the efforts made to reach the labouring population now engaged in productive labour may be noted here.

The apprentices at Hope Gardens who receive practical teaching with demonstrations in agricultural and horticultural work have continued to find good positions in private establishments in Jamaica and elsewhere after leaving the Gardens. The laboratory students also once a week, for 2½ hours, have lectures and demonstrations in agricultural work dealing particularly with the economic products of the island. The special course for distillers, held in August and lasting three weeks, was a very successful course, and besides the ten gentlemen who took the full course, seven others subsequently attended for special instructions in distillery methods. Rum manufacture is certainly the subject now of more scientific interest and investigation than it has been in the past. Only one of the three £36 scholarships, offered by the Board of Agriculture and tenable at the laboratory, was awarded, owing to lack of candidates of sufficient standard of attainments.

The work of the agricultural instructors increases in amount and continues to be popular and to promise success. Two of these officers are under the control of the Board of Agriculture, and three others giving different proportions of their time to the work are controlled by the Agricultural Society. Each works within an appointed district, and they visit, lecture, and demonstrate either in connection with the local branches of the Agricultural Society or (where none of these exist) independently. They give instruction either on the general principles and practices of agriculture, or deal with special difficulties or defects of cultivation in any particular locality, or suggest new objects for cultivation. They help to organise and judge at Agricultural Shows, visit and report upon school gardens, and advise the teachers about such work. They also instruct and judge the holdings which compete for the prizes offered under the Prize Holdings Scheme.

The Prize Holdings Scheme has continued to prove a very successful means of testing the practical result of the instructors' efforts. In recent years three parishes have been dealt with each year; this year the Parishes of Clarendon, St. Catherine, and Portland have been included. It is arranged that for several months before its turn comes round an agricultural instructor works the parish so as to prepare the ground, and take advantage of the stimulus which the prospect of a sort of examination may impart to his teaching. There are three classes of holdings according to acreage, and there were altogether 239 entries in the three parishes.

The Agricultural Society has continued to carry out the objects with which it was established, 11 years ago, with very commendable zeal. These objects were to obtain useful information and to disseminate it, to encourage improved cultivation of products and improved breed of stock, and to watch over the agricultural industry generally. The Board of Management of 15 members, with the Governor as President, and two Vice-Presidents and the Director of Public Gardens as Deputy Chairman, is representative as far as possible of the different branches of our agricultural industries and also of the different parishes in the island. The central society now has 498 members, and the membership of the 50 branch societies, scattered all over this island, is reported as 2,580. The society's journal, issued monthly with a publication of 3,365 copies, is sent to all the members of the central society and the branch societies alike; and it not only stimulates and guides agricultural improvement by disseminating useful information in a popular form, but serves a very valuable educational purpose in providing literature to many to whom reading as a source of information is not familiar. The half-yearly reports of the Society's work show that its interests have covered a very wide field. The Government grant to this society in 1905-6 was £1,250.

MUNICIPALITIES AND BOARDS.

Jamaica is divided into fifteen parishes, of which each is under the control of a Parochial Board for local purposes, such as the maintenance of local roads, poor relief, the management of markets and sanitary matters. All these bodies are elective with the exception of the Port Royal Parochial Board. The Kingston Board is known by the name of the Mayor and Council of Kingston, but it stands on the same footing as the other Parochial Boards. At the same time certain functions, namely, the management of water-works, sewerage, markets, and certain street improvements, are in the hands of the Kingston Commissioners, a body not elected, but appointed by the Governor. The operations of this body are explained at the end of this section. The Parochial Boards have power to levy a general rate and also a special road rate for purely local purposes, such as water works. Special local rates may also, with the consent of the Government, be imposed. The highest parochial rates are those of Kingston, where the general rate stood at 3*s.* 1*d.* in the £1 (rental value) in 1905-6, but has been reduced to 2*s.* 10½*d.* for the year 1906-7. In every other parish taxation in on the capital value. The lowest rates are those for St. Elizabeth, the general rate of which was 7*d.* in the £10 capital value, with a road rate at one penny. The adjoining Parish of Manchester had a general rate of 8½*d.*, and found it unnecessary to levy a road rate, relying on the tax on wheel and on horsekind, by which all the road funds of the

parish are fed, to provide the means of maintaining their parochial roads. The general rates of the other parishes varied from 1*s.* 10*d.* to 10*d.* in Clarendon, and in all the other parishes the road rate stands at a penny.

The process of repayment of debt has proceeded satisfactorily. At the present time the following parishes are entirely free from debt, viz.: Kingston, Port Royal, St. Andrew, St. Mary, St. Ann and Manchester, and the total amount owing by the Boards to the Government of Jamaica stood on the 31st March last at £45,642.

With the consent of the Government, special districts may be formed within a parish, and a special district rate levied for purely local purposes, such as waterworks. This power has been exercised in a few cases.

There are two Irrigation Boards of sufficient importance to deserve notice; the Rio Cobre Irrigation Canal and the Vere Commission. The former is now under the management of the Colonial Secretary and the Director of Public Works, and the large extension of the cultivation of bananas in the district which it irrigates is due to its existence. The Vere Commissioners are partly elected by the consumers of water and partly appointed by the Government. Their works have scarcely emerged from the difficulties incidental to construction, but they have already enabled the proprietors of the lands in South Clarendon to extend their cultivation both of sugar and of bananas.

There are also various charitable endowments administered by boards of trustees. An account of these, which are mainly of an educational nature, is to be found in the Jamaica hand book.

The Kingston General Commissioners.—The Kingston General Commissioners manage the water supply of Kingston and its suburbs, the gas works, the markets and slaughter houses, the Kingston Street Improvement Scheme, and the Sewerage System, which is at present incomplete.

With regard to the water works, they supply the city and Liguanea Plains from two sources, the Hope and the Wag Water Rivers. The revenue for the year 1905-6 was £17,841, as against £17,472 the previous year, and the expenditure £6,101 as against £6,247. There was thus a small increase in receipts and a small reduction in expenses. The original loan capital of the water works, £167,000, has been reduced by debentures redeemed to £144,067, and there were at the end of 1905-6 sinking funds accumulated for future redemption to the amount of £10,481. The Engineer reports that the works were maintained in efficient state, and a full supply of water provided, the average being five and a half million gallons daily. The Island Chemist's bacteriological and chemical reports show the water to have been of excellent quality.

With regard to the Kingston Gas Works: the receipts for the year are given as £7,148 as against 6,643 in the preceding year, the expenditure as £5,100 against £4,990. The loan capital—£30,000— has been reduced by redemption of debentures to £24,986. Street lighting was extended in some of the suburbs of Kingston, and the lighting in the city somewhat improved. The consumption of gas by private consumers and for the working of gas engines shows some increase.

With regard to the two large markets, the "Victoria" and the "Jubilee" markets, the receipts reported are £3,525 as against £3,373 in 1904-5 and the expenditure as £2,187 against £2,105 in 1904-5; the extra expenditure being attributed to additional sanitary precautions carried out.

At the slaughter house 5,344 cattle were slaughtered besides smaller animals, but a good deal of the butcher's meat consumed in Kingston and its outskirts is slaughtered in the adjoining parishes of St. Catherine and St. Andrew. The receipts at the slaughter house were £1,232 as against £1,180 the preceding year, and the expenditure £562 as against £550.

With regard to the Kingston Improvement Works, the large intersecting sewer and the works of the pumping station and on the street sewers having been completed in past years (with a total mileage of 46 miles, including the house connections laid down to the boundaries of private property), the work of connecting private premises with the sewers has been proceeded with; and 2,030 houses are now attached as against 1,896 last year. The quantity of sewage pumped daily averages 125,000 gallons. No additional work of street re-construction or in connection with street sewers was taken in hand during the year 1905-6, and the total length of streets re-constructed remains about 12 miles.

The interest and redemption charges required for such of the works constructed or managed by the Commissioners as are not remunerative are provided partly out of the profits of the remunerative works, partly by a small allotment (£600 a year), from the tax on wheels and horses collected in Kingston by the Mayor and Council, and partly by a special rate known as the Improvement Rate. This rate, which in 1903-4 was 9*d.* in the £1 annual value, has since that date remained at 7½*d.*

MILITARY AND NAVAL.

The naval buildings at Port Royal remained throughout the year in charge of the Director of Public Works.

The three companies of European Infantry were withdrawn from Jamaica, but detachments of the Royal Engineers and Garrison Artillery remained on the station, together with details (Europeans).

On the other hand a whole battalion of the West India Regiment was located in Jamaica in lieu of the strength previously stationed in the colony, viz.: Headquarters and four companies.

The Militia Infantry in this their last year, prior to disbandment, distinguished themselves by excellent shooting.

CONSTABULARY AND CRIME.

The strength of the constabulary force at the close of the year 1905-6 was as follows:—

Officers	18
Sub-officers	135
Constables	635
District Constables	777

These figures include the Water Police Force of 33 men, who look after the waterside protection of wharf premises, &c.; it includes also detectives and mounted orderlies. There were one sub-officer less, three constables more and 31 district constables less than at the close of the preceding year. The district constables were nearly 100 below their allowed strength.

There was a good deal of sickness amongst the men of the Kingston Division, attributable partly to the unsatisfactory barrack accommodation at Sutton Street, which is being remedied; and many of the trained men have been attracted to the Isthmus of Panama by the high pay which they command there. This has not affected the number of applicants for admission, but it may affect the standard of the recruits.

The Inspector General's Report contains an interesting comparison between the proportion of police to population in Jamaica, and the proportion in other Colonies with which comparison is reasonable. It is excellent testimony to the law-abiding character of our population. Major Kershaw notes, that while in Jamaica there are 9·83 policemen to every 10,000 inhabitants; in Barbados the number is 15·83; in Mauritius 20·22; in British Guiana 22·10; in Trinidad 23·98; in Cyprus 29·53. It has been arranged to provide one hundred additional men in the ensuing year. These will be very valuable as a reserve which will ensure better training for recruits, help to keep the divisions up to their full strength, and allow some divisions to be strengthened, which have often been too weak in the past to cope successfully with their work.

The Inspector-General speaks generally with commendation of the way in which the duties of the police force have been performed in the year under report. These duties are very multifarious; they include preservation of the peace, and detection of crime, the apprehension of summoning of people who violate criminal or conservancy laws, the execution of warrants, summonses, and subpœnas, and other processes which courts of justices of the peace may issue, assistance to health

and sanitary officers in the execution of their duty, apprehensions of smugglers and others who violate Revenue Laws, the escort of prisoners and patrol duty, seizure of contraband goods and taxable property for non-payment of taxes, and the keeping of order in towns, and villages and places of public resort.

The district constables are paid at the rate of 2*s*. a day, when engaged in their work. The system works moderately well, but tends to place the men under a suspicion of making work.

The total number of cases prosecuted both by private parties and by the police was 27,583, as against 30,267 the previous year, and 28,991 in 1903-4; of these cases 10,202 were prosecuted by the police. The percentage of convictions on the whole number of prosecutions was 60·26; on the police cases, 78·14.

As was to be expected, Kingston shows by far the largest incidence of crime, viz., 883·43 per 10,000 of its estimated population; the Parish of St. Thomas shows the lowest (239·61); but six other parishes show less than 400. A very large proportion of the cases brought into court in Jamaica on summonses issued by private parties are grotesquely trivial, and many of them more of a civil than a criminal character. The incidence of crime therefore is by no means as serious as the figures might appear to indicate. Nearly the whole of the reduction (which amounts to 2,684 cases in the year 1905-6 as compared with the previous year) is under the head of "Offences against property committed without violence."

"Offences against the Person" in Circuit and Resident Magistrate's Courts show 601 convictions as against 552 (1904-5), and 449 (1903-4). Offences of this class prosecuted in petty sessions show a few more convictions than in the preceding year, but considerably fewer convictions than in 1903-4. There were three convictions for murder during the year, as compared with two and four in the two previous years respectively.

"Cutting and Wounding" is the only class of serious crime which calls for any comment, the convictions being 68 and 115 more than in 1904-5 and 1903-4 respectively. But it hardly calls for graver comment than the Inspector-General's remark —"that although the cases are not very frequently of a serious character, the majority being attributed to petty jealousies and to small fights, still the offence is unpleasantly frequent throughout the Colony, and requires vigorous punishment when there is the slightest tendency to anything of a serious nature."

Amongst "Offences against Property committed with Violence," the cases of "Breaking into Dwelling Houses and Stealing" and of "Breaking into Shops and Warehouses and Stealing" both show decrease as compared with the year 1904-5, but they are still higher than in 1903-4. Under

"Burglary," however, there were 9 convictions as compared with 4 in 1905 and 2 in 1904. In Kingston and St. Andrew it is hoped that what the Inspector General describes as an "epidemic of burglary" has been brought to an end by the conviction of the principal offender and his accomplice who received the stolen goods. In Port Antonio shopbreaking was exceedingly prevalent for a time, and entailed much extra patrol work on the police. As a very large proportion of dwelling houses, either from carelessness or for the sake of ventilation, offer exceptional facilities to prowlers by their unfastened doors or open windows, it is not very surprising that thieves are often tempted to enter in. However, there is less carelessness than hitherto, for the number of houses in Kingston found by the police open or inadequately secured at nights is only about one-half what it was two years ago.

Convictions in the cases of "Offences against Property committed without Violence" were 3,479 as compared with 5,015 in 1904-5, and 3,047 in 1903-4, the decrease in the more serious cases tried in the Circuit or Resident Magistrate's Courts being 1,294; in the minor offences tried in Petty Sessions 242 as compared with last year. The convictions in cases of Larceny of Ground Provisions were 59 less and 7 more than in 1905 and 1904 respectively; of Simple Larceny 353 less and 214 more, and of Praedial Larceny 1,071 less and 242 more.

Praedial Larceny, as was forecasted, has diminished with favourable seasons and good crops, for the bounties of nature while they increase opportunities diminish temptation, and make the man who is ready to live on his neighbour's crop at any time of need, temporarily independent; in times of abundance also people are less careful to prosecute in petty cases. Nor is it unlikely that emigration has relieved us of some of our professional pilferers. It is hoped that the abolition of the itinerant produce-dealing agent with the 2*s*. licence will further reduce the temptation and opportunity to turn pilfered goods into ready cash.

The fact, to which the Inspector General calls attention, that the average value assigned to the stolen property in 2,493 cases of Praedial Larceny only amounts to 1·03 shillings, shows that most of this work is of the nature of pilfering. Its seriousness lies in the proportion of undetected crime, which must from the circumstances be very large; in its discouraging effect on honest industry amongst a people prone to fatalism and therefore rather easily discouraged; in the cruelty of it, when the weak and indigent are its victims and lose in a single raid or more frequently, little by little, the food supply which represents almost their whole provision for future sustenance. Nor is it a little demoralising to any community, even if individual offences are trivial in themselves, when practices become prevalent which demonstrate to large classes only too ready to

learn the lesson that the sweat of the brow is unnecessary for securing a livelihood.

It is such considerations that justify the heavy sentences passed upon praedial thieves, and demand that punishment shall take its most deterrent form. It has to be remembered that in four-fifths or perhaps a larger proportion of cases, the praedial thief plunders the crop of members of the community of his own position or poorer than himself, and not the cultivation of a large proprietor.

Short terms of imprisonment with flogging on a second or subsequent conviction are the punishment least costly to the community, and according to local opinion most efficacious in deterrent effect. Excluding the cases in which juvenile offenders were switched in lieu of being sent to goal, only 54 persons were flogged on reconviction for Praedial Larceny in the year under review, the total cases of flogging being 186 as compared with 319 the year before.

In all the sub-classes of "Malicious Offences against Property"—arson, felonious wounding of stock, forcible entry and wilful damage—the year's returns show reduction. Three of these classes of crime are the means that readily suggest themselves to people bent upon revenge; arson also is particularly tempting to such as desire to get money dishonestly out of fire insurance.

An increase of 162 over the previous records in convictions for cruelty to animals is satisfactory evidence of increased attention to this offence on the part of the police, and also of an advance in public sentiment on the subject. In some measure at least, we may credit this to the Society of Prevention of Cruelty to Animals, and to the attention which the matter receives from some of our tourist visitors. There has been ample room for such improvement, though the cruelties perpetrated are mostly the result of indifference, and a lack of sympathy which is in itself, perhaps, due to defective power of imagination, amongst our lower classes; there is little taint of deliberate cruelty in the racial character.

The number of habitual criminals under police surveillance during the year was 1,978, practically the same number as in the two preceding years; and 750 of them were reconvicted during the year. It is now recognised as wise policy to remove these jail birds from the free enjoyment of the opportunities they abuse, and the transfer of their cases to the Circuit Courts for trial, regardless of the gravity of the specific offence, will secure longer security for the public against their depredations, and relieve the police of some of the recurrent trouble of recapturing them.

PRISONS.

The number of persons in custody at the end of the year was 1,317, as compared with 1,432 at the same date in the preceding year, but about 100 in excess of the average number of the five years previous. The total number of committals was 5,751, as compared with 7,604 in 1904-5; the latter was an unusally large number, and attributable no doubt to the economic effects of the hurricane of 1903. "The reconvictions amounted to 1,528, of which 638 were second convictions, 312 third, and 578 fourth or more."

Both in the St. Catherine District Prison and in the General Penitentiary, Kingston, school has been regularly held and religious services have been regularly conducted by the representatives of various denominations. The death-rate in the General Penitentiary was higher than usual (45·04 per 1,000 of inmates, as against 34·99 the average for the previous five years); but the sanitary conditions of the prisons have been reported as quite satisfactory, and the buildings in good order.

The cost of the two prisons was as follows:—

General Penitentiary (average number of prisoners daily, 733), including labour charges, fuel for kilns, soap, implements, blasting materials	£13,868
St. Catherine's District Prison (average number of prisoners daily, 554)	6,395
	£20,263

against this, we set:—

General Penitentiary, gross earnings in cash	£3,834
Cost of materials used for prison	113
St. Catherine's District Prison, gross earnings in cash	1,156
	£5,103

thus the nett cost of the prisons was £15,160, or £11 15*s.* 7*d.* per prisoner per annum. In the preceding year this was £9 19*s* 4½*d.* As much as possible is done to keep down the expense, by utilizing the labour of the inmates of the prisons. The St. Catherine's District Prison supplied farm produce, valued at £740, for the consumption of its inmates, and produce was sold to the value of £570. Clothing was made, mended, and washed for prisoners at the General Penitentiary to the estimated value of nearly £1,100. There would be further reduction in the reported cost of the prisons if the value of work done for other public institutions that gives no return in money were credited. Washing for the Public Hospital done at the General Penitentiary was estimated at

£468, and stones supplied to the Public Works Department from St. Catherine's District Prison at a value of £546. The total value of labour at the prisons giving no return in money is estimated at £7,301.

The discipline of regulated agricultural labour on the farm at the St. Catherine's District Prison is directed to the reformation of offenders who are not hardened criminals, but it is open to criticism as deterrent from crime.

At the General Penitentiary brick-making has been the leading industry. In fact, this brick-factory may be reckoned amongst our larger manufacturing concerns. The output of bricks for the year (clinkers, hardburnt, red, and yellow) amounted to 1,568,975; and the island was able to export bricks. The produce of the prisoners' labour included 10,709 barrels of lime, 1,958 tons of road metal, and 2,439 tons of marl. There was also some manufacture of coir, and beds and mats from cocoanut fibre.

PUBLIC WORKS AND RAILWAY.

The work of this Department during the year 1905-6 was as far as possible restricted to maintenance, and protection against damage. Very little new work was carried out, except the completion of the lunatic asylum (in the matter of buildings), and some deviations (in the matter of roads). Considerable progress was also made with the Falmouth Harbour Improvement Scheme, though much less progress than was expected.

2. The total expenditure by the Department during the period was £100,563 5*s.* 11*d.*, summarised under the following heads in the Director's Annual Report:—

"Establishment:—					
"Salaries and other charges			£13,841	18	5
"Works under Public Works Votes:—					
"1. Main roads and bridges, maintenance ...			57,975	1	8
"2. Main roads and bridges, new works ...			4,625	2	3
"3. Public buildings and telegraph, maintenance			6,761	3	6
"4. Public buildings, new works, including works under Laws 6 of 1893, 40 of 1894, and 27 of 1897 ...	£4,019	14 8			
Falmouth Harbour Works	2,799	9 10			
			6,819	4	6
"5. Lighthouses, maintenance			1,585	17	11
"6. Rio Cobre Irrigation, maintenance ...			1,675	15	9
"7. Spanish Town Waterworks			458	4	3
"8. Special relief works			156	17	7
			£80,057	7	5

"Work done for other Departments £6,442 7 7

"This included:—

"Post Office, including mails conveyance	£2,593	8	4
"Education	416	17	7
"Jamaica Government Railway	1,892	13	

"This expenditure was £14,365 14*s.* 7*d.* less than that of the preceding year. The principal causes of this were the small expenditure by the contractor upon the Falmouth Harbour Works, and the almost entire absence of expenditure upon Special Relief Works Account.

"The cost of the Department was equal to 13·8 per cent. of its total expenditure.

"The total length of main roads at the close of the year was 1,943 miles 75 chains, or practically the same as that at the close of the previous year.

"The average cost of ordinary maintenance per mile of road was £26 2*s.* 2*d.*, or £1 10*s.* 3*d.* less than in the previous year. For the several parishes the highest average cost was £44 5*s.* 5*d.* per mile in St. Mary, and the lowest average £15 18*s.* 9*d.* in St. Elizabeth. The average annual expenditure for ordinary maintenance in the previous eight years was £24 1*s* 2*d.* Including special repairs to bridges, retaining walls and protective works, the average cost per mile of maintenance of main roads and bridges was for the whole island £29 16*s* 5*d.*"

Two circumstances combined to lower the standard at which our main roads have been hitherto maintained by the Department. Except in St. Thomas, where some damage was done to bridges, and in Portland, there were no flood-rains, such as in many previous years have been recorded, but in several parts of the island moderate rain has continued over longer periods than usual; and at the same time, in many parts there has been considerable increase of heavy traffic. In North Manchester, Trelawny, Clarendon, Hanover, and in the hills of Westmoreland, increased banana transport, in the plains of Westmoreland increased transport of logwood, and in Vere the cartage of new machinery for the sugar estates, have found out the weak places in the surface of the roads. The studied economy of past years has made the crust of many roads thinner, and the metalled area narrower than it should be—the sparing use of metal being the point in road repair where the opportunities and the temptation of economy are greatest. Given damp weather, and heavy traffic under such conditions, and unusual damage is bound to ensue. Scarcity of labour towards the close of the financial year also necessitated the postponement of some work which it had been proposed to carry through.

The departmental expenditure on public buildings and undertakings other than roads and bridges, which is chargeable to general revenue, was, as regards repairs and maintenance, £647 below the estimate (£6,507); as regards new works, £3,288 less than the total amount authorised. The total amount authorised for new works, namely, £8,062, consisted partly of the amount originally voted, £6,991, and partly of a sum of £1,071 subsequently authorised. Almost the whole saving (£3,288) was due to the fact that the expenditure of the contractor for the Falmouth Harbour improvement (£2,799) did not reach the amount provided for the work —£5,901—within the financial year.

The length of telegraph lines remained practically the same as in the previous year, viz., 695 miles.

Expenditure on public buildings and telegraphs for maintenance and for new works, respectively, is classified in the Director of Public Works' Report as follows:—

—	Repairs.			New Works.		
	£	s.	d.	£	s.	d.
A. Churches	85	14	0	Nil		
B. Courts and Public Offices	1,248	12	2	127	6	1
C. Prisons, Reformatories, and Police Stations.	1,355	1	3	887	4	4
D. Hospitals and Asylums	1,030	2	8	404	18	5
E. Miscellaneous (excluding telegraphs) ...	1,482	4	0	3,354	4	11
F. Rents, Taxes, and Rates...	611	15	9	Nil		
G. Furniture	45	19	8	Nil		
	5,859	9	6	4,773	13	9

Under the Public Buildings Loan Laws, the wards in the new female lunatic asylum were completed at an expenditure of £2,045.

The four lighthouses were maintained in good condition and received the necessary repairs; and at Port Morant the outbuildings destroyed by the hurricane of 1903 were replaced by substantial structures. Out of the sum authorised for their maintenance (£1,642) there was, at the close of the year, a balance of £56 unspent.

The Rio Cobre Irrigation Works, dam and head works, main and branch canals, were all maintained in good order. The new works and their maintenance cost, respectively, £56 and £261 less than their estimates; and a further saving of £338 was effected in the total estimated expenditure (£1,675). The earnings for the year (£8,458) and the revenue collected (£9,154) exceeded the previous year's returns by £525 and £1,238, respectively. The area benefited by the Rio Cobre Irrigation Works is 11,700 acres, of which 8,800 acres are reported to be in bananas, 800 acres parts of sugar estates,

2,100 acres on pens and in guinea grass, 200 acres in provision grounds, and 600 acres in oranges. The canals yielded 13,841 cubic yards of water per hour, an average supply of 1·2 cubic yards per hour per acre. These figures are much the same as those given last year.

The waterworks at Spanish Town and at Linstead are managed by the Public Works Department, the waterworks in other parishes being under parochial administration. At both places they were maintained in effective condition.

The small expenditure under special relief works, £156, was entirely in connection with lands acquired for relief works previously carried out, the titles for which could not be obtained earlier.

The expenditure on behalf of the Post Office Department, £2,593, was almost all incurred for the conveyance of inland mails. It is reported that "the service was, as a rule, conducted with efficiency and regularity."

The expenditure charged to the Lands Department, £726, was incurred mostly in the construction of roads opening out Crown Lands intended for sale or allotment.

A school house was erected at Annotto Bay, and buildings were made suitable for school purposes at Falmouth and at Buff Bay, on behalf of the Education Department.

Various other works carried out, either for public departments, or on roads and bridges and buildings, in the several parishes, are enumerated in detail in the annual report of the Director of Public Works. Amongst these he notes the construction of a large outlet drain in St. Andrew which removes the danger and inconvenience caused by heavy rains on the Half-Way-Tree Road; the erection of a school house at Port Morant, begun but not completed in the financial year; and the opening of a wide canal between the Yallahs Ponds and the sea, the object of this being to secure interchange between the sea and the stagnant water of the ponds, which afflicted Kingston with bad smells for many weeks. At Port Antonio the improvement of a stretch of main road near the town, carried out in co-operation with the Parochial Board, has removed an insanitary and unpleasant feature in its environment. In St. Mary an embankment of considerable size was constructed at Jack's Rock, to control the vagaries of the Wag Water River which threatened serious damage to road and railway. The cost of this work was charged to the railway.

The Falmouth Harbour improvement works were taken out of the contractor's hands in November and carried out departmentally during the remainder of the financial year.

Railway.

The Director of the Railway reports the receipts for 1905-1906 as £134,602, or £3,457 more than the revised estimates for the year, and £19,751 in excess of the receipts in 1904-5.

The chief items in which this considerable increase is exhibited are: passengers, £4,108; wharf dues, £2,101; goods and cattle, £13,385.

The detailed classification under the last heading, while it shows reductions for the transport of logwood (£616); spars and other woods (£644); pimento (£235); ginger (£215); sugar and rum (£137); grass and hay (£95), shows increases which far out-weigh them under the following heads:—Coffee (£555); general merchandise (£3,958); cocoa (£160); oranges (£600); and bananas (£8,895).

At only five stations out of the 36 are diminished receipts reported. At Kingston the increase is £5,048, at three other stations it exceeds £1,000, and at eight others it exceeds £500.

The working expenses of the railway amounted to £78,718, inclusive of charges for new rolling stock and for special services, as compared with £89,914 for 1904-5, and exhibiting a decrease of expenditure of £11,196. In 1904-5 while receipts were exceptionally low, the working expenses were high, owing to an expenditure of over £15,000 for new rolling stock.

The principal reduction in expenditure is classified under the following heads:—Mainway and works (£2,528); rolling stock (£13,843); law costs (£346).

On the other hand, increase over the expenditure of 1904-5 is noted in locomotive power (£728); carriages and waggons (£621); traffic expenses and wharves (£68); general charges (£977); additional work, including a siding for bananas between Kingston and Gregory Park Station, for a shed at the Port Antonio Wharf (£545); and for extension of track (£523); special works and alterations (£2,056), the last-named expenditure being mainly attributable to the works which had to be constructed to resist the encroachment of the Wag Water River on the railway track. This cost £1,923.

The following table of the nett earnings of the railway during the last five years is particularly interesting in the light which it throws on the general recovery of the island from the effects of the hurricane of 1903:—

Nett Earnings—

1905-1906	£55,504
1904-1905	24,306
1903-1904	33,740
1902-1903	63,108
1901-1902	40,330

The permanent way, all buildings and structures, engines, rolling stock, and plant were maintained in fair order.

Since the railway was taken over by the Government in 1900, the locomotive stock has been increased by six new engines,

built in England, and the capacity of the waggon stock has been increased by over 50 per cent.

LEGISLATION.

Of the laws which came into force in the year under review, all but one were passed in the session in spring in 1905. Of these the greater part were directly or indirectly passed to increase or protect the revenue of the Colony. It is proposed to allude to these measures in the order in which they were passed.

Law 13 of 1905 was intended to secure *inter alia* the payment already prescribed by existing law by employers of fees for employing Indian immigrants who have completed their term of indenture but not lived ten years in the Colony. The laxity with which such fees had been collected in the past was one of the causes contributing to the insolvency of the Immigration Fund.

Law 15 extends the power of the Marine Board to recover from owners the cost of removing wrecks.

Law 16 provides that the relief given by the Revenue Commissioner from payment of taxes on account of poverty shall not operate to relieve the premises. Unpaid taxes are to remain a charge on them, which may be realised when the property changes hands or earlier if the Commissioner thinks fit.

Law 18 follows Imperial legislation in making the Law of Escheat applicable to incorporeal hereditament and to equitable estates.

The Immigrants Finance Law (No. 20) enables the Governor, with the advice of the Privy Council, to increase or reduce the payments to be made by employers on the allotment of immigrants. This measure is intended to restore the solvency of the fund, which had recently become a heavy burden on general revenue.

Law 21 of 1905 deprives ordinary witnesses of the right to be paid from public funds for attendance at police courts, coroners' inquests, and fire inquests. A large and growing increase in the cost to the Government on this head had recently developed, and it was thought desirable to check it at its present stage.

Law 23 of 1905 empowers the Commissioners under the Vere Irrigation Law of 1907 to raise £10,000 on debentures on the security of the undertaking without a Government guarantee, and it also enables them to increase the price of water and gives them fuller power to recover rates in arrear. The Irrigation Scheme, though promising for the future, stood in need of further capital in order to put its work in a better condition.

The previous capital had been raised on a Government guarantee, but empowered by this law they have raised all the additional capital which it is believed is necessary without increasing the liability of the Government by £1.

Law 25 of 1905 authorises the exclusion from landing of persons likely to become a charge on public funds.

Law 29 of 1905 is intended to cure certain defects in detail of the Stamp Duty Law, 1903, It relates chiefly to cheques, bills of exchange, and bankers' receipts.

The Spirits Licence Law 31 of 1905 is merely a consolidating law.

Law 33 of 1905 amends the Emigrants Protection Law by enabling the Governor in Privy Council to fix the amount of deposit to be paid by or on behalf of an emigrant in the case of any proclaimed place. The amount had previously been fixed by law at 25*s*., but this amount had been found insufficient to cover the cost of repatriation in the case of certain countries. This law also imposes stringent conditions with the view to prevention of the illicit recruit of labour for service abroad.

Turning now to measures of a more general nature, the Slander of Women Law 8 of 1905, follows Imperial legislation in making proof of special damage unnecessary in the case of slander imputing unchastity to women.

The Dental Practitioners' Law 11 of 1905 provides for the registration of dentists, a profession which has hitherto received no recognition.

Law 24 of 1905 is intended to ensure that Building Societies shall render better accounts and be subject to greater scrutiny.

The Motor Car Law 26 of 1905 has been necessitated by the increase of the tourist traffic. It empowers the Government to pass regulations for their registration and for the licensing of drivers.

The Usury Law 27 of 1905 enables borrowers in certain cases to re-open transactions and obtain relief. It also makes all interest over 8 per cent. per annum irrecoverable after the aggregate interest in arrear is equal to the principal.

The Marriage Law 1897 Amendment Law of 1905 was passed to facilitate marriage by shortening the period for the publication of banns and also introducing a cheap marriage licence which may be issued by a justice of the peace or any person appointed for the purpose. This licence dispenses with the necessity of publication of banns, but not a 15 days' residence.

The Protection of Property Law 30 of 1905 makes it a criminal offence in a person employed under a contract of service in any public undertaking for the supply of water or light or for the conveyance of passengers, freight, or mails to break his contract if he has reason to believe that his action will result in public inconvenience. It also makes it a criminal offence for any person employed under any contract for service

to break it if he has cause to believe that his action will result in danger to life or limb or to valuable property.

The Quarantine Law 32 of 1905 contains a suspensory clause and has not been brought into operation. It introduces the changes recommended by the recent inter-Colonial Conference on Quarantine, including the substitution of surveillance and observation in many cases for detention in the Lazaretto. The Legislative Council took the view that the close proximity of Jamaica to foreign West Indian Islands and Central American Republics rendered the protection which might suffice in the case of other British West Indian Colonies insufficient in the case of Jamaica, and therefore refused the Vote required to provide the means of carrying the new system into effect.

The only law passed in the session of 1906, which came into force in the year under review, was 1 of 1906, which repealed 3 of 1905 by which the import duties were temporarily increased.

EDUCATION.

The secondary education of the island, so far as it is maintained out of Government funds or endowments administered under Legislative enactments, is chiefly controlled by the Jamaica Schools Commission, which body also acts directly in the management of the Jamaica College. The Secondary School at Montego Bay is under the Board of Education.

The Government grants directly in aid of secondary education in 1905-6 were:—To Jamaica College, £1,227; to Montego Bay Secondary School, £200. The Government also offers in connection with secondary education, six scholarships worth £10 a year each, and tenable for one year to the three boys and three girls standing highest in the Cambridge Junior Local Examination; one scholarship of £60 per annum, tenable for three years, to the Jamaica candidate who stands highest in the Cambridge Senior Local Examination next to the winner of the Jamaica Scholarship; and the Jamaica Scholarship of £200 per annum for three years, which is a prize for competition amongst those who obtain honours in the senior examination. The total amount offered for scholarships is thus an annual charge of £840 when all the scholarships are filled. In addition to the scholarships provided out of the revenue of the Colony, the benefaction of the late Mr. Cecil Rhodes has also furnished Jamaica with an annual scholarship of £300 a year, tenable for three years at Oxford.

The interest and annuities payable to educational institutions under Law 28 Vic., Cap. 23, considering the rates allowed under the law and since continuing in full force, may be reckoned among Government aids to secondary education. The annual charge on the revenue amounts to £5,466, one trust obtaining interest at the rate of 10 per cent., five at the

rate of 8 per cent., and the remaining six at 6 per cent. on the principal monies, all together amounting to £64,803 appropriated for the public of the island prior to the year 1865.

Thanks to the pious liberality of former benefactors, secondary education is a smaller charge on the public funds of the Colony and on the private resources of parents than it might be. Leaving out of account the 169 foundationers at secondary schools who obtain their education free and the 38 scholars who pay half the ordinary fee, a comparison of the amount paid in fees and the annual income of the schools from endowments shows that the ordinary pupil gets his education at a good deal below its cost price.

The incomes derived from endowments at the several secondary schools with which this report deals are detailed as follows:—

Jamaica College	£996	0	0
Guthrie Davidson Bequest, Montego Bay	60	0	0
Wolmer's Schools, Kingston	1,044	0	0
Titchfield Trust, Portland	869	15	6
Rusea's Trust, Hanover	270	0	0
Manning's Trust, Westmoreland	471	3	3
Munro and Dickenson's Trust, St. Elizabeth and Manchester	1,597	15	11
Manchester Free Schools	195	10	8
Beckford and Smith's Trust	305	8	7
Total	£5,809	13	11

The reports on these institutions for the year 1905-6 supply the following figures:—

Schools.	Pupils.	Foundationers.	Fees. £	s.	d.
Jamaica College	60	23	1,147	17	10
Wolmer's Boys	102	29	1,124	11	3
„ Girls	119	25			
Titchfield Higher Grade	35	10	130	0	0
Rusea's	46	16	153	18	4
Manning's	65	29	188	0	0
Munro and Dickenson's Trust—					
Potsdam Boys	68	12	1,607	1	8
Hampton Girls	61	7	1,669	10	0
Manchester Free School	25	8	128	8	0
Beckford and Smith's	22	10	59	14	0
Montego Bay Secondary School ...	45	—	280	0	0
Total	—	—	6,489	1	1

At the Jamaica College 42 of the boys are boarders, and all the pupils are boarders at Potsdam and Hampton; besides foundationers, Potsdam receives 20 boys, Hampton 8 girls, and Manning's 10 pupils who pay half the ordinary fee. Of the total number, 648 scholars, attending these secondary schools here dealt with, about 225 are girls.

The education aimed at in these schools is generally that of a modernized English Grammar School; at Port Antonio with a commercial inclination; at Montego Bay science teaching is specially developed, and with promising success. Effort is being made to develop science teaching in all these schools; but for various reasons, the process of change being expensive, is difficult and slow. The standard by which the schools measure their work is generally that of the Cambridge Local Examinations, which have been held annually in the island for twenty-four years. In December, 1905, at six centres in the island, 222 candidates sat, of whom 168 (or 75·6 per cent.) passed, and 47 (or 21 per cent.) with honours. The schools dealt with in this report supplied 176 of the candidates, 144 of those who passed, and 44 of those who took honours. In addition to those examinations, seven candidates sat for the Higher Local Examination, and nine for various examinations of the University of London. The results generally of these examinations compare favourably with the general average of success elsewhere, and it may be considered that our schools are successful in attaining the standard that is set before them. With scarcely an exception, the principals are graduates with English University Degrees, and at most of the schools, English graduates are among the assistants. In addition to the Cambridge Local Examinations for selected pupils, each of the schools is subject to an annual examination held by an examiner appointed by the Local Board with the approval of the Schools' Commission or the Board of Education.

The report of the Superintending Inspector of Schools shows 14 fewer schools on the list of the elementary schools aided by Government, viz., 692 against 706 last year; and there were 81,857 children on the registers, as against 83,974 in 1904-5. The average attendance, however, had increased by 1,319, and there are clear indications in more recent returns of a general revival in school attendance. The recent decline in attendance was accompanied by some deterioration in efficiency, the first and second class schools being 15 less than the year before, and the third class increased.

The grants to schools, which fluctuate with attendance and marks, diminished to the amount of £6,045. Although this reduction is, most of it, apparent rather than real, three-fourths of it being nominal and due to a change of method in pay, still the reduction told seriously on the staffing of many schools.

The total amount expended through the Education Department in 1905-6 was £58,858. The following classification, which is extracted from the departmental report, compares the expenditure during the last three years:—

—	1903-4.	1904-5.	1905-6.
	£	£	£
Grants to Elementary Schools and Teachers.	46,129	50,264	44,037
Building Grants	1,027	2,659	2,994
Administration and Inspection	4,976	4,992	5,050
Government Training College	1,204	1,204	1,204
Aid to Voluntary Training Colleges ...	2,544	2,518	2,551
Board of Education	249	142	170
Jamaica College	1,250	1,250	1,227
Scholarships (including Secondary Education Scholarships).	1,262	1,225	1,368
Secondary School, Montego Bay ...	198	200	200
Printing	48	51	57
	58,887	64,505	58,858

Of the six Government schools that have been established in Government buildings, only three had got into working order at the close of the year. The advocates of Government schools claim for the system economy, at least of educational effort, as they represent amalgamation; but except in their management, which rests with a Local Board instead of with a single manager, and in the receipt of an additional grant by way of rent of one shilling per scholar, where the building is denominational property, they differ little from the ordinary denominational school. No addition has been made during the year to the Government schools (55 in number) in denominational buildings.

The usual examinations were held of teachers, training college students, and pupil teachers. 43 teachers sat for the examination for permanent registration or certificate, and 19 passed; 126 training college students were presented, including 51 female students, and 114 passed; 300 pupil teachers sat, and 217 passed; besides the latter, 1,140 outside volunteer candidates took the pupil teachers' examination, paying a five shilling fee, and of these 503 passed. Like the Cambridge Locals for the secondary schools, this examination serves a useful purpose as a common standard for guiding and measuring the work in the elementary schools.

All the training college students referred to above came from voluntary training colleges (which received grants amounting to £2,551), except 34 female students from Shortwood Female Training College, which is still a quasi-Government institution, managed by an undenominational Board. Its Government grant was £1,204. Of its 34 students, 32

passed, 8 in honours. The ordinary course of training now covers two years, but the admission of a considerable number of girls (without payment of the £5 entrance fee) as preliminary students, secures an extra year's discipline accompanied with some educational opportunities for these, as well as most useful training in domestic work; they do the bulk of the domestic work of the college.

The Manual Training School in Kingston, which is managed by a Committee of the Board of Education, has continued to work efficiently. Besides the manual training afforded to the scholars, the principal and the kindergarten mistress hold classes for teachers and the principal also takes work at the training colleges. It thus serves as the centre from which manual training and kindergarten work are distributed throughout the island. It entered 18 candidates at the examination in manual work held by the City and Guilds of London, and 12 of these were successful in gaining certificates. There are now five centres in various parts of the island where the teaching of advanced manual training is systematically attempted with more or less success, and small special grants amounting to £39 were made to the teachers in charge of them.

The grants to elementary schools for practical agricultural and horticultural work in school gardens amounted to £226, an increase of 30 per cent. on the previous year's grant. The Board of Agriculture has aided in the encouragement of school gardens, and there were 19 gardens established under its auspices. It will probably be well in the future to confine the control of agricultural work in the elementary schools to the Education Department, although the co-operation of officers of the Board of Agriculture and the Agricultural Society in guiding the work cannot at present be dispensed with. Considerable change has been made by the Education Department in its regulations for the practical work, part of it now counting as school time, and the special grant which previously could only be earned by work out of school hours has been proportionately reduced. An initial grant for the purchase of tools is now also allowed when the work begins. These changes appear to be popular, and we are likely to have considerable increase in the number of school gardens in the near future.

The school garden work is for practical convenience of nomenclature styled "Agricultural." The term, however, should not be misunderstood. Its main object is, in fact, essentially identical with that of the work known as "Manual Training." It aims at the training of the hand and eye and the development of the general powers of observation under circumstances and in a medium which corresponds to the conditions under which the great majority of the children will earn their livelihood. Incidentally, no doubt, the work

tends to increase the esteem in which, from both an intellectual and an economic point of view, agriculture is held.

The Special Courses of Agriculture teaching at the Mico Training College, which have been held annually for the last six years, have been exceedingly helpful in improving the agricultural teaching of the schools. They have been attended by teachers engaged in actual work in Elementary Schools who had no such opportunities during their training. This year's course, which lasted the usual month, was as successful as its predecessors. Sixty-five teachers of whom six were women attended it. We may reckon that at least half the teachers now at work in the schools have had some special training of this kind.

Further effect has been given to the desire to advance the teaching of elementary principles of agriculture as a part of the science work which elementary schools may properly attempt, by changes in the code, which have increased the number of marks for elementary science (including agriculture) in country schools, and reduced to a corresponding extent the number of marks given for drawing and manual work. In town schools the proportion of marks has been altered *vice versa.*

Some other important changes in the elementary school code deserve note. The hour of morning roll call has been fixed at 9.30, although for a short time ten o'clock has been allowed as the time for closing the roll, in order that the change may be less sudden. This change has been most necessary, in order to secure earlier and more punctual attendance of the children. The usual hour was formerly ten o'clock, sometimes 10.30, occasionally 11.0.

A change has also been made in the period from which the grants based on marks and average attendance are to be calculated. Instead of being paid as hitherto, on the results of the preceding inspection, the attendance is to be made up for the twelve months ending 31st October, and this is to be the average for the ensuing financial year. The marks which have to determine the grant will be those at the inspection next before January 1st in the preceding financial year. The result of this change will be, that the department will be able to forecast its expenditure more exactly than hitherto, and there will be no unexpended balances out of the money voted for the year, in case of attendance or efficiency falling below expectation; and teachers and managers will know exactly what to expect. But the change makes payment by results somewhat retrospective, and cancels at least some of the advantages claimed for such a system.

Considerable discussion has taken place over a proposal to introduce amongst the schedules of the code a day school catechism, which the representatives of the various protestant denominations had combined to prepare, as a suitable basis of

religious instruction and a needed stimulant for the teaching of morals. After a very careful and exhaustive discussion, the Board of Education recommended its adoption, and various safeguards were recommended in the interests of such as might have conscientious objections to its use. In view of the animated opposition which the proposal has met from a small minority of those who object to catechisms of all sorts, and those who objected on various grounds to the catechism proposed and the safeguards recommended, no decision in the matter has so far been made.

Steps have been taken by the adoption of a suitable manual and by the encouragement of the training colleges, and by attaching some importance to the matter in judging of the discipline and organization of schools, to make exercises in physical drill a commoner feature in the work of the elementary schools. Such exercises while of comparatively little importance for physical development in Jamaica where nearly all the children have abundant opportunities for exercise in the open air, will no doubt be of educational benefit and improve school discipline.

The Industrial Schools reported on by the Superintending Inspector of Schools are: The Hope Industrial School (50 boys), Alpha Boys' School (38 boys), Alpha Girls (40 girls), Belmont Orphanage (17 girls), Shortwood Industrial School (45 girls and 5 small boys), and a small school at Happy Grove, where 8 orphan or destitute East Indian girls were kept. At all these institutions, with varying degrees of organization and success, various industrious pursuits are carried on, chiefly of a domestic character, and such as reduce the cost of the establishment. The Hope boys have good agricultural opportunities, working under supervision at the Hope Gardens. At the Alpha Boys' School, the output of the bakery was valued at £546. At the Alpha Girls' School, sewing done for the establishment was valued at £71. At Shortwood, the total value of work done was estimated at £337; and the report of the work at the Belmont Orphanage is particularly creditable. At some places articles are made for sale, and sold; and effort is made to apprentice the boys to tradesmen, or to find other service for the children when they leave.

At Stony Hill the Institution is at once an Industrial School and a Reformatory. It is a matter of regret that for reasons of economy it has not yet been found practicable to separate the two classes of boys. As a Reformatory, it is under the control of the Inspector General of Police, the school work being tested as at other schools by one of the Inspectors of the Education Department. The Girls' Department which had in it 37 girls (as against 35 the previous year), is purely Reformatory for girls with a criminal record. At the Boys' Department there were 47 Industrial Boys (pauper children) as compared with 44 in 1904-5; and 232 reformatory boys as against 185 in the previous year. About 27 per cent. of the inmates

are between the ages of 9 and 12; the remainder between 12 and 16. The institution is a large one, and well managed. Between 60 and 70 of the boys work under master tradesmen as carpenters, blacksmiths, tailors, masons and bricklayers, and in the kitchen and bakery; and agricultural work of all sorts is done under supervision in the land under cultivation, which is now 33 acres. The total value of the work done at the institution is reported as £1,983 (in 1904-5, £1,184), of which £1,492 was the value of work done for the institution for which no money was obtained. The various workshops did outside work for customers, which realised £150. The Girls' Department did for the institution washing worth £439 and sewing worth £90. The agricultural cultivation, amongst other products accounts for vegetables to the value of £61, 3,576 bunches of bananas, and 3,375 lbs. of coffee, the whole produce reaped being valued at £329, as against £206 last year.

The expenditure at Stony Hill is thus summarised for the last two years, the daily average number of inmates being 290 as against 223 in 1904-5. Total expenditure for 1905-6, £3,883 (last year £3,286), reduced by reimbursements from the Parishes for Industrial School Children, £572 (last year £560), and by work done for money and sales, £372 (last year £234); the cost to General Revenue, therefore, was £2,939 as against £2,490 in 1904-5. The cost per inmate per diem, after the deduction of reimbursements and monies received for work and sales was 6·66*d.* as against 7·34*d.* last year, and the average earnings of each inmate for the year amounted to £6 16*s.* 9*d.*, which exceeds last year's figure (£5 12*s.* 4*d.*) very considerably. The reward system has continued, and the sum of £29 was paid for rewards during the year. Of 125 children discharged during the last three years, 7 were reconvicted during 1905-6.

The Institute of Jamaica.—This Institution represents efforts to keep alive literary and artistic and antiquarian interest that cover a considerable period of years. Seventy-six years ago, the Royal Agricultural Society of Jamaica began a natural history museum, and the Royal Society of Arts was established eleven years later. After a few years, the societies amalgamated, but in 1873 they had to be wound up, the Government being placed in charge of the Museum collections. In 1879, the present Institute was established under a Board of Management, whose duties are to establish and maintain an Institution comprising a library, reading room and museum, and to provide for the reading of Papers, the delivery of lectures, and the holding of examinations on subjects connected with literature, science and arts, to award premiums for the application of scientific and artistic methods to local industries, and to hold exhibitions, illustrative of the industries of Jamaica. For the execution of this scheme a Government grant as high as £2,000 has in the past been given. It now stands at £900. Within the means at their disposal, the Governors endeavour to fulfil their trust.

The Library contains about 11,500 volumes catalogued, and a good many other volumes besides, the Libraries of the old House of Assembly and the old Legislative Council having been transferred to the Institute when it was established. The West India section of the library contains a collection of books of the very highest value, and tourists and visitors surpass the residents of the Colony in their appreciation of it. Popular wants are consulted in the reading room by a fair provision of periodical literature and newspapers, and popular works find place in the library. Subscribers of ten shillings per annum get books other than light literature transmitted to them free by post, yet in spite of the diligent service of the secretary and librarian, the membership is: honorary members 10, corresponding members 17, life-members 2, subscribing members 120. During the last year visitors to the reading room (15,811) showed some increase; 1,122 volumes were added to the library; and the number of books lent out was about 20 per cent. greater than the preceding year.

The museum specimens, which are in a separate building, aim at representing the fauna and flora of the island, along with its geology and anthropology. There is also a Herbarium which contains a collection of the economical woods in the island. Little is now being done to complete these collections, and a caretaker supplies the place of the former curator.

The art galleries include a portrait gallery of persons of note in the history of the island, to which nine portraits were added during the year, making a total of 149, and a small collection of paintings of local interest and value has been commenced. Effort has been made to illustrate the history of art by means of engravings and the exhibition of art objects. An interesting collection of ancient Egyptian pottery was received as a donation from the University of Liverpool during the year. Art classes have been held as usual and lectures were delivered and Papers read as opportunity offered, advantage being taken of the presence of visitors from England or America, competent and willing to give service in such ways. Two exhibitions of Arts and Crafts were held within the financial year, the first in April and May, 1905; the second in March, 1906; both were fairly successful, and undoubtedly appreciated, and altogether 3,336 people visited them; and several exhibitors received commissions for work in consequence of the exhibitions.

To the thirty or more publications issued by the Institute from time to time on matters dealing with literature, science or art, was added "Jamaica in 1905," a remodelled edition of a work which first appeared under the title "Jamaica in 1895"; a brief handbook of information for intending settlers and others, compiled with a view of giving in handy form such particulars concerning the island as might prove useful to intending settlers. In the present issue notes of interest to the tourist have been added.

CURRENCY.

The note circulation as returned by the banks is as follows:—

—	1905-6.	1904-5.
	£	£
Colonial Bank	107,062	113,340
Nova Scotia Bank ...	26,138	18,196
£	133,200	131,536

GOVERNMENT SAVINGS BANK.

The Report of the Manager of the Government Savings Bank begins with the following statement of its Liabilities and Assets:—

Liabilities:—

To sundry depositors on 31st March, 1906 ...	£388,581 13 1	
Suspense Account ...	1 14 0	£388,583 7 1

Assets:—

Securities held	£388,068 17 5	
Uninvested	383 10 8	
Cash in hand	130 19 0	£388,583 7 1

Comparing 1905-6 we find that of the fourteen parishes with separate Savings Banks, increase in deposits is shown in eight parishes, and decrease in six; and, that while the total increases amount to £22,857 (to which Government Deposits contribute £10,164) the total decreases only amount to £1,226. The following summary exemplifies the comparison between the two years in the matter of deposits:—

Summary.

—	Amount.
Ordinary deposits:	£ s. d.
For the year ended 31st March, 1906	166,099 6 11
For the year ended 31st March, 1905	154,632 3 2
Showing an increase of	11,467 3 9

Summary—cont.

—	Amount.		
Government deposits :	£	s.	d.
For the year ended 31st March, 1906	41,152	11	11
For the year ended 31st March, 1905	30,988	3	3
Showing an increase of	10,164	8	8

The most marked increase in deposits is shewn at Kingston (2,105 ordinary deposits, not Government); in Portland (£3,786); St. James (£3,609); and in Hanover (£1,438).

Comparing deposits with withdrawals in the year under review, we find that the former (including interest) amounted to £207,251; the latter to £213,627, the amounts withdrawn thus exceeding the amounts deposited by £6,375. The following summary, however, shows that this result is largely due to Government withdrawals:—

Summary.

—	Amount.					
Ordinary withdrawals :	£	s.	d.	£	s.	d.
For the year ended 31st March, 1906 ...	166,407	4	6			
For the year ended 31st March, 1905 ...	183,787	1	7			
Decrease of	—			17,379	17	1
Government withdrawals :						
For the year ended 31st March, 1906 ...	47,220	0	11			
For the year ended 31st March, 1905 ...	32,648	19	7			
Increase of	—			14,571	1	4
Net decrease in withdrawals				2,808	15	9

Comparing 1905-6 with 1904-5, while increase in withdrawals is shown in six parishes, amounting to £20,990 (of which £14,571 is the amount of the Government withdrawals), eight parishes show diminished withdrawals to the amount of £23,799. Portland and St. James show most increase, Kingston (ordinary deposits), Westmoreland and St. Elizabeth show most decrease.

It is to be noted that the several amounts charged as Government deposits and Government withdrawals are amounts lodged for convenience at the Savings Banks, awaiting the orders of Courts in suits pending, or withdrawn on the orders of Courts on the conclusion of suits.

In 1904-5 in the ordinary transactions of the year, *i.e.*, eliminating Government accounts, deposits showed a decrease of £34,178, and withdrawals also showed a decrease of £5,760;

in 1905-6, deposits showed increase of £11,467, and withdrawals decrease of £17,379, a much healthier state of affairs. In Kingston, the improvement is very remarkable, for a total of £2,105 more was deposited there and £18,533 less withdrawn than in the preceding year; Trelawny and St. Catherine also make a very satisfactory appearance. In the other parishes where less favourable return is made, the result may be due to lingering effects of the hurricane, or, in some cases, to the superior attraction of agricultural investments.

The profits of the Savings Bank for the year 1905-6 on invested monies, after paying management of head office and branches, £2,512; loss on investments sold, £78; and the interest credited to depositors, £9,127, was £3,936.

There are now thirteen branches of the Savings Bank in the principal towns, and nine sub-branches in other centres, without including the chief office in Kingston. During the year 4,164 new accounts were opened, 2,806 accounts were closed, and 36,188 accounts remained open; the last number being 1,360 more than in 1904-5. Nearly the whole of the increase is amongst the accounts of £5 and under, which exceeded the number in the preceding year by 1,033. It is reported that out of the total number of accounts, no fewer than 27,004 were accounts of £5 or under; ten years ago the number of similar small accounts was 19,929. The rate of interest continues at 2½ per cent. to which it was reduced from 3 per cent. in 1897.

It is noted this year that East Indian Immigrants have to their credit in the Savings Bank £14,330, distributed amongst 985 separate accounts. These figures are less than in 1905-6, owing to the return of time-expired immigrants during the year, who took away with them £5,635 out of the Government Savings Bank.

IMMIGRATION.

In July, 1905, the "Indus" brought 812 East Indian immigrants (including women and children), the majority of whom went to banana plantations in St. Mary and Portland, and some to sugar estates in Vere. Six of these immigrants have proved unfit for work. In January, 1906, the "Erne" took return immigrants to India to the number of 680. They did not return empty, but took Treasury Bills to the value of £5,940 and jewellery and coin valued at £1,320. Twenty-six immigrants were released from their indentures during the 15 months ending 31st March, 1906, four of these by purchase, the rest for incapacity, and 41 time-expired East Indians have obtained passports during the year and left the island, most of them for Colon and Port Limon.

According to the Collector-General's report, East Indians who can be traced by the retention of their Indian names,

now own 7,489 acres of land in the island, their property being valued at £35,060, and live stock to the value of £5,759. Their trade licences number 348, spirit licences 87.

The health of the immigrants is reported to have been fairly good, allowing for such illness as new arrivals may expect in the process of acclimatisation. During the earlier part of the period, the wages earned by the immigrants were good, and exceeded the rates allowed by law; towards the end of the year their employment was less remunerative. There were 43 marriages performed by ministers of religion between East Indians who had become Christians, and three marriages according to their own religion and personal law.

During the 15 months covered by the Protector's report, 30 allotments of land were given in lieu of return passages, the total number of acres being 311; but as these allotments do not reduce the proportion of the returning immigrants, and impose the expenses attending allotment, and in some cases of new roads on the Government (amounting in 1905-6 to £695), offers of land in lieu of return passages will cease.

The conduct of the immigrants has been good; 17 were in gaol for various offences at the end of the year, and 60 were undergoing treatment in the lunatic asylum, a slight increase on the previous year's figures. Seventy complaints against indentured immigrants were tried before Resident Magistrates during the 15 months, and 117 complaints before officers of the Department. No cases were brought by immigrants against their employers. There were no cases of murder, but two cases of suicide.

The sum of £1,488 was collected during the 15 months covered by the Protector's report from the employers of second-term coolies (as against £1,075 for the preceding 12 months). To meet the difficulties of tracing these men, it has been found necessary to require them to report themselves quarterly to the police.

In order to defray the charges sometimes made on general revenue to make good deficits in the accounts of the Immigration Fund, the fees payable by importers of immigrants have been increased, and at the close of the year stood at £21 4*s.* payable on allotment, or £22 payable in instalments.

The number of indentured immigrants in the island on 31st March, 1906, was 1,427.

CROWN LANDS DEPARTMENT.

The sale of Crown lands in small lots to purchasers on payment by instalments, under the scheme formulated in 1895, has not been extended during 1905-6, though 87 allotments, consisting of 22 town lots, and 427 acres were made. These allotments were among those taken back from purchasers in previous years who have made default. Up to the 31st of March, 1906, 3,288 applications, covering 34,283 acres, have been received, and 3,219 lots covering 30,172 acres have been surveyed and put in possession of the purchasers; the total amount paid on account of these lands being £15,879 up to 31st March, 1906. The acreage of land taken back from defaulting purchasers now amounts to 13 per cent. of the whole, and there are still on hand, undisposed of, 321 lots covering about 3,500 acres.

During the year 2,669 acres and 43 town lots of Government lands have been leased for £264 per annum, and 265 acres and two town lots have been allotted to East Indian immigrants in lieu of return passages to India. Altogether, some 3,123 acres have now been allotted under this plan to 554 persons, but the system is to cease.

No fresh notification of land forfeitable for nonpayment of taxes was issued during the year, there being an accumulation of lands advertised in previous notifications not yet disposed of by final judgment. In 1905-6, 2,720 acres were finally forfeited.

The Department's work for the year includes 169 lineal miles of survey work for the purpose of defining Government lands and making allotments; the map of Jamaica of 1888 has been revised and brought up to date for the issue of a fresh publication; and a very large collection of plans of properties has been sorted out for reference. The number of plans for properties in the Office is now about 40,000.

The expenditure of the Department for the year amounted to £2,507, the receipts to £4,716; the latter include deposits on sale of Crown lands, £43; annual instalments on Crown lands sold, £1,994; sales of Crown lands outright, £486; rents of Government lands and buildings, £2,055. The receipts are £634 and the expenditure £61 in excess of the corresponding amounts for 1904-5.

MEDICAL DEPARTMENT (HOSPITALS AND ASYLUMS).

The gross expenditure of the Island Medical Department for the year 1905-6 was £52,672, this amount being reduced by the collecting of dues and reimbursements to £50,593.

The expenditure covers the cost (including personal emoluments) of the Head Office; of the 34 medical districts into which

the island is now divided, each with a medical officer in charge; of the Public Hospital at Kingston, with a resident staff of four medical officers; of the 17 Public General Hospitals in various parts of the island, with total accommodation of 554 beds; of attendance on immigrants; special yaws fees and vaccination fees; the expenses incurred in five prosecutions under the Drugs and Poisons Law at the instance of the police; and expenses in carrying out the Quarantine Law and in connection with the Central Board of Health and the Medical Council. It also includes the expenses of the Lepers' Home, the Lunatic Asylum, with a resident staff of three medical officers, and the Victoria Jubilee Lying-in Hospital; also the personal emoluments of the Medical Officer of the General Penitentiary and the Health Officer at Port Royal. Drugs, stimulants, surgical appliances and lymph were issued to the institutions and to medical officers amounting in value to £2,461.

Savings have been effected by the abolition of one of the two appointments as Supernumerary Medical Officer at the Public Hospital (salary £200) and by the abolition of three separate medical districts, by which a further annual saving of £275 has been secured. The three medical districts (Manchioneal, Old Harbour, and Gayle) were small districts, and the first had only been a temporary arrangement; they have been sub-divided and included in the medical districts adjoining. In no case has the abolition involved any addition to the pension list or the superannuation of the medical officer in charge. The resolution of the Legislative Council, passed on 11th May, 1889, recommending the reduction of medical districts from 48 to 36 and, later, as opportunity might arise, to 34, has now been fully carried into effect.

In the absence of Government dispensaries, the system instituted in 1880 of assisting poor persons, not on the pauper roll but unable to pay the usual minimum fee of 4*s* for medical advice and medicine, has continued to be appreciated in Kingston. These tickets are given gratuitously by distributors appointed by the Governor, and in Kingston 6,397 tickets, which reduced the cost of advice and medicine to the applicant to 1*s*., and 2,427 tickets, reducing the cost to 2*s*., are reported as having been issued. In the country districts, however, the system does not appear to be in general use.

In the Public Hospital, Kingston, there were treated during the year 3,961 patients, and the average number of beds in daily occupation was 206. Out-patients, including casualty patients to the number of 7,078, were also treated, and the prescriptions for out-patients, with or without tickets (including constables, prisoners, and the patients of the Lying-in Hospital) amounted to 13,650. In all these figures some increase is shown on the returns of the preceding year. The mortality-rate was 6·9 per cent., nearly one-half of the 273

deaths occurring within 72 hours of the patient's admission; the number of operations recorded was 1,440, the death-rate under this head being only 2·17 per cent.

The number of applicants for admission who were rejected for want of accommodation or as unsuitable was 4,579; many of these were admitted subsequently or referred to the District Medical Officer for Kingston or to the Inspector of Poor.

A new children's ward with 20 cots has been added to the Public Hospital during the year; it has been named after Her late Majesty Queen Victoria, and provision has been made on next year's estimates for the expenditure of £1,013 for a new operating theatre and some other improvements which have long been urgently required. Arrangements have also been made by voluntary effort to secure board and lodging within the hospital precincts for the probationer nurses; this should remove some of the difficulties which these probationers have experienced and caused.

The Dispensing School in the Public Hospital for the training of dispensers has continued its work. As instruction is given in the dressing of wounds as well as in pharmacy, the students get good practical training. Of the apprentices, seven completed the term of their indenture during the year, and five new apprentices were admitted, the number under tuition at the close of the year being 16. Of the 28 candidates for examination under the Drugs and Poisons Law, the seven candidates from the Public Hospital were amongst the 12 who satisfied the examiners and received licences. Classes of instruction in medical and surgical subjects and in bandaging have also been held in the Hospital by the Deaconess Matron, and have been of great value.

The gross expenditure at the Public Hospital during the year was £7,888, which was reduced by receipts to £7,460, the daily cost per bed being 2*s.* 1*d.*, as compared with 2*s.* 1½*d.* last year.

In the 17 Public General Hospitals distributed over the island, 13,895 patients were treated during the year, the daily average number of patients being 534. The total accommodation, so far as room is allowed for beds, was reported last year as 554 beds. There has, therefore, been very little margin, and in some places on occasions overcrowding has been unavoidable. It is hoped that the stricter enforcement of the long-established rule that chronic and incurable cases must be removed from hospital or otherwise arranged for by the Inspectors of Poor, will diminish the chances of congestion in the future. Unless the rule is strictly adhered to, the facilities which hospitals properly afford for the relief of cases urgent or otherwise suitable, must be seriously restricted.

The average mortality-rate in the Public General Hospitals was 2·08 per cent.; four hospitals only showing an average of over 4 per cent., and six showing an average of under 2 per

cent. The total cost of these hospitals for the year amounted to £9,038, the average daily cost for each patient being as low as 7¼*d.* in one hospital, and as high as 1*s.* 6¼*d.* in another. The number of out-patients treated gratuitously by District Medical Officers in their several districts (constables, prisoners, paupers, immigrants, and parochial midwifery cases) was 21,896.

Some effort has been made to improve the equipment of the Public General Hospitals in necessary instruments and furniture, and several gifts of conveniences and luxuries, such as couches, reclining chairs, &c., in which our hospitals are conspicuously deficient, have been reported, and have been greatly appreciated.

The Superintending Medical Officer calls attention to the absence, even in Kingston, of private nursing homes, where at a reasonable rate efficient nursing might be secured by private patients.

There has been a much larger number of vaccinations during this year than for several years, the total being 30,205, as compared with 22,772 last year, and in all, except about 1,000 cases, the vaccination was reported as successful. The total cost of this service was £1,672.

Arm to arm vaccination has now been almost entirely abandoned in the Government medical service, and regular supplies of calf-lymph have been sent out fortnightly from the Jenner Institute with very satisfactory results.

The new Quarantine Regulations approved and recommended at the Inter-Colonial Conference at Barbados in 1904 are not yet in operation here. The Legislative Council passed the necessary Quarantine Law in 1905, but it subsequently refused by the unanimous vote of the elected members to sanction the expenditure required to put the Quarantine Station at Green Bay in a condition suitable to meet the new law's requirements. The reason of the refusal was, partly, the large immediate outlay demanded, partly the dislocation that might be caused in the fruit trade with America, if quarantine regulations such as at present find no favour there should be adopted in Jamaica, and partly, that the community are not convinced that the substitution of "surveillance" for "observation" in a large class of cases would be free from great risk.

During the year the Lazaretto has been placed in telephonic communication with the Health Officer's quarters at Port Royal and also with Kingston.

The Lazaretto received 74 passengers who were landed from four ships quarantined, and the net expenditure for the year, after deducting amounts collected from some of the passengers for maintenance during the time of their detention, was £542.

The Victoria Jubilee Lying-in Hospital was founded in commemoration of Her late Majesty's Jubilee, and raised, to a considerable extent, by the voluntary contributions of the people. It is maintained by an annual grant from the Legislature. While serving as a charitable institution for the relief of suffering, its main object was to diminish mortality and the hardship caused all over the island by the lack of trained midwives. But its very usefulness has opened the door to abuse, and two years ago the Acting Governor reported that "it was coming to be regarded as a free nursing home available for all applicants"; and it was frequently overcrowded. The number of patients admitted increased from 217 in 1895-6 to 813 in 1903-4. This large number was reduced to 655 last year, and has been further reduced to 415 in the year under review. The number of beds available for ordinary use has been reduced from 20 to 18, and the pupil nurses from eight to six. The daily average number of beds occupied this year has been 13. Of the 407 children born in the institution this year, only 101 were legitimate. In nine cases admission had to be refused, because the institution was full at the time. The death-rate was 2·4 per cent. as against 1·2 per cent. last year. Nine pupil nurses completed their course of training, and six new ones were admitted. The nurses trained at this institution are now established at many places in the island, and are rendering most valuable service. Of the 415 patients admitted 274 paid some fees, the rest were treated gratuitously. The gross expenditure for the year was £1,189, reduced by receipts to £939. Last year the net cost of the institution was £1,034.

At the commencement of the year there were 1,034 patients in the Lunatic Asylum. During the year 230 were admitted, 121 were discharged, and 86 died. The numbers, therefore, show an increase of 23. There was marked improvement in the death-rate, 8·2 per cent., as compared with 10·8 per cent. of the preceding year on the average number of residents. Of the 121 discharged 111 were recoveries, and the recovery rate, calculated on the total number of admissions, was 48·2 per cent., as compared with 43·77 per cent., the average of the previous 10 years. The number of inmates is more than twice what it was 20 years ago, but the new buildings for the accommodation of females were completed for occupation in the last month of the year, and now that the overcrowding from which this institution has long very seriously suffered is relieved, a further improvement in the health of the inmates may be anticipated.

The net cost of this institution for the year, after deducting reimbursements, was £16,220, or an average of 10·17d. per head per day, as compared with £15,557, or 10d. per day last year. The parochial contributions towards the maintenance of lunatics amounted to £14,397, leaving the net cost of the asylum to general revenue £1,823.

There were 115 patients at the Lepers' Home at the beginning of the official year; 2 were discharged, 3 absconded, 14 died, and 19 fresh patients were admitted. The number therefore remains unchanged.

Both at the Lunatic Asylum and at the Lepers' Home every use is made of such service as the unfortunate inmates are able to render in laundry work and in keeping the buildings and premises in order and in growing some crops for the use of the institutions. Such employments of course help to relieve the tedium of their life, and improve their health, and are at the same time of some assistance to the public purse.

In the city of Kingston the reports show a fairly satisfactory condition of public health during the year. As usual the mortality was higher in the cool dry months when the variation of diurnal temperature was greatest than in the hot wet months when the daily temperature was more uniform and the rains flushed the surface drainage frequently. The Kingston death-rate was 29·07 per thousand of the estimated population (54,444), as compared with 31·78 the previous year. Enteric fever accounted for 0·76 of this rate (last year 1·22). Malaria accounted for 1·62 (last year 0·86), and phthisis accounted for 1·82 (last year 2·70). The infantile mortality continues enormously high in Kingston (231 per 1,000 births), though this is somewhat better than last year's return (244 per 1,000 births).

The general sanitary condition of the city continues to improve, particularly in the better streets, but improvement is slow, and there is still much that needs attention from the sanitary point of view. The Medical Officer's report points out the need for more thorough cleansing of the water tables, and calls attention to the condition of the gullies which intersect the city and of the disused cemeteries within its limits; also to the dangers which arise from the present method of selling milk.

In Port Antonio, where the health conditions need special vigilance, in view of the considerable intercourse with America and the shortness of the voyage, the District Medical Officer reports that the year has been very free of disease. Only seven cases of diseases notifiable under the law have been reported, and three of these came from America. One very insanitary feature, previously complained of, has been remedied in the reconstruction of the road through Somers Town; other portions of road near the town, he reports, require to be similarly improved. He adds that, while the streets and lanes are swept and the drains flushed regularly, insufficient attention is paid to the condition of private yards and premises where refuse and waste receptacles collect and afford breeding places for mosquitoes. This remark applies probably with more or less completeness to sanitary proceedings in all our towns.

The general health of the island may be considered as having been about normal during the past year, and no epidemics of any serious proportions were reported. Some districts have suffered from influenza or measles or chicken-pox or scabies (or similar skin affections) or typhoid fever, but the outbreaks have not been extensive or destructive anywhere. The "vomiting sickness" which in previous years has been responsible for considerable mortality amongst children in several districts is reported as having been less prevalent and of a milder type, and the "stock" medicines for this disease which were supplied to police stations for distribution have afforded relief in a great many cases.

The arrival of 800 East Indian immigrants who had to be acclimatised, and the unusually heavy rainfall in the last six months of the year probably account for the increase in cases of malarial fever reported. At the public general hospitals 5,336 cases, and at the Public Hospital, Kingston, 949 cases, were admitted, as compared with 4,174 and 653 cases respectively in the previous year. The total number of deaths from malarial fever only amounted to 55 in the country hospitals and 33 in the Kingston Hospital. The "intermittent" or mildest variety includes about 80 per cent. of the cases treated, with a death-rate of only 39 per cent., and the "remittent" type, with a death-rate of 1·94 per cent., accounts for nearly all the rest. The "pernicious" type includes only 24 cases, but in these the death-rate was 75 per cent., the delay of proper treatment being the probable cause of such high mortality. It is reported that since the outlet from the Yallahs Pond into the sea has been opened the smell which had caused so much dissatisfaction in Kingston has practically disappeared. Chest complaints are somewhat fewer than last year, perhaps because the winter was mild, but diseases of the digestive organs and syphilis and venereal diseases show an increase. Yaws does not appear to diminish, and we shall not be rid of this repulsive complaint until we can establish compulsory isolation or the people cease to think lightly of it.

When we take into account the circumstances under which a very large proportion of the people live, the unhealthy situation of their houses in damp places overshaded with tropical vegetation, the imperfect construction of many of them and the slight protection they afford against tropical rains, the popular ignorance of hygienic conditions and lack of ventilation, and the overcrowding of the houses at night, the common neglect of refuse, the lack of proper clothing and reckless exposure to wet, the improper diet and the excessive proportion of purely vegetable food, and the carelessness that is common with regard to drinking water, it is not surprising that the resisting power against disease is often feeble and the death-rate of the island much higher than it need be.

Such adverse conditions as these, however, we must mainly depend on increase in knowledge and intelligence and ambition and advancement in civilization to remove.

Not least important amongst the factors of high mortality is the neglect of disease in its earlier stages, the result of ignorance or poverty, and in many cases of the distance from a doctor. The means of increasing the supply of qualified medical men in the country districts of the island has engaged the attention of the Government, but so far I am unable to report any action calculated to secure this desirable object. There are now 117 registered medical practitioners (including Government officers) reported as practising in the island. While the Government salary of the District Medical Officer is partly a fee for which certain public service is exacted (*i.e.*, attendance on paupers and on the constabulary and indentured immigrants, and the medical charge of any hospital, almshouse, or prison in the district, &c.), the District Medical Service is also to be regarded as a system in aid, the object of which is to diffuse medical assistance throughout the parishes by inducing practitioners to settle in districts which, without such contribution from Government, would be altogether destitute of medical aid. At the same time such salary as the public funds afford is a small one (it is fixed at £100 per annum for future appointments), and it is obvious that a medical man must depend in the main on his private practice and that only in populous districts can this yield such an income as a man with English qualifications may reasonably expect. It is a matter for much concern that in many parts of the island the nearest doctor is 20 or more miles away, and practically beyond the reach of poor persons. There are in consequence many preventable deaths. The death-rate for the island (21·9 per 1,000 of the population) is considerably less than in the two preceding years, in both of which it exceeded 24 per 1,000. The Parishes of St. Ann and Manchester continue to report the lowest rate; St. Elizabeth is a good third.

The Dental Practitioners' Law, passed in the Legislative Council last year, came into operation in October, 1905. It provides for the registration of dentists qualified to practice in the United Kingdom, and of those engaged in practice in Jamaica, who hold the diplomas of certain selected dental colleges in the United States of America. 51 dental colleges have been recognised for the purpose; it also provides for the examination by a local board of examiners of applicants for registration with specified qualifications. It will be needful, therefore, for the future that any dental surgeon seeking to practise in Jamaica should have had first-class training at a recognised dental school.

POST OFFICE AND TELEGRAPHS.

Both under postal revenue and under telegraphs the cash collections for the year 1905-6 exceeded the estimates. They are thus compared with the collections of the previous two years:—

—	1905-6.			1904-5.	1903-4.
	£	s.	d.	£	£
Postages	29,593	10	4	26,538	26,326
Commission on money orders	440	18	5	560	637
Local Commission on British postal orders	97	12	0	37	—
Commission on local postal orders ...	689	11	1	657	690
Miscellaneous	614	7	1	863	398
Telegraphs	5,982	19	6	4,792	5,195
£	37,418	18	5	33,447	33,246

The presence of large numbers of Jamaicans at the Isthmus may account for some of the increase in postages and in commissions on postal orders, and the extension of the daily post to all the offices in the island has, of course, had some share; but we may reasonably regard this considerable improvement among the reliable indications of general progress in the island during the year.

The Postmaster submits an interesting review of the revenue of the Department taken decennially during the last 40 years:—

Year.	Postages.	Commission on Money Orders and British Postal Orders.	Commission on Postal Orders.	Telegraphs.	Miscellaneous.	Total.
	£	£	£	£	£	£
1865-6 ...	11,260	585	—	—	741	12,586
1875-6 ...	14,856	281	—	—	614	15,751
1885-6 ...	15,681	314	—	4,055	205	20,255
1895-6 ...	22,439	388	520	6,156	173	29,726
1905-6 ...	29,560	538	689	5,983	806	37,577

During this period inland letter postage has been reduced from 4*d.* and 3*d.* according to distance, and postage to the United Kingdom from 1*s.*, by successive steps, to the uniform rate of 1*d.* per half-ounce.

The expenditure of the Post Office Department for the year 1905-6 is thus stated:—

Personal emoluments	£15,252	9	1
Mail conveyance	10,862	8	5
Services	5,202	0	9
Maintenance of telegraph lines by Director of Public Works	798	14	10
	£32,115	13	1

The excess of £391 over the expenditure of the previous year is accounted for by the expenditure of £1,130 in the year for the manufacture of stamps. Under each of the three principal heads of expenditure, viz., "Personal Emoluments," "Mail Conveyance," and "Maintenance of Telegraph," there has been successive reduction in the last three years.

The revenue collected on postages during the last three years is apportioned between ocean postages and inland postages as follows:—

—	Ocean Postages.	Inland Postages.	Total.
	£	£	£
1903–4	4,892	21,434	26,326
1904–5	5,712	21,390	27,102
1905–6	6,749	23,534	30,283

Amongst small changes affecting in one way or another the convenience of the public, the Postmaster notes the reduction of postage to Australia to 1*d.* per half-ounce, although the same postage from Australia remains at 2*d.*; also the addition of one letter box in Kingston making the number 22, and the provision of facilities for obtaining inland postal orders and embossed stamps at the Circulation Branch of the Kingston Post Office. Mail coach service between Ewarton and Dry Harbour and between Kingston and Port Antonio has been discontinued.

The estimates taken quarterly at the Control Office in Kingston and at the district post offices give the following analysis of the correspondence handled by the Department, the previous year's returns being also submitted for comparison:—

Analysis of Correspondence.

—	Outwards.		Inwards.	
	1904–5.	1905–6.	1904–5.	1905–6.
Inland Mails—

By vessels not contract—				
United States of America—				
Ordinary Letters ...	169,095	197,481	215,545	252,708
Post Cards	30,693	73,862	16,696	18,481
Other Countries—				
Ordinary Letters ...	85,922	243,324	128,879	152,135
Post Cards	6,870	21,726	959	9,600
Registered Letters, over-sea.	24,235	28,735	26,997	41,273
	2,465,900	2,830,308	2,876,323	3,119,006

This shows an increase of 717,541 in the number of letters and post-cards dealt with (or nearly 12 per cent.); registered letters have increased by 58,849 (nearly 24 per cent.); insured letters to the number of 29 and of declared value of £1,267 were received; and 63 letters of the declared value of £5,218 were despatched.

The conveyance of ocean mails was performed—outwards—by 54 vessels under contract carrying 421 mails, and 438 vessels non-contract carrying 908 mails: inwards—by 34 contract vessels carrying 264 mails, and 524 non-contract vessels carrying 2,105 mails. The number of transit mails was 265.

The mails despatched exceed the number of the previous year by 161, and the mails received are 290 in excess.

There is a fortnightly direct service each way between Bristol and Kingston, provided under contract with Messrs. Elder, Dempster and Co. For this service the Colony contributes £20,000 a year. Its primary object is the development of the fruit trade with the Mother Country.

The expenditure charged to this department on the ocean mail service is as under:—

Contributions towards Imperial contract with Royal Mail Steam Packet Company to 30th June, 1905	£525	0	0
Sea and territorial rates paid to other countries	157	8	8
Ship letter gratuities	1,657	19	3

In the matter of convenience for correspondence with the United Kingdom little change has been caused by the cessation of the Royal Mail contract. The company carried on its sailings much as usual to the end of October. The new itinerary then introduced, while it diminishes considerably the means of communication with the neighbouring West Indian Colonies, has added another quick and reliable service between Jamaica and the United States of America and by New York to England. The rate of gratuity for the conveyance of mails by non-contract vessels has been considerably reduced.

The inland mail service has been carried out at a cost of £8,722, partly by contractors, partly by the Public Works Department. The cost of this service in 1904-5 was £8,290. The district post offices now number 159. One district postmaster was prosecuted for misappropriation of money, and sentenced to two years' imprisonment.

With regard to money orders issued payable abroad, the number in 1905-6 was 8,023, and the total value of the orders £23,913, as compared with 11,086 orders and £29,200 value in 1904-5. The issues of other countries payable in Jamaica were 3,873, value £11,165, as compared with 4,816 orders, value £12,721, in the preceding year. The money order exchanges added £440 to Post Office revenue.

Postal orders, 226,105 in number, £33,193 in value, and yielding £691 in commissions, were issued in the year under report, the corresponding figures in the preceding year being number, 208,455; value, £31,713; commission, £652.

The transactions of the parcel post branch were as follows:—

From.	Parcels.		Import Duty.					
	1904-5.	1905-6.	1904-5.			1905-6.		
			£	s.	d.	£	s.	d.
United Kingdom	12,736	13,496	2,144	18	0	2,565	6	4
British West Indies... ...	262	275	18	4	0	21	6	6
United States of America ...	6,489	8,080	585	0	2	826	6	7
Dominion of Canada ...	285	398	96	11	11	92	9	6
Turks Island...	16	29	0	5	7	2	7	11
Belize...	—	—	—			—		
Bermuda	81	41	2	12	7	1	14	6
	19,869	22,319	2,847	12	3	3,509	11	4

The postage which accrued to Jamaica was £594, as compared with £375 in 1904-5, and the declared value of the parcels was £22,357 as against £23,370 in the preceding year.

At the end of the year 1905-6 64 telegraph stations and six telephone stations were connected with the postal system, the numbers in 1904-5 being 69 and 5 respectively. The railway telegraph service provides 35 additional centres at which telegrams may be received and despatched. The number of telegraph messages sent during the year exceeded the previous year's total by 12,494 messages. Working in harmony with the ocean cables, the department collected £2,820 on behalf of the Direct Cable Company and £212 on behalf of the West India and Panama Telegraph Company.

The necessity of providing a new building for the General Post Office at an early date is recognised.

MISCELLANEOUS.

Vital Statistics.

No census having been taken since the year 1891, the population of the island is arrived at by adding annually the natural increase on the results obtained 15 years ago. Such calculation, the Registrar-General reports, gives the estimated population of the island on 31st March, 1906, as 820,437.

The number of marriages registered during the year 1905-6 was 3,116, being 3·8 per 1,000 of the estimated population. This is a slight advance on the preceding year, when the proportion was 3·6, but below the rate reported in the six previous years. The percentage of bridegrooms who signed by "mark" was 31·6 and of brides 37·8. The gradual improvement in ability to write which the last ten years have shown in this way is maintained. Last year the figures were 34·6 and 40·4 respectively.

The birth-rate was 38·8 per 1,000 of the population, as against 36·1 in 1904-5, the births in 1905-6 numbering 31,618, viz., 15,938 males and 15,680 females. In the proportion of illegitimate children the improvement noticed last year has not been maintained, being 65·2 per cent. of the children born; only in three years out of the last ten years has this rate been exceeded; in 1904-5 it was 63·2.

The death-rate was 21·9 of the estimated population as compared with 24·7 in 1904-5. The deaths registered numbered 17,871, viz., 8,865 males and 9,006 females. The parishes of St. Ann, Manchester, and St. Elizabeth exhibited the lowest death-rate, but in all the parishes except St. Thomas it was lower than last year. Of the 17,871 deaths registered, 5,219, or 29·2 per cent., were those of children

under one year old, and 7,927, or 44·4 per cent., were of children under five years old. Out of every hundred legitimate children 11·97 died under one year; the proportion amongst the illegitimate children was 18·91. The proportion of deaths not medically certified was 79·7, almost exactly the same proportion as in the four preceding years.

The following table of statistics is given for purposes of comparison:—

Colony.	Year.	Marriages.	Births.	Deaths.	Illegitimate Births.
		Rate per 1,000 of population.	Rate per 1,000 of population.	Rate per 1,000 of population.	Rate per 100 Births.
British Guiana ...	1903...	—	29·3	28·9	67·2
Barbados	1905...	9·6	39·8	28·9	55·9
Trinidad	1903–4	7·9	33·5	24·2	65·4
Jamaica	1905–6	3·8	38·8	21·9	65·2

GENERAL.

I left Jamaica on the 2nd May, 1905, in H.M.S. "Diamond" on a visit to the Cayman Islands, and returned on the 5th idem.

The Colonial Secretary accompanied me, and during my absence I appointed Brigadier-General J. E. W. S. Caulfeild to act as Deputy Governor.

I have, &c.,

J. A. SWETTENHAM,

Governor.

The Right Honourable

The Earl of Elgin, K.G.,

&c., &c., &c.

APPENDIX.

JAMAICA.

A comparative table of REVENUE and EXPENDITURE compiled on the principles adopted in Sir D. BARBOUR'S REPORT in 1899.

No. 541.

TURKS AND CAICOS ISLANDS.

(For Report for 1905, *see* No. 495.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House,
Jamaica,
4th September, 1907.

MY LORD,

I HAVE the honour to transmit to your Lordship a copy of the Blue Book of the Turks and Caicos Islands for the year 1906, with the Commissioner's Report thereon for the same period.

I have, &c.,

SYDNEY OLIVIER,
Governor.

The Right Honourable
The Earl of Elgin, K.G.,
&c., &c., &c.

1125 Wt 24282 10/07 D & S 5 30044

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1906.

Totals	8,053	7,989	8,006	8,910	8,002	8,192	7,279	7,080

From the above tabulated statements it will be seen that the revenue, estimated at £7,770, amounted to only £6,810, a difference of £960, which serious falling off was mai[illegible] to the small shipments of salt, resulting in a loss of [illegible] £176 in the royalty on salt and port dues respectively [illegible] not been for "The Customs Tariff Ordinance 1905" r[illegible]ing, in spite of the general depression in the staple industry of the Dependency, all that was expected of it, the deficit would have been largely increased.

The approved estimate of expenditure was £7,681, but by dint of rigorous economy in all departments, the actual amount disbursed was only £7,080, a saving of £601 on the estimates, and £1,112 less than the average annual expenditure for the five years ended 1904.

TRADE, AGRICULTURE, AND INDUSTRIES.

The total imports during the year 1906 were valued at £27,572 and the total exports at £24,940, compared with the average of £29,549 and £32,119, respectively, for the five years 1900-1904, and as against £28,230 and £23,898 in 1905. The exports of salt fell in value even below that of 1905, the lowest on record, being £14,275, as compared with £14,604 of the previous year. The export of fibre, the most important subsidiary industry, fell from £5,803 to £5,605.

Imports.

As the Dependency is passing through the most critical period in the history of its staple industry, the following tables may be of value and interest, as showing how low the exports of salt have fallen since the last average year, 1903:—

Whither Exported.	1903.		1904.		1905.		1906.	
	Bushels.	Value.	Bushels.	Value.	Bushels.	Value.	Bushels.	Value.

Total 1905 ...	193	24,064	93	141,731	186	165,795

CIVIL ESTABLISHMENT.

The Commissioner, Mr. Douglas Young, having been promoted to the Administratorship of Dominica, left the Dependency on the 26th March. The Judge, Mr. G. P. St. Aubyn, administered the Government, and Mr. A. W. Harriott, Assistant Commissioner at Grand Turk, acted as Auditor, pending the arrival of Mr. Young's successor.

Mr. Frederick Henry Watkins, Companion of the Imperial Service Order, having been appointed Commissioner of the Turks and Caicos Islands, arrived in the Dependency and assumed the duties of his office on the 10th May.

LEGISLATION.

The following Ordinances were passed by the Legislative Board during the year:—

The Supplementary Appropriation Ordinance, No. 1.
The Appropriation Ordinance, No. 2, and
The Court of Appeal Ordinance, No. 3.

By the last-named Ordinance the local Court of Appeal was abolished and appeals from the judgments of the Supreme Court were made to lie to the Supreme Court of Judicature of Jamaica.

EDUCATION.

In 1883 an Ordinance was passed to make it conpulsory upon parents, as far as local circumstances permitted, to cause their children to attend the public elementary schools, but there was a provision that the compulsory clauses should not come into operation except by order of the Commissioner with the approval of the Governor of Jamaica. For eighteen years the Ordinance, so far as compulsory attendance was concerned, remained a dead letter, and in 1901 when the provisions were found unsuitable for the requirements of the Dependency, the present Education Ordinance was passed. The administration of education is vested in a Board consisting of the Commissioner with not more than seven or less than four other persons appointed annually. The Board meets twice a year for the despatch of general business and at any other time when necessary.

The sum of £600 is placed at the disposal, annually, of the Board for the purpose of carrying out the provisions of the Ordinance, but the details of the expenditure are left entirely to the Board.

The Commissioner appoints such schoolmasters as are necessary, who, although subject to the same discipline as the other public officers, are not entitled to receive pensions.

To encourage or compel attendance at the schools of the principal settlements, a school-rate is made payable to the Board by a parent in respect of each child of school age (the words "school age" means over six and under thirteen years of age) living within a mile and a half of a school, except the following requirements are satisfied:—

(1) That the child has been in regular attendance at a school approved by the Board.

(2) That the child has been prevented from attendance by sickness or other reasonable cause.

(3) That the child has received sufficient instruction by private tuition.

(4) That the child has reached the age of ten years and has been granted a certificate by the Board of his ability to read and write and of a knowledge of elementary arithmetic.

All rates collected under this Ordinance are applied in such manner as to the Board seems fit.

The Bible is a daily class book in every school receiving aid, but no child may be excluded from such a school on account of his religious denomination.

A code of regulations was made for the Government schools in 1903. The rules deal with the school records and attendance book, sewing classes and pupil teachers, together with a schedule of graded instructions.

The pupil teachers, who are engaged for a course of four years, are examined annually in the examinations for pupil teachers held by the Education Department of Jamaica.

There is, at present, no course of training for teachers, locally, but this is a defect which will, it is hoped be soon remedied, for the question of obtaining qualified teachers has been one of peculiar difficulty. How successful the operation of the Ordinance in the compulsory districts has been, may be gathered from the following comparative table:—

District.	On Roll.		Average Attendance.	
	1901.	1906.	1901.	1906.
Grand Turk°	163	219	79	190
Salt Cay*	49	42	31	35
Cockburn Harbour°	100	121	68	100
Kew	74	102	49	63
Blue Hills	79	78	34	47
Lorimers	83	102	41	42
Bottle Creek	—	113	—	92

* Compulsory District.

There are several private schools within the Dependency, but the attendance at such schools, unless licensed by the Board, does not exempt the parent from the payment of the school-rate. There are 207 children in attendance at the private schools.

CRIMINAL STATISTICS.

Throughout the Dependency serious crime is of rare occurrence, abusive language being the most frequent offence.

The following table gives a comparative statement of the criminal statistics of the Dependency for the years 1903 to 1906:—

—	1903	1904	1905.	1906.
The number of offences reported to the Police.	143	134	128	160
The number of persons apprehended by the Police or summoned before the Magistrates.	143	129	128	160
The number of Summary Convictions :—				
1. For offences against the person ...	28	37	26	27
2. For prædial larceny	—	—	5	1
3. For offences against property other than prædial larceny.	6	7	6	13
4. For other offences	96	53	63	93
The number of Convictions in the Superior Courts :—				
1. For offences against the person ...	—	—	—	2
2. For prædial larceny	—	—	—	—
3. For offences against property other than prædial larceny.	2	—	2	—
4. For other offences	—	—	—	—
The number of persons acquitted :—				
1. In the Superior Courts	—	—	—	5
2. In the Inferior Courts	11	31	21	24

VITAL STATISTICS.

The year 1906 was healthy, no epidemics or serious outbreaks of sickness having been reported. During the wet season cases of malaria, as is usual, occurred in the Caicos Islands.

The number of births and deaths was 190 and 107, being 40 per thousand and 20 per thousand of the population respectively.

PUBLIC WORKS.

Owing to the financial condition of the Dependency, no works of importance were undertaken, but the survey of the Caicos Islands was continued by Mr. E. G. Reid, the Colonial Surveyor, who has been engaged under a three years' agreement for that purpose. During the year, Mr. Reid was occupied in field work for six months, during which period about 100 lots near Kew and about 150 lots near Bottle Creek, in the North Caicos, were surveyed. It is to be hoped that this important work will be pressed vigorously and finished within a reasonable time.

POSTAL AND TELEGRAPH.

There is no internal postal, telegraph, or telephone service. There is frequent, but irregular, steamship communication with the United Kingdom and other countries. The only line which has any pretence to fixed date is the Imperial Direct West India Mail, the steamers of which call at Grand Turk on their way to Jamaica every other Wednesday, bringing mails and parcels post from Bristol. Unfortunately, there is not sufficient inducement offered to these steamers to touch on their return voyage. The voyage from Avonmouth occupies about 12 days, and freight is brought out by the "Port Kingston" every six weeks, at the rate of 25*s.* a ton. The subsidized steamer "Beta" from Halifax, Nova Scotia, calls about once a month both on her way to, and on her return from, Jamaica, and is the only means of steam communication from Jamaica. The subsidy paid is £120 a year.

Most of the mails to the United Kingdom are carried to New York by the steamers of the Clyde Line, which call here on their voyage to and from San Domingo, at intervals of about 14 days each way.

The revenue of the Post Office for the year 1906 was £406, made up of—

	£	£
Receipts.		
Sales of Stamps	193	
Commission on Money Orders ...	37	
Commission on Postal Orders ...	3	
Sale of Stamps to Collectors ...	153	
Other receipts	20	
		406
Expenditure.		
Office Expenses	34	
Transit Charges	8	
Mail Subsidy	217	
		259
Net Revenue of Post Office ...		£147

The estimated number of letters and postal matter beyond the seas dealt with by the local Post Office during the year 1906 may be seen from the following table:—

—	United Kingdom.		Other Places.		Total.
	From.	To.	From.	To.	
Letters	3,000	3,050	13,500	11,720	31,270
Post Cards	500	600	750	1,250	3,100
Newspapers	2,000	450	16,150	1,325	19,925
Book Packets	1,250	50	1,300	100	2,700
Parcels	219	62	209	51	541

Money orders to the value of £768 were issued during the year on the United Kingdom, and orders for £124 drawn in the United Kingdom paid in the Dependency. The money order transactions with other places abroad amounted to £731 issued and £141 paid in the Dependency, the majority of the transactions being with Jamaica.

The cable of the Direct West India Cable Company between Halifax, Bermuda, and Jamaica, is connected with Grand Turk. The Company supplies a news bulletin daily, in respect of which an annual grant of £120 is made. The rates chargeable under the Cable Company's Ordinance 1898, are as follows:—

	s.	d.	
To Jamaica	1	0	a word.
,, Bermuda	1	6	,,
,, Halifax	2	0	,,
,, United Kingdom ...	3	0	,,

METEOROLOGICAL OBSERVATIONS.

The following readings and statistics were from observations taken at the United States Weather Bureau Station at Grand Turk, latitude 21° 21′ N., longitude 71° 7′ W., at a height above mean sea level of 11·3 feet.

Rain fell on 149 days during the year, and measured 28·36 inches, compared with—

41·97	inches in	1905
43·79	,,	1904
36·63	,,	1903
27·45	,,	1902
29·52	,,	1901
23·59	,,	1900

and an average rainfall of 24.61 for the previous seven years, 1893-99. The heaviest rain on any one day during the year was 3·70 inches on the 5th November, while the wettest months were March, June, and November, with 4·24, 3·94 and

9·00 inches respectively. It is intended to have the rainfall recorded in other places as soon as possible.

The coolest and hottest months were December and August, with mean readings of 74·4 and 83·8 respectively, while the mean temperature for the year was 79·6.

FOREIGN CONSULS.

United States of America:—J. A. Howells, Consul; W. S. Jones, Vice-Consul.

France:—W. S. Jones, Consular Agent.

Denmark:—H. M. Murphy, Consul.

Dominican Republic:—W. A. Manuel, Consul.

GENERAL REMARKS.

The general condition of the Dependency still continues to be one of depression and to cause the gravest anxiety for the future of the staple industry of these islands. Owing to the abnormally wet seasons, the two previous years had been classed among the worst ever experienced in their history, and this disastrous state of things continued until the middle of the past year, when the dry weather allowed average rakings to be made. The inability on the part of the salt pond owners during the two years and a half to meet the demand, had in the meantime caused the purchasers at the principal markets to seek fresh sources of supply, especially in the Trapani district of Sicily, so that at the end of the year when, at last, abundant salt was ready for shipment, little or no demand for local salt at profitable prices existed. How serious the situation is, especially for Grand Turk, may be gathered from the following tabulated statement, showing the export value and the number of bushels of salt shipped during the past four years:—

Year.	Grand Turk.	Salt Cay.	Cockburn Harbour.	Total.	Value.
	Average export 700,000 bushels.	Average export 400,000 bushels.	Average export 700,000 bushels.	Average export 1,800,000 bushels.	
					£
1903	694,609	418,480	693,605	1,806,694	23,678
1904	193,305	210,566	601,477	1,005,248	15,079
1905	110,475	361,412	489,412	961,299	14,604
1906	104,648	369,725	569,101	1,043,474	14,276

From the above statement it will be seen that Grand Turk has in three years of disaster, 1904-6, shipped less than two-thirds of what should be its average export.

It addition to the drawbacks of the heavy rains in 1904 and 1905 and the low prices at present obtainable, the high protective duty, about 6 cents or three pence per bushel, on foreign salt imported into the United States, makes it a matter of impossibility for the majority of salt pond owners to retrieve their losses. New districts in the United States by the development of railways are gradually being opened up for the utilization of salt lakes and mines, and this increased production of domestic salt is confining, more and more, the use of imported salt to the packing factories situated in close proximity to the seaboard of the Atlantic. Efforts to extend our trade with Canada, would, I am disposed to believe, not be without result, but united effort and enterprise are necessary, and both, I am sorry to say, are not forthcoming to any large extent at present in this Dependency. Under even the most favourable circumstances, the profits of the salt industry are small and uncertain, and the words of the report for 1899 of one of my predecessors, now Sir H. M. Jackson, deserve to be quoted as being as true with regard to the conditions now existing as they were at the time when written. "The salt industry is, nevertheless, perhaps the most uncertain that could be found, as a single day's rain in the raking season will reduce the crop by one fourth, and yet, as it has hitherto been the only possible industry in these islands, the merchants have gone struggling on, barely keeping their heads above water in an average year, and in a good year tormented with the prospect that it may be followed by a 'dripping season' which will swallow up all their hardly-earned profits. It is not too much to say that but for the 'store' which is the necessary adjunct of every salt merchant's business here, no salt raker could pay his way, and those among them who have attained to even the most modest competence have done so by what they have taken across the counter, not by what they have gathered from their ponds."

The salt ponds are divided into too many interests, and the small owners and even some of the large proprietors are now unable to bear the strain of the last three years.

Although, owing to its size, the introduction of subsidiary industries into Grand Turk is almost impossible, there are several sources of export from the Caicos Islands to supplement the production of salt, as may be seen from the following table:—

Comparative Statement of the value of the Principal Exports other than Salt from the Dependency, 1887–1906.

Year.	Sisal Fibre.	Sponge.	Turtle Shell.	Dried Fish. Conchs.
	£	£	£	£
1887	—	282	56	—
1888	—	287	230	92
1889	—	249	400	—
1890	50	181	30	78
1891	11	1,250	37	41
1892	25	940	77	—
1893	—	618	176	—
1894	420	218	62	44
1895	620	552	150	69
1896	1,047	957	230	6
1897	2,539	4,484	276	—
1898	2,902	982	799	—
1899	7,494	2,004	823	111
1900	5,081	3,951	652	190
1901	6,551	9,277	937	186
1902	7,101	1,961	547	313
1903	6,488	1,253	43	268
1904	6,887	1,414	151	434
1905	5,803	2,223	533	656
1906	5,605	2,418	1,768	509

As will be seen, by far the most important of these industries is that of sisal fibre, which is of comparatively recent introduction into the Dependency. Capt. (now Sir H. M.) Jackson was the first Commissioner to direct practical attention to the possibilities of this plant, for he sent on to Kew specimens of the Pita found in the Caicos, which were identified as the sisal of commerce. The seedlings of the original plants are said to have been brought from Crooked Island in the Bahamas to the Caicos Islands by Mr. Henshall Stubbs about the middle of the last century, but it was not seriously cultivated for export purposes until 1890, when two companies at West Caicos and East Caicos were formed and registered under the Trading Companies Ordinance. Despite the inevitable initial discouragements and difficulties, these companies have struggled on and have proved the practical salvation of the Caicos Islands. Prior to the commencement of the cultivation of fibre, the chief occupations of the people had been wrecking and primitive cultivation of ground provisions. The erection of the Grand Turk Lighthouse had deprived them in a large measure of their chief source of livelihood, and one of my predecessors had quaintly to lament, in enumerating the disasters of the year, that there had been only three wrecks. As the soil in the Caicos at the best is shallow in the extreme, the crops in the frequent seasons of drought were absolute failures, so that the Government had almost yearly to send relief in the form of

food to the half starving people dependent, as has been said, upon crops which, in most favourable years, could, with difficulty, satisfy their wants. Coming at an opportune time, the fibre industry gave steady employment and established habits of industry in place of precarious and demoralizing conditions of work to the people, who were rapidly relapsing into semi-savagery. At the present moment 250 to 300 persons are regularly engaged in the fibre cultivation, and in addition to the two pioneer companies already mentioned, several persons belonging to the Dependency have commenced planting fibre, and are increasing the area of cultivation as quickly as their limited capital will allow. A rough estimate as follows may be given of the land now planted in sisal:—

East Caicos	Acres	2,000
West Caicos	,,	1,000
Bellevue, North Caicos ...	,,	150
Haulover, Grand Caicos ...	,,	50
		3,200

At East Caicos 1,000 acres more are to be planted in the near future, while there will still remain about 3,000 acres for future development. In West Caicos there are about 4,000 acres belonging to the Company suitable for sisal, and 600 acres of Crown Lands are also to be leased. At Bellevue and Haulover there are 1,500 and several thousand acres respectively. In the Turks Islands, the recent unfortunate experience in the salt industry has clearly indicated the importance of introducing fibre to afford, during wet seasons, employment to the labourers and prevent their wholesale emigration, and two leases for Crown Lands of 430 and 350 acres in Grand Turk and Salt Cay, respectively, have been signed during the past year. These leases, which are for 21 years, with the option of renewal for a further term of 21 years, stipulate that the lessees shall within three years commence the cultivation of the land, and within five years have at least so many acres under cultivation as are approved by the Government. In the Caicos Islands there are thousands of acres suitable for sisal cultivation, which, being surveyed, can be either sold or leased on conditions similar to those already stated.

Sponge gathering as an industry of commercial importance is also of recent date. At present, there are three sponging establishments in the Caicos Islands; at Cockburn Harbour, Dellis Cay, and Five Cays, where sponges are purchased, cured, assorted, baled, and shipped. The gathering of the sponges is carried on by more than 50 sloops belonging principally to Blue Hills or Providenciales, each of which employs three to nine men according to the number of boats carried. The best

months for sponging are April, May, September, November, and December. After being cured, the sponges, when carefully graded, are pressed in bales, averaging 50lb. in weight, and exported. The sponges are bought locally in 2 strands of 15 pieces each, the total weight being from 1½ to 2lb. on an average. Although inferior to those imported from the Mediterranean, these sponges find ready sale at fairly remunerative prices at the local establishments, and in the United States bring—

Grade.	Local Prices.	Prices in New York.
	cents.	cents.
Sheep's Wool	50–125	70–175
Reef (local)	20–25	75–120
Yellow and Hard Head ...	11–15	30–40
Velvet	10–12	40
Grass	10–12	20–40

Turtling is carried on for the sake of the shell of the Hawksbill, and, owing to the lack of local enterprise and knowledge, is largely in the hands of the Bahama schooners, which come in large numbers into these waters during the season. Legislation is necessary for establishing a close season, or else the turtle will soon be rarely seen, owing to its shy habits and the modern ingenious contrivances for ensnaring it, which, in sporting parlance, leave the turtle, when once seen, no off-chance of escape.

Conchs are a favourite article of diet among all classes in these Islands, and if properly dressed can be made exceedingly palatable. When dried they are exported principally to Hayti, where they find a ready sale. Occasionally those engaged in the trade have the good fortune to find pink pearls, for which high prices are obtained.

The bat manure caves at East Caicos and Conch Bar, in the Grand Caicos, have long since been exhausted.

Although the immediate outlook is gloomy in the extreme, it is to be hoped that the clouds will soon lift and that all classes of the Dependency who have met the recent adverse years with grit, patience, and fortitude, will once more experience what they deserve—a long period of prosperity.

F. H. Watkins,
Commissioner of the
Turks and Caicos Islands.

*** A Report upon the Sisal Industry of the Caicos Islands is being published separately; Colonial Reports (Miscellaneous) No. 43 [Cd. 3766].

(For Report for 1905-6, *see* No. 525.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House, Jamaica,
17th October, 1907.

MY LORD,

I HAVE the honour to transmit to your Lordship the accompanying Report on the Blue Book of Jamaica for the year 1906-7, which has been prepared by Mr. H. C. Bourne, C.M.G., the Colonial Secretary.

2. Having assumed the Government of this Island since the close of the period dealt with, I have no observations to make upon this Report, which appears to me to present a well-composed and interesting survey of the year's transactions.

I have, &c.,

SYDNEY OLIVIER,
Governor.

The Right Honourable
The Earl of Elgin, K.G.,
&c., &c., &c.

1125 Wt 24282 11/07 D & S 5 30281 A 2

REPORT ON THE BLUE BOOK OF JAMAICA FOR THE YEAR 1906-7.

The improvement in prosperity which set in towards the end of 1905 and indicated the recovery of the Colony from the cyclone of August 11th, 1903, continued under favourable climatic conditions throughout the first three quarters of the year under review, and in January, 1907, the prospects of agriculture and trade were bright, and a large surplus was anticipated. On the 14th of that month at 3.33 p.m., when the West Indian Agricultural Conference, held at Kingston under the auspices of the Imperial Department of Agriculture and attended by an unusual number of distinguished visitors from the Mother Country was taking place, a terrible earthquake occurred which wrecked almost all the brick buildings in the town. It was immediately followed by a fire, which broke out at three different points, and rapidly spread over the business and shipping section of Kingston. In a few hours the commercial quarter was reduced to ruins, and nearly all the trading stocks and food supplies of Kingston were destroyed.

The following is the account of the catastrophe given by the Inspector-General of Constabulary in his Annual Report:—

"The disastrous earthquake which destroyed the business part of Kingston, and rendered almost all the dwellings in the remainder of the city and lower part of Saint Andrew uninhabitable, occurred on the afternoon of the 14th January, about 3.30. Several fires broke out immediately after the shock, within that portion of the city south of the Parade, between Church Street on the east, and Orange Street on the west, which rapidly spread and consumed the entire area down to the sea, including the wharves situated within these boundaries.

"The loss of life caused by the falling buildings and subsequent fire (many persons who survived the shock got pinned under the debris and collapsed buildings, or being too seriously injured to escape unaided, were burnt to death by the quickly advancing fire before they could be rescued) must have been over 1,200, including strangers who were visiting Jamaica, and some of the leading citizens, and prominent and business men, while numbers of persons were seriously injured. I am unable to state, with any degree of accuracy, the loss to property, but it must have been very great.

"As soon as possible after the catastrophe, with the assistance of the Deputy Inspector-General and other Officers, I organised the police, as well as was possible under the circumstances, and sent out parties to assist in rescuing the wounded and help at the fires, which could not, however, be checked, owing to the destruction of the principal fire station.

"The police, assisted by parties of the West India Regiment, who soon arrived from camp, and the Royal Garrison Artillery, continued during the night to patrol the streets and remove the wounded to the Public Hospital and other places of safety outside the fire-swept area. Picquets and guards were posted at the two banks (which although burned down had their contents safe in the vaults), Myrtle Bank Hotel, and at all other points in the city where their services were most urgently required, while the Water Police protected the sea front.

"Next day the work of rescuing the wounded and burying the dead was continued, and numbers of bodies, many of which through disfigurement could not be identified, were buried. Two sub-officers and eighty men were continuously engaged on this work for forty-eight hours, owing to the pressing necessity of quick burial.

"A cordon of police and military was formed round the burned area, and was extended so as to include the Railway Station and Kingston Mills, also the Customs and Bonded Warehouses, and the Hamburg-American and Railway Wharves. Everybody was excluded and none allowed to re-enter, except on production of a written pass. Guards of police and military were also mounted on the banks, wharves, customs, and bonded warehouses, the railway, and the few stores which were opened for business. The West India Regiment supplied a guard for the Public Hospital and Cross Roads, and the city and suburbs were constantly patrolled by police and military picquets.

"Almost the entire population of the city took refuge on the Race Course, and other open spaces, north of the Parade Gardens, being afraid to return to their damaged houses, but some of the lower order returned and looted many of the stores north of the police and military cordon. Numbers of them, however, were arrested, and a considerable quantity of loot was recovered on that and succeeding days, and removed to Sutton Street Station and restored to the owners.

"Reinforcements were called up from the Depôt and the parishes of Manchester, Saint Elizabeth, Westmoreland, Saint James, and Saint Mary, and I was able to relieve the great strain on the Kingston men, who had been on duty continuously for two days and nights, as well as to afford the much needed protection which the city called for in its altered and defenceless condition. The Militia Artillery guarded the Railway buildings and contents, the Kingston Mills, and the Customs and Bonded Warehouses, the West India Regiment, the Wharves, Banks, Ordnance, &c., while the police and Saint Andrew Rifle Corps supplied the cordon and mounted guards on all the public offices, wharves, and food distributing depôts, and guarded the relief supplies as they arrived. The Kingston Rifle Corps, some of whom were mounted, rendered good service in patrolling the suburbs and keeping in touch with, and

reporting to, Police Headquarters, and Mr. F. C. Burke, B.A., of Westmoreland, and some of his friends, did valuable work in this direction for a considerable period.

"As the dead bodies were being recovered, and the streets within the burnt area cleared and opened to traffic, the cordon gradually closed towards the sea, when, at the end of two weeks, the whole city having been sufficiently cleared, it was withdrawn, and the services of the regular and irregular forces dispensed with. The extra police from the country continued to guard the lower part of the city, and mount the guards and picquets already established, down to the 1st of March, when the Kingston Division, having been increased by twenty men from the Depôt, resumed entire control of the city, and the country detachments returned to their Division.

"For fully a week after the earthquake, Sutton Street Police Station and its approaches were actually besieged by the terror-stricken population, who looked upon it as a sort of information bureau, and every effort was made to supply information to persons—native and foreign—regarding missing friends, &c. As written permits were required to pass through the cordon the issue of these alone kept a couple of officers continually busy. An unusually large number of permits were also issued to persons leaving the Island.

"I have much pleasure" (writes the Inspector-General of Constabulary in the report from which this is quoted) "in expressing my appreciation of the valuable services rendered in aid of the police, under circumstances of almost unparalled difficulties, by the Officers and men of the West India Regiment, the Royal Garrison Artillery, the Jamaica Militia Artillery, and the Saint Andrew and Kingston Rifle Corps, without which it would have been impossible to police the fallen city, immediately after the earthquake. The conduct of the men and the harmony with which they worked together was admirable, considering the depressing and disagreeable nature of the duty, the long spells of watching, irregular meals, contact with the dead and dying, and the dispiriting example of a despondent populace. Everything was done in a humane manner, and not one complaint of rough handling on the part of the police or military reached me. I must also pay a similar tribute to the Officers and men of the police, who worked, with untiring zeal, under very great difficulties. Their barracks were down, and when not on duty they had to sleep in the open. For days after the catastrophe they had to remain on duty for twelve hours at a time in the streets, with fixed bayonets, without a regular food supply, and, except where an occasional man dropped out through physical exhaustion, not a murmur or complaint was heard.

"The Water Police kept a vigilant watch on the sea front, and after the first day, at least, effectually prevented looting in that direction, and also made some smart detections of looted goods, while the detectives were responsible for the recovery

of a large amount of property which had been looted immediately after the earthquake.

"When we bear in mind the unprotected condition of the partially destroyed wharves, warehouses, railway premises, bonded warehouses, and private houses, containing goods and valuable property, it is satisfactory to state that, after the great panic of the first day and night—when it was almost impossible to prevent it—little or no looting or serious robberies took place. The conduct of the people was good. They gave the police very little trouble, and obeyed those to whom were entrusted the maintenance of social order, and I doubt if the people of more enlightened cities elsewhere would have acted as well, in face of such a calamity."

The Inspector-General's estimate of the loss of life is probably excessive. An alternative estimate of 800 is based on the following particulars:—

Buried up to 28th January—		
May Pen	501	
Half-Way-Tree	18	
Catholic Cemetery	57	
Up-Park-Camp	27	
Spanish Town	5	
Stated to have been cremated	91	
		699
Deaths in Hospital after January 28th ...		13
		712
Bodies still buried in ruins and other deaths not included in above, say		88
		800

Any estimate of the destruction of property is necessarily very rough, but the following are the figures set out in the petition presented to the Imperial Parliament:—

	£
Loss of buildings in the burnt area ...	500,000
Losses on private buildings in Kingston and suburbs of St. Andrew	900,000
Ecclesiastical buildings in Kingston ...	60,000
Merchandise and personal property in burnt area	500,000
Ecclesiastical buildings out of Kingston ...	30,000
Other buildings in other parishes	20,000
	£2,010,000

The following paragraph from the annual report of the Collector-General indicates the extent to which the wharves and the wholesale stores suffered:—

"Out of twenty-one bonded warehouses fifteen were destroyed by fire and five by earthquake, but one escaping. The special stores fared no better, the freight house at the Royal Mail Wharf and that of the Hamburg-American Atlas Company being the exceptions. There were found to be capable of being patched up for immediate requirements seven special stores and four bonded warehouses. Of twenty-two wharves used for the commerce of the City six were totally destroyed by fire. Duty approximating £11,842 was remitted on goods in warehouses destroyed by fire and £1,260 in respect of goods short on stocktaking in those warehouses wrecked by earthquake."

The Petitioners' estimate of the loss by destruction of buildings in Kingston was computed by taking the annual assessed rental of houses (including sites) at 15 years' purchase, and roughly estimating the depreciation at 95 per cent. in the case of premises in the burnt area and 75 per cent. in that of those in the rest of Kingston, and then deducting 5 per cent. from the total to cover inaccuracies. It may be doubted whether this allowance of 5 per cent. was sufficient, seeing that as regards the burnt area the value of the site alone would in every case represent more than 5 per cent. of the value of the premises, and as regards the district in respect of which a depreciation of 75 per cent. on the premises is assumed, that rate would imply a very much larger depreciation of the buildings taken alone and one obviously not in agreement with the facts. It may be noted that the properties in or about Kingston, roughly numbering 700, in which one of the leading building societies was interested were re-valued after the earthquake at nearly 95 per cent. of their former values, and many owners of sites in the burnt area claim that they have increased in value since the earthquake. On the other hand the value of the stocks and personal property destroyed is estimated by some whose opinion is entitled to respect at a very much higher figure than £500,000. The total amount of fire insurance policies on property in the burnt area is computed at £800,000.

The relief of immediate distress was ably carried out by a Committee appointed by the Governor, under the Chairmanship of His Grace the Archbishop of the West Indies, and among other steps taken by the Government, all the stores of foodstuffs remaining in the warehouses were commandeered to maintain a supply of the necessaries of life at a reasonable price, and were sold to the public through the agency of shops specially opened or kept open under police protection. Goods were retailed across the counter at Wolmers School by the Headmaster of the School and the Secretary of the Jamaica

Institute, and credit is due to the Auditor-General for ultimately disposing of surplus stores.

Though the sum of personal loss has been enormous and a great part of the working capital of the trade of the Colony has been destroyed, its agricultural resources are unimpaired, and its productive power is reduced only in so far as local capital for agriculture derivable from Kingston is diminished and capital is diverted from agriculture to the replacement of capital required for trade. These effects, however, will, it is to be hoped, be materially checked by the munificent assistance afforded by the Imperial Government and the generous donations contributed through the Mansion House Fund and other agencies from all parts of His Majesty's dominions and from foreign countries.

The total contributions (apart from the Imperial Grant and Loan subsequently voted by the Mother Country, and excluding the stores which were distributed in kind) amounted to £103,670, which was made up as follows:—

	£
Mansion House Fund	54,053
United Kingdom—other public subscriptions	15,778
United Kingdom—private subscriptions ...	533
British Colonies—Government contributions	7,179
British Colonies and India—private ,, ...	8,302
Foreign countries	6,804
Sale of relief stores	7,469
Island of Jamaica	3,010
Interest	542
	£103,670

Of this, £32,683 was spent in the relief of immediate distress, and a balance of £70,987 was handed over to the Assistance Committee, which has now been constituted to disburse the Imperial Grant in assistance of a more permanent nature. The operations of this Committee, and of the Loan Board, which is entrusted with the administration of the Imperial Loan, fall outside the year with which this report deals.

FINANCIAL.

The immediate effect of the earthquake on the revenue of the Colony was a few weeks' industrial paralysis, followed by a great increase in receipts from import duty and rum duty resulting from the demand for the re-placement of stocks. This increase commenced soon enough to neutralise the short period of stagnation which preceded it, and the surplus anticipated before the catastrophe has consequently been realised.

The accounts of the Colony for 1906-7 are not yet finally completed, but so far as at present ascertained the following are the results of the year's transactions:—

	£	s.	d.
Revenue	886,911	7	0
Expenditure	827,386	8	11½

showing a surplus of £59,524 18*s.* 0½*d.* This surplus added to the balance of assets with which the year commenced, £38,621 18*s.* 1¼*d.*, has left the Colony at the close of the year with the balance of assets £98,146 16*s.* 1¾*d.*

A table in which the revenue and expenditure are compared with those of previous years is appended to this Report. The original estimate of revenue was exceeded by £84,752. A surplus was realised on every head of revenue except rents, which fell short by £150. The excesses were as follows:—

	£
Customs	41,000
Port, Harbour, and Lighthouse Dues ...	850
Licences, Excise, and Internal Revenue ...	11,500
Fees of Office, Stamp Duty, Reimbursements, &c.	6,500
Post Office and Telegraphs	4,800
Railway	13,000
Interest	400
Miscellaneous	5,000
Land Sales	13,000

The original estimate of expenditure, £801,230, was increased by supplementary appropriations of £25,591, and also by £29,187 devoted to the repayment *pro tanto* of the loan under the Imperial Colonial Loans Act, 1900, for arrears of Railway Interest. Of the total appropriation of £856,008, the amount expended was £827,386, showing a saving of £28,662.

A policy of strict economy was observed throughout the year, but the Supplementary Estimates would probably have included provision for certain road extensions and other extraordinary works, if the occurrence of the earthquake had not led to the postponement of all new works which were not considered to be matters of most pressing urgency. As it was, however, considerable expenditure was incurred on roads in Vere and St. Thomas which had been necessitated by traffic in the former case, and in both, by the economies which had been practised for years in the upkeep of the roads of the Colony.

The excess of assets over liabilities was at the close of the year £98,146. The only assets which are not immediately realisable, are the following:—

	£
Parochial Improvement Loans and Advances to Parishes	37,744
Planters' Notes	29,828
Stores	30,172

and a few other Miscellaneous Advances. The amount still outstanding on account of Loans under the Hurricane Loans Law, 1903, was £2,648, and on account of advances to Sugar Industry £460.

For the benefit of readers who are not acquainted with the system of Public Official Accounts it is perhaps desirable to explain that the published statement of assets and liabilities relates only to transactions on general revenue account. Accordingly the liabilities do not include the amount of the funded debt nor do assets include the results of expenditure from loans. It is unnecessary to add that the Statement takes no account of Crown Lands and other items of wealth which have not been acquired from general revenue, or of the taxable capacity of the Colony which is the ultimate measure of its solvency.

The Public Debt, that is to say the funded debt of the Colony together with certain loans for special purposes charged on the undertakings and guaranteed by general revenue, amounted on the 31st March, 1907, to £3,654,388, and the Sinking Funds for the redemption of debt to £447,533. By the ordinary operations of the Sinking Funds, the repayment in certain cases by annuities, and the prescribed drawing and repayment of debentures, the outstanding debt will be reduced in 1915 to about £3,611,000, in 1925 to £3,494,000, in 1935 to £3,179,000, in 1945 to £1,688,000, and in 1955 to £36,000.

A lucid and exhaustive examination of the composition of the Public Debt is to be found in Sir Sydney Olivier's report on the Blue Book for 1901-2.*

The amount of revenue raised by direct taxation is comparatively small. Of the total revenue—nearly £887,000 last year—£411,000 was contributed by Customs and £101,000 by Rum Duty. It may be noted here that the existing Customs Tariff, by which imports not specially rated or scheduled in the free list are subject to the high *ad valorem* duty of 16⅔ per cent. has been renewed for five years from June, 1906. The Excise Duty on rum has remained at 5*s*. since 1898. The Railway (the gross receipts of which are credited to General Revenue) yielded over £148,000, and the Post Office and Telegraphs over £39,000. If licences, which are not compulsory imports, are excluded, the only direct tax for colonial purposes is the Property Tax, which is fixed by Law at 8*d*. in the £10 gross capital value, and last year yielded £29,000, and a House Tax in Kingston (in lieu of the Property Tax), which ceased at the end of the year, which yielded £5,779. The total of the Parochial Rates was £64,000, exclusive of about £3,000 Road Rates, by which, together with Taxes on horse-kind, carts, and other vehicles and a few minor items the Parochial Road Funds are fed. The total collections for these funds was £38,000. One other item of direct taxation not

* Colonial Report—Annual—No. 373.

included in the above should be added, viz.: Water Rates, which are for the most part compulsory in the districts served. These produced £16,800* in Kingston and St. Andrew, and £5,400 in the other parishes.

The Parochial General Exchequer shows a slight diminution compared with the collections of 1905-06, due entirely to the remission of rates in Kingston after the earthquake. But for this disaster the Collector-General reports that notwithstanding a reduction in the rating of Kingston of 2*d.* in the pound of rental the collection would have been maintained at the preceding year's figures, and so satisfactory were the City's finances at the end of 1906 that a further reduction of 3*d.* in the pound was contemplated.

The collection of the General Parish Rates under Law 16 of 1903 was very satisfactory. Arrear taxes were collected on 250,000 acres, while at the close of the year the arrear accounts consisted of only 66,000 acres. As regards Kingston, the system of taxation has since the close of the financial year been assimilated to that of the other parishes. Hitherto the house has been the unit for taxation, and it may be instructive to take this the last opportunity of noting the results of an analysis of the City's assessment.

The houses of and under £12 rental numbered 3,355, or 55·7 of the whole, while those of a rental of £59 and upwards were only 355, or 4·5 of the whole. The Collector-General observes that these figures suggest either that Kingston before its destruction was a very squalid city or that rents were very low. He adds that as a matter of fact rents were not low compared with rents of provincial towns in England. As regards the parishes other than Kingston the General Parish Rate was altered last year in only four cases. In St. Andrew it has been reduced from 1*s.* 3½*d.* to 1*s.* 3*d.*, and Port Royal from 1*s.* 10*d.* to 1*s.* 8*d.* In St. Thomas it has been raised from 1*s.* 1*d.* to 1*s.* 1½*d.*, and in St. Elizabeth from 7*d.* to 8*d.* It varied from 8*d.* in St. Elizabeth, and 8½*d.* in Manchester, to 1*s.* 5*d.* in Trelawney and St. James, and 1*s.* 8*d.* in Port Royal. The maximum of the Parochial Road Rate fixed by Law is 2*d.* In very few cases does it exceed 1*d.*, and in some no such rate is levied at all. The number of properties rated as being of £20 gross value or less numbered 54,827 or 43·7 per cent.; those valued at over £40 gross value numbered 21,285 or 17 per cent.

Of 160,000 tax accounts on the Rolls only 4·7 per cent. were in default at the end of the year, and it must be remembered that the arrear lists include derelict accounts and lands, the owners of which cannot be traced. The open accounts, which numbered at the end of 1904-5 nearly 19,000, and at the end of 1905-6 nearly 11,000, were at the end of 1906-7 only 7,954.

The following abstract indicates considerable progress in the ease or willingness of the taxpayers to pay their direct taxes:—

* Original estimate.

Taxpayers.

—	1906-07.	1905-06.
Taxpayers on roll	161,625	161,472
Paying voluntarily to end of June	85,484	69,779
Cases in which relief (partial or total) has been granted.	1,968	2,626
Assessment notices issued	91,166	106,279
Levy writs issued	57,506	67,288
Number paying to 31st December	146,444	136,842
Summonses issued	19,324	27,785
Paid on issue of summonses	11,059	14,112
Commitments applied for	2,502	3,935
Paid on issue of commitments	1,649	2,953
Number sent to prison...	76	91

TRADE, AGRICULTURE, AND INDUSTRIES.

The value of the imports into the Colony in the year under review was £2,261,469, as against £1,941,937 in the preceding year, which had shewn a very large advance on 1904-5. The exports for 1906-7 were valued at £1,992,007, as against £1,568,224 in the preceding year, which showed an advance of over £406,000 on 1904-5. As regards imports the increased collection of duty is shewn under many heads, the largest increases being flour over £5,000, and fish (dried or salted), whisky, tobacco, and oil, each over £2,000. A decrease exceeding £1,000 is shown only in the case of fish (alewives), the high price of which resulted in the substituted importation of dried or salted fish. The large increase in flour though due for the most part to satisfactory causes was also enhanced by the drought which set in before the close of the year and reduced the local supply of farinaceous food. The exports show an increase in value under each of the four heads under which they are classified, viz.:—

	£
1. Live animals, food, &c.	88,900
2. Raw materials	3,000
3. Manufactured articles	24,000
4. Coin and bullion	31,000

Under Class I. the chief increases were the following:—

—	Quantity.		Value.
			£
Cocoa	16,500	cwt.	57,000
Bananas ... ... over	1,000,000	stems.	37,800
Rum	32,500	galls.	35,200
Cocoanuts ... ... nearly	4,000,000		15,800
Cigars	500,600	lbs.	4,500
Tobacco leaf	39,000	,,	1,100
Turtle ... ... nearly	599		1,000

It is very satisfactory to note that the increase in the export of cocoa exceeds even that in the case of bananas. Cocoa is still classified among the minor products, but its cultivation is steadily extending, and it is a less precarious crop than fruit. The increased export of cocoanuts is an indication of gradual recovery from the hurricane of 1903. Smaller increases appear in grapefruit, limes, limejuice, and horses, and increases in quantity, but accompanied by decrease in value, in the case of sugar, annatto, kola-nuts, and yams. On the other hand the ginger exported, though less in quantity, was valued nearly £11,900 higher than the preceding year's crop. The chief decreases were:—

—	Quantity.	Value.
		£
Coffee	25,900 cwt.	45,800
Oranges	19,300,000 No.	19,500
Pimento	6,400 cwt.	1,300
Cattle	2,240 No.	13,000

Under Class II. the most important increases are wood (logwood) nearly £3,700, wood (bitter) £1,600, tortoise shell £1,700, and under Class III. logwood extract £16,600.

The following table taken from the Collector-General's annual report shows the relative importance of the Colony's staple products and the place that those still classified as minor products take in the list:—

—	1904–5.	1905–6.	1906–7.
	Per cent.	Per cent.	Per cent.
Sugar	8·1	6·9	6·3
Rum	6·4	5·6	7·1
Coffee	5·9	7·6	4·7
Dyewoods	5·4	4·5	4·4
Fruits	41·8	55·0	53·7
Pimento	9·5	4·5	4·2
Minor products	22·9	15·9	19·6

The one item under the general head "Fruit" that gives it its important place is bananas. The following are the number of stems exported in each of the past four years:—

1903-4	7,800,000
1904-5	8,900,000
1905-6	14,980,000
1906-7	16,000,000

The vast bulk of the crop goes to the United States, but the quantity sent to the United Kingdom, which was under

695,000 in 1904-5, rose to 1,217,000 in 1905-6, and 1,254,000 in 1906-7. In the same period the quantity exported to Canada has risen from 10,500 to nearly 118,000.

The number of oranges exported has fallen since 1903-4 from 82,600,000 to 55,100,000 last year, the export to the United States having fallen from 64,200,000 to 18,400,000. On the other hand the quantity exported to the United Kingdom which was 12,100,000 in 1903-4 has risen to nearly 26,000,000 last year, and to Canada from 4,500,000 to over 10,000,000. Pimento, of which Jamaica has practically the monopoly, fluctuates continually from year to year. The value of this export was worth in 1904-5 nearly £137,000, only £80,000 in 1905-6, and under £79,000 in 1906-7.

The following table shows the proportions in which our exports, including imports re-exported, were distributed among the markets of the world:—

—	1904–5.	1905–6.	1906–7.
United Kingdom	18·8	19·3	21·6
United States of America	53·4	57·4	57·2
Canada...	8·8	6·1	7·5
Other countries	19·0	17·2	13·7

It will be observed that in the last year there has been a slight movement in favour of the United Kingdom and of Canada at the expense of the United States and other countries. The United States, however, take more than half of our exports.

It is a matter of gratification that the prospects of a great development in our export trade in rum are very good. According to the special Commissioner appointed under the Jamaica Rum Protection Law, 26 of 1904, the planters have received for their last crop £20,000 more than they would have received had there been no protection against fraud hitherto perpetrated against the Jamaica product. Many planters have combined and entered into contracts to sell their rum for a term of years to a company specially formed for the purpose of securing Jamaica rum against such fraud. The action of Mr. Nolan and of this company, together with the assistance to their efforts given by the Imperial Departments in the United Kingdom are likely to increase the demand for and stimulate the production of the genuine article.

An analysis of the shipping returns shows a net increase of steam ships coming to the Island of 103, tonnage 120,430. This increase, however, is entirely in foreign shipping, British steamships showing a decrease in number of 11·8 per cent., and in tonnage of 12·1 per cent. The total tonnage of British steamers in 1906-7 was 506,000 tons, and of foreign steamers 968,000. The

steam tonnage entering at Kingston has increased in 14 years from 409,096 tons in 1892-3 to 1,097,668 tons in 1906-7. The relative position of the ports of entry in Jamaica has changed little since 1903, and that little is in favour of Kingston. Kingston, which in 1903 did 71·6 of the total trade, in 1906-7 did 73·4. Montego Bay shows an increase from 5·8 to 6·1, while Port Antonio has advanced only from 4·4 to 4·5; Port Maria and Annotto Bay have both gone back and now stand at 2·7 and 2·1 respectively; and Falmouth, in spite of its harbour improvements, remains at the same figure, 2·1.

The land statistics of the Colony classify the land enumerated under four heads, viz.: tilled lands, guinea grass, commons, and wood and ruinate.

The following table shows the average acreage of each returned for last year and the average for the last four years:—

—	1906–7.	Average of four years.
Tilled lands	255,414	229,127
Guinea grass	138,569	122,894
Commons	476,863	432,013
Wood and ruinate	1,270,551	1,292,531
	2,141,397	2,076,565

The acreage not accounted for varies from 3·9 in the case of Hanover to 32·3 in the case of Trelawny. A glance at this table suggests that there is much scope for the extension of agriculture. A further table is added showing approximately the acreage of the different cultivations:—

—	1906–7.	Average of four years.
Canes	29,182	25,732
Coffee	27,783	26,348
Cocoanuts	9,782	10,915
Bananas	62,685	43,625
Cocoa	8,586	5,040
Ground Provisions	113,995	115,974
Other items	3,401	1,493
	255,414	229,127

Apart from agriculture and penkeeping, that is the raising of stock, the chief industries other than those connected merely with distribution are, of course, those incidental to agriculture. With the exception, however, of sugar and rum, and cigars,

no elaborate preparation of the produce of agriculture is necessary prior to exportation. Rum and sugar are manufactured on the estates on which they grow, and though various schemes for central factories for sugar are in process of organization, the manufacture of sugar as an industry distinct from the production of the cane has still to be developed. There are several factories of excellent cigars in Kingston, and the merits of Jamaica cigars are becoming slowly recognized. The demand for the tobacco is in excess of the supply, and in view of the special skill required in its treatment the position in this respect will be changed only very gradually. The five chief factories respectively produced last year quantities varying from 245,000 to 3,459,000 cigars, and two factories produced 3,000,000 and 23,000,000 cigarettes respectively. The cigarettes are chiefly made from imported tobacco. Cigars are also made in six of the parishes. There are half a dozen aerated water factories at Kingston and others in other towns. Ice is manufactured at several centres. Small breweries and tanneries exist in many places. Butter making is being developed as a special industry at dairies in Manchester and Westmoreland. A factory at Spanish Town (The West India Chemical Works) for the production of logwood extract has in recent years been a large purchaser of all logwood within its reach and the establishment last year of a similar factory at Lacovia in St. Elizabeth promises to be of great value to that parish. A small company has also been established in St. Ann for the manufacture of meal from native corn, and it is understood that in St. Mary the Patterson Food Company of London is exploiting the banana for prepared food. Reference has been made in the reports on the Blue Book for former years to local match and soap factories. Under the protection of the Colonial Tariff the match factory has continued to manufacture matches from imported materials and to compete with the article imported ready-made. The number of boxes made last year was nearly 77,000 gross. The Doncaster Brick Works at Kingston is the only rival of the Penitentiary in the manufacture of bricks. The hotel industry is gradually developing. In addition to the hotels in the neighbourhood of Kingston, the large Hotel Titchfield at Port Antonio, and the smaller hotels at Spanish Town, Mandeville, Moneague and Montpelier, there are now some fifty licensed hotels or recognized lodgings in different parts of the Island available for tourists, and the accommodation provided is improving year by year. Of those owned by the Government, Moneague Hotel has, in response to popular demand, been enlarged in the past year. The tourist season naturally comprises the winter months, but the large majority of visitors who come from the United States do not reach Jamaica until after Christmas. Hence the tourist traffic for last year was to a great extent destroyed by the earthquake. The Collector for Portland records that the number of tourists entering the

Island through Port Antonio, the port at which the visitors from the United States chiefly arrive, fell off by 985.

Reference may conveniently be made in this section of my Report to those agencies which exist for the promotion and encouragement of agriculture and other industries of the Colony. The Board of Agriculture, which is under Government control, co-ordinates and supervises the Departments of Public Gardens and Plantations, and of the Island Chemist in so far as he is concerned in agricultural experiments. It also has control of the expenditure of the Imperial Grant of £10,000 allotted prior to the Brussels Convention for the relief of the sugar industry in Jamaica. Of this £10,000, £3,000 was allocated to capital expenditure on building machinery and appliances required to carry out experiments in the manufacture of rum. The bulk of these experiments are conducted at the Government Laboratory, but a part has been carried on at estate distilleries. Of this sum allocated to capital expenditure £147 only remains. The balance of the fund was appropriated to current expenditure and will suffice to provide the means of carrying on operations until 1910. This recurrent expenditure includes the salaries of a fermentation chemist and a superintendent of field experiments, and also provision for the cost of systematic experiments in the value of manures as applied to cane cultivation and in the relative merits of different varieties of seedling and other canes. Provision is also made for the training of distillers in a more scientific manner than has been customary in the past. One result of the united labours of the Island chemist and the fermentation chemist has been the discovery of what is now known as the high ether process in the manufacture of rum. At the outset practically nothing was known as to the composition of the materials used and of the changes which occurred during the process of fermentation. The Island chemist claims that it is now established that the flavour of Jamaica rum, to which the great variety in its character and quality is due, is the result, not of alcoholic fermentation by yeasts, but of acidic and putrefactive fermentation by bacteria. It has been demonstrated further that the compound ethers are the chief source of the special aroma on which the commercial value depends. The high ether process reinforces the ether content of rum by recovering the volatile acids left in the spent liquor from the retorts and returning them into the process. This process was last year carried out on a commercial scale on six estates. The rum produced was sold in London and favourably reported on by brokers and merchants. In some cases, however, the extraordinarily high standard of ethers in the new rum has made the market slower to welcome it than might have been anticipated. Experiments in manures have been carried on in conjunction with soil analysis on selected estates in four parishes, and the experiment to test the value of seedling canes as compared with

the ordinary estate canes on twenty-four estates in eight parishes. Progress has been made in the agricultural education centred at the laboratory which is carried on in connection with the scientific work of the department. The training of distillers has been mentioned above. Seven students attended the course of agricultural science during the year: of these five presented themselves for diploma examination and were all successful. The standard of competition for agricultural scholarships was also much higher than last year.

The Department of Public Gardens and Plantations also carries on both experimental and educational work. The department has three stations, Hope Gardens near Kingston, Castleton Gardens on the banks of the Wag Water (s.c., Agua Alta) in St. Mary, and the now neglected Hill Gardens at Cinchona in the Blue Mountains (5,000 feet above the sea). The experimental plantation at Hope included during the year under review seedling canes, Havana and Sumatra tobacco, cassava (various varieties), cocoa, coffee, citrus fruits, bananas, pineapples, various vegetables, rubber, and vanilla. Possibly the most valuable part of the educational work of the department is that carried on by the two travelling instructors who spend their time visiting whatever districts in the Colony are in the greatest need of their services, to lead the peasant proprietor into the better way of cultivating economic plants. These instructors work in co-operation with those appointed for similar purposes by the Jamaica Agricultural Society. The management of that Society is entirely independent of the Government, though the Governor is its chairman, and it is supported by a Government Grant which last year amounted to £1,250. The various Agricultural Shows which are held under the auspices of the Society are popular social gatherings, and they stimulate competition in the minor agricultural industries and still more the breeding of high-class horsekind and stock. The Society also awards prizes directly for the best cultivated holdings in selected districts. The Westmoreland Sugar Planters Association and the Northside Sugar Planters Association are, as their names imply, devoted entirely to the interest of sugar and rum. They may congratulate themselves on the success of the measure promoted by them and accepted by the Government for the representation of the rum industry of Jamaica by a direct agent in London.

The Royal Jamaica Society of Agriculture and Commerce and Merchants Exchange, which was established in 1885, performs the functions of a Chamber of Commerce. It receives a grant of £100 a year from the Government.

CURRENCY AND BANKING.

English silver is legal tender to any amount in the Colony, and the currency consists mainly of English silver, nickel coined specially for Jamaica, and bank notes for one pound issued by the Colonial Bank and the Bank of Nova Scotia. The amount of coin in circulation in the Colony last year is estimated at £300,000. The note circulation of the Colonial Bank was a little over £100,000, and that of the Bank of Nova Scotia a little under £40,000

The local bank-rate of interest is 6 per cent. The average rate of exchange with London during the past year was, bankers' selling rate 90 days, par, buying rate 90 days, ½ per cent. discount. The Bank of Nova Scotia has opened a savings bank branch in which it allows 3 per cent. interest on deposits. The Government Savings Bank allows 2½ per cent. The latter has fourteen branches in the Colony. The total number of depositors and amount of deposits at the commencement and the end of the year respectively were as follows:—

—	31st March, 1906.	31st March, 1907.
Depositors	38,971	40,056
Deposits	£ 353,125	£ 349,616

LEGISLATION.

The Legislative Council consists of the Governor as President, five ex-officio members, ten members nominated by the Governor, and fourteen members elected by the fourteen parishes other than Port Royal respectively. The bare majority of the votes under the Governor's control cannot be used by the Governor in all cases, as the votes of the ex-officio and nominated members cannot be taken in support of a law, vote, or resolution imposing any new tax or appropriating public revenue if nine elected members vote against it, unless the Governor declares from the chair that the passing of the measure is of paramount importance in the public interest, and similarly if the fourteen elected members are united on any question the votes of the rest of the Council cannot be taken unless the Governor declares that its decision in a contrary sense is a matter of paramount importance. The law of Jamaica is based on the English Common Law.

The following were the principal measures enacted during the year under review:—

Law 7 of 1906 provided for the appointment of an Assistant to the Attorney-General on the abolition of the Solicitor-Generalship.

Law 8 of 1906—the law to amend the Post Office Law 1868—compels all vessels outward bound to take mails at such rates as the Governor in Privy Council may fix.

Law 9 of 1906—the Produce Protection Law Amendment Law 1906—effected two changes. It compels every shipper of produce always to use the same trade mark, leaving it open to him, however, to employ subsidiary marks. It also abolished servants' licences under the amending Law of 1904, which appear to have created a class of tout who encouraged the peasant to sell him immature fruit for export, and also, as it is alleged, instigated praedial larceny.

Law 10 of 1906—a law to amend the Port Royal Law, 1900—reconstructed the Parochial Board of Port Royal on its abandonment as a naval station in being.

Law 20 of 1906—a law to amend the law as to the Registration of Voters and the Election Law, 1884—provides for the automatic registration of persons qualified as voters, provided they have paid their taxes, while it preserves the exclusion of persons who cannot write by excepting those who have signed their ingiving for tax purposes with a mark. The necessity of this law was suggested by the observation that a comparatively small number of persons who are entitled to be registered as voters took the trouble to get their names placed on the list. There has been a large increase in the lists since the law came into operation.

EDUCATION.

The secondary education of the Island, so far as it is maintained out of Government Funds or endowments administered under legislative enactments, is completely controlled by the Jamaica Schools Commission, which also acts directly in the management of the Jamaica College. The Secondary School at Montego Bay is under the Board of Education. The Government grants appropriated directly to secondary education in 1906-7 were:—

			£
Jamaica College	...	...	1,206
Montego Bay School	...	...	210

In addition about £1,150 was appropriated for scholarships. The Report on the Blue Book for 1905-6 gave a detailed account of the objects on which these appropriations are ex-

pended and also of the incomes derived from endowments by the secondary schools of the Colony. The total of such endowments belonging to nine different institutions amounts to about £5,800. The report for last year was received from the Schools Commission after this report was written, and it will perhaps be sufficient to refer for information on this head to the Blue Book Report mentioned above.

The basis of the elementary education of the Colony is a system of voluntary schools "assisted" by Government grants based mainly on the results of annual examinations. At the present time the whole expenses of these schools except for the provision and maintenance of buildings is so provided. At the end of 1906-7 they numbered 687, as against 692 at the close of the preceding year. These numbers include about 60 so-called Government schools, of which all but six are held in denominational buildings. In the past year Government schools at Annotto Bay and Port Morant have been opened and are in successful operation. The advocates of Government schools claim for the system economy at least of educational effort. They at any rate represent amalgamation, but, except in their management, which rests with a local Board instead of a single manager, and in the receipt of an additional grant by way of rent of 1*s*. a scholar where the building is denominational property, they differ little from the ordinary denominational school. A change which has been introduced in the method of calculating the numbers on the books and the average attendance makes an accurate comparison between the returns for last year and its predecessor impossible. The average number of scholars on the books for the year ending October 31st was 84,439, and the average attendance 54,868. The numbers on the register for 1905-6 and 1904-5 were 81,857 and 83,974 respectively. The average attendance for 1905-6 and 1904-5 was 51,931 and 50,612 respectively. The total payments to elementary schools and teachers were £43.845, as against £45,635 in the preceding year. The attendance in Kingston, St. Andrew, and part of St. Catherine, was naturally affected by the earthquake. An improvement in the efficiency in the schools, however, is evidenced by an increase of 8 per cent. in the number of first class schools. A slight decrease in the total amount spent on education is more than explained by the fact that for the first time since the hurricane the estimates for the year made no provision for building grants.

The Superintending Inspector of Schools observes that with a steady increase of trained and efficient teachers the attendance at the school barely, if at all, keeps pace with the increase in the population, and repeats the suggestion that compulsion is the only remedy.

The annual examination of teachers and students in the training colleges took place as usual. The training colleges

are voluntary institutions receiving grants from the Government, except the Shortwood Female Training College, which is still a quasi-Government Institution managed by an undenominational Board. The grant to that college is £1,204, to the Mico College £1,650, and to other training colleges, including bonuses, £910.

The teaching of advanced manual training has continued in the centres in which it has been carried on in preceding years. As a result of the earthquake the manual training school in Kingston has been removed from the centre of the town to a site where a much larger area of ground is available.

Certain changes made in the Code last year have, Mr. Capper observes, stimulated the formation and maintenance of school gardens with great educational benefit, not only to the school but to practical agriculture in their neighbourhood. It should however, never be forgotten that the main object of such work in elementary schools is in fact essentially identical with that of manual training. It aims at the training of the hand and eye and the general development of the powers of observation under circumstances, and in a medium, which correspond to the conditions under which the great majority of the children will earn their livelihood. A new officer has been appointed inspector of school gardens who has had experience of their working in the United States.

Two changes in the code, which have been the subject of much discussion, have come into operation and appear to be working satisfactorily. One of these effected a change in the hour for calling the roll, and the other, which causes the grants for the whole of the financial year to be regulated by the results of the examination held before its commencement, has removed a great inconvenience by securing a fixed income for the year. Another matter to which public attention has been largely directed was the proposed adoption of a day school catechism on the preparation of which all the Churches and sects collaborated. In the end the Secretary of State for the Colonies has found himself unable, in the absence of complete unanimity, to sanction its compulsory adoption, and so far little use of it has been made in the schools.

The loss of life in the schools caused by the earthquake was much less than might have been expected, seeing that the shock occurred at an hour when the schools would have ordinarily been in full operation. Fortunately in several which suffered most the children had been dismissed at an earlier hour than usual. Of the 31 Kingston schools four were completely destroyed and twelve were badly and six slightly damaged. Many owed their immunity to their wooden construction. January the 14th was the day on which most of the schools assembled after the Christmas holidays, and, though the attendance was probably rather below the

normal, some 4,000 children must have been in school at half-past three. In one case the children ran from the school-house, which remained standing, to the adjoining chapel, which collapsed and killed 14 of them. One child was also killed at another school. These appear to be the only fatal cases. Great energy was displayed by the teachers in making arrangements for the resumption of work, which was often carried on under booths made of branches or in the shade of a tree. Within three weeks all the schools except six were in operation. The Mico College and Shortwood College were both wrecked and their operations have since been carried on under great difficulties.

The system of payment by results is often the subject of adverse criticism, but the following extract from the Report by the Superintending Inspector of Schools shows that any departure from the system would be attended with serious danger:—

"In connection with the remarks of the Inspectors which I quote below, on the working of Article 28A, which allows the usual annual examination to be omitted for two, three, or more years, in the case of schools which have attained 60 or more marks, its place being taken by two visits of inspection and observation without notice during the year, I have made more particular enquiries from the Inspectors and others. The result of these enquiries is that the omission of the annual inspection is considered by all the Inspectors, and by the majority at least of Managers and teachers, to be detrimental to the efficiency of the schools. The one exception quoted by one of the Inspectors is a teacher whose school it was deemed desirable to examine, in the exercise of the discretion reserved to the Department, with the result that it was found, without reasonable cause shown, to have dropped several marks. The teacher in this case was opposed to the examination."

The certified Industrial Schools have not changed since the date of the last Blue Book Report. The Hope School, where

the boys do agricultural work under the supervision of the officers of Hope Gardens, again had an average of 50 boys in residence. Efforts have been made to keep in touch with the nine discharged during the year. Of these five were reported to be working, three were at home with their relatives, one had left his employment, and one was imprisoned for stealing. Of six boys licensed out of school five for various causes returned. Under the management of the new master, whose death since the close of the year I regret to have to record, the school work of the Institution has made good progress and improvement in the general conduct of the boys is also reported.

At St. Mary's Industrial School for Boys there were 38 inmates at the close of the year. St. Mary's Industrial School for girls had 40 scholars at the end of the year. Of the four girls discharged, three are reported doing well, one as a cook and two as first-class laundresses. A noteworthy feature of this school is the manufacture of Jippi-jappa hats.

At Belmont Orphanage for girls (about 17) agricultural work is a leading feature of the industrial training. The girls attend the first-class Government School at Stony Hill. Four girls have been discharged and have turned out satisfactorily.

The Shortwood Industrial School provided at the close of the year for 45 girls and 5 boys. This is the largest industrial school for girls in Jamaica. The rate per child per diem charged against the parishes responsible for the children's maintenance varied from 7*d.* in the first quarter to 9*d.* in the second. The girls in addition to school work do their own laundry work, cooking, and dressmaking. They also make clothes for the Hope Industrial School, and work in the garden.

Happy Grove School, containing 23 girls, appears to have had a prosperous but uneventful year.

The Institution at Stony Hill, which is at once an Industrial School for boys and a reformatory for boys and girls, is dealt with in another part of this report. It is a matter for regret that it has not yet been found practicable to separate the two classes of boys which are committed respectively under the Reformatory and Industrial School Laws.

An educational institution to which reference should be made is the Institute of Jamaica. An account of this institution was given in last year's Blue Book Report, and it is perhaps unnecessary to repeat it. The Government vote for its support was again £900. It may be noted with satisfaction that though the building of the Institute was wrecked by the earthquake and much of its property damaged, the valuable library escaped with little loss.

CONSTABULARY AND CRIME.

The strength of the Constabulary Force at the close of the year was as follows:—

Officers	19
Sub-officers	136
Constables	675
District Constables	814

In the preceding year the numbers had been—

Officers	18
Sub-officers	135
Constables	635
District Constables	777

These figures include the Water Police Force and also detectives and mounted orderlies. The number of Sub-officers and men who were sick during the year was considerably greater even than in 1905-6, when the amount of illness in the force was a matter for comment. 1,921 men were at one time or another under treatment, the average sickness per man for the whole force being 8·43 days.

The Inspector-General in his annual report again makes a comparison between the proportion of police to population in Jamaica and in certain other Colonies respectively. He notes that while Trinidad has to every 10,000 of the population 23·98 policemen, British Guiana 22·10, Mauritius 20·22, Cyprus 29·53, and Barbados 15·83, Jamaica has only 10·1. While in Trinidad for every 10,000 of the population 918 cases are reported to the police, in Barbados 800, in British Guiana 335, the number in Jamaica is only 318. On the other hand, in spite of the numerical weakness of the force, the percentage of convictions of persons prosecuted was in Jamaica 68·36, whereas in Cyprus, Barbados, Trinidad, and British Guiana the numbers were respectively 66·90, 65·47, 62·65 and 58·59. Varying inferences might be drawn from these figures, but the Inspector-General bases on them a claim that Jamaica possesses the best behaved population of the larger West Indian Colonies, and that as regards detection the Jamaican Police are more successful in their results than the English Police, and in the matter of prosecution more successful than the police of the other Colonies with which a comparison has been made.

The total number of persons prosecuted in the year, including private prosecutions, was 27,178, being less than any of the other four preceding years and more than 3,000 below the total for 1904-5.

The total number of convictions for offences against the person was 2,404, against 2,349 in the preceding year. Of these 1,711 were convictions in petty sessions. Five persons were convicted of murder, against three and two respectively in the two preceding years. There was no execution in 1907.

The convictions classified under "offences committed against property with violence" were 216 against 275 for the preceding year. These included 13 convictions for burglary, 199 for house-breaking, and 75 for shop-breaking.

The convictions for "offences against property without violence" were 2,861, being 700 less than the preceding year. The bulk of these cases were, as usual, very petty. There were 1,216 cases of simple larceny, the average value of the property stolen being under 1*s.* 6*d.* The number of cases of praedial larceny was 1,082, more than 500 less than the preceding year, and nearly 1,600 less than in 1904-5. Though the advocates of heavy sentences and corporal punishment may attribute the reduction in certain districts to a strict administration of the law, there is no doubt that it has been in great measure due to the fact that throughout the greater part of the year the peasantry have had no difficulty in providing themselves with food by lawful means. Praedial larceny is committed for one of two reasons, either to satisfy immediate hunger or to sell the stolen produce. When the produce of the peasant's own garden fails to supply his wants he is tempted to steal, and in view of the difficulty of detection no effective deterrent is likely to be found until the practice is much more generally reprobated than at present by the public opinion of the class to which the offender belongs. As regards the more serious offence of stealing to sell, this occurs chiefly in the case of bananas and is always apt to increase when prices offer the greatest temptation. A subsidiary cause of the decrease in praedial larceny is possibly to be found in the recent abolition of agents' licences under the Agricultural Produce Protection Law, which, as I have stated in another part of this report, appear to have brought into existence a class of itinerant receivers of stolen produce.

Malicious offences against property caused 43 convictions, including six for arson. Forgery and offences against currency accounted for 22 convictions. Of convictions for "other offences," disorderly conduct is responsible for 4,412, and bad language for 2,930. The prosecutions for cruelty to animals numbered 515 against 607 in the preceding year. Obeah convictions were exactly the same as in the preceding year, 38. The number of habitual criminals under police surveillance during the year was 2,030. In connection with crime it may be noted that the Judiciary consists of a Supreme Court of three Judges (a Chief Justice and two puisne Judges), who sit separately as Judges of first instance at Kingston and on circuit in the chief towns of the Colony, and also sit jointly as a court of appeal, of a bench of lay magistrates for each parish, over each of which presides a Custos (*i.e.*, Custos Rotulorum), who is entitled to considerable social precedence, and of a number of stipendiary Resident Magistrates—at present ten—each assigned to a parish or a pair of parishes. These last, in

addition to their magisterial functions, exercise a large civil jurisdiction. Trial by jury is in force, but in civil actions it is much less common than in similar cases in the United Kingdom.

PRISONS AND REFORMATORIES.

The number of prisoners in custody at the close of each of the past five years was as follows:—

March 31st,	1903	...	...	1,067
,,	1904	...	...	1,178
,,	1905	...	...	1,402
,,	1906	...	...	1,295
,,	1907	...	...	1,176

There were also 14 persons undergoing imprisonment in local lock-ups for periods of 14 days or less. Of the re-admissions, 1,318, 483 had been committed three or more times previously. There were 32 deaths in the General Penitentiary and 14 in the St. Catherine District Prison, against 33 and 26 respectively in the preceding year. School has been held regularly in both institutions. The gross expenditure for the General Penitentiary was £13,427 and for the St. Catherine District Prison £6,131. The gross earnings at the Penitentiary were in cash £3,228, and in materials used for the prison £214. The gross earnings at St. Catherine were £1,512. The net cost of the prisons was therefore £14,544, or £11 14*s.* 2*d.* per prisoner per annum. The manufacture of bricks at the Penitentiary, its most important industry, has been interrupted for the time being owing to the destruction by the earthquake of the Hoffman Kiln. The work at the St. Catherine District Prison, intended for short-sentence prisoners, is entirely agricultural, and the farm yielded crops valued at £1,490.

The only reformatory is the institution at Stony Hill, of which the boys' department is also certified as an Industrial School. At the close of the year it contained 218 boys committed under the Reformatory Law, and 46 industrial school boys. The girls' reformatory had 35 inmates. The boys have worked partly at agriculture and partly under skilled workmen in the carpenters', blacksmiths', and tailors' shops. Others also are trained as masons and bricklayers and in cooking. The girls do all the laundry work, make and mend their clothing and do some work for the boys. The expenditure for the year has been £4,034, of which £531 has been reimbursed by the different parishes and £407 has been recouped by sales. The gross cost of each child is a little over £13 per annum, or 8·6*d.* per diem, against 8·8*d.* in the preceding year. The average earning of each inmate has been £5 13*s.* 7*d.*, in 1905-6 it was £6 19*s.* 6*d.*

MILITARY AND NAVAL.

The naval buildings at Port Royal have been transferred from the care of the Director of Public Works to that of the Military Authorities. The expenditure incurred by the Colony on account of its Military Defences amounted in the year under review to £8,821, of which £1,794 was the cost of the Militia (excluding the band), and the Rifle Clubs, and the balance represents allowances to officers and men of the Imperial Service in lieu of free imports. The expenditure of the Imperial Government for the military establishment stationed in the Island and in aid of the civil establishment was £134,893. The Imperial troops stationed in Jamaica consisted of the second battalion of the West India Regiment and of detachments of the Royal Engineers and the Garrison Artillery, with other details. The total number of officers and men was, Europeans 403, and West Indians 741. The Militia Infantry was disbanded at the commencement of the year, but the Militia Artillery and the band were retained. The strength of the former was 104. The Rifle Corps, whose establishment was authorised on the disbandment of the Militia Infantry, consisted of the St. Andrew Rifle Corps with a strength of 135, and the Kingston Rifle Corps with a strength of 51. These Corps receive a grant of £2 for each efficient.

The barracks at Up Park Camp suffered very severely in the earthquake. There were, as stated in an earlier part of this report, twenty-seven deaths, and many casualties. The fire which broke out in the buildings imposed great additional work on the troops, but they were able to render valuable assistance to the police in the arduous duties which devolved on the latter in Kingston.

MEDICAL DEPARTMENT (HOSPITALS AND ASYLUMS).

The total appropriation for the Medical Department last year was nearly £55,000, as against an actual expenditure of £56,632 in 1905-6. The expenditure covers the cost of the Head Office, of the Medical Districts, at present 34, into which the Island is divided, each with a Medical Officer in charge, of the Public Hospitals and Asylums, of attendance on indentured immigrants, of special yaws fees and vaccination fees, of the execution of the Quarantine Law, and of the Central Board of Health, and of the Medical Council. The relief of destitution is delegated to the Parochial Boards, under a Poor Law system based on the Scotch Poor Law. With the exception of Manchester and Port Royal each parish has established a Poor-House. Kingston and St. Andrew combine to maintain one such institution. The hospitals directly maintained

by the Government are the Public Hospital at Kingston, and seventeen hospitals in various parts of the Island which had at the close of last year a total accommodation of 793 beds, and the Victoria Jubilee Lying-in Hospital at Kingston. The Government also maintains the Lunatic Asylum and the Lepers Home. The most noteworthy events which occurred at the Kingston Hospital last year were concentrated in the few weeks following the 14th January. The Superintending Medical Officer reports that when he entered the hospital shortly after the earthquake the whole quadrangle and the spaces between the female words were crowded to overflowing with wounded people. "The patients," he states, "were lying with clothes partially torn off by falling masonry and many of them soaked in blood. The wounds were not ordinary wounds, clean made, like those to be dealt with after an action, but wounds made by the grinding and falling of masonry." The male wards had been shaken and the wounded refused to enter them. The plaster at the top of many of the female wards was loosened and fell in many places. The partly finished new operating theatre was wrecked when it was most needed, and the X-ray apparatus ordered previously had not yet arrived. The number of patients for whom provision is made on the Estimates is 214. The number on the night of January 14th was 624. In the first instance patients were to a great extent laid out in the open air, tents not being obtainable for several days, but fortunately the weather remained remarkably fine. The female wards were occupied, and the piazzas surrounding them afforded excellent accommodation, as did also the covered ways between the wards. Many, however, had to lie out in the open, and many had to be operated on where they lay. It is a matter for congratulation therefore, that the efforts of the medical staff, reinforced by medical officers from outside, and of the nurses, assisted by volunteers, were rewarded with results as successful as those shown by the returns of the institution. The total number of patients injured by the earthquake dealt with between the 14th of January and the 31st of March was 499, exclusive of a large number of cases treated for minor injuries of which no record was kept. Between the 14th and the 15th of January there were thirty-eight deaths, and between the 16th and 17th sixteen, but many of these cases had been brought to the hospital in a moribund condition. Of the 445 cases operated on 28 died. Seven of these deaths were caused by tetanus—a small proportion, considering the nature of the injuries and the conditions under which they were treated.

The failure of the ordinary sources of supply demanded extraordinary organization for the provision of food, drugs, and medical appliances, but the difficulty was successfully overcome with the aid of volunteers drawn not only from the neighbourhood, but also from across the sea.

This account would be incomplete without a reference to the means by which wounded patients found their way to the hospital on the evening and night of the 14th of January. They were brought in not only by relatives and friends, and by the police, but also by volunteers mostly working independently. Among those who did especially valuable service in this way it is not invidious to specially mention one name. Mr. Hodge, a rifle leader of the Kingston Rifle Corps, is entitled to the credit of having saved over twenty lives by his individual energy and initiative. By commandeering such carts as he could find, and impressing the services of stray spectators, he conveyed a large number of persons disabled by the earthquake and threatened by the advancing fire, first to a place of safety and subsequently to the hospital.

The gross expenditure of the hospital for last year was £9,192, against £7,888 for the preceding year; the average daily number of beds 229, against 206, and the daily cost per bed 2*s.* 2¼*d.*, against 2*s.* 2*d.* The total number of patients admitted to the Hospital in 1906-7 was 4,045. 2,870 were discharged cured, 300 died. The death-rate was 7·4. The Nurses' Home, attached to the hospital, which had been started in the previous year has been enlarged to provide for the housing of nine nurses. There is no doubt that this provision has tended to create a communal feeling among these young women and a devotion on their part for their work of which they gave such excellent proof when an extraordinary demand was made upon them.

Of the seventeen public general hospitals other than the Kingston Hospital, Port Antonio is perhaps the best equipped, owing partly to the liberality of American visitors who frequent the town. For example, the hospital is by these means in possession of an operating room and appliances superior to those at present available in Kingston. This hospital is one of many which were originally started to satisfy the law relating to Indian immigration. No distinction now exists between these hospitals and those provided primarily to meet the needs of the creole population. But the hospitals situated in the neighbourhood of estates which take indentured coolies are still distinguished by having a large proportion of Indian patients. Of these one or two have suffered from over-crowding in the past year, and one of these, Lionel Town, in Vere, has been considerably enlarged to meet the demands upon its accommodation. The daily average of patients at Lionel Town was 152, at Annotto Bay 139, at Spanish Town 58, and at Port Maria 54. The others have varied between 33 and 6. The daily cost of each patient depends largely upon their numbers, and also to some extent upon whether they are Indians or creoles. The daily cost of each patient varied from 6*d.* at Lionel Town to 1*s.* 9*d.* at Lucea. The highest death-rate was at Falmouth, 6·48 per cent., and the lowest at Cave

Valley, where the daily average number of patients was 6 and where there were no deaths. Port Antonio Hospital has been enlarged by the addition of two wards (30 beds) by fitting up the under building. These wards have been rendered mosquito proof by the erection of bronze gauze screens. This is a new departure in Jamaica. The out-door patient treatment, other than the treatment at the hospital, and the treatment of paupers includes treatment by the Government Medical Officers at cheap rates (1*s.*, 2*s.*, and 3*s.*) on tickets distributed for the purpose by persons specially authorised by the Governor. The number of such tickets issued last year was: 1*s.*, 3,936 (all in Kingston); 2*s.*, 2,018; and 3*s.*, 16. The number of successful vaccinations last year was 24,470, against 29,112 the year before. The number of Yaws cases attended was 3,512, against 1,554 the year before and 1,367 in 1904-5. The Lazaretto opposite Port Royal was opened on five occasions during the year for passengers detained in quarantine. A number of cases of measles were landed from the Coolie Emigrant Steamship "Indus" and there treated. It cannot be claimed that the accommodation at the station is up-to-date, and the Quarantine Law of 1905 which would bring the Law of the Colony in this matter into line with other West Indian Colonies, by substituting *inter alia* surveillance for detention in the station in many cases, has not yet been brought into force. There is no doubt that the conditions of Jamaica differ from those of the Colonies which have accepted the most modern ideas on the subject. Jamaica has not only to protect itself from the importation of disease from the other British West Indian Colonies which have adopted a common system of precautions, but is within a few days' voyage of Haiti, Cuba, and the Central American ports, and is commercially to a great extent within their trade system.

The number of patients admitted during the year to the Victoria Jubilee Lying-in Hospital was 441, an increase of 6 on the preceding year. 132 of the women were married, and 127 legitimate children were born. 309 of the mothers were unmarried. The death-rate was the same as in the preceding year, viz., 2·4. 301 patients paid fees. The youngest mother was 14 years of age, as against 15 and 12 in the two previous years. Since the earthquake the work of the hospital has been carried on in marquees floored with wood work and with water laid on.

The patients at the Leper Asylum at Spanish Town numbered 113 at the close of the year, which had commenced with 115. There were fifteen deaths. The surgeon in charge reports that the farm attached to the asylum is in fair condition of cultivation considering the prolonged drought. During the past two years he has been treating leprosy by new methods, namely by preparations of red mangrove bark and latterly by subcutaneous injections of iodoform. He is not

sanguine as to the results of these methods and hazards the opinion that success in the treatment of leprosy will eventually be found in opsonins on the lines on which bacteriologists are working with reference to tuberculosis.

The report of the Medical Superintendent of the Lunatic Asylum contains some interesting observations on the effects of the earthquake and the subsequent shocks on the mental condition of many of the inmates. "The noisy and turbulent became quiet, and the quiet became excited, noisy, and destructive, and one woman who had been dumb for years was roused from her lethargy, and becoming noisy resumed her former life." A large proportion of the admissions subsequent to the earthquake are attributed to it, insanity resulting either directly from shock, or indirectly following from family bereavement or privations. The buildings suffered very severely from the disaster. Nine men were killed on the spot, and there were at least two subsequent deaths. On the other hand 20 sick patients in the female infirmary, which collapsed, were all rescued from the ruins. With the exception of four one-storied buildings and two ranges of single rooms, the whole range of buildings for male patients was totally destroyed, but though the patients had subsequently to sleep in the open air there were fewer sick patients under treatment after the earthquake than at any other period during the year. Sixteen patients escaped, and it was found necessary to seclude a number of turbulent lunatics pending temporary repairs. 33 harmless patients were sent home in order to relieve the pressure on the institution. The staff of the asylum, both professional and subordinate, are to be congratulated on the success which rewarded their untiring efforts to preserve the working organization of the institution during the crisis, and to minimize the suffering and discomfort of the patients. The total number of patients at the end of the year was 1,006, against 1,057 at its commencement. The diminution in number was due to the causes to which reference has been made, the actual admissions having exceeded those of the preceding year. The admissions were 234, including 62 re-admissions. 152 patients were discharged as recovered, and 9 as relieved. The total expenditure at the Asylum was £16,298, and the cost of maintenance 10*d*. per head per day.

POST OFFICE AND TELEGRAPHS.

The cash collections of the Department for 1906-7 were—

	£
Postal	33,360
Telegraphs	6,614

The estimates were exceeded on both heads and surpassed the revenue of the preceding year by a substantial amount. The total revenue of the department for the two preceding years had been 1905-6 £37,418, and for 1904-5 £33,447. The expenditure amounted to £32,194, against £32,115 in 1905-6, and £31,724 in 1904-5.

The department has in recent years been yielding a profit, but it must be borne in mind that it is not charged with any part of the subsidy of £20,000 a year payable to Messrs. Elder Dempster & Co. under their contract for a fortnightly direct service between Bristol and Kingston. This contract, however, has for its main object the development of the fruit trade with the Mother Country, and if the Jamaica Post Office were debited with a portion of the subsidy equivalent to what was paid under the last mail contract for the carriage of mails the department would still be more than self-supporting. The ocean postages collected have risen from £5,712 in 1904-5 to £7,659 in 1906-7, and the inland postages from £21,390 to £24,400.

The total number of letters and postcards passing through the head office is estimated at—outwards 3,123,551, inwards 3,263,010. The corresponding figures for 1903-4 were 2,133,817 and 2,347,186 respectively. The number dealt with at the District post offices was 1,308,328 in 1906-7, against 1,213,211 in 1903-4.

Mails were despatched by 516 vessels and received by 570, the mails despatched abroad being 87 more than in the preceding year, and those received 31 less. The reduction in the number received is attributed by the postmaster to the adoption by the Royal Mail Steam Packet Company since the termination of their contract of a more circuitous route. Though the service provided by this Company between England and Jamaica is now of little use either for mails or passengers, their fortnightly service to and from New York, which is worked in connection with the Cunard Line, provides an alternative route to England to that furnished by the direct line (Elder Dempster & Co.). The Hamburg-American Line and the vessels of the United Fruit Company, some of which are under contract with the United States Government for the carriage of mails between Boston and Jamaica, afford further regular communication with the States.

Under the operation of a law passed in the preceding year the total expenditure for the ocean mail service chargeable to

the department amounted to only £2,067. The inland mail service which is carried partly by the Government Railway, and partly by road, cost £9,030, as against £8,722 in the preceding year. The carriage by road is in some cases undertaken by the Public Works Department and in others is subject to contract. As a means of travelling the mail coach cannot be specially recommended.

A daily service is established throughout the Island, but house to house delivery is at present in operation only in Kingston and Spanish Town.

Money orders were issued to the number of 8,301 and the value of £32,208—in both cases an advance on the preceding year. Foreign money orders were received to the number of 7,546 and to the value of £25,106. Both figures are more than double those for 1905-6, the large increase being due to the establishment of a money order system in June, 1906, between Jamaica and the Canal Zone. A new money order direct system with Canada was introduced on the 1st of January last. The Commission on British postal orders of the value of 2*s.* 6*d.* has been reduced from 1*d.* to ½*d.* The value of postal orders sold has risen from £32,096 in 1904-5 to £33,150 in 1906-7.

The parcels post business is also increasing, the parcels received numbering 25,170, against 22,319 in the preceding year The import duty paid on them was £4,090. The parcel despatched were 5,730, against 5,901 in 1905-6. The bulk of the business done through the parcels post is carried on with the Mother Country. The parcels received from the United Kingdom, however, which had been 79 per cent. of the whole in 1904-5, were only 72 per cent. in 1905-6, and 73 per cent. in 1906-7, while those received from the United States were 17 per cent. in 1904-5, 24 per cent. in 1905-6, and 22 per cent. in 1906-7. Of the parcels despatched the percentage sent to the United Kingdom has remained during the three years at 71 per cent.

At the end of the year there were 64 telegraph stations and seven telephone stations in operation under the postal system. In addition to these the railway telegraph service has generally been available to the public.

The total number of messages sent was 109,859, being 7,870 more than in the preceding year. All the telegraph offices have been overhauled and defective leading wires have been replaced during the year. The department continues to work in harmony with the local superintendents of the ocean cables, and during the year £2,398 was collected on behalf of the Direct Cable Company, and £1,042 for the West India and Panama Cable Company.

The profits made by the postal and telegraph departments as a whole have been stated above. It is not so easy to compare the revenue and expenditure of the telegraph service

taken separately, as the salaries and wages are for the most paid for the performance of a combination of duties. Charging the service, however, with fair proportion of salary and wages and including the maintenance of the wires which is borne by the Public Works Department, the Postmaster states the cost of the telegraph system approximately as follows:—

	£
Salaries, Head Office	1,042
Salaries, District Offices	3,432
Messengers	998
Maintenance of Lines	801
Rent (say)	700
Other Expenses	912
	£7,885

This total cost is therefore considerably in excess of the telegraph receipts which, as stated above, amounted last year to £6,614, and in the two preceding years to £5,983 and £4,792 respectively.

The Post Office Buildings suffered severely from the earthquake, and two clerks and three letter-carriers were killed by falling buildings. Though, however, the business of the department had to be mainly carried on for some time in an open yard, the continuity of the mail service was scarcely broken, and telegraphic communication was promptly restored with all parts of the Colony. Communication by telegraph with the outer world was in the first instance cut off, but the West India and Panama Company's cable was very quickly reconnected. On the other hand the Direct Company's cable was broken to fragments near the spot which appears to have been the centre of the seismic disturbance, and weeks elapsed before the necessary repairs could be effected.

PUBLIC WORKS.

The expenditure of the Works Department amounted in the year 1906-7 to £111,310, including £1,728 value of lumber imported and not used within the year. The details of expenditure were as follows:—

	£
Salaries, &c.	14,071
Main Roads and Bridges Maintenance...	62,444
Main Roads and Bridges, New Works...	345
Buildings and Telegraph (ordinary maintenance)	7,444
Buildings and Telegraph (earthquake repairs)	8,012
Clearing débris in Kingston streets ...	534

	£
Buildings—	
New Works	5,099
Falmouth Harbour	3,013
Telegraph Construction	106
Lighthouses Maintenance	1,306
Rio Cobre Irrigation	1,774
Spanish Town Water Works	458
Expenditure under Sundry Laws ...	586
Work done for other Departments and Bodies	6,111

The expenditure exceeded that of the preceding year by £10,746, of which £9,789 was directly occasioned by the earthquake. The cost of the department was 12·6 per cent. of its expenditure. The total damage to buildings under the care of the department caused by the earthquake is estimated by the Director of Public Works at nearly £60,000, of which £50,000 occurred in Kingston and St. Andrews, £4,000 in St. Catherine, and the balance in St. Thomas, Portland, and St. Mary. Against this damage of £60,000, £8,012 only was expended in repairs before the end of the year under review. The damage done to roads and bridges is estimated at £8,200, of which £2,000 was expended within the year. The effect on the main roads was, according to the report of the Director of Public Works, comparatively insignificant, and on bridges quite inappreciable. Damage to the roads was confined to the hill districts of St. Andrew and Portland and a small part of St. Mary and St. Catherine. In all cases it was due to local landslips caused by the earthquake, and not directly to the latter. With regard to buildings in Kingston, with the remarkable exception of the old Treasury building which was constructed of wood, all the Public Offices and the Supreme Court and the Resident Magistrate's and Police Court, were wholly or partially wrecked. Only Headquarters House, the Island Medical Office, and the Offices of the Public Works, Lands, Education, and Immigration Departments, in addition to the old Treasury, remained even partially safe for occupation. The masonry of Plumb Point Lighthouse was shattered and its iron pedestal broken, and the light apparatus thrown on its side. No light was exhibited for the first three nights, but it was temporarily restored on the fourth. The lamp was, however, again disabled by subsequent shocks and was temporarily replaced by lamps of inferior power until the 17th of February, when the tower had, with the assistance of the engineering staff of H.M.S. "Indefatigable" been permanently repaired.

The clearing of the streets of débris was commenced the day after the earthquake, the officers of the Public Works Department being assisted by those of other Departments and private gentlemen who volunteered their

publishing company, inc.

services for the purpose. On the arrival of H.M.S. "Indefatigable" the gangs already organised were reinforced by a large force of marines, and in the course of two weeks the work was sufficiently advanced to be handed over to the Mayor and Council. Temporary arrangements for the accommodation of the Public Offices were put in hand on the 15th of January, accommodation being provided not only for Government Departments but also for the Government's bankers, the Bank of Nova Scotia.

The total length of main roads at the close of the year was 1,944 miles. The average cost of maintenance was £28 14*s.* per mile or £2 12*s.* more than in the preceding year. The cost varied from £46 11*s.* per mile in St. Mary to £16 1*s.* in Manchester. The continuous rain which prevailed in the southern parishes from May to October was a source of considerable expense, and in many districts, especially in Vere, the increased traffic of bananas necessitated greater attention to the roads than in previous years. No new works of any importance were undertaken under the head "Roads and Bridges," the whole of such expenditure amounting to only £345. The length of the telegraph lines in working maintained by the department remained at 695 miles, but a new line from Christiana to Cave Valley was commenced.

The total expenditure on the Rio Cobre Irrigation Works was £1,774, and its earnings £9,458. The area irrigated was 12,000 acres, the acreage in bananas being 300 more than in the preceding year. Under the head of "Public Buildings" no new works of importance were undertaken. A new operating theatre at the Public Hospital was approaching completion when it was wrecked by the earthquake. A new ward was added to the Lionel Town Hospital to meet the demand caused by the increased introduction of coolies into Vere, and the hospital at Port Antonio was also enlarged.

The Falmouth Harbour Works have been, it is hoped, finally and satisfactorily completed. Steamers of large size can now enter and leave the harbour with safety at all hours of the day and night.

Reference has been made above to the Rio Cobre Irrigation Works, and it will be convenient here to mention the only other similar undertaking of any importance in the Colony, namely, the Vere Irrigation Canal, although the latter is under Government control only to a limited extent, the management being in the hands of Commissioners chiefly representing the interests of the consumers of water. The Vere Commissioners are still struggling with difficulties incidental to construction, but their works have already largely promoted the extension of cultivation in the district which they serve.

RAILWAY.

The total earnings of the railway for the year under review amounted to £150,013 (actual receipts £148,421, against £134,233 in 1905-6). The expenditure was £79,046, against £78,718. The net earnings for the past five years have been:—

	£
1902-3	53,618*
1903-4	33,740
1904-5	24,306
1905-6	55,504
1906-7	70,966

The year has been a very successful one for the railway, but it must not be forgotten that, while the net earnings were nearly £71,000, the interest paid on the railway debt, which is not charged to the railway, amounted to £85,000. The results shown are largely due to great economy in management and, it may be added, to the postponement of all special work and improvements that have not been considered absolutely necessary.

In 1905-6 £1,686 was expended on additional rolling stock, and £2,250 was provided on the estimates for 1906-7: £393 only was expended. Similarly for additional and special works, on which £2,601 was expended in 1905-6, and for which £3,148 was voted, only £680 was expended. On the other hand before the close of the year £1,835 had been spent on repairs necessitated by the earthquake. Though the head railway station was badly damaged and the workshops wrecked and much damage was done to rolling stock the permanent way was fortunately uninjured. The service was practically uninterrupted, a fact on which the Colony is to be congratulated, as it enabled stores to be poured into Kingston from the parishes, and provided the means of escape for large numbers of houseless people.

It may be noted that in the months of February and March while the number of first-class passengers carried was 4,558 less than in the preceding year, the third-class passengers were 14,600 more. This result is attributed on the one hand to movements of the population brought about by the earthquake and on the other to the sudden interruption of the tourist trade.

The total length of the railway line, exclusive of sidings, remains at 184 miles.

Apart from the Government Railway the United Fruit Company owns a private line, eight miles long, for the conveyance of fruit from the interior of St. Thomas to Port Morant, and the Vere Estates Company has recently constructed thirteen miles of line in the south of Clarendon.

---

* Excluding £9,489 written off to Loan Account.

CROWN LANDS DEPARTMENT.

The total area of Crown Land at the end of the year was 202,750 acres. Two hundred and fifty-seven acres were alienated in the year in forty-eight grants, of which none comprised 100 acres. The average price per acre realized was £1 4*s*. These figures are exclusive of twenty-two town lots sold for a total of £964.

CLIMATE.

The average rainfall at 129 stations for the year 1906 was 86·71 inches. It varied from 13·23 in May to 2·06 in December. The highest average was in the N.E. district, viz.: 109·69: the lowest in the N. district, 56·25. The mean temperature at Negril Point Lighthouse, thirty-three feet above sea level, was 76·1 Fahr. at 7 a.m. and 82·2 at 3 p.m. The maximum was 92·9 on the 19th of September and the minimum 63·9 on the 6th of April. It must be borne in mind however that the mountainous nature of the Island causes a great variety of temperature in different districts. The uplands of St. Ann's enjoy a climate very different from that of the Liguanea Plain, while houses in the Blue Mountains are provided with fireplaces, and on the Blue Mountain Peak hoar frost is not unknown.

VITAL STATISTICS.

The Registrar General's Returns furnish the following statistics:—

Estimated population on the 31st March, 1907	830,261
Births, 1906-7	31,547
Deaths, 1906-7	21,723
Marriages, 1906-7	5,507

The birth-rate was 38·1 per thousand, the death-rate 26·2 per thousand, and the marriage-rate 6·6 per thousand.

The marriage-rate was extraordinarily high. In the preceding year it had been 3·8 per thousand, and the average for nine years had been 4·2. This remarkable increase is mainly due to the number of marriages which took place after the 14th January. Of the total number 1,228 were registered in February, and more than half in the March quarter. 43·5 per cent. of the parties married signed the register by mark. 65·2 per cent. of the births registered were illegitimate—the same percentage of illegitimacy as in the preceding year. The death-rate which was, as stated above, 26·2 for the whole Colony, as against 21·9 for 1905-6, rose in Kingston from 28·0 in the former year to 36·9 in 1906-7 and in St. Andrew from 29·1 to 37·2.

GENERAL OBSERVATIONS.

Any retrospect of the past year is apt to stop short at the 14th of January. In the first part of this report I have shown that prior to that date the outlook of the Colony was very encouraging; and I venture to express the hope that in the future it will be realized that the rude and terrible check which Jamaica has received has had only a very temporary effect on its material progress. The appalling incidence however of the calamity on the lives and fortunes of individuals will cause the year in which it occurred to be known henceforth as the Earthquake Year, and I need offer no excuse for confining my concluding remarks to certain observations on the experience of earthquakes which Jamaica has had in the past.

These phenomena are not new to the Island, but disastrous earthquakes are fortunately few and far between. The first of which we have any account was felt by Dr. Hans Sloane at Spanish Town on the 19th February, 1688, when at about 8 a.m. three light shocks occurred, lasting about one minute altogether, and sounds were also heard. In the introduction to his "Natural History of Jamaica," Volume I., he writes:

"Earthquakes, as they are too in Hispaniola, where they have formerly thrown down the town of Santo Domingo, so they are too common here also: the inhabitants expect one every year and some of them think they follow their great rains." The following observations are instructive: "The Spaniards who inhabited this Island and those neighbouring built their houses very low, and they consisted only of ground rooms, their walls being made of posts which are as much buried underground as they stood above, on purpose to avoid the danger which attended the manner of building from earthquakes. I have seen in the mountains afar off bare spots which the inhabitants told me were the effects of earthquakes throwing down part of the hills, which continued bare and steep."

It is also noteworthy that referring to Port Royal, Sir Hans Sloane writes:

"This point which was called Point Cagway, where Port Royal stood, was never built upon by Spaniards while they remained possessors of the Island, for two reasons, as I was informed.* The first was the frequency of earthquakes, which when considerable would certainly overturn it."

Long, one of the historians of Jamaica, giving a detailed account of the memorable earthquake of the 7th of June, 1692, which destroyed Port Royal and did great damage over the rest of the Island, writes:

* The other cause was the fear of being "washed off" by hurricanes from the South.

"It left not a house standing at Passage Fort, only one at Liguanea, destroyed most of the planters' habitations in the country, and all in St. Jago de la Vega, except what were built by Spaniards."

The preamble to the Act entitled "An Act for establishing a Perpetual Anniversary Fast on the Seventh June" passed by the Assembly of Jamaica in 1693, refers to the historic calamity of 1692 as "a most terrible and dreadful earthquake, which not only laid waste Our Estates and places of habitation in general, but also destroyed many hundreds of people."

After this there appears to have been no considerable shock for about 80 years, but on September 3rd, 1771, a severe one occurred at Kingston and Port Royal, which Admiral Lord Rodney mentions in the following passage:

"Since my letter of the 14th inst. (Sept.) giving Their Lordships an account of the violent earthquake which happened the day before, which has been attended with frequent shocks till within these days, and in the opinion of the inhabitants done more damage than any since the great one in 1692, particularly in the town of Port Royal and Kingston, in the former of which there is not a single house that has not been damaged, I find His Majesty's Dockyard has suffered considerably."

"There have," he continues, "been nine shocks since the first, but as each has appeared weaker I hope we shall experience no more of them."

While various shocks are recorded in the succeeding 40 years, and among them some noted by Lady Nugent in 1802 as causing a good deal of alarm, the next considerable disturbance appears to have taken place in 1812. On November 11th in that year, as the Jamaica Magazine records, "about ten minutes before six in the morning, there was a great earthquake which was felt all over the Island, but chiefly at the eastern end. Three shocks succeeded each other rapidly, there were tremblings, concussions, durations, and sounds. Great damage was done to the houses in Kingston. At Annotto Bay the anchorage ground sank. The "Experiment" lost her anchors and ninety fathoms of cable, which were swallowed up. There had been a slight shock previously at 2.30 a.m. that morning."

In the introduction to Volume II. of the Jamaica Meteorological Observation by Mr. Maxwell Hall, from which these particulars have been taken, there are also to be found notes of similar disturbances in the other Islands of the Greater Antilles, of which some were also felt in greater or less intensity in Jamaica.

In June, 1766, a violent shock did great damage at Santiago de Cuba; it was felt in Jamaica, but, as Long states, "it threw down no buildings here."

The following is an extract from Southey's Chronological History of the West Indies, Volume II.:

"Upon the 3rd of June, 1770, about a quarter past seven in the evening, four violent shocks of earthquake were felt at Cape Nicola Mole, in St. Domingo: the most severe lasted two minutes and a half, accompanied with a noise much like an echo from the hills after the firing of cannon. The town did not receive any damage, but the city of Port au Prince was entirely destroyed; not one house was left standing, and about 500 persons were buried in the ruins. Petit Goave and Leogane were also destroyed. The plains of Leogane, Port au Prince, and Petit Goave suffered considerably, all the sugar works were destroyed, and La Croix de Bouquet, a small town, with the greatest part of its inhabitants, was swallowed up. The earthquake extended thirty-five leagues, and the sea rose a league and a half up into the Island."

This appears to have been felt in Jamaica as "a very smart shock which continued near the space of one minute. It was most violent at Kingston, where it threw down several kitchen chimneys, &c."

On the 7th May, 1842, a shock was felt at Cape Haytian in Haiti, where it is said to have destroyed the town and caused the death of 3,000 people. It was also felt in Jamaica, but no particular damage seems to have been recorded.

Seismic disturbances similar to those noted in Cuba and Haiti seem to have occurred from time to time in the more easterly members of the same chain of Islands, and disastrous earthquakes in Porto Rico, St. Thomas, and Antigua are on record.

For purposes of reference, Mr. Maxwell Hall, the Government Meteorologist for Jamaica, has adopted the following scale:—

I. Light shock.
II. Well-marked shock.
III. Shock sufficient to make houses rock.
IV. Shock sufficient to crack walls of houses.
V. Shock sufficient to throw down a few houses.
VI. Shock sufficient to throw down almost all houses.

In the terms of this nomenclature he has indicated on a map the intensity with which the shock of the 14th of January was felt in different parts of Jamaica.

From Kingston and its neighbourhood the shock, which there of course was No. VI. on the scale, diminished, until at the extreme east end, and for a large part of the west end, it was felt only as a No. III. shock. It thus resembled that of 1812 in that it was felt chiefly at the eastern end of the Island.

The epicentre or place immediately above the focus is placed by Mr. Hall a few miles to the south-east of Plumb Point Lighthouse, and he thinks that there was probably another focus near Buff Bay about 20 miles north of Kingston.

Mr. Hall gives three lists of earthquakes in Jamaica:

(*a*) From 1688 to 1880, which he states is very imperfect;
(*b*) From 1880 to the 14th January, 1907; and
(*c*) From January 14th to July 5th, 1907.

In the first period he includes—

one shock (1692) of Intensity VI.,
one shock (1771) of Intensity V., and
two shocks (1770 and 1812) of Intensity IV.

Except the shock of the 14th January last the second list includes none of Intensity VI. or greater force than No. III.

Among the shocks which have since occurred one only has been felt of force IV., and few of force III. By far the greatest number have been only slight shocks (No. I.).

After the calamity of last January an important truth began, as Mr. Hall observes, to dawn upon the community. The subject of earthquakes had been entirely overlooked in Jamaica, and the ruins of scores of modern brick villas afford proof enough of the fact. The lessons of history had been disregarded, and protracted immunity from serious disturbance had lulled to sleep the memory of recent generations. The liability to earthquakes is more widespread than is often realized by communities which have escaped damage for a century, but the realisation of this source of possible danger need cause no serious alarm, provided that buildings are constructed of the materials and on the principles which have stood the test of experience in the past.

H. CLARENCE BOURNE.

12th October, 1907.

No. 578.

TURKS AND CAICOS ISLANDS.

(For Report for 1906, *see* No. 541.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House,
Jamaica,
28th August, 1908.

MY LORD,

I HAVE the honour to transmit to your Lordship a copy of the Blue Book of the Turks and Caicos Islands for the year 1907, with the Commissioner's Report thereon for the same period.

I have, &c.,

SYDNEY OLIVIER,
Governor.

The Right Honourable,
The Earl of Crewe, K.G.,
&c., &c., &c.

1125 Wt 24282 10/08 D & S 5 33741 A 2

REPORT ON BLUE BOOK FOR 1907.
FINANCIAL.

Revenue and Expenditure.

From the following statements it will be seen that the revenue for 1907, which was estimated at £7,715, actually amounted to £7,391, a difference of £324, mainly attributable to the reduction during the year in the statutory value of salt exported from 3½*d.* to 2*d.* per bushel. This was, however, an improvement of £582 upon the amount of revenue collected in the previous year.

The approved estimate of expenditure was £7,651, but the actual expenditure, owing to certain reductions in the establishment, amounted to only £7,119, a saving of £532. Altogether there was a surplus of £272, the first since 1902.

Finances.

Public Debt.

There is no Public Debt, but surplus funds amounting to £7,085 invested in Colonial securities.

TRADE, AGRICULTURE, AND INDUSTRIES.

The total imports during the year 1907 were valued at £27,660 and the total exports at £23,817, compared with the average of £29,283 and £30,301, respectively, for the five years 1901-1905, and as against £27,572 and £24,940 in 1906. The exports of salt, in spite of the low prices obtained throughout the year, showed a welcome increase from £14,275 in 1906 to £16,557 during the year under review. The prolonged drought, although favourable to salt raking, was disastrous to the sisal crop, which fell in value from £5,602 to £3,107.

Year.	*Imports.* Value.	*Exports.* Value.
1903	£30,956	£31,878
1904	24,120	24,020
1905	28,230	23,898
1906	27,572	24,940
1907	27,660	23,817

Shipping.

Comparative statement for the period 1903-1907:—

Year.	Total Tonnage.
1903	335,442
1904	275,132
1905	332,254
1906	357,960
1907	345,453

The following table gives a comparative statement of the shipping cleared for the years 1906 and 1907:—

Nationality.	Sailing.		Steam.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
British	167	16,259	26	43,719	193	59,978
United States	16	13,785	24	44,452	40	58,237
Others	72	1,904	34	53,215	106	55,119
Total 1907	255	31,948	84	141,386	339	173,334
Total 1906	228	26,617	93	151,667	321	178,284

LEGISLATION.

The following were the chief Ordinances passed by the Legislative Board:—

Salt Exporters Relief Ordinances, No. 4 and No. 6, to afford relief to the exporters of salt in the depressed condition of the industry.

Statute Law Revision Ordinance, No. 5, with a view to the preparation of an edition of the local laws.

Court of Appeal Ordinance, No. 9, allowing appeals from the Supreme Court to the Appeal Court of Jamaica.

The Wild Birds Protection and Turtle and Sponge Ordinances, Nos. 11, 12, and 13, to establish close seasons for wild birds and turtles, and to protect, otherwise, the sponge and turtle industries.

EDUCATION.

During the year the Board of Education passed supplementary regulations by which no person may be appointed to the charge of a public school except he holds a certificate of efficiency from the Board, which may grant such certificates to teachers passing a satisfactory examination according to an approved schedule. So that hardship should not be inflicted on teachers already in charge of schools, certificates were awarded to those who had been in office for at least three years. In lieu of the system of appointing year by year a member of the Board or some qualified person to conduct the examination of the primary schools, the Commissioner was given the power to appoint an Inspector of Schools, who, subject to the direction of the Board, would have the supervision of all public and private schools, and hold an examination of each public school and of candidates for certificates of efficiency at least once a year. In accordance with this rule, Mr. H. H. Hutchings, who had for many years previously held the annual examination of the schools and had evinced warm interest in elementary education generally, was appointed first Inspector of Schools.

It is to be hoped that, by these regulations, the difficulty so often experienced of obtaining qualified teachers locally will be removed, and that the appointment of a permanent inspector will ensure more systematic and efficient work throughout the schools.

The average attendance in the salt settlements, all of which are compulsory districts under the Ordinance, was extremely satisfactory, but the severe drought had an appreciable effect

upon the regular and punctual attendance of the children throughout the Caicos Islands, notably at Kew. The total average attendance at the public schools of the Dependency was 547.

4. Other offences	—

Number of Persons Acquitted.

1. In the Superior Court	—
2. In the Inferior Courts	44

The Dependency is to be congratulated on a continued absence of serious crime. A slight increase in the number of convictions for larceny was probably due to the straitened circumstances of the people in consequence of the severe drought.

VITAL STATISTICS.

There is nothing to call for notice during the year, as no serious epidemic or outbreak of sickness was reported. The number of births and deaths was 238 and 122, being 45 and 23 per thousand of the population, respectively, while 26 marriages took place. The highest birth-rate was in the Caicos Islands, being 62 per thousand, while the lowest death-rate was at Salt Cay, being 18 per thousand.

POSTAL AND TELEGRAPH.

Although no internal postal, telegraph, or telephone service exists, there is frequent, but irregular, steamship communication with the United Kingdom and other countries. The only line which has any pretence to fixed dates is the Imperial Direct West India Mail, the steamers of which touch at Grand Turk on their way to Jamaica every other Wednesday, bringing mails and parcel post from Bristol. Unfortunately, there is not sufficient inducement offered to these steamers to call on their return voyage. The voyage from Avonmouth occupies about 12 days, and freight is brought out by the "Port Kingston" every six weeks, at the rate of 25*s.* a ton. A subsidized steamer of the Pickford and Black Line from Halifax, Nova Scotia, calls about once a month both on her way to and from Jamaica, and is the only means of steam communication from Jamaica. The subsidy paid is £120 a year.

Most of the mails to the United Kingdom are carried to New York by the steamers of the Clyde Line, which call here on their voyage to and from San Domingo, at intervals of about 14 days each way.

The revenue and expenditure of the Post Office for the year 1906 were £341 and £158, respectively, made up of—

Receipts.

The rates of postage are as follows:—

Letters to the United Kingdom, to all British Colonies generally, and to Egypt	1*d.* per ounce.
To Brazil, Costa Rica, Ecuador, France, Hayti, Peru, Persia, Russia	2½*d.* half ounce.
To other countries	2½*d.* per ounce.
For every additional ounce	1½*d.*
Post Cards	1*d.* each.
Parcels to the United Kingdom:—	
Under 3 lbs.	1*s.*
From 3 lbs. to 7 lbs.	2*s.*
From 7 lbs. to 11 lbs.	3*s.*
Parcels to Jamaica, per lb.	6*d.*
„ to Canada, per lb.	10*d.*
„ to Bermuda, per lb. ...	6*d.*
„ to the United States ...	6*d.*

The cable of the Direct West India Cable Company between Halifax, Bermuda, and Jamaica, is connected with Grand Turk. The company supplies a news bulletin daily in respect of which an annual grant of £120 is made. The rates chargeable under the Cable Company's Ordinance, 1898, are as follows:—

	s.	*d.*	
To Jamaica	1	0	a word.
„ Bermuda	1	6	„
„ Halifax	2	0	„
„ United Kingdom ..	3	0	„

METEOROLOGICAL OBSERVATIONS.

The following readings and statistics were from observations taken at the United States Weather Bureau Station in Grand Turk, latitude 21° 21′ N., longitude 71° 7′ W., at a height above mean sea level of 11·3 feet.

The rainfall in 1907 measured 28·49 inches, compared with—

28·36	inches in	1906
41·97	,,	1905
43·79	,,	1904
36·63	,,	1903
27·75	,,	1902

The heaviest rain for any one day was 2·75 inches on the 9th November, while the wettest months were October, November, and January, with 7·21, 5·63, and 2·77 inches, respectively.

The coolest and hottest months were January and July, with mean readings of 74·2 and 83·8, respectively, while the mean temperature for the year was 79·2 and the mean pressure 30·044. The lowest temperature was registered on the 25th March at 61°, while the hottest point, 92°, was reached on the 23rd July.

Observations showed that the prevailing wind on the following number of days blew from:—

CIVIL ESTABLISHMENT.

Mr. Alexis Wynns Harriott, Assistant Commissioner of Grand Turk, was transferred to the Assistant Commissionership of Salt Cay *vice* Dr. Hirst, promoted to the Commissionership of the Cayman Islands.

Mr. Lindsay Lea Smith, Clerk to the Commissioner, was appointed Accountant and Clerk *vice* Mr. E. C. Harriott, promoted to a post in Jamaica.

Mr. Hugh Houston Hutchings was appointed Clerk to the Commissioner in place of Mr. L. L. Smith, promoted, and was later on appointed to the Assistant Commissionership

of Grand Turk *vice* Mr. A. W. Harriott, transferred to Salt Cay, in conjunction with his other duties.

Mr. Frederick Eugene Todd was appointed to perform the duties of Harbour Master in conjunction with his other work in the police force.

PUBLIC WORKS.

During the year, although the financial situation would not allow of any important public works being initiated, the survey of the Caicos Islands was actively pressed on. More was done within the twelve months in the matter of grants than had been accomplished in the previous ten years. An agreement was entered into with the Acting Colonial Surveyor, Mr. E. G. Reid, which will assure the completion of the survey of the Caicos Islands within a reasonable and definite period, and it will then be possible, besides allotting plots to the small owners and restricting indiscriminate squatting with its resultant evils, to offer large tracts of land suitable for the growth of sisals at prices such as will induce persons with capital to engage in and extend the cultivation.

GENERAL.

The year under review opened under circumstances of more than ordinary sadness, for a terrible catastrophe overwhelmed the principal town of Jamaica, causing immense loss of life and property. The people of the Dependency, which is so closely connected with Jamaica, responded generously to an appeal for assistance to their neighbours in their hour of sorrow and need, and an amount of more than £170 was collected and forwarded as an expression of sympathy with the sufferers.

Unlike its immediate forerunners, the year, too, commenced under conditions most propitious for salt raking, and these conditions continued so favourable that one of the largest crops known was gathered. Unfortunately, owing to the trade having been diverted through the inability to meet the supply during the preceding years of disastrous rains, there proved to be little or no demand for the chief product of these islands, and, as months passed, it was painfully apparent that exceptional measures were imperative to aid the owners of salt ponds to meet the worst crisis the Depen-

dency had ever experienced. At a meeting of the Legislative Board, held in June, a resolution was unanimously adopted by the unofficial members praying that, in view of the very depressed and uncertain state of the staple industry, the Government be prepared to make a substantial reduction in the statutory value of salt on which the amount of royalty was based. At a subsequent interview a few days later, the unofficial members agreed in recommending that the statutory value, as paid by Section 5 of the Salt Ponds Ordinance, be reduced from 3½*d.* to 2*d.* per bushel, and that the loss in revenue, estimated at £1,100, likely to be caused by the proposed reduction, be met by adding a surtax of ten per cent. to all duties on imports, at the same time pledging themselves if, at the end of the year, the surtax of ten per cent. proved insufficient, to support and vote for an addition of twenty per cent. to the existing import duties. These urgent representations, together with the confidential reports of the principal owners of salt ponds throughout the Dependency which, in the large majority of instances, supported the proposals of the unofficial members, were transmitted without delay to the Governor, who sanctioned the suggested reduction of the statutory value until the end of the year, without the imposition of additional import duties. As there was, unfortunately, but little improvement in the situation, the Estimates for 1908 were so framed as to give effect for another year to the recommendations of the unofficial members, and ordinances were passed, one containing the reduction of the statutory value, the other making provision to meet the loss in revenue caused by that reduction. By retrenchment in the cost of administration it was not found necessary to take advantage of the pledge of the unofficial members to increase the import duties by twenty per cent. The owners of the salt ponds did not benefit to the full amount of the reduction, but they were enabled thereby to offer their produce at a rate which enabled them to compete with, and regain part of the trade from, their formidable competitors of the Mediterranean. At the end of the year endeavours were made to bring about an agreement with the dealers in the United States to enable the producers to dispose of their salt at remunerative prices, but difficulties supervened and the matter unfortunately remained in abeyance.

Although the principal industry was in so depressed and unsatisfactory a condition, it is satisfactory to note that, despite a temporary set-back occasioned by prolonged drought, the prospects of sisal are encouraging, high and remunerative prices for carefully graded fibre having, as a rule, been obtained. Much of the future success of this cultivation will depend upon the production of a fibre of good and uniform quality and upon careful and honest grading. Efforts must be made to produce sisal in sufficient quantity and reliable

quality to justify a separate name for the fibre exported from the Bahamas and this Dependency to distinguish it from that produced in Yucatan. At present, the price of the fibre exported from these islands is, in spite of its superiority, governed largely by that obtained for inferior qualities made in Mexico. The agreement made during the year, which will assure the completion of the survey of the Caicos Islands within a reasonable and definite period, will render it possible to offer large tracts of lands at prices such as should induce persons to engage in and extend the cultivation. Its future development is one of great interest, for it may be said without exaggeration that this industry has, in a large measure, been the material and educational salvation of the Caicos Islands.

The sponge and turtle industries will, it is hoped, after a term of close seasons and beneficent protection, be once more placed on a basis which will assure regular employment and reasonable profits.

The clouds which for several years past have overhung the Dependency have in a measure lifted, but several years more of careful financial administration will be required before the future can be regarded as free from anxiety.

F. H. WATKINS,

Commissioner of the
Turks and Caicos Islands.

Total	828,114	16	10	935,426	16	11

The total Revenue and Expenditure for the last five years has been as shown below :—

	Revenue. £	Expenditure. £
1903–1904 ...	926,164 ...	822,876
1904–1905 ...	751,563 ...	824,816
1905–1906 ...	865,696 ...	821,612
1906–1907 ...	887,228 ...	828,115
1907–1908 ...	1,021,937 ...	935,427

The great increase of import duties in this year was due principally to the following causes :—

(1) The replacement of stocks in Kingston destroyed by the earthquake and fire of the 14th of January, 1907 (on which duty had already been paid).

(2) The circulation of money paid in wages for repairing earthquake damage in Kingston.

(3) The importation of an unusual quantity of foodstuffs for consumption by the labouring population on account of the failure of country provision crops owing to drought.

Cause (2) also augmented the yield of the excise duty on rum and the railway passenger receipts.

The receipts from Bankruptcy and Administration Commissions, Stamp Duties, and Title Registration Fees were also considerably augmented by the results of the earthquake. The increase in Postal Revenue must also, probably, be in part attributed to the same calamity.

The Revenue included an amount of £13,304, transferred from the Constabulary Pension Fund created under Law 8 of 1867 ; the liabilities of the Fund being made for the future chargeable against General Revenue. This amount has since been invested to repay the balance of a loan obtained from the Imperial Government in 1900 to pay expenses incurred when the railway was taken over by the Government.

The increase of £5,973 in the expenditure on constabulary and prisons was partly due to the enormous increase in the number of convictions for prædial larceny, which was specially rife owing to the drought and consequent scarcity of local foodstuffs above referred to.

The increase of £24,787 in miscellaneous expenditure was due principally to the payment of £23,000 in aid of the revenue of the city of Kingston, where no ordinary rates were levied during the year.

Earthquake damage accounted for the increase of £24,903 in the expenditure for the repair of public buildings.

£11,783 was disbursed on account of the purchase of a central site for the new public buildings in Kingston and £50,000 was set aside as the beginning of an insurance fund (to be increased to £100,000 by annual instalments of £10,000) to provide for the restoration of public property destroyed on any future occasion by hurricane, earthquake, fire, or any similar unforeseen calamity.

(*b*) No important changes in taxation were brought into force.

(*c*) In addition to the amount (£50,000) of the insurance fund mentioned above, there was available for general purposes a surplus of assets over liabilities amounting to £184,245 at the close of the year.

(*d*) The public debt of the Island amounted to £3,440,491 on the 31st of March, 1908. Provision for repayment is made by sinking funds, the accumulated amount of which on the same date amounted

to £450,830 15*s.* 8*d.*; guaranteed public loans for local and special purposes secured on municipal rates and undertakings amounted to £296,198, with sinking fund investments amounting to £45,048.

(*e*) The currency of the Island is British sterling, with no limit to the legal tender of silver.

(*f*) The total revenue and expenditure of the City Council of Kingston, the Kingston General Commissioners, and of all the other Parochial Boards taken together, for the last five years, are shown in the following comparative statements :—

Kingston City Council.

	Receipts. £	Expenditure. £
1903–4	30,245	27,841
1904–5	32,418	34,053
1905–6	30,684	29,220
1906–7	27,170	28,165
1907–8	30,775	30,858

Kingston General Commissioners.

	Receipts. £	Expenditure. £
1903–4	28,386	26,491
1904–5	28,670	25,106
1905–6	30,218	25,597
1906–7	26,294	25,809
1907–8	28,251	25,273

Parochial Boards (15 *Parishes*).

	Receipts. £	Expenditure. £
1903–4	98,649	111,822
1904–5	99,469	103,034
1905–6	105,168	97,038
1906–7	103,484	100,577
1907–8	105,433	106,891

(*g*) The debts of parochial boards to the Island Treasury for advances made for waterworks and markets amounted at the close of the year to £34,482.

II.—TRADE, AGRICULTURE AND INDUSTRIES.

(A.) Imports and Exports.

The total values of Imports and Exports for the last five years are as follows :—

	Imports. £	Exports. £
1903–4	2,014,477	1,543,267
1904–5	1,682,356	1,436,725
1905–6	1,941,938	1,843,180
1906–7	2,261,469	1,992,007
1907–8	2,854,042	2,360,702

The chief articles of Imports were (Foodstuffs, &c.) :—

	1907–8. £		1906–7. £
Ale, beer and porter ...	48,905	...	30,551
Beef, wet, salted ...	22,933	...	18,787
Bread and biscuit ...	41,211	...	30,447
Butter and substitutes...	29,460	...	22,904
Coals	74,797	...	74,750
Corn	50,912	...	34,520
Fish, dried and salted...	115,177	...	116,783
Fish, pickled or smoked	59,310	...	67,084
Flour (wheaten) ...	248,435	...	158,435
Meal (other than wheaten)	45,614	...	17,627
Milk, condensed ...	35,860	...	26,429
Oils	53,637	...	59,446
Pork, wet, salted ...	24,889	...	22,017
Rice	66,988	...	44,679
Soap	43,186	...	32,659
Spirits	23,217	...	16,306
Tobacco (manufactured)	21,385	...	16,494
Wines	14,891	...	7,969
Pitch pine lumber ...	88,457	...	37,874

The large increases in the importations of bread, butter, corn, flour, meal and rice reflect the effects of the drought, but do not necessarily indicate exceptional stringency of resources. The increases in ale, beer and porter, beef and pork, soap, wines and spirits and tobacco, and the fact that the importation of salt fish was hardly diminished, show that more money was available for luxuries than in the preceding year. This may be accounted for partly by the fact that the exports were larger, partly by the large expenditure proceeding for the repair of earthquake damages. The increase in pitch pine lumber is the result of this demand for rebuilding.

The values of Imports received from different parts of the world were as follows :—

	£		Per cent.
United Kingdom	1,331,762	...	46·6
United States ...	1,261,762	...	44·2
Canada	162,172	...	5·7
Other Countries ...	98,574	...	3·5

These proportions differ remarkably little from those of the trade of 1898, which were as follows :—

	£		Per cent.
United Kingdom ...	760,271	...	47·2
United States ...	720,859	...	43·0
Canada	118,867	...	7·1
Other Countries ...	44,383	...	2·7

The increase in the trade from the United States of America has been slightly. but very slightly, faster in rate than that from the

United Kingdom, and it has been less in volume, the gross increases being :—

	£
United Kingdom	571,491
United States of America	540,907
Canada	43,305
Other Countries	45,191

The chief articles of Export show the following variations :—

	1907–8. £	1906–7. £
Annatto ...	6,926 ...	5,226
Beeswax ...	5,859 ...	4,346
Cocoa	151,903 ...	109,992
Coco-nuts ...	57,035 ...	44,256
Coffee	141,310 ...	88,469
Bananas ...	1,038,721 ...	880,531
Grape-fruit ...	19,591 ...	12,613
Oranges ...	77,105 ...	70,951
Ginger	46,043 ...	39,621
Hides	10,460 ...	10,108
Honey	17,496 ...	9,739
Lime juice ...	4,840 ...	3,777
Pimento ...	70,233 ...	78,897
Rum	174,956 ...	134,114
Sugar	109,775 ...	118,544
Cigars	33,456 ...	24,815
Fustic and bitter-wood.	12,305 ...	14,113
Logwood ...	72,709 ...	73,427
Logwood extract	106,863 ...	84,920

These figures show a healthy improvement in the harvests of the planting community as compared with the previous year.

The distribution of the Exports was as follows :—

	1907–8. Per cent.	1906–7. Per cent.
To United Kingdom ...	21·4 ...	21·6
„ United States ...	59·0 ...	57·2
„ Canada	5·3 ...	7·5
„ Other Countries ...	14·3 ...	13·7

The improvements in the fruit and coco-nut trade augmented the proportion of exports to the United States.

The following table shows the relative importance of the principal staples and "minor" products.

	1907–8. Per cent.	1906–7. Per cent.
Sugar	5·0 ...	6·3
Rum	8·0 ...	7·1
Coffee	6·4 ...	4·7
Dyewoods...	3·6 ...	4·4
Fruit	53·9 ...	53·7
Pimento	3·1 ...	4·2
Minor products (including cocoa).	20·0 ...	19·6

The following comparison between the exports of 40 years ago and those of 1907–8 is interesting.

	1868	1908
	£	£
Sugar	551,406	109,775
Rum	206,173	174,955
Coffee	168,998	141,310
Dyewoods...	92,747	80,960
Fruit	3,042	1,193,784
Pimento	29,256	70,233
Minor products (including cocoa).	46,709	443,810
	1,098,331	2,214,827

The total increase of £1,116,496 is more than entirely accounted for by the increase of £1,190,042 in fruit. Sugar has fallen off by £441,631 (the 1908 crop was a short one), minor products have increased by £397,101, and the other staples show no very remarkable variation.

(B.) Mines, Manufactures, and Fisheries.

Copper lodes in Clarendon were actively worked during the year as a preliminary to floating a company; and the most promising results have from time to time been announced to the public. The Ippi Ippa hat-making industry progresses.

(C.) Agricultural Industries and Botanical Stations.

The tables of exports printed in the foregoing section indicate the principal agricultural industries of the Island and their position during the year under review. The various public agencies for the improvement of agricultural efficiency continued their work during the year. These are :—

(*a*) The Board of Agriculture, which was established for the purpose of co-ordinating the various public agricultural agencies. At the close of the year provision was made for the establishment of a Department of Agriculture with a view to superseding this Board on the retirement of the Honourable W. Fawcett from the position of Director of Public Gardens and Plantations. That Department was abolished as a separate Department and transferred to the control of the Honourable H. H. Cousins, Island Agricultural Chemist, in the new position of Director of Agriculture.

(*b*) The Jamaica Agricultural Society, a popular organisation having many subordinate branches throughout the Island.

(*c*) The Department of Public Gardens and Plantations (now abolished as above mentioned).

(*d*) The Island and Agricultural Chemist's Department.

(*e*) The Committee in control of sugar experiments.

(*f*) The Education Department.

The activities of these several Departments and bodies have hitherto somewhat overlapped and interlaced. Agricultural instructors have worked partly under the Board of Agriculture, partly under the Jamaica Agricultural Society. They have been actively engaged in instruction in various parishes of the Island and especially in connection with the competitions for prizes for the best cultivated holdings of various classes, which are offered in rotation in groups of parishes throughout the Island. It is the duty of the instructors to encourage and assist the peasantry to enter for these competitions, for which prizes are given by the Agricultural Society and to assist in the judging.

At Hope Gardens the instruction of agricultural students, apprentices, and industrial school boys has been carried on. Owing to the destruction of the Mico College by the earthquake only 22 elementary school teachers attended the annual course for agricultural instruction. A special instructor has been employed for the improvement of school gardens throughout the Island. He reports that it is evident that considerable work has been done in many of the schools by the native teachers. Taking into consideration the amount of teaching other than that given to the children in the school gardens, he considers the results remarkable. The time, however, devoted to this work is very much limited and might, with profit both to the children and to the country, be increased. The children show for the most part a very keen interest in the work and many have established small cottage gardens as a direct outcome of the work of the school garden. The instructor calls attention to the importance of treating the school garden as an example of method, order, and a thorough understanding of the laws of tillage, far more important than theoretical teaching of botanical science. He also insists on the need of greater provision for fencing and tools. As an example of the advantage that may result to the country in the matter of cottage gardens by means of this education, the instructor mentions the vegetable industry in the Port Royal Mountains which has sprung up of recent years principally as a direct outcome of the work of the teacher of the Mavis Bank School, who is also secretary of the local agricultural society. The industry is now worth thousands of pounds annually to the inhabitants of the mountains and affords means of livelihood in substitution for that which was formerly obtainable on the large coffee plantations.

(D) Land Grants and General Value of Land.

No considerable alienation of Crown Land was made during the year. The Surveyor General reports that he finds considerable difficulty in obtaining the payment of instalments of purchase money for crown lands sold to small settlers under a system of annual payments. Land suitable for banana cultivation continues to advance in value and is frequently worth as much as £30 an acre. There have from time to time been representations of a demand for more land for peasant settlement. This, however, appears to be for the most part a demand for new woodland or fallow land for cultivation in the primitive methods of cutting and burning. There is

plenty of land obtainable which would yield crops under proper cultivation such as it is one of the prime objects of the Agricultural Society to induce the peasantry to pursue.

(E) Shipping.

The total number of steamers reported with cargo during the year was 858, with tonnage 1,266,191, which is an increase over the previous year of 30 ships, with 109,504 tonnage. The number of steamers reported in ballast was 293 with tonnage 215,230, or 123 with 102,955 tonnage less than the corresponding period of the previous year. Thus there has been a decrease in steamers reporting to the extent of 93 in number, the tonnage, however, works out at an increase of 6,549. Steamers cleared with cargo are recorded as numbering 1,056, with tonnage 1,388,915. This is a decrease over the previous year of 65 ships, but tonnage again shows an increase of 37,731. Steamers clearing in ballast numbered 83 with tonnage 81,780, or a decrease of 31 ships when compared with the figures of the previous year. The tonnage in this case also shows a decrease of 36,086. Taking the total steamers cleared there has been a decrease of 96 in number, but an increase of 1,645 in tonnage.

Sailing vessels reported show a decrease of 34 with tonnage 12,593. The figures being :—

1906–7	231	44,415 tonnage.
1907–8	197	31,822 „
	34	12,593

Sailing vessels cleared show a decrease in number of 11, but an increase in tonnage of 2,267. Taking steamers and sailing vessels together there has been a decrease in the number reporting of 127 with 6,044 tonnage, and in the number clearing a decrease of 107 with tonnage 3,912.

The decrease in steamers reporting works out as under :—

British.

1906–7	312	506,683 tonnage.
1907–8	307	502,788 „
	5	3,895 decrease.

Foreign.

1906–7	932	968,189 tonnage.
1907–8	844	978,643 „
	88	10,454 decrease.

Out of the total number of steamers reporting 307, or 26·7 per cent. were British, and 844, or 73·3 per cent. foreign. Compared with the previous year there has been a gain of 1·7 per cent. by the British carriers. The figures are as under:

	1906–7		1907–8	
British	312	25 per cent.	307	26·7 per cent.
Foreign	932	75 „	844	73·3 „

A retrospect for forty years at ten year rests gives the following:—

—	Ships Entered.		Ships Cleared.	
	Number.	Tonnage.	Number.	Tonnage.
1868	579	167,749	528	157,184
1878	836	374,393	838	363,513
1888	991	563,902	952	520,755
1898	1,060	780,861	1,055	780,083
1908	1,348	1,513,243	1,348	1,511,101

Cleared.

III.—LEGISLATION.

Twenty-six laws were passed in the Session of 1907, the most important of which were the following:—

Laws 13 and 23, amending the Kingston Building Law of 1883, providing regulations for better building in the city to diminish the risk of destruction by future earthquakes, and to enable the Governor to establish a new Building Authority.

Law 14, the Kingston Tax Collection Law, which remitted all direct taxes on property for 15 months from the 1st January, 1907, and enabled the Governor to make good to the Mayor and Council out of General Revenue the resulting deficiency of city revenue. This Law also brought the City of Kingston under the operation of the Parish Rates Law and Property Tax Law of 1903, changing the basis of taxation from the assessed annual value to the assessed capital value, and bringing Kingston in line with the rest of the Parishes. This Law also extended to Kingston the exemption of all public property, whether owned by the Government or by the Parochial Board, from taxation instituted by the Taxation Laws of 1903.

Laws 15 and 18, the Public Buildings Laws, enabling the Government to acquire lands in the centre of the burnt area of the city of Kingston for the purpose of erecting new Public Buildings.

Law 20, the Assistance Committee Law, providing for the establishment and duties of a Committee to administer the Imperial Grant of £150 000 made in aid of the sufferers from the earthquake, and the other charitable subscriptions contributed for that purpose.

Laws 22 and 23, the Earthquake Loan (Imperial) Law, and the Earthquake Loans Administration Law, enabling the Colonial Government to borrow from the Imperial Government sums not exceeding in all £800,000 for the purpose of repairing damage caused by the earthquake and to provide for proper administration

of such loans. Moneys borrowed for this purpose from the Imperial Government were to be lent at 3½ per cent., and would be repayable by annuities of principal and interest combined at the following rates :—

	£	s.	d.	
For 7 years	16	7	1	per cent. per annum.
„ 10 „	12	0	5¾	„ „
„ 12 „	10	6	11½	„ „
„ 15 „	8	13	7¾	„ „
„ 20 „	7	0	8¾	„ „

A Loan Board was established by the Earthquake Loans Administration Law empowered to make advances on real property repayable by annuities based on the above scale, but including provision for cost of administration, for cost of remittance, and for a guarantee to cover possible losses. Such loans were secured in the first place by the real property mortgaged, next upon the parochial rates of the Parish within which they were made, and finally upon General Revenue of the Island.

Before the 31st March, 1908, five Laws were assented to and passed in the Session of that year, Nos. 1 and 3 empowering the acquisition of further lands for the Public Buildings, No. 2 further amending the Building Law, and Nos. 5 and 6 removing certain anomalies in the Parish Rates Law, 1903, and the Property Tax Law, 1903.

IV.—EDUCATION.

In his report for the year the Superintending Inspector of Schools gives the following statistics :—

	1907–8.	1906–7.
Schools on annual grant list at end of financial year	696	687
Average number of Scholars on Books for year from quarter ended October 31st, 1906	88,862	86,090
Average attendance for year ended October 31st, 1906	53,691	54,822
Percentage on average attendance of number on books	60·55	63·68
Total payments to elementary schools and Teachers	£46,314	£45,047

He adds the following observations :—

"It will be seen that the average attendance for the year under review, taken from the monthly average returns, is very much lower than it was for the year before. The year opened well. The only Parish where the attendance suffered appreciably from the direct effects of the earthquake was Kingston, and in Kingston, as I observed in my last Report, the managers of all the schools showed the most commendable public spirit in setting at once to work to replace the ruined buildings, and meantime to maintain the continued efficient

working of the schools. The buildings that were first restored were those under Roman Catholic managers, but all denominations were alike in getting their schools at once to work in booths, temporary buildings, and what not, so that the Kingston attendance recovered with extraordinary rapidity from the temporary set back caused by the disaster. In the rest of the Island there was, with few exceptions, not even a temporary falling off in attendance, and had we had our usual seasons there can be little doubt that the attendance for the Island generally for the financial year 1907-8 would, in spite of the earthquake, if the difference in age limit be taken into account, have approached what it was in the record years following the abolition of fees in 1892. But again, as in 1880 and 1903, our sanguine anticipations were destined to disappointment. A long continued drought, the effects of which were first felt in the Parishes of Manchester and St. Elizabeth, but which ultimately involved more or less every part of the Island, caused widespread scarcity and distress, and the attendance at the schools, always responsive to such influences, dropped in the Parishes chiefly concerned to something like two-thirds of its normal figure. Even the averages for the year 1st November, 1906, to 31st October, 1907, upon which the grants for the financial year 1908-9 have been calculated, fell off in central parishes to such an extent that the Legislature passed a Vote of £1,800 for special Distress Grants, to enable the schools in these parishes to receive payments based upon higher averages than would otherwise have in most cases obtained, and the subsequent continuance of the drought and consequent poor attendance makes it certain that next spring the same difficulty will have to be met, possibly in an intensified form.

"It is gratifying to be able to record that for the most part the teachers have made very praiseworthy and, to a great extent, successful efforts to strive against the adverse influences they have had to meet. In spite of all difficulties the schools maintained on the whole a high level of efficiency, the slight falling off in the number of first class schools being offset by a considerably greater increase in the number of second class, and a diminution in the number of the third. Owing to this fact, coupled with the special provision referred to in the previous paragraph, there will be a slight increase on the whole in grants in aid to schools for the year 1908-9, coupled with a lower average attendance."

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

The Public General Hospital at Kingston was considerably damaged by the earthquake, and the work of the institution, on which there was more than usual pressure, was carried on under some difficulty and inconvenience. The most noticeable feature in the reports on the Public General Hospitals in the country parishes is the great pressure on the hospitals in the districts in which

Indian immigrants are employed, for the accommodation of coolies suffering from malarial fever. This increased pressure calls for the serious attention of the Government and remedial measures are being considered on the lines :—

(1) of removing hospitals from malarial places ;

(2) of abating malaria in the districts and on the estates whence patients are sent to the hospitals.

(B.) Reformatories.

The numbers of boys and girls in the reformatories at Stony Hill increased during the year from 299 to 345, and the accommodation for the girls reformatory having become quite insufficient, steps are being taken to provide other quarters for the girls. The boys did a considerable amount of valuable work for the institution and for the public.

(C.) Savings Bank.

The report of the manager of the Government Savings Bank shows liabilities to depositors on the 31st March, 1906, of £402,925, on account of which securities to the amount of £395,783 were held, the balance of £7,142 being cash at call in the Treasury. There was an increase in the balances of Government accounts without which the depositors' balances would have been decreased by £13,541. This is accounted for by extensive withdrawals in Kingston for building purposes, and it is noted that the drought in Manchester appears to have affected deposits in that parish.

East Indian immigrants have to their credit £15,007 distributed among 950 separate accounts. This is an increase in the number of depositors and in amount as compared with last year.

The net profit of the savings bank to the Government after paying all expenses, interest, and losses on sale of investment, was £2,309.

VI.—JUDICIAL STATISTICS.

The Inspector-General reports that there were in custody in the prisons on the 31st of March, 1908, 1662 prisoners together with 33 prisoners in the local lock-ups, this number being an increase of 595 over that of prisoners in custody on the 31st March, 1907.

The committals to prisons and lock-ups during the year were 6,460. During the previous year there were 4,891 showing an increase of 1,569 in the number of committals to prison as compared with the previous year. As compared, however, with the year 1905-6, there was a decrease of 1,144 in committals.

The re-convictions during 1907-8 amounted to 1,515. Of these 667 were second convictions, 269 third, and 579 fourth and upwards.

There were 124 deaths as compared with 46 in the previous year. This heavy mortality formed the subject of special enquiry, and reports from the prison surgeons. The cause was not attributable to any defect in the sanitary conditions of the prisons, which are reported as quite satisfactory. A great number of prisoners are admitted in very poor physical condition. Of those who died 62 were in feeble health when admitted.

There were no executions of capital punishment during the year.

The gross expenditure for the General Penitentiary in the year was £14,516, that for St. Catherine's District Prison £6,705, making a total of £21,221. The cash earnings of the two prisons were £5,268, leaving a net cost of £15,953 or £11 12*s.* 2*d.* per prisoner per annum.

The total estimated value of the labour yielding no return in cash was £10,676. The value of the crops reaped on the St. Catherine Prison Farm was £1,490 10*s.*

A great deal of the damage done by the earthquake to the buildings of the General Penitentiary has been repaired by the prisoners during the year.

Discipline has been maintained in the prisons notwithstanding the abnormal number of inmates, and the mark system is stated to continue to work satisfactorily.

In reporting on the criminal statistics for the year the Attorney-General observes that the outstanding feature of the returns is the great increase in the number of cases of praedial larceny and of offences against property. Praedial larceny cases increased from 1,082 in the previous year to 2,547 and offences against property from 1,938 to 2,530. The Attorney-General thinks these increases are due to the great drought in the year following, at a comparatively short period, the earthquake of January 1907. He points out that the number of those offences does not exceed that for the year 1904-5, following the cyclone in 1903. There is a slight decrease in the number of offences against the person and a very satisfactory decrease in the cases of serious crime tried in the Circuit Courts.

VII.—VITAL STATISTICS.

(A.) Population.

The estimated population of the Island on the 31st March, 1908, was 835,800.

The number of marriages registered during the year was 6,251, being 7·4 per thousand of the estimated population.

Births registered were 29,210, 14,816 males and 14,394 females. The birth-rate was 35 per thousand of the estimated population, the lowest since 1886-7; the illegitimate births 18,042, 61·7 per cent. of births, the lowest percentage since 1896-7.

Deaths registered 23,672, 28·3 per 1,000 of the estimated population. This is the highest death-rate recorded during the 30 years of registration. That of the preceding year was 26·2 per thousand. 6,535, or 27·6 per cent. of the total number of deaths were of children under one year of age, and 10,135 or 44·5 per cent. of children under five years. Among these the death-rate of legitimate children was 16·33 per cent. and of illegitimate 26·11 per cent.

Illegitimate percentage is thus shown to contain, as compared with legitimate, a very considerable tincture of manslaughter.

(B.) Public Health.

The year was less healthy than the average. There was a great deal of sickness after the earthquake ; a troublesome form of sore throat with fever and diarrhœa appeared to be diffused by the dust of the fallen city, and there were throughout the year more than the usual persistent number of sporadic cases of enteric or typhoid fever. There was a considerable prevalence of malarial fever among the Indian immigrants in Portland, St. Mary, and St. Thomas, and the hospitals were much overcrowded.

(C.) Sanitation.

The duties of local sanitary authorities continued to be administered by the several parochial boards throughout the Island.

(D.) Climate.

The rainfall was below the average and the greater part of the Island suffered more or less severely from drought throughout the year.

VIII.—POSTAL AND TELEGRAPH SERVICES.

The Postmaster-General furnishes the following figures comparing the postal revenues for 1907–8 with those of the previous year.

—	1907–08.	1906–07.	1905–06.
	£	£	£
Postages	32,465	31,384	29,594
Commission on Money Orders ...	638	531	441
Local Commission on British Postal Orders.	176	125	98
Commission on Local Postal Orders	734	682	690
Miscellaneous	764	639	614
Telegraphs	6,489	6,614	5,983
Total	41,266	39,975	37,420

These statistics show an increase of £1,291 over the revenue of the previous year distributed under all heads of receipt except telegraphs, in which there has been a falling off of £125, attributed to the continued drought and its effect on the banana business.

The expenditure of the year by the department amounted to £33,472, but in this there is not included any charge against the post office for the fortnightly conveyance of mails and parcels to and from the United Kingdom by the direct line of steamers, which receives a subsidy of £20,000 per annum from general revenue.

The estimate of mail matter handled shows 3,386,300 items outwards, and 3,726,957 inwards at the Kingston post office, and at district post offices a total of 1,523,746. This is an increase of 699,365 items over the estimate for the previous year. Correspondence was unquestionably stimulated by the results of the earthquake of January, 1907.

The postmaster expresses his appreciation of the continued good services rendered by the clerks of the head office at Kingston and at the out stations during the period of disorganization into which the post office was thrown after the earthquake of January, 1907. The post office is still housed in inconvenient temporary quarters and carries on its work under considerable difficulties.

IX.—MILITARY FORCES AND EXPENDITURE.

I find nothing of any importance to report under this head.

X.—GENERAL CONDITIONS.

The most outstanding feature of the year's history must be considered to have been the work done in Kingston and its neighbourhood in reparation of the effects of the earthquake. In addition to large expenditure from the public Treasury in the restoration of Government buildings and from private resources in replacing houses and shops, there was expended by the Committees established to administer the amounts subscribed through the Lord Mayor of London's Fund and other channels (together with the sum of £150,000 contributed by the Imperial Government), a total amount of about £224,535 up to the 31st March. Of this amount £154,020 was expended in rebuilding houses, and residue in providing for the maintenance of those who had lost their supporters or other means of subsistence, or in enabling losers to make a fresh start in business. In addition to this fund there was expended in the Island out of the public loan guaranteed by the Imperial Parliament sums amounting to £92,625 advanced on mortgage. This amount was all advanced

from the local Treasury and no loan had, up to the close of the year, been obtained from the Imperial Government to cover these advances.

The Island suffered from drought during the year, but, as the returns of exports show, was not on the whole unprosperous. Emigration to Colon and Costa Rica continued active. 10,880 persons left the Island to seek employment in Central America, and 7,957 returned. These emigrants remit or bring back with them a considerable amount of money, some of which they invest in land and houses in Jamaica.

The planting of bananas continues to be the most attractive investment for capital and labour, and it is somewhat unfortunate that the economic prosperity of the Island should be coming to depend so predominately upon this remunerative but risky crop. At the same time it is clear that the planting of more permanent crops such as cocoa and coconuts is increasing more rapidly than ever, and in a few years time the export of cocoa may assume that position of importance in our exports which the suitability of parts of the Island for this staple have long indicated as its due. The orange does not appear to be progressive.

Owing to the depression of price in some of the former staples of production the social condition of the people in a few districts is deteriorating. On the other hand, in the districts suitable for bananas, cocoa and other products which hold their own, material wealth and prosperity are unquestionably on the advance, and it is satisfactory to be able to report a considerable increase in the investment of capital in machinery for sugar production, and in the cultivation of the sugar cane. The prospects of this industry are improving. On the whole it may be said that in the year 1907–8 the city of Kingston, suffering from the shattering effects of the earthquake, and the island generally, suffering from special difficulties of climate, held their own very satisfactorily, and placed and kept themselves in a position to reap the advantage of the more favourable conditions that have followed.

A sketch map of the island is annexed to this report.

I have &c.,

SYDNEY OLIVIER,

Governor.

The Right Honourable
The Earl of Crewe, K.G.,
Secretary of State for the Colonies.

TURKS AND CAICOS ISLANDS.

(For Report for 1907, *see* No. 578.)

THE ACTING GOVERNOR to THE SECRETARY OF STATE.

King's House,
Jamaica,
5th August, 1909.

MY LORD,

I HAVE the honour to transmit to your Lordship a copy of the Blue Book of the Turks and Caicos Islands for the year 1908, together with the Acting Commissioner's Report thereon.

2. It will be seen that Mr. Slader has on this occasion furnished a sketch map of the Dependency as suggested in your Circular Despatch of the 30th April, 1908.

I have, &c.,

P. C. CORK,
Acting Governor.

The Right Honourable
The Earl of Crewe, K.G.,
&c., &c., &c.

(14264—2.) Wt. 26122—322 1125. 9/09. D & S. A 2

REPORT ON THE BLUE BOOK FOR 1908

FINANCIAL.

The revenue for the year 1908 amounted to the sum of £7,404, while the expenditure was £11,430.

Of this amount the sum of £4,000 was earmarked for Hurricane Relief, and set aside from the invested funds of these Islands; this leaves the expenditure at £7,430, being £16 in excess of the revenue for the year.

The hurricane of September last was undoubtedly the cause of the deficit, as for a time it quite dislocated trade. The exporting of salt ceased, while the import duties fell off considerably, only food-stuffs, which are nearly all free under the Tariff Ordinance, continuing to come in.

Finances.

Year.	Revenue.	Expenditure.
	£	£
1904	6,466 ...	8,001
1905	6,243 ...	7,279
1906	6,809 ...	7,080
1907	7,391 ...	7,119
1908	7,404 ...	11,430*

Revenue.

There is no Public Debt, but there are surplus funds amounting to £5,900 invested in Colonial securities.

TRADE, AGRICULTURE, AND INDUSTRIES.

The value of the imports during the year 1908 amounted to £24,426, while the exports were £24,798, which shows a decrease of £3,234 of imports as compared with last year, and an increase of £981 in the exports for the same period.

The salt exported amounted to 1,749,526 bushels, which was a fairly good crop when it is remembered that the hurricane in

September effectually prevented any more salt being raked for the year: the price, however, was very low, being only 4½ cents per bushel, a figure at which it was kept until December, 1908. The value of the salt exported in 1907 was £16,557, being £812 more than the value of the crop in the year under review.

The sisal crop was not so good as in preceding years, due in a measure to the hurricane. The amount exported was £1,664, as against £3,107 in 1907, and £5,602 in 1906.

The value of the total imports and exports is:—

Year.	Imports.	Exports.
	£	£
1904	24,120 ...	24,020
1905	28,230 ...	23,898
1906	27,572 ...	24,940
1907	27,660 ...	23,817
1908	24,426 ...	24,798

Articles of Export.

Shipping.

The total tonnage of vessels which entered and cleared during the years 1904 to 1908 is shown in the following statement:—

Year.	Total Tonnage.
1904	275,132
1905	332,254
1906	357,960
1907	345,453
1908	410,195

Comparative statement of the shipping cleared for the years 1907 and 1908:—

Nationality.	Sailing.		Steam.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
British	166	16,014	39	62,787	205	78,801
United States	29	22,332	26	50,748	55	73,080
Others	62	16,892	25	50,026	87	52,210
Total 1908	267	55,238	90	163,561	347	204,091
Total 1907	255	31,948	84	141,386	339	173,334

LEGISLATION.

The only Ordinances passed during the year were:—

1. An Ordinance imposing a duty on all living Sisal plants exported from the Dependency.
2. An Ordinance declaring the Acts and Ordinances comprised in the recently-printed volume entitled "The Laws of the Turks and Caicos Islands" to be the only Acts and Ordinances in force and operation in the Dependency.

Law 46 of 1908 passed by the Jamaica Legislature gave a right of appeal from the Supreme Court of these Islands to the Appeal Court of Jamaica in both Civil and Criminal proceedings.

EDUCATION.

There are eleven elementary schools in these Islands, three at Grand Turk, two at Salt Cay, and the other six in the Caicos. Seven of these are Government Schools, and are supported from a grant of £600 per annum made for education.

The total number of children being educated is 915, of whom 476 are boys and 439 girls. The schools are inspected annually by Mr. H. H. Hutchings, the Government Inspector. The teachers are all natives, and do excellent work; they are provided with houses, and are paid salaries ranging from £40 to £96 per annum.

The following table will show the respective schools, and the average attendance of the pupils:—

—	Boys.	Girls.	Total.
Grand Turk ...	97	111	208
* Do.	30	49	79
Salt Cay	37	19	56
* Do.	13	9	22

Public Library.

The Public Library, which stands on the embankment overlooking the Harbour, is certainly the most appreciated institution in these Islands. It was built in 1887 from private subscriptions and a Government grant. There is a small annual subscription and members may borrow three English or American magazines or papers every afternoon. The Library contains about 5,238 books for the use of the members.

In this community where there are so few amusements for the inhabitants the Library is regarded as a very great boon.

The annual Government grant-in-aid is £50.

JUDICIAL STATISTICS.

The Police Force consists of a total strength of one officer and 22 men.

—	1906.	1907.	1908.
Offences reported to police	160	207	202
Number of persons apprehended	160	204	202
Number of persons convicted	134	157	160
Convictions in Magistrates' Court :—			
1. Offences against the Person	27	34	24
2. Prædial Larceny	1	13	6
3. Offences against Property	13	3	23
4. Other Offences	93	107	107
Convictions in the Superior Court :—			
1. Offences against the Person	2	1	0
2. Prædial Larceny	0	0	0
3. Offences against Property	0	1	0
4. Other offences	0	0	3
Number of Persons acquitted :—			
1. In the Superior Court	—	—	—
2. In the Inferior Court	24	44	40

There is practically no serious crime in the Dependency.

VITAL STATISTICS.

The estimated population on the 31st December, 1908, amounted to 5,287, distributed as follows:—

	Males.	Females.
Grand Turk	720 ...	1,031
Salt Cay	223 ...	230
South Caicos	323 ...	379
Other Caicos	1,142 ...	1,239
	2,408	2,879

Of this population 342 are white, and the remainder coloured and black.

There were 164 births, 159 deaths, and 26 marriages, during the year. The highest birth-rate was 38·1 per thousand in the Caicos, and the lowest 21·1 per thousand at Grand Turk.

The general health during the year was excellent, and there were no epidemics of a serious nature.

POSTAL AND TELEGRAPHS.

There is no internal postal, telegraphic, or telephonic communication in the Islands, but there is a fairly good steamship service between Grand Turk, the United Kingdom, and the United States. The Imperial Direct West India Mail Steamers call here fortnightly on their way to Jamaica, and the Clyde Line steamers from New York call on their way to San Domingo every ten days, while the Pickford and Black steamship "Boston" calls once a month from Halifax, and on her return trip from Jamaica. For this latter service a subsidy of £120 per annum is paid.

Latterly there has also been a "Dominican Line" calling on their voyages between New York and San Domingo.

Letters posted to London *viâ* America are frequently answered within 28 days.

The following amounts are the revenue and expenditure of the Post Office:—

Receipts.	1907.	1908.
Sale of stamps	£228 ...	£376

METEOROLOGICAL OBSERVATIONS.

The following is the rainfall:—

	inches
1904	43·79
1905	41·97
1906	28·36
1907	28·49
1908	41·37

The wettest month was November, when there was 6 inches and 57 parts of rain measured, while the driest month was April, with 37 parts. The heaviest rainfall was 3 inches and 10 parts, on the 22nd May.

The coolest and hottest months were February and August, the mean temperature 74·2° F. and 84·3° F. respectively.

The mean temperature for the year ...	79·6° F.
The mean pressure	30·036 ins.
The lowest temperature	63° F. on 17 Feb.
The highest	100·5° F. on 30 Oct.

The prevailing winds during the year:—

CIVIL ESTABLISHMENT.

Mr. Hugh Houston Hutchings, the Clerk to the Commissioner, was appointed Assistant Commissioner at Grand Turk. The duties of Clerk to the Commissioner were merged in his new appointment, and the clerkship abolished.

Miss Jessie Rigby was appointed typist.

Mr. Daniel Bascome Hinson, the Boarding and Revenue Officer at Cockburn Harbour, was appointed to the Gold Coast Colony.

Mr. William Alfred Durham was appointed Boarding and Revenue Office at Cockburn Harbour, *vice* Mr. Hinson, promoted.

His Honour G. P. St. Aubyn went on three months' leave, and during his absence His Honour F. H. Watkins acted as Judge of the Supreme Court.

In December last His Honour G. P. St. Aubyn was promoted to Jamaica as Resident Magistrate for St. James and Trelawney.

PUBLIC WORKS.

The only public work of importance carried out during the year was the completion of the survey of the North Caicos, by Mr. E. G. Reid, the Acting Colonial Surveyor.

This island, the most important of the Caicos Group, contains 39 square miles, of which 6,110 acres were disposed of to small settlers before the coming into operation of the Crown Lands Ordinance of 1896. Two thousand four hundred and fifty acres have been sold under the provisions of that Ordinance. There are about 1,000 acres of salt ponds, and 6,500 acres fit and available for cultivation, while the remaining portion of the Crown Lands is pine barren and rocks unfit for use.

The chief settlement is Kew, containing 450 inhabitants and 79 acres, situated in the West Centre. There are three villages, viz., Bottle Creek, Sandy Point, and Whitby on the North Coast.

GENERAL.

Seldom in the history of these islands has a year passed under conditions less immediately favourable to the staple industry than obtained in 1908.

In June, 1906, an Ordinance was passed by the Legislative Board reducing the statutory value of salt, on which a royalty of 10 per cent. is paid to the Government on shipment, from 3½*d.* to 2*d.* per bushel. This was done with a view to assisting the salt owners, who had very nearly been ousted from the American market in consequence of their inability to supply the demand during two years of rains. The purchasers had obtained supplies from Sicily to meet their requirements, and it was in order to allow our own people to recapture the American trade that it was necessary to reduce the royalty and enable them to sell cheaper. Fortunately the weather was favourable to salt-raking, and a crop of 1.749,000 bushels was gathered, which permitted the price of salt to be kept down to 4½ cents per bushel during the whole year, the lowest figure ever reached.

The shipments of salt were large and frequent, the demands were amply met, and the result aimed at by the Legislature in recapturing the American market achieved. The success, however, was dearly bought, as the great majority of the salt-pond owners, through the effects of years of adversity, were not in a position to stand the strain, and so were reduced to the greatest straits.

The loss in revenue to the Dependency from the decrease in the royalty on salt for the period amounted to £1,000, but this was almost entirely met—

(1st.) by £500 collected from an increased tariff, and

(2nd.) by economy in administration.

These conditions of affairs were put an end to by an intervention of Providence, for on the 10th and 11th September, 1908, a most violent hurricane broke over these islands, laying waste about 1,000,000 bushels of salt, and wrecking most of the houses of the peasantry, to say nothing of the destruction to the shipping, sisal cultivation, and sponge industry of the Dependency. The situation is most aptly described by His Honour F. H. Watkins in his address to the Legislative Board in November last, as follows:—

"The effects of the hurricane, though fortunately less in "magnitude than those of some of its predecessors, were more "severely felt by all classes of the community, who were, under "the circumstances, without the necessary means to make good "their losses without assistance. As soon as practicable, relief "committees were formed to deal with the situation, and to "administer such funds as might become available to rebuild "and repair houses destroyed or damaged in the hurricane, and "to afford relief in deserving cases of distress. The Governor "of Jamaica arrived in H.M.S. Scylla on the 23rd September, "and after consultation with the honourable members of this "Board and others representing the general interests of the De-"pendency, His Excellency permitted £3,500 to £4,000 to be "drawn from the reserve fund,* £3,000 to £3,500 of which was

* This was for repairing and cleaning the salt ponds, and does not represent the loss in salt.

"to be expended in aiding the salt-pond owners to recommence "their work at once in order that profitable employment could "be provided by them at as early a date as possible. So far as "can be ascertained from the reports of the committees in each "settlement, which reports have been carefully revised by a "sub-committee specially appointed for that purpose, the loss* "(exclusive of wastage by the rain) sustained by the salt indus-"try amounts to £2,500, while the sum required to rebuild and "repair the houses of the labouring population and to help some "in the Caicos Islands to replace their boats will be at least "£3,000. In addition to the grant from the reserve funds, the "people of Jamaica and others interested in the Dependency "have come forward promptly and sent timely and generous aid "for those in need, but those private subscriptions would, with-"out the amount given from the reserve fund, have proved quite "inadequate to meet the exigencies of the situation."

The hurricane was most severely felt in Salt Cay. That island, which is seven miles south of Grand Turk, is only now just beginning to make salt again; the sea broke over the low-lying lands on the east side of the island and flooded the salt ponds, making them into one large lake, and bringing in so much seaweed and rubbish, that the whole of the water and brine had to be emptied by the canals into the harbour.

The amount voted for the relief of the salt industry was used exclusively for cleaning and repairing the salt-ponds, and the work during its progress was supervised by experts in salt-making. Coming just at this crisis the relief to the salt-pond owners was of the utmost benefit, more especially to those who had, in the previous years of struggle for a bare existence, not been able to keep their ponds up to an efficient state of culture. The employment of the labourers and the consequent circulation of money at a time when it was so much needed acted like a tonic in stimulating the masses to an effort, and the loss of salt and brine was soon forgotten in restoring order out of chaos.

Many old inhabitants say that not for forty years have the salt-ponds as a whole been in better condition than when this work was carried out, and even pessimists were forced to predict a beneficial result.

The year under review, which had been such a trying and disastrous one, saw the occurrence of the most important events for these islands that had taken place for a long period:

(1st.) The recapturing of the American market for the sale of Turks Islands' salt, and

(2nd.) The thorough renovating of the salt-ponds.

The Ordinance which temporarily reduced the royalty on salt exported lapsed at the end of the year. The price was raised to 6 cents per bushel, and with favourable weather the outlook for 1909 is decidedly encouraging.

The cultivation of sisal in the Caicos, which is the second industry of importance to the Dependency, has been steadily pro-

* Injury to the salt-ponds.

gressing, and each year sees new lands taken up for the purpose. The small amount of fibre exported was principally due to the low prices prevailing which was not a sufficient inducement for some of the companies to ship. The damage to the plants by the hurricane was trifling, while the rains which accompanied this visitation were most beneficial.

The sponge industry received a decided set back in consequence of the number of boats destroyed, which prevents those engaged in this pursuit from carrying on their sponging. The young sponges growing near the shore and in shallow water were totally destroyed by the violence of the breakers.

In concluding, I would state that the popular feeling is that it is a very fortunate thing for these islands that during this period of adversity and misfortune they had so able a Commissioner as Mr. Watkins proved to be. What would otherwise probably have been a crushing catastrophe, the results of which might have taken years to efface, has been skilfully averted, and the foundation for a prosperous future has been laid in a remarkably short time.

Immediately after the hurricane the Commissioner's plan of action began, his indefatigable exertions and personal influence with the masses aroused them to united effort, and by tact in the grouping of his working committees, the work of relief not only removed the feeling of despair which had laid hold on the people, but established in them greater confidence in the future.

It may be of interest to state that these islands have been visited by hurricanes at periods of about every twenty years. The detailed records of the damages done by hurricanes in the past do not go beyond 1866, but in those records there is enough to show that the hurricane of 1837 must have been a most disastrous one.

The following is a list of the recorded hurricanes, showing the loss of life and damage to property, occasioned by them:—

Year.	Lives Lost.	Damages to Houses and Shipping.	Damages to Salt Industry.	Other Damages.
		£	£	£
1837	No records.			
1866	63	79,600	12,000	2,373
1888	21	5,604	5,000	780
1908	22	6,000	9,000	2,000

A most useful and important work was accomplished during the year in the revision and indexing of the laws of the Dependency by His Honour G. P. St. Aubyn, Judge of the Turks and Caicos Islands. They have been excellently printed and bound into one volume by Messrs. Waterlow and Son, of London.

JAMAICA.

(For Report for 1907–8, *see* No. 607.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House, Jamaica,
21st October, 1909.

MY LORD,

I HAVE the honour to report to your Lordship on the Blue Book Returns of this Government for the financial year ended the 31st March, 1909.

I.—FINANCIAL.

The revenue and expenditure of the year, under the Heads of Estimates, compared with those of the preceding year, were as follows:—

REVENUE.

Heads.	Receipts, 1907-8. £	s.	d.	Receipts, 1908-9. £	s.	d.

Transfer to Insurance Fund	50,000	0	0	—		
	935,426	16	11	911,095	5	10

The total revenue and expenditure for the last five years have been as shown below:—

	Revenue. £	Expenditure. £
1904-5	751,563	824,816
1905-6	865,696	821,612
1906-7	887,228	828,115
1907-8	1,021,937	935,427
1908-9	933,751	911,095

The revenue for 1908-9 was £6,298 in excess of the estimate, but £88,186 less than that of the previous year. The receipts in 1907-8 had been abnormally swelled by Customs duties on goods imported to replace stocks destroyed by the Earthquake and fire of the 14th January, 1907, and the subsequent activity in building operations, and by the transfer to general revenue of the amount of £13,304 from the Constabulary Pension Fund. The principal decreases were due to the fall which had been anticipated in Customs revenue of £65,365, and to an unexpected shrinkage in railway receipts of nearly £9,000, attributable to the prolonged drought. The expenditure is shown as £24,332 less than that of the previous year, but as an amount of £50,000 was included in the figures of 1907-8, which was an investment in the Insurance Fund, the real expenditure during 1908-9 was in fact, £25,668 in excess of that of 1907-8. The principal items making up this increase are Public Works and Buildings, including new Government buildings, £12,637, increased grants for

Education, £9,827; Constabulary and Prisons, £3,127; Medical, £1,564; Pensions, £1,538. Under other heads there were various small increases or decreases contributing to the net result stated above. The total expenditure was £83,591 less than the approved estimates; the greater part of the difference being due to the postponement of expenditure on the new public buildings, King's House, the new railway station and workshops, and other public works in restoration of earthquake damage. So that, whereas a deficit of £67,234 was budgeted for, there was instead an apparent surplus; but this surplus was only owing to the deferring of expenditure to which the Government was pledged, and which was provided for afresh in the estimates for 1909-10.

No important changes in taxation were brought into force.

In addition to the amount of £50,000 at credit of the Insurance Fund there was available for general purposes a surplus of assets over liabilities amounting to £206,901 at the close of the year. Of this a further amount of £50,000 was appropriated to make up the Insurance Fund to £100,000.

The Public Debt of the island (most of which is represented by productive investments) amounted to £3,769,844 on 31st March, 1909, and the Sinking Funds to £547,306, leaving a net liability of £3,222,578. Included in the above are guaranteed public loans for local and special purposes secured on municipal rates and undertakings amounting to £294,019, the sinking funds in respect of which amount to £48,321.

The currency of the island is British sterling, with no limit to the tender of silver.

The total revenue and expenditure of the City Council of Kingston, the Kingston General Commissioners, and all the Parochial Boards taken together for the last five years are shown in the following comparative statements:—

Kingston City Council.

	Receipts. £	Expenditure. £
1904-5	32,418	34,053
1905-6	30,684	29,220
1906-7	27,170	28,165
1907-8	30,775	30,858
1908-9	32,197	30,010

Kingston General Commissioners.

	Receipts. £	Expenditure. £
1904-5	28,670	25,106
1905-6	30,218	25,597
1906-7	26,294	25,809
1907-8	28,251	25,273
1908-9	30,545	26,223

Parochial Boards (15 *Parishes*).

	Receipts.	Expenditure.
	£	£
1904-5	99,469	103,034
1905-6	105,168	97,038
1906-7	103,484	100,577
1907-8	105,433	106,891
1908-9	109,051	110,645

The debts of the Parochial Boards to the Treasury for advances made for waterworks and markets amounted, at the close of the year, to £31,591.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

The total values of imports and exports for the last five years are as follows:—

	Imports.	Exports.
	£	£
1904-5	1,682,356	1,436,725
1905-6	1,941,938	1,843,180
1906-7	2,261,469	1,992,007
1907-8	2,854,042	2,360,702
1908-9	2,420,335	2,268,254

The chief articles of import were (foodstuffs, &c.):—

	Value.	
	1908-9.	1907-8.
	£	£
Ale, beer, and porter	40,292	48,905
Beef, wet salted	20,975	22,933
Bread and biscuit	38,899	41,211
Butter and substitutes	30,227	29,460
Coal	47,826	74,797
Corn	47,082	501,912
Fish, dried and salted	115,439	115,177
Fish, pickled or smoked	59,468	59,310
Flour (wheaten)	245,697	248,435
Meal (other than wheaten) ...	37,610	45,614
Milk, condensed	36,455	35,860
Oils	55,949	53,637
Pork—wet salted	28,086	24,889
Rice	50,615	66,988
Soap	28,097	43,186
Spirits	15,949	23,217
Tobacco (manufactured)	21,853	21,385
Wines	13,720	14,891
Pitch pine lumber	83,222	88,457

A high price for corn has prevailed during the year, causing oats to be used more largely, and thus diminishing the amount of corn imported. The importation of pork shows a steady increase, pointing to a falling off in the home supply. The increase in importation of naphtha is accounted for by the number of automobiles now being used in the island. The values of imports received from different parts of the world were as follows:—

	£	Per cent.
United Kingdom	1,003,239	41·5
United States	1,131,521	46·9
Canada	173,810	7·2
Other countries	111,764	4·4

The chief articles of export show the following variations:—

Values.	1908-9. £	1907-8. £
Annatto	10,308	6,926
Beeswax	5,134	5,859
Cocoa	90,914	151,903
Cocoanuts	44,523	57,038
Coffee	116,166	141,310
Bananas	1,044,820	1,038,721
Grape fruit	13,366	19,591
Oranges	38,474	77,105
Ginger	43,581	46,043
Hides	8,678	10,460
Honey	14,323	17,496
Lime juice	4,753	4,840
Pimento	143,623	70,233
Rum	186,803	174,955
Sugar	77,047	109,775
Cigars	29,981	33,456
Fustic and bitterwood	6,680	12,305
Logwood	46,401	72,709
Logwood, extract	114,460	106,863

The distribution of the exports was as follows:—

	1908-9. Per cent.	1907-8. Per cent.
United Kingdom	21·5	21·4
United States	57·8	59
Canada	4·3	5·3
Other countries	16·4	14·3

The following table shows the relative importance of the principal staples and minor products:—

	1908-9. Per cent.	1907-8. Per cent.
Sugar	3·6	5·0
Rum	8·9	8·0
Coffee	5·5	6·4
Dyewoods	2·4	3·6
Fruit	54·9	53·9
Pimento	6·8	3·1
Minor products, including cocoa	17·9	20·0

The following comparison between the exports of 40 years ago and those of 1908-9 is interesting:—

	1869.	1909.
	£	£
Sugar	443,078	77,047
Rum	157,359	186,803
Coffee	120,246	116,166
Dyewoods	256,034	51,693
Fruit	3,124	1,142,765
Pimento	33,915	143,623
Minor products	38,806	367,614
	1,052,562	2,085,711

This comparison indicates the leading features of the considerable modification which has taken place in the agricultural industries of the island during this period. The products of the sugar-cane, coffee, and dyewoods were, at the commencement of this period, the principal articles of export. Beet sugar, Brazilian coffee, and aniline dyes caused so great a depreciation of prices that the Colony had to seek for other commodities to replace them, and tried bananas, oranges, lemons, limes, grape fruit, pineapples, mangoes, cocoa, tobacco, cassava, and various minor products, painfully and by slow degrees readjusting its industrial life. In the process some wealthy districts have become depressed, and some poor districts prosperous, but as a result the production of fruit (principally bananas), cocoa, and minor products has enabled the Colony to double its exports. Sugar planters have, however, kept that industry alive, and, since the modification of bounties on beet sugar and the successful results in improving the sugar-cane, have made efforts which are now showing some promise to regain for it something of its former importance. On the whole, the agricultural outlook is favourable, and the advancing development of banana cultivation in new districts of the island tends to diffuse the risk involved in the increasing dependence of the island on that precarious crop. The Collector-General in his report observes that "a lingering suspicion of depression, a symptom that follows the recovery of trade after a period of protracted drought, has characterised the trading of the year, so that while there has been a tendency to expand establishments at centres there has also been a guard set against the danger of over-importing." This is for Jamaica a very healthy and desirable tone of mind.

Mines, Manufactures, and Fisheries.

No marked development has taken place in the copper mines during the year. There is alleged to be a considerable amount of the metal, and indications of its presence are manifest in several places, though to what extent it is to be found in paying quantities has not yet been satisfactorily established.

The principal manufactures continue to be sugar, rum, and logwood dye, and a moderate number of hats are made, but in the absence of coal mines it is improbable that any considerable manufacturing industry would be established until the water power of the mountain streams is utilised to generate electrical energy.

There are no fisheries beyond those established to supply the local daily demand, and the Cayman Islands Turtle Fishery which contributes to the London market.

Agricultural Industries.

The tables of exports printed in the foregoing section indicate the principal agricultural industries of the island and their position during the year under review.

The new Department of Agriculture, which has taken over the duties of the Board of Agriculture, the Department of Public Gardens and Plantations, the Island and Agricultural Chemists' Department, and the control of sugar experiments, came into being during the year, and the Agricultural Society continued its operations.

The Agricultural Department is designed to conduct the serious work of research, experiment, and the collection of exact statistics respecting tropical agriculture, and to supply seed and plants superior to those ordinarily obtainable, and introduce and acclimatise new economic plants, and the Agricultural Society, with its numerous branches, to perform the no less important function of popularising agriculture and acting as the link between the Department and the people, and of improving the breed of stock and poultry.

The Surveyor-General reports continued difficulty in recovering payment for lands sold to small proprietors on the instalment system. He writes: "Notwithstanding the re-sale of lots taken back from defaulting purchasers there are on hand some 364 lots covering 3,794 acres, or nearly 13 per cent. of the total area of 30,751 acres allotted to 3,331 lotholders, exclusive of the larger areas on which instalments are considerably in arrear, and in respect of which grace for payment has been taken by the defaulters." This is a discouraging element in the partially satisfactory results of the experiment of selling Crown lands to the peasantry on exceedingly easy terms. Taking into account the cost of roads, surveys, and staff charges during the period through which the instalments are payable, it is to be feared that the Treasury has made little, if any, direct pecuniary profit by these transactions.

Shipping.

The total number of steamers reporting with cargo was 817—tonnage 1,210,092—which is a decrease over the previous year of 41 with tonnage 56,099. The number of steamers reporting in ballast was 327, tonnage 233,625, which is an increase over the previous year of 34 with tonnage 18,395. One thousand and

eighty-one steamships cleared with cargo, an increase of 25, with tonnage 20,835. Sixty-seven steamships cleared in ballast, a decrease of 16, with tonnage 18,688. Taking the total steamers cleared, there is an increase of 9 steamers and an increase of 2,147 in tonnage.

Sailing vessels reported show an increase of 21 ships, with tonnage 7,185, the figures being:—

1907-8	197 ...	31,822
1908-9	219 ...	39,007
Increase	22 ...	7,185

Sailing vessels cleared show an increase in number of 15 with an increase in tonnage of 4,522.

Taking steamers and sailing vessels together there has been an increase in the number reporting of 15, with 30,519 tonnage, and in the number clearing an increase of 24, with tonnage 6,669.

The decrease in steamers reporting works out as under:—

	Increase.	Decrease.
Kingston	—	49
Port Morant	4	—
Port Antonio	45	—
Port Maria	—	4
St. Ann's Bay	1	—
Falmouth	2	—
Montego Bay	—	3
Sav. la Mar	—	1
Black River	—	1
Milk River	—	1
	52	59
		52
Decrease	—	7

British.

1907-8...	307	502,788	tonnage.
1908-9...	317	527,360	,,
	10	24,572	increase.

Foreign.

1907-8...	844	978,643	
1908-9...	827	916,357	
	17	62,286	decrease.

But of the total number of steamers reporting 317 or 27·7 per cent. were British and 827 or 72·3 per cent. foreign. Compared with the previous years there has been a gain of 1 per cent. by the British carriers. The figures are as under:—

	1907-8.	1908-9.
British	307 or 26·7 per cent.	317 or 27·7 per cent.
Foreign	844 or 73·3 ,,	827 or 72·3 ,,

A retrospect for forty years at ten-year rests gives the following:—

Year.	Ships Entered.		Ships Cleared.	
	No.	Tonnage.	No.	Tonnage.
1869	743	223,956	750	216,828
1879	884	394,804	848	378,304
1889	917	538,297	945	536,592
1899	1,420	910,449	1,429	917,270
1909	1,363	1,482,724	1,372	1,517,770

Comparative Statement showing the Tonnage of Vessels *entered* and *cleared* at Ports in the Colony of Jamaica for the five years ended 31st March, 1909.

Year.	Ships Entered.		Ships Cleared.	
	No.	Tonnage.	No.	Tonnage.
1904–5	1,135	1,220,189	1,135	1,220,533
1905–6	1,353	1,397,611	1,354	1,393,837
1906–7	1,475	1,519,287	1,455	1,507,189
1907–8	1,348	1,513,243	1,348	1,511,101
1908–9	1,363	1,482,724	1,372	1,517,770

Entered.

Comparative Statement showing number and tonnage of Sailing Vessels and Steamers of each Nation *entered* at Ports in the Colony of Jamaica in the years 1907–1908 and 1908–1909.

III.—LEGISLATION.

Fifty-eight Laws were passed in the Session of 1908, of which five were passed and assented to before the 1st of April. The more important were:—

Law 7. To amend and consolidate the laws imposing licences upon trades and businesses.

Law 21. In aid of the Sanitary Laws, giving powers to local boards of health for the protection of local water supplies.

Law 22. To provide for the notification of the disease of yaws.

Law 23. To empower Parochial Boards of Manchester to employ surplus road funds for the construction of water works.

Law 25. Adulteration of food and drugs.

Law 27. Merchandise Marks Law Amendment Law.

Law 28. Parochial Boards Building Law, enabling parochial boards to make by-laws regulating the alteration, erection, or repair of buildings within the limits of any town.

Law 30. Amending the Public Health Law, 1867, enabling local boards of health to provide for the isolation of persons suffering from infectious diseases, and to make provision against the diffusion of infection.

Law 32. Insurance Fund Law, providing for the creation of a fund of £100,000 to be devoted to making good extraordinary public expenditure incurred by loss sustained by the Government through the occurrence of any earthquake, hurricane, drought, fire, or other public calamity. (The full amount contemplated by this Law has now been provided and set aside out of surplus revenue.)

Law 40. Vere Irrigation Law, 1897, Amendment Law, regulating the constitution of the Vere Irrigation Commission and its proceedings, and empowering the Commissioners to extend their sources of supply, and to raise money for the purpose in debentures.

Law 45. The Constabulary Gratuity Law, allowing refund of contributions to the pension fund, with interest, to be made to any constable retiring owing to ill-health before earning a pension.

Law 46. Regulating appeals from the Supreme Court of the Turks and Caicos Islands to the Supreme Court of Jamaica.

Law 49. The Medical Law, consolidating and amending the laws as to the registration of medical practitioners.

Law 51. Post Office Law, a consolidating and amending law.

Law 52. Registration of Voters' Law, consolidating and amending.

Law 53. Prevention of Corruption Law, restraining secret commissions.

Law 56. Sale of Poisons and Drugs Law, 1894, Amendment Law.

Law 58. Fire-arms Definition Law, defining as fire-arms certain weapons discharged without fire.

Before the expiration of the financial year, Law 1 of 1909, the Contagious Diseases of Animals Law, was passed, which was called for by an outbreak of infectious disease among cattle and horse-kind. Three other Laws were passed before the 1st of April, 1909, including No. 4, a Law in aid of the laws relating to the Prædial Larceny, enabling persons found in possession of agricultural produce under suspicious circumstances to be arrested and compelled to give account of their possession of those articles.

IV.—EDUCATION.

In his report for the year the Superintending Inspector of Schools gives the following statistics:—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books for Year ended 31st October, 1908.	Average Attendance for Year ended 31st October, 1908.	Percentage on Average Attendance of number on Books.	Total Payments to Elementary Schools and Teachers.
					£
1908–9 ...	690	85,167	53,386	62·69	48,699
1907–8 ...	690	88,862	53,691	60·55	46,314

In addition to the increased grant of £2,385, shown above, special building grants, necessitated by the destruction of school buildings by the earthquake, were made to elementary schools of £2,287, to the Jamaica College £2,500, and to Wolmers School £2,500.

The total expenditure out of general revenues in aid of primary and secondary education, including scholarships and training colleges, during the year was £67,827, or an increase over 1907-8 of £9,632.

The standard of teaching in the primary schools appears to be gradually improving, and much greater attention is being given to elementary science, agricultural teaching, and manual training, than formerly

From the Jamaica College and endowed schools, the former governed by the Jamaica Schools Commission, and the latter under schemes framed by that body, pupils gained a Rhodes' Scholarship and a £60 Scholarship, and 102 passed the Cambridge Local Examination, 22 of this number in honours.

V.—GOVERNMENT INSTITUTIONS.

At the Public Hospital in Kingston 10,764 patients were treated; 3,729 as in-patients, and 7,035 as out-patients. There were 596 admissions to the Lying-in Hospital, 1,269 cases treated in the Lunatic Asylum, 19,464 in the Public General Hospitals, and 115 in the Leper Asylum. In addition, the District Medical Officers treat free of charge all inmates of the Parochial Almshouses, and all registered paupers; the number of out-patients during this year being 31,492, while 5,332 yaws cases were treated, and 21,662 successful vaccinations performed at Government expense.

The repair of earthquake damages at the Public Hospital has been undertaken and certain improvements effected, and a decision arrived at to utilise a bequest of £2,049 15*s.* 3*d.* from the late Miss Rietti for the construction of a new ward to be known as the "Rietti Ward."

All the other hospitals of the island have been maintained in fair order.

The number of boys and girls in the reformatories at Stony Hill increased during the year from 345 to 369. In addition to three hours' school work each day, the boys were employed in agriculture and trades, while the girls performed laundry, needlework, cooking, and general household work.

The report of the Manager of the Government Savings Bank shows liabilities to depositors, on the 31st March, 1909, of £390,390, on account of which securities to the amount of £373,871 were held, the balance of £16,519 being cash at call in the Treasury. The ordinary accounts have decreased by £38,625, and the balances of Government accounts increased by £26,090. The Manager states that large sums were withdrawn for better investment and building purposes as well as for business transactions, and that the long drought which prevailed has no doubt contributed to the withdrawals, but that the number of accounts has increased, and that accounts of £5 and under have gone up by 4,508 during the past four years from 25,971 to 30,479.

As the Bank of Nova Scotia operates a Savings Bank Department and pays 3 per cent. interest on deposits, it has probably captured some of the business formerly falling to the Government Savings Bank, which only gives 2½ per cent. The poorest investors, however, still cling to the latter.

East Indian immigrants have to their credit £16,301, the number of accounts having increased by 207, and the amount at deposit by £1,294.

The net profit of the Savings Bank to the Government, after paying all expenses, interest, and losses on Colonial Securities redeemed, was £5,063.

VI.—JUDICIAL STATISTICS.

The Inspector-General reports that there were in custody in the prisons on the 31st March, 1909, 1,394 prisoners, also 24 prisoners in the local lock-ups, making a total of 1,418, or 277 less than on the same date in 1908.

The committals to prisons and lock-ups during 1908-9 were 6,370, or 90 less than in the previous year. Of these 639 were admitted in feeble health.

The re-convictions numbered 1,829, of which 676 were second convictions, 397 third, and 756 fourth or more. There was an increase of 414 re-convictions over those of the previous year.

The daily average number of inmates of the General Penitentiary and the St. Catherine District Prison was 1,519 for 1908-9, as compared with 1,374 for 1907-8.

There were 108 deaths, as against 124 in 1907-8.

There were no executions of capital punishment.

The gross expenditure of the General Penitentiary was £15,904 7*s.* 7*d.*, and of the St. Catherine District Prison, £6,545 8*s.* 8*d.*, a total of £22,449 16*s.* 3*d.*

The cash earnings of the penitentiary were £3,294 19*s.* 7*d.*, and of the district prison £1,764 2*s.* 1*d.*, equal to £5,059 1*s.* 8*d.*, reducing the cost to £17,390 14*s.* 7*d.*, or £11 8*s.* 11½*d.* per prisoner, but washing was done for the public and lying-in hospitals amounting to £564 1*s.* 7*d.*, and stone broken for the Public Works Department to the value of £638 11*s.* 7*d.*, equal to £1,102 13*s.* 2*d.*, which were not paid for. Articles of the value of £1,068 9*s.* 9*d.* were manufactured in the General Penitentiary and used for prison purposes, and produce of the value of £627 11*s.* 3*d.* from the prison farm was consumed in the St. Catherine District Prison.

The total estimated value of labour yielding no return in money was £10,170 14*s.*

The St. Catherine Prison Farm yielded crops valued at £1,564 5*s.* 7*d.*

The principal features connected with crime in Jamaica are, that offences of a serious nature are comparatively few in number, and that the diminution in the number of cases of such crimes tried in the Supreme Court, which I noted last year, continues, but the lesser offences of theft of various descriptions, of common assault, and disorderly conduct, monopolize the time of the Courts. Drunkenness is almost inappreciable, only 20 charges for this offence having been made during the year. The smaller irregularities seem so far to be persistent and ineradicable, in spite of the efforts of the minister of religion, the schoolmaster, and the magistrate. The rise and fall in the number of cases of prædial larceny is largely indicative of the history of the weather: if provisions fall short, the countryman "takes" from his neighbour (for he does not term it stealing, unless it happens to himself), and if he has money in his pocket he makes up his mind to beat his enemy and pay for it, apparently feeling a sense of gratification at paying a fine for such an indulgence.

VII.—VITAL STATISTICS.

Estimated population of the Island, 31st March, 1909, 848,656 (males 413,899, females 434,757).

Emigrated during the year	18,329
Immigrated	17,496
Including labourers emigrating mostly to Colon, Cuba, and Costa Rica	10,967
Labourers returning	10,506

Marriages.	1908–9.	1907–8.	1906–7	1905–6.
Number	3,116	6,251	5,507	3,116
Rate per 1,000 of population.	4·1	7·4	6·6	3·8

The sudden freshet of marriages let loose by the earthquake (following after two years of very low matrimonial water) has now evidently exhausted itself, and the Island rate has reverted to the average of the five years preceding that spiritual quickening.

Births registered: 31,785 against 29,210 the previous year, males 16,162, females 15,623. Birth-rate: 37·6 per 1,000 of the estimated population against 35·0 in the previous year. Illegitimate births: 60·59 per cent. of the total, the lowest rate since 1892-3; showing, perhaps, the influence of the earthquake-marriages. The average percentage of illegitimate births during the last 10 years, including 1908-9, is 63·5.

Deaths registered: 18,928, 9,511 males and 9,417 females. Rate per 1,000 of estimated population 22·4, a remarkable drop from the 28·3 of 1907-8, and the 26·2 of 1906-7, and a slight improvement on the average rate (22·6) of the previous five years.

Kingston has the highest estimated death-rate among the parishes of the Island, 33·3 per 1,000; St. Anns the lowest, 16·0 per 1,000; and Manchester, 16·2 per 1,000. I am disposed, however, to be somewhat suspicious of the estimates of population upon which these rates are based, and I doubt whether full account has been taken of the influx into Kingston since the earthquake.

Presuming that only 75 per cent. of the deaths recorded in Kingston was medically certified and that 9·9 of those certified were ascribed to "ill-defined" causes, I observe that 18·9 per cent. of those certified were imputed to diarrhœa, enteric fever, enteritis, dysentery, or gastro-enteritis; 9·9 to phthisis; 2·2 to tuberculosis, other than tuberculous phthisis; and 4·4 to pneumonia; 4·5 to malarial fever; and 3·7 to fever undistinguished; that is to say, 43·6, out of 90·1 identified, as due to communicable diseases amenable to abatement by sanitary measures. I am glad to say that the high rate of mortality from such diseases which has been noticeable in Kingston since the earthquake has aroused

public opinion to a lively sense of the importance of sanitation, and that the health authorities, not only in Kingston but throughout the Island, may be expected to give more careful and effectual attention to this subject than they have been in the habit of doing.

VIII.—POSTAL AND TELEGRAPH SERVICES.

The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1908-9 with those of previous years:—

—	1908–9.	1907–8.	1906–7.
	£	£	£
Postages	32,505	32,465	31,384
Commission on money orders ...	459	638	531
Local commission on British postal orders.	195	176	125
Commission on local postal orders...	742	734	682
Miscellaneous	673	764	639
Telegraphs	6,221	6,489	6,614
Total	40,795	41,266	39,975

These statistics show a falling off of £471 in gross revenue as compared with the previous year, due to decreases in telegraph, money order, and miscellaneous receipts, partly counterbalanced by small increases on the other items.

The expenditure of the year by the Department amounted to £34,232, but in this there is not included any charge against the Post Office for the fortnightly conveyance of mails and parcels to and from the United Kingdom by the Direct Line steamers of the Elder Dempster Company, which receives a subsidy of £20,000 per annum from general revenue.

The estimate of mail matter handled shows 3,839,582 items outwards, and 4,579,495 inwards at the Kingston Post Office, and at the district post offices a total of 1,560,372. This is an increase of 1,342,446 items over the estimate for the previous year.

There has been a very large growth of postal business during the last decade, the receipts for postages having increased by 50¼ per cent. from £21,438 to £32,210, while telegraph business remained practically stationary, the increase being less than 2 per cent.

IX.—PUBLIC WORKS.

The public works of the Colony are controlled by three classes of authorities. The Railway Department and the Public Works Department are under the control of the Governor, the Parochial Boards, 15 in number, are elected under a 10*s*. franchise, and the Kingston General Commissioners are a nominated body entrusted with the control of the water, gas, markets, slaughter house, and the sewerage installation of Kingston, and the improvement and laying out of streets, subject to the general approval of the Governor.

There are 185⅝ miles of railway, the property of the Government; 1,967 miles and 20¼ chains of main or arterial roads maintained out of general revenues; and 4,376 miles of parochial roads kept up by the elected boards of the different parishes with occasional assistance from the Government.

The average cost per mile of maintenance of the main roads was £32 4*s*. 11*d*., or £5 6*s*. 2*d*. more than in the previous year. Special repairs to bridges, protective works, repairs to culverts, &c., increased the total cost per mile to £34 12*s*. 3*d*. New works on deviations, improving gradients, widening or constructing roads, and building bridges, &c., amounted to £17,222.

The expenditure on maintenance of public buildings was £11,989, of telegraph lines £935, and on new works £42,942, largely due to repairs of earthquake damages or the replacement of buildings destroyed.

The Rio Cobre irrigation works and the subsidiary Spanish Town waterworks were maintained in good order. The water supplied for irrigation amounted to 15,160 cubic yards per hour, of which 13,010 cubic yards was utilised in the cultivation of 9,760 acres of bananas, and the balance for sugar canes, oranges, pasture land, &c.

The length of telegraph lines in operation was 715 miles, including railway telegraphs used for general purposes.

The various lighthouses were also kept in order.

X.—GENERAL OBSERVATIONS.

The Work of the Assistance Committee.

In my general observations on the Blue Book for 1907-8, I referred to the work done in Kingston and its neighbourhood in repair of the effects of the earthquake. During the year 1908-9, the work of the Assistance Committee—the body entrusted with the administration of the Imperial Grant of £150,000 and other charitable contributions in aid of the sufferers by the earthquake—was practically completed. I have before me the report of the Committee up to the 31st July, 1909, showing that out of the total of £241,002 5*s*. 4*d*. received by them they had at that date disbursed all but £1,496 1*s*. 9*d*.

This expenditure is summarised as follows:—

	£	s.	d.
(*a*) Cash relief and alimentary allowances..	7,962	11	7
(*b*) Restoration of houses	161,094	9	9
(*c*) Grants and annuities to widows and orphans (and artificial limbs) ...	37,392	7	8
(*d*) Grants and loans to tradesmen	28,412	15	3
(*e*) Costs of administration	4,643	14	4
and there was outstanding a balance of... ... (due for loans and other advances).	282	1	4

Arrangements have been made for the administration of the remainder of the funds by a small committee in accordance with the purposes for which they were subscribed.

The Earthquake Loan Board.

The balance sheet, at the 31st March, 1909, of the Loan Board appointed to administer the purposes of the Earthquake Loan Laws, in furtherance of which the Imperial Government undertook to make loans to the Colonial Government, showed that up to that date the Board had received £237,033 13*s.* 6*d.* This amount was made up as follows:—

	£	s.	d.
Borrowed from Imperial Treasury... ...	50,000	0	0
Invested from General Revenue Account of the Colonial Government...	14,747	10	9
Invested out of the funds of the Assistance Committee for the provision of annuities to widows and orphans	34,064	12	0
Advanced from Island Treasury	123,146	6	8
Received in repayment of loans	7,759	3	3
Received in payment of interest	4,941	17	3½
Miscellaneous receipts	2,374	3	6

	£	s.	d.
The Board had advanced in loans	229,492	0	0
Paid in interest	3,372	17	3
Paid in annuities	2,468	15	4
Administration expenses	1,700	0	11

In addition to loans made, further loans to the amount of £9,698 had been approved.

There were no arrears on account of loans—all annuities and interest due from borrowers having been paid. It had been necessary only in one case to realise the security held by the Board, which was done without any loss.

The sum of £352 15*s.* 2*d.*, in the Reserve Guarantee Fund, and the profits of the Board's operations to date, amounting to £392 1*s.* 8*d.*, were available against any future losses which might occur.

Shortly after the close of the financial year, a resolution was passed in the Legislative Council to determine the receipt of

applications for loans after the 30th September, 1909. It was considered that the recovery of fire insurance by those whose property had been burned, and the generally improved aspect of the island's trade had brought about a considerable alteration of the conditions under which the Legislature had consented to guarantee loans, and that, a great part of the purpose of the Loan Laws having been attained, justification for continuing the extraordinary provision made for the financing of building operations in Kingston was no longer presumable. It will be observed that only £50,000 had been borrowed within the year from the Imperial Government. Since the close of the year another amount of £100,000 has been borrowed. It is uncertain how much it may ultimately be found necessary so to borrow, to refund advances temporarily made from the Island Treasury, but it would at present appear that the total amount should probably not exceed £200,000.

Recent Financial Vicissitudes and Present Situation.

The vicissitudes of the Government's financial position during the last five years have been sufficiently remarkable to invite special commentary. In August, 1903, this island suffered enormous loss from a cyclone, which was followed by droughts, and the exports of the years 1903-4 and 1904-5 fell much below the average; their value being lowest in the latter year. Concurrently, in 1904-5 there was a serious deficiency in the revenue, which fell short of the Estimate by £56,069, whilst at the same time the damage wrought by the cyclone had to be repaired and some expenditure was being incurred on relief works. The result was an excess of expenditure over revenue in that year of £73,253, and a net deficit, or excess of liabilities over assets, in the Colony's balance sheet, of £5,462 at the close of the year.

In the session of 1905 special taxation was imposed to bring up the revenue to sufficient for the estimated expenditure. The revenue for 1905-6, estimated at £819,524, yielded £841,093 (not including £24,602 recovered from the Colonial Bank), and exceeded the expenditure by £44,084, leaving a surplus balance of £38,622 to the Government's credit.

The revenue for 1906-7 was estimated at £802,159, and the expenditure at £801,231, but the receipts actually amounted to £887,228, whilst the expenditure (including that for special calls arising out of the earthquake of January, 1907) was £828,115, leaving a surplus on the year's finance of £59,113, and a surplus balance of £97,735 to the credit of the Government at the close of the year.

The estimates for 1907-8 were framed (before I assumed this Government) during a period of much present stress and uncertainty as to the future, immediately after the Kingston Earthquake; they forecast a revenue of £832,622 and an expenditure of £923,070—the excess of estimated expenditure over revenue to be met from surplus funds or "by loan or subsequent budgets."

This forecast appeared to anticipate a reduction of the Colony's surplus balance (if no loan were raised in aid of revenue) from £97,735 to £7,277, whilst it left a considerable amount still to be provided for the works of restoration and new buildings necessitated by the earthquake. The estimates of revenue proved very far indeed below the mark, the amount received, without any increase in the rates of taxation, being no less than £1,007,634 (omitting a sum of £13,303 transferred from the Constabulary Reward Fund), whilst the expenditure (omitting £50,000 transferred to the new Insurance Fund) was £885,426. The surplus balance of assets over liabilities at the close of the year 1907-8 thus came to stand at £184,245, after carrying £50,000 to a reserve fund. This large surplus, which it would have been hardly defensible or indeed possible for the Government deliberately to budget for, is thus seen to be more than accounted for by the underestimating of revenue receipts in three successive years, viz:—

		£
1905-6	under estimate	21,569
1906-7	,, ,,	55,892
1907-8	,, ,,	175,012
		252,473

The estimates for the year under report proved much more reliable. The accuracy of the estimates of tax-revenue is so remarkable that I give the figures below:—

	Estimate. £	Actual. £
Customs	450,000	451,973
Port, Harbour Dues	7,200	7,407
Excise	166,331	166,235
Fees, Stamps, and Reimbursements-in-Aid, and Irrigation receipts	87,797	90,970
Post Office and Telegraphs ...	38,500	40,695
Railway	153,020	144,181
Rents	2,418	1,701
Interest	10,350	17,140
Miscellaneous	9,336	11,218
Land Sales	2,500	2,229
Total revenue	927,452	933,750

The estimates of the year did not forecast any surplus of revenue over expenditure, but the contrary, and although there was an actual excess of £22,655 in the receipts over disbursements, this was due to the non-expenditure of money voted for works and not spent during the year, but standing over to be met in the year now current. Nor was any surplus expected in the budget of this year (1909-10), whilst the possibility of an

excess of revenue over estimate has already been in some degree discounted by remissions of taxation.

The unforeseen excesses of revenue over estimate in the three years 1905-8, therefore, have, entirely without premeditation on the part of the Government, placed it in a position to set aside £100,000 as an insurance fund, to purchase sites in Kingston for the new public buildings at a cost of £27,500, to appropriate £58,000 for the first block of public buildings and the rebuilding of King's House, £27,500 for new rum warehouses, and £20,000 for new railway workshops, and, after providing out of the excesses of normal revenue over expenditure for practically the whole of the repairs of earthquake damage to other public buildings, for large grants-in-aid of the finances of the city of Kingston, and for a considerable expenditure on new roads, to forecast, on the estimates of the current year, an unappropriated closing balance of surplus of upwards of £83,000. If this forecast is realised (and so far there appears every prospect of its being so) the Colony will be able to provide for the second block of the new public buildings and carry forward a working balance of some £50,000 to next year, the finance of which it should be possible to deal with on a clean sheet, freed from the embarrassments of the extraordinary calls of the recent period imposed by the results of the earthquake.

Distressed Districts.

The shortage of rainfall which has prevailed during several years past continued, especially in certain districts, throughout the course of the year under review. Its effects were most severely felt in the south and south-eastern parts of St. Elizabeth and in the southern district of Manchester. In my last year's report I mentioned that owing to the depression of price in some former staples of production the social condition of the people in a few districts was deteriorating. This observation especially applies to the districts I have just mentioned, which formerly depended chiefly on coffee.

Coffee has ceased to pay as an estate cultivation at this altitude, and, consequently, offers now no employment at wages for the labouring classes. The peasants' coffee has deteriorated through the exhaustion of the soil and through the neglect induced by the fall in price. The exportation of common oranges has resulted in losses during recent years, and South Manchester being far from the railway or from any fruit-shipping port there is now little effective demand for the fruit. The population, accordingly, has come to depend almost entirely on food crops raised on a shallow soil overlying limestone rock, which, although very fertile under normal rains, has yielded very little return recently to the inefficient cultivation of the peasantry, and on the produce of their pimento trees, which need no cultivation and can resist severe drought. At the same time a very large proportion of the able-bodied and younger men have left these unpromising districts and the majority of the population now resident there consists of women and children, many of them without

acknowledged parents. Under these circumstances, distress during the dry season of last year became acute and demanded special attention. I referred to the Board of Management of the Agricultural Society for a report and recommendations, and, subsequently, on the motion of the Member of the Council for Manchester, I appointed a Commission of Enquiry under the Chairmanship of the Director of Agriculture to report on the same matters. The effect of their report was to indicate that the districts affected, especially South Manchester, could not be relied upon continuously to support their present population in comfortable circumstances. Although a great deal more could be done to maintain the fertility of the soil by proper cultivation and stocking (examples of this being conspicuous amidst the generally low level of agricultural effort), and food supplies should not fail in favourable seasons, it was clear that these districts must always suffer severely in times of drought, and that no very remunerative marketable crop could be produced in them. The only money-yielding crops would be coffee, oranges, pimento (a very treacherous bearer), and cassava. It had been represented that more land was required by the peasantry, but it was shown by the evidence before the Commission that what was really desired was not more land for permanent occupation, but access to new land for the purpose of cutting down and burning the woodland growth thereon, reaping one set of crops, and leaving the land exhausted in the old wasteful method, which has been principally responsible for the impoverishment of the lands already occupied. These lands not being capable of maintaining a large population in stable prosperity, it appeared impolitic to encourage renewed settlement of population in the district.

It seems much preferable that, as has been happening to some extent, there should be permanent migration to, and settlement in, more fertile parts of the island. The only possible local palliatives, which do not indeed promise to be complete and effectual remedies, of a very difficult position of affairs seem to lie in improved methods of cultivation and in the finding of a market for cassava and citrus products.

These districts are, however, exceedingly healthy, and have a delightful climate, and the people are naturally much attached to their homes. Many of those who migrate to Central America or other parts of the island return from time to time to their dependents and relation or send them money, but many of those whose bread-winners have gone away remain helpless at home and fall into permanent destitution. It is this residuum which constitutes the main difficulty of the situation.

Labour is, even in favourable seasons, more productive in other parts of the island, and in unfavourable seasons these districts are recurrently famine-stricken. At the time at which I write I have recently visited them, and I find that the distress has largely passed away, rains having fallen and provisions being now forthcoming in increasing abundance. But this betterment can hardly be relied upon. There is a tendency to relapse into apathy, an apathy which is largely characteristic of the district, because of

Maps on this order too large to be entirely included in one exposure are filmed clockwise beginning in the upper left hand corner, left to right and top to bottom as many frames as required. The following diagrams illustrate the method.

Ordnance Survey, Southampton, 1909.

the inferior and enfeebled condition of so large a proportion of its inhabitants. At the same time special effort is being made by the Agricultural Society, who have appointed a special instructor to improve the average of cultivation. If his labours are effectual it is to be hoped there will be less distress on the next occurrence of drought, but it is impossible to expect that distress will not recur. This situation has repeated itself again and again within memory, and I fear there is no royal road to a remedy for it. Much of the poverty of the district is due to ignorance and to constitutional weakness and apathy, created in part by starvation, but largely due to the effects of venereal disease, which is exceedingly prevalent in the district. Its prevalence is no doubt aggravated by the migratory character and irregular habits of the male population, and by the entire absence of restraint over young people growing up without established family life.

Save for the difficulties of this particular district, I am glad to be able to report that the general population of the island enjoyed a moderately prosperous year, that conditions improved towards its close, and have continued to improve up to the date of this report.

I have, &c.,

SYDNEY OLIVIER,
Governor.

TURKS AND CAICOS ISLANDS.

(For Report for 1908, *see* No. 612.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
24th June, 1910.

MY LORD,

I HAVE the honour to transmit to your Lordship a copy of the Blue Book of the Turks and Caicos Islands for the year 1909, together with the Commissioner's report thereon.

2. I also furnish a copy of a letter from the Commissioner transmitting a map of the Islands for inclusion in the report.

I have, &c.,
SYDNEY OLIVIER,
Governor.

The Right Honourable
The Earl of Crewe, K.G.,
&c., &c., &c.

(17160—2.) Wt. 27349—387. 1125 & 85. 8/10. D & S. A 2

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR 1909.

FINANCIAL.

The revenue of the year 1909 amounted to £7,748, while the expenditure was £7,454, there being thus a surplus of £294. As an amount of £800 for hurricane relief was included in the expenditure, there was really an excess of revenue over ordinary expenditure of £1,094, due in a large measure to the sales of the new issue of postage stamps, for the revenue from the latter was £1,458 as against £432 in 1908. Owing to the short crop of salt after the hurricane of the previous year, the import duties and port dues fell off £533 and £260, respectively.

Finances.

Year.	Revenue. £	Expenditure. £
1905	6,243	7,279
1906	6,809	7,080
1907	7,391	7,119
1908	7,404	11,430
1909	7,748	7,454

Including £4,000 in 1908 and £800 in 1909 for hurricane relief.

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports and exports during the year were valued at £25,262 and £18,936 (the lowest on record since 1879) as against £24,426 and £24,798 in 1908, respectively. The exports in salt, in spite of better prices being obtained, fell from £19,439 to £15,732, the short crop being due to the disastrous hurricane of the previous year, which also, in an appreciable degree, affected the shipments of sisal.

The value of the imports and exports during the past five years has been:—

Year.	Imports. £	Exports. £
1905	28,230	23,898
1906	27,572	24,940
1907	27,660	23,817
1908	24,426	24,798
1909	25,262	18,936

During 1909 the trade was with the following countries:—

	Imports. £	Exports. £
United Kingdom ...	4,799	545
British Colonies	5,215	1,865
Foreign Countries ...	15,248	16,526
	£25,262	£18,936

Articles of Exports.

	Value in— 1908.	1909.
Conchs	706	510
Sisal	1,664	608
Salt	19,439	15,732
Sponges	1,095	953
Miscellaneous	1,894	1,133
	£24,798	£18,936

Shipping.

The total tonnage of vessels entered and cleared during the period 1905 to 1909 was:—

Year.	Tonnage.
1905	332,254
1906	357,960
1907	345,453
1908	410,195
1909	433,340

Comparative statement of shipping cleared for the years 1908 and 1909:—

Nationality.	Sailing.		Steam.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
British	131	9,042	14	46,438	145	55,480
United States	16	12,978	57	115,454	73	128,432
Others	73	2,044	41	30,894	114	32,938
Totals 1908	220	24,064	112	192,786	332	216,850
Totals 1909	267	55,238	90	163,561	347	204,091

COUNCILS.

Mr. H. H. Hutchings and Dr. T. R. Robertson were appointed official members of the Legislative Board on 18th March and on 29th April, 1909, respectively.

CIVIL ESTABLISHMENT.

The Commissioner, Mr. F. H. Watkins, was absent from the Dependency from the 17th March to the 13th October, during which period Mr. C. H. Yorke Slader performed the duties of that office, and also acted as Judge from the 19th January to the 14th October.

Mr. Watkins acted as Judge from the 1st to the 18th January, and from the 15th October to the 31st December, while Mr. Hutchings acted as Auditor from the 17th March to the end of the year.

Dr. T. R. Robertson was appointed Government Medical Officer of Grand Turk *vice* Dr. A. E. Ireland, transferred to Fiji, and Dr. T. A. Dowse was made District Commissioner and Medical Officer of the Caicos Islands in place of Dr. Robertson.

Mr. A. W. Harriott, Assistant Commissioner of Salt Cay, obtained three months' vacation leave from 28th May to 28th August, and his duties were performed by Mr. E. C. Harriott, of the Jamaica Civil Service.

LEGISLATION.

Besides the usual supply ordinances those of importance were:—

No. 4, the Young Criminal Punishment Ordinance.

No. 5, amending the ordinances regulating the sale of spirits.

No. 7, continuing the Wild Birds Protection Ordinance, 1907.

EDUCATION.

The schools were examined, as usual, by the Inspector of Schools, Mr. H. H. Hutchings, and the results were, considering the impoverished condition of many of the labouring population, satisfactory, while the attendance at the salt settlements, where the provisions of the Ordinance enforcing compulsion are in force, was excellent. The average number on the roll in the different islands was:—

Grand Turk	307
Salt Cay	83
Cockburn Harbour	166
Kew	98
Blue Hills	86
Lorimers	97
Bottle Creek	102
	939

SAVINGS BANK.

	£
Deposits during year	922
Amount of withdrawals	779
Total amount at credit of depositors	2,392
Amount of invested funds	2,269
Interest credited to depositors	44
Interest on investments	59

Number of depositors, 261.

Rate of interest paid to depositors, 2 per cent.

POSTAL AND TELEGRAPHS.

There is no internal postal, telegraph, or telephone service. There is frequent but irregular steamship communication. The only line with regular dates of arrival is the Imperial Direct West India Mail, the steamers of which call at Grand Turk,

on their way to Jamaica, every other week, bringing mails and parcels post from Avonmouth. The subsidised steamer "Boston," from Halifax, Nova Scotia, calls about once a month, both on her way to and on her return from Jamaica, and is the only means of direct steam communication from Jamaica. Most of the mails to the United Kingdom are carried, viâ New York, by the steamers of the Clyde Line, which call here on the voyage to and from San Domingo at intervals of 14 days each way, but much more frequently during the sugar crop.

The following amounts are the revenue and expenditure of the Post Office:—

Receipts.	1908. £	1909. £
Sale of stamps	376	1,397
Commission on money orders	35	35
Commission on postal orders	11	9
Other receipts	10	17
	£432	£1,458

Payments.	1908. £	1909. £
Office expenses	27	232
Conveyance of mails	158	140
	£185	£372

The large increase in the receipts and payments is due to the issue of new stamps, bearing the King's head.

The line of the Direct West India Cable Company, between Halifax, Bermuda, and Jamaica, is connected with Grand Turk. The Company supplies a news bulletin daily, in respect of which an annual grant of £120 is made.

JUDICIAL STATISTICS.

The Police Force consists of a total strength of one officer and 22 men.

Offences reported to police	178
Number of persons brought before the magistrate	168
Summary convictions—	
Offences against property with violence to the person	—
Other offences against property	5
Other offences against the person	12
Other offences	101
Convictions in the Superior Court	Nil
Number of persons acquitted—	
In the Superior Court	—
In the Inferior Court	50

VITAL STATISTICS.

There were 209 births or 39 per thousand, and 103 deaths or 19 per thousand. The estimated population was:—

Grand Turk	1,751
Salt Cay	453
Cockburn Harbour	702
Caicos Islands	1,381
	5,287

of whom 342 were white.

METEOROLOGICAL OBSERVATIONS.

The readings and statistics given below were chiefly from observations taken at the United States Weather Bureau Station at Grand Turk, lat. 21° 21′ N., long. 71° 7′ W., at a height above mean sea level of 11·3 feet. The rainfall is taken at the principal islands, and has been during the last five years at Grand Turk:—

	Inches.
1905	41·97
1906	28·36
1907	28·49
1908	41·37
1909	39·97

The average rainfall throughout the Dependency for the year was 44·00 inches. The wettest month was November, during which 13·88 inches were recorded, as much as 25·22 inches being measured at Cockburn Harbour, where 8·48 inches fell on the 2nd November.

The coolest and hottest months were December and July, the mean temperature being 73·8° and 83·8°, respectively.

The mean temperature for the year	78·5°
Mean pressure	30·040
Lowest temperature, on the 25th December ...	58°
Highest temperature, on the 17th August ...	91·5°

The prevailing winds during the year were:—

	Days.

GENERAL.

Despite the damage to the salt ponds by the disastrous hurricane of the preceding year and the certainty of a short crop in consequence of the loss of pickle, the year under review opened with fair auspices for the Dependency and the staple industry in particular. Most of the houses damaged or destroyed had been restored, and the weather conditions, on the whole, were favourable for raking. An understanding for the sale of salt at 6 cents a bushel entered into with the dealers in the United States, the principal market being thus practically regained with remunerative prices, the salt pond in a better condition than for years past, and the probability of a reduction in the duty on salt imported into the United States, were circumstances which justified sanguine hopes for the future. Unfortunately, the dealers delayed in taking the quantity of salt expected, and it was certain that, contrary to the understanding, certain of them had succumbed to the temptation of offers of cheaper salt from the Mediterranean and other sources. To culminate their misfortunes, these islands were visited in November by unprecedented rainfalls, which, though sparing life and houses, wrought more destruction to the ponds than the hurricane of 1908. The rainfall in November was 13·88 inches throughout the Dependency, 16·16 inches in Grand Turk, 17·83 inches in Salt Cay, and 25·22 inches at Cockburn Harbour. This new disaster added considerably to the already heavy sum of burdens borne by those engaged in the salt industry, and made once more the prospect gloomy and fraught with apprehensions, for raking in any quantity was rendered impossible before May, 1910, at the earliest. As the shipments in consequence of the small quantity on hand could give in that way but little employment, the Government was faced for several months with the problem of providing food and work for many of the labouring population in the salt settlements. As relief in the form of repairs to roads and of other public works had been found to unsettle and demoralise those employed, measures were taken to provide more productive employment which, while giving food to the labourers, would at the same time aid the owners, most of whom had been reduced to serious pecuniary straits by a succession of misfortunes during recent years, to repair the ravages of the storm. An unexpended balance of £800 from the Hurricane Fund was devoted to this relief and allotted as follows:—

Grand Turk	300
Cockburn Harbour	300
Salt Cay	150
Special cases	50
	£800

on condition that the amounts were given solely for manual work, were expended before the end of April, and were paid through the public treasury strictly in accordance with the financial regu-

lations of the colonial service governing the payments of labourers employed on public works.

Toward the end of the year a memorial was addressed to His Majesty by the large majority of salt pond owners, representing the necessity for the abolition of the royalty on salt exported, so as to reduce locally the cost of production and enable those concerned to compete on favourable terms with their commercial rivals, and praying for a Royal Commission to be appointed to inquire into the condition and prospects of the salt industry.

The survey of the Caicos Islands, which will be completed this year, has enabled the Government to enter into negotiation for the sales and leases of important tracts of land for the development of sisal and other industries. Chief among these is the grant of an option to the Pita Company of West Caicos for the lease and ultimate purchase of all available Crown lands in Blue Hills and North Caicos. The terms of the option were that the Company should lease from the Crown such lands as they thought suitable for sisal for a term of 6 years, with an optional renewal for 10 years at the yearly rental of 4*d*. an acre. If, at the end of the six years or at any time thereafter during the lease, at least one-half of the cultivable lands were planted in sisal, the Company would acquire in fee simple, without further payment, all lands held in leasehold; in other words, the rental might continue for 10 years after the 6 years until the conditions as to planting were fulfilled. The Company was to pay the cost of the whole of the survey of Blue Hills, and a proportionate part of the whole cost of the survey of North Caicos to the lands they leased. A deposit of £1,000 was to be made as security of a *bonâ fide* intention to bring the lands under cultivation within a reasonable time and for the expenses of the survey. In November, Pita, Limited, was merged into a new company registered as the Colonial Fibre Planting and Trading Company, Limited, with a capital of £100,000.

Another enterprise was established by the Caicos Development Company which leased Chalk Sound at the south-west of Blue Hills for raising and canning turtles, lobsters, and other shell-fish.

The small settlers in the Caicos Islands are gradually acquiring grants for their lands, and it is to be hoped that, in a short time, the long vexed land question will be finally and satisfactorily solved.

The immediate prospects of the Dependency are clouded with the impossibility of having much more than half an average crop in the coming year. Some time must inevitably elapse before the staple industry can recover from the disaster of several years, and the owners, embarrassed by debt, are unable to find the capital necessary to accelerate a return to prosperity. The crucial questions, too, remain, how long the present prices can be assured and how long the dealers in the United States will be disposed to give preference to the salt of these islands if the producers in the Mediterranean and other West Indies are able and willing to supply salt at prices below the minimum cost of production possible in this Dependency. The United

States, moreover, provide, at present, not only 96 per cent. of salt consumed by their population, but export a quantity equal to two-thirds of the salt produced in these islands. The demand for salt in the principal market is limited, and the industry has to meet a competition growing keener and keener year by year. Much, however, may be done, by means of private co-operation, to meet this competition, to reduce the local cost of production, and to extricate the salt industry from its serious condition.

I have, &c.,

F. H. WATKINS,
Commissioner.

Maps on this order too large to be entirely included in one exposure are filmed clockwise beginning in the upper left hand corner, left to right and top to bottom as many frames as required. The following diagrams illustrate the method.

JAMAICA.

(For Report for 1908–9, *see* No. 626.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House, Jamaica,
22nd October, 1910.

MY LORD,

I HAVE the honour to report to Your Lordship on the Blue Book Returns of this Government for the financial year ended the 31st March, 1910.

I.—FINANCIAL.

1. The revenue and expenditure of the year, under the Heads of Estimates, compared with those of the preceding year, were as follows:—

REVENUE.

Heads.	Receipts, 1908-9. £	s.	d.	Receipts, 1909-10. £	s.	d.
Customs	451,972	18	0	465,080	18	6

EXPENDITURE—*continued.*

Heads.	Payments, 1908-9. £ s. d.	Payments, 1909-10. £ s. d.
New Government Buildings	—	50,548 8 10½
Railway	100,659 13 2	110,564 4 11½
Transfer to Insurance Fund	—	50,000 0 0
	911,095 5 10	1,033,794 12 7¼

2. The total revenue and expenditure for the last five years have been as shown below:—

	Revenue. £	Expenditure. £
1904-5	751,563	824,816
1905-6	865,696	821,612
1906-7	887,228	828,115
1907-8	1,021,937	935,427
1908-9	933,751	911,095
1909-10	992,976	1,033,794

3. The revenue for 1909-10 exceeded the estimate by £92,420, and the revenue of the previous year by £59,225. Omitting certain items, namely, £9,250 received from fire insurance on the destruction of the railway pier, £2,050 received as a bequest for charitable purposes and employed in enlarging the hospital, and £3,518 received from the Earthquake Loan Board to be applied to payment of the interest and Sinking Fund on the Imperial Earthquake Loan—there was an increase in normal revenue of about £44,407 over the total of the preceding year. The sources principally contributing to this increase were:—Customs duties, which added £13,108; Port and Harbour dues, £700; Excise duties on rum, £11,908; on tobacco, £1,445 (more than counterbalanced, however, by a decrease in receipts from Customs duties on imported tobacco); Property Tax, £1,191; Administrator-General's fees, £1,487; Post Office, £1,017; Telegraphs, £550; Railway, £10,416; Rents, £635; Interest, £1,598; Miscellaneous Receipts, £2,698; showing a general improvement in the business and consuming power of the community.

The duties on kerosene oil were reduced at the beginning of the financial year, with the effect of sacrificing about £5,265 of revenue. Stamp duties had also been reduced at an estimated loss to the revenue of £3,000.

4. The expenditure was £1,033,794, exceeding that of the previous year by £122,699, or, deducting the three special items corresponding to those mentioned in the last paragraph under the total of revenue, by £107,881.

The principal contributions to this increase were under Pensions, £3,098; Widows and Orphans' Pensions, £1,117; Immigration, £1,719; Post Office and Telegraphs, £2,656; Medical,

£1,913; Agricultural services, £2,913; Government Printing Office, £1,843; Maintenance of Main Roads and Bridges, £24,865; New Works on Main Roads, £1,847; New Works on Public Buildings, £29,235; Rio Cobre Canal, £2,997; Spanish Town Water Works, £927. Transferred to Insurance Fund, £50,000.

5. The increases for the maintenance of roads and bridges and the Rio Cobre Canal were due to special expenditure entailed by the heavy rains in November, 1909. The total expenditure entailed by these, so far as it fell into the accounts of the year, is estimated at £24,028 for main roads and bridges, £2,911 for Rio Cobre Canal, and £4,620 for the Government Railway, £31,561 in all, besides £1,825 granted to Parochial Boards and in relief.

Fuller particulars will be given in surveying the work of the Public Works Department for the year.

6. Miscellaneous expenditure, although less than in 1908-9, exceeded the estimate for the year by £6,734, owing to unforeseen expenditure having to be provided for, of which the following are the principal items:—

	£	s.	d.
Contribution to City of Kingston in lieu of rates on Government property (voted after passing of Estimates)	1,875	0	0
Written off for depreciation of value of investments held on account of Miscellaneous Deposits	1,585	12	5
Flood Grants to Parishes for relief of sufferers and repairs to roads	1,825	0	0
Cost of increased remittances	600	0	0

7. The Government closed the year with a surplus of assets over liabilities on general revenue account amounting to £166,082 16*s.* 6*d.*, having also £100,000 invested out of surplus balances as an insurance fund to provide for the repair of damage to Government property by hurricane, fire, or earthquake. The repairs of the damages wrought by the floods of November, 1909, were provided for out of current revenue without having recourse to this fund.

£80,367 1*s.* 1*d.* stood as advanced on the 31st of March, 1910, to the Earthquake Loan Board in anticipation of further borrowing, if necessary, from the Imperial Government in addition to the loans amounting to £150,000 which have been already obtained. At the same date, the Island Government had remittances amounting to £50,000 in transit to the Crown Agents, and cash balances of £45,029 to its credit in the Bank of Nova Scotia.

8. The Public Debt of the Island (most of which is represented by productive investments) amounted to £3,850,697 on the 31st of March, 1910. This included £148,231 due to the Imperial Government for Earthquake Loans, directly secured by advances on properties. The accumulated Sinking Funds on the same date amounted to £600,332, leaving a nett liability of £3,250,365. Included in the Debt were guaranteed Public Loans for local purposes secured on municipal rates and undertakings amounting

to £291,595, the sinking funds in respect of which amounted to £51,817.

9. The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together, for the last five years, are shown in the following comparative statements:—

Kingston City Council.

	Receipts.	Expenditure.
	£	£
1905-6	30,684	29,220
1906-7	27,170	28,165
1907-8	30,775	30,858
1908-9	32,197	30,010
1909-10	32,513	35,739

Kingston General Commissioners.

	Receipts.	Expenditure.
	£	£
1905-6	30,218	25,597
1906-7	26,294	25,809
1907-8	28,251	25,273
1908-9	30,545	26,223
1909-10	31,957	30,707

Other Parochial Boards (14 *Parishes*).

	Receipts.	Expenditure.
	£	£
1905-6	105,168	97,038
1906-7	103,484	100,577
1907-8	105,433	106,891
1908-9	106,231	107,838
1909-10	111,586	117,461

The excess of expenditure over revenue by Parochial Boards in the year 1909-10 is largely owing to expenditure on water supplies in anticipation of loans.

10. The debts of the Parochial Boards to the Treasury for advances made for water works and markets amounted at the close of the year to £32,935.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

A. Imports and Exports.

11. The total values of imports and exports for the last five years are as follows:—

	Imports.	Exports.
	£	£
1905-6	1,941,938	1,843,180
1906-7	2,261,[illegible]69	1,992,007
1907-8	2,854,042	2,360,702
1908-9	2,420,335	2,268,254
1909	2,561,674	2,628,307

In order to comply with the request of the Imperial Government that uniformity of period may be maintained in the statistics of the trade of the Empire, the figures given on the last line are those for the calendar year 1909. Those given for previous years are for the financial and statistical year of the Island Government, viz., from 1st April to 31st March. The figures for 1909 thus include one quarter's trade already included in the total for 1908-9. I add the approximate totals of imports and exports for the six months ended 30th June, 1910.

	£
Imports	1,376,986
Exports	1,307,789

12. The Collector-General reports that the trading of the year exhibited a tone of confidence, which has been the result of fairly good seasons and good marketing. Generally, reports indicate a year of fair economic progress. A notable feature in the year's transactions is the excess in the value of the exports over that of the imports.

This is due to two factors—

(1) the recovery of the Island's production from the effects of the cyclone of 1903, and ensuing droughts;

(2) the falling off of special importations for restoration of earthquake damage. An excess of exports is the normal condition owing to the amount of remittances to be made on public and private loans invested in the Island.

13. The principal articles of import were:—

	Value.	
	1909.	1908-9.
	£	£
Ale, beer, and porter	41,932	40,292
Beef, wet salted	20,301	20,975
Bread and biscuit	31,038	38,899
Butter and substitutes	31,875	30,227
Coal	50,866	47,826
Corn	45,141	47,082
Fish, dried and salted	124,463	115,439
Fish, pickled or smoked	59,304	59,468
Flour (wheaten)	243,664	245,697
Meal (other than wheaten) ...	28,000	37,610
Milk, condensed	34,429	36,455
Oils	60,676	55,949
Pork, wet salted	29,059	28,086
Rice	57,852	50,615
Soap	39,233	28,097
Spirits	16,116	15,949
Tobacco (manufactured)	17,619	21,853
Wines	12,590	13,720
Pitch pine lumber	72,099	83,222

The decreases of imports of bread and biscuit, flour, and meal mark the passing of the drought which prevailed in some parts

of the Island in the year preceding; and the fluctuations in what may be termed luxuries (in distinction from actual necessities) furnish an index of the degree of prosperity enjoyed during the year. This is especially so in the case of the *ad valorem* collections recorded under non-enumerated merchandise (not shown in the above list).

The following items which may be classed as luxuries show increased payments of import duty:—Ale, beer, and porter, £1,614; butter and substitutes, £546; cheese, £124; fish, dried and salted, £4,096 (apparently preferred to herrings, which show a decrease); fish, alewives, £111; mackerels, pickled, £327; ham, £48; spirits, £1,238; tea, £309; leaf tobacco, £95; wines, £544; non-enumerated merchandise, £21,923. Matches show an increase of £570 due to a falling off in the local manufacture. The growing number of motor-cars in use in the Island explains the increase of £233 recorded under naphtha (gasolene), and an increase of £1,919 in rice is possibly due to recent increased importations of East Indian labourers.

14. It appears an absurdity, and is strongly significant of the backward condition of the elementary arts of agriculture prevailing among the 155,000 landed proprietors of the Island, that in a country having no manufacturing population and admirably adapted to the maintenance of cattle, goats, pigs, and other stock, whether on large or small holdings, and to the production of oil-bearing trees and plants, condensed milk to the value of £38,429, butter and substitutes to the value of £31,875, and culinary oils to the value of £19,104 should appear among the imports of the year. The labours of the Agricultural Society and its branches make some headway, but very slowly, in educating the peasantry to remedy this waste of resources. Meanwhile the infant death-rate, for lack of milk, is excessive. Similar comment might be made with regard to the importations of corn and cornmeal. Dealing with other decreases than those already referred to—oils, although imported in increased quantities (1,118,311 gallons, value £60,676, against 1,055,014 gallons, value £55,950, in the preceding year), show a falling off of £5,265 in duty collected, owing to the reduction from 7½*d.* to 4*d.* a gallon of the import duty on petroleum and its products effected by Law 41 of 1909. Cigarettes show a decrease of £4,108, accounted for by increase of the local manufacture; and pork, wet salted, a decrease of £1,735, the high price having curtailed consumption. A decrease of £1,454 in the collections on imported lumber and shingles indicates that fewer wooden or wooden-roofed buildings were being constructed. This may be accounted for by the completion of restorations following the earthquake.

15. The values of the imports received from the different parts of the world were as follows:—

	£	Per cent.
United Kingdom	1,126,453	43·8
United States	1,151,573	44·8
Canada	174,587	6·8
Other Countries	116,736	4·6

It will be noted that in the last decade the imports from Canada have increased by about 50 per cent., but are hardly greater than they were thirty years ago.

16. The total imports into the Colony for the past fifty years, at intervals of ten years, have been as follows:—

1869. Year ended 31st December, 1869.	1879. Year ended 30th September, 1880.	1889. Year ended 30th September. —	1899. Year ended 31st March, 1900.	1909. Year ended 31st December, 1909.
£ 1,224,413	£ 1,475,197	£ 1,597,600	£ 1,844,332	£ 2,569,349

Divided between the countries from which supplies were obtained, the figures work out as under:—

—	1869. Year ended 31st December, 1869.	1879. Year ended 30th September, 1880.	1889. Year ended 30th September. —	1899. Year ended 31st March, 1900.	1909. Year ended 31st December, 1909.
	£	£	£	£	£
United Kingdom.	775,087 63·3%	777,628 62·7%	884,444 55·5%	873,296 47·3%	1,126,453 43·8%
United States.	266,983 21·8%	474,116 32·1%	544,530 34%	800,527 43·4%	1,151,573 44·8%
Canada ...	133,989 10·9%	171,801 11·6%	144,353 9%	118,003 6·4%	174,587 6·8%
Other Countries.	48,354 5%	51,652 3·6%	24,273 1·7%	52,506 2·9%	116,736 4·6%
Total ...	1,224,413	1,475,197	1,597,600	1,844,332	2,569,349

17. The chief articles of export show the following variations:—

	Values. 1909. £	1908-9. £
Annatto	10,291	10,308
Beeswax	5,539	5,134
Cocoa	110,049	90,914
Cocoanuts	54,941	44,523
Coffee	127,121	116,166
Bananas	1,403,830	1,044,820
Grape fruit	16,145	13,366
Oranges	31,953	38,474
Ginger	36,710	43,581
Hides	13,182	8,678
Honey	19,281	14,323
Lime juice	3,931	4,753
Pimento	68,352	143,623

	Values. 1909. £	1908-9. £
Rum	234,151	186,803
Sugar	118,733	77,047
Cigars	357,884	263,850
Fustic and bitterwood	7,771	6,680
Logwood	52,159	46,401
Logwood, extract	113,254	114,460

18. The total value of the exports shows an increase of £360,053 (more than 15 per cent.) as compared with the previous year. The principal increases are in cocoa, £19,134; cocoanuts, £10,418; coffee, £10,955; bananas, £359,010; rum, £47,348; and sugar, £41,686.

The fruit industry of the Colony continues to develop, and the increases under sugar and rum indicate that these old staples are recovering some of their lost ground. There has been much activity in the rum trade during the year. Light and Harbour Dues show an increase of £723 as a result of the continued increase in the fruit trade. The excessive predominance of the banana amongst the staple exports is a feature of insecurity in the Island's economy.

19. The distribution of the exports was as follows:—

	1909. Per cent.	1908-9. Per cent.
United Kingdom	21·2	21·5
United States	61·5	57·8
Canada	4·7	4·3
Other Countries	12·6	16·4

20. The total exports from the Colony for the past fifty years, at ten year intervals, have been as follows:—

1869. Year ended 31st December 1869.	1879. Year ended 30th September 1880.	1889. Year ended 30th September. —	1899. Year ended 31st March 1900.	1909. Year ended 31st December 1909.
£ 1,162,768	£ 1,512,978	£ 1,614,824	£ 1,868,079	£ 2,628,307

21. The following table shows the relative importance of the principal staples and minor products:—

	1909. Per cent.	1908-9. Per cent.
Sugar	4·7	3·6
Rum	9·4	8·9
Coffee	5·1	5·5
Dyewoods	2·3	2·4
Fruit	59·9	54·9
Pimento	2·7	6·8
Cocoa	4·4	4·3
Minor products	11·5	13·6

and the following is a comparison between the exports of 1869 and those of 1909:—

	1869.	1909.
	£	£
Sugar	443,078	118,733
Rum	157,359	234,151
Coffee	120,246	127,120
Dyewoods	256,034	57,098
Fruit	3,124	1,508,033
Pimento	33,915	68,351
Cocoa	714	110,048
Minor products	38,806	291,884
	1,052,562	2,515,418

The total increase on the exports of fifty years ago is £1,465,780; the increase in the export of fruit £1,504,909.

Mines, Manufactures, and Fisheries.

22. A new central sugar factory was equipped in Westmoreland by the Belleisle Estates Company. The two other large central factories (Amity Hall and Morelands) recently established in Vere had a successful and satisfactory season, and have justified the energy and perseverance with which their proprietors contended against drought, failure of irrigation, and other misfortunes at the period of their inception. The logwood extract factory at Lacovia in St. Elizabeth has enlarged its operations, and is investing further capital on the improvement of its machinery. The similar factory at Spanish Town was also active in production during the year.

Agricultural Industries.

23. The tables given above indicate the principal exporting agricultural industries of the Colony and their relative position during the year. For the native provision supply the seasons were moderately favourable.

It is observable that the production of exportable crops is tending to supersede that of local root foods, the increase of cultivated lands in 1909-10 during four years having been:—in cane, 1,294 acres or 4·4 per cent.; cocoanuts, 3,895 acres or 36·7 per cent.; bananas, 7,920 acres or 12·9 per cent.; cocoa, 3,206 acres or 39·0 per cent.; and minor items, 1,201 acres or 35·5 per cent.; while the falling off of cultivation in ground provisions is returned as 4,592 acres or 4·2 per cent.; and in coffee, 1,314 acres or 5 per cent. The increase in cane cultivation is not very marked; that in bananas, cocoanuts, and cocoa is apparent in those parishes in which these plants flourish, St. Mary perhaps being the chief contributor in the case of cocoa and bananas, although even St. Elizabeth and Manchester are giving attention to the latter culture; St. Elizabeth returning 254 acres, and Manchester 307. Decrease of coffee cultivation is most marked in Manchester and St. Mary; St. Elizabeth and Clarendon are chief contributors to the decrease in acreage of ground provisions.

The returns of lands in cultivation, which are rendered voluntarily and are not checked, cannot in my opinion be regarded as exact or exhaustive, especially in regard to ground provisions and other peasants' crops; but their variations from year to year may be taken as a fairly reliable indication of the tendencies of agricultural development.

24. The following table groups the land statistics of the Colony under four main headings, and these are set out with the total acreage in each case, as compared with the average acreage of the preceding four years, viz.:—

	1909-10.	Average four years.
Tilled lands	295,623	284,013
Guinea grass	137,663	135,640
Commons	497,352	467,667
Wood and ruinate	1,236,192	1,241,776
	2,130,830	2,093,096

On total acreage there has been a gain of 37,734 acres; on tilled land a gain of 11,610 acres; on guinea grass a gain of 2,023 acres; on commons a gain of 29,685 acres; and on ruinate a loss of 5,584 acres. The transfer from ruinate to one of the heads indicating beneficial occupation, the increase in tilled and pastoral land, and the appreciation of land values that is known to have taken place within the last few years, all point to agricultural progress of a much more marked character than that which characterized the last decade of the nineteenth century, and the import and export returns as well as the revenue receipts confirm the conclusion that the rate of progress in the decennium just past was in many respects much more rapid than it was in that immediately preceding. The surveying of lands on changing hands and the operation of the Registration of Titles Laws have borne a part in the correction of missing acreage.

25. This Government in the year 1903 established a system of valuation of real property. The following statement sets out the number and the classification according to value of the separate properties upon which the general and parochial direct taxes are assessed, those the subject of temporary relief, and those in arrear, in comparison with the figures of 1908-9:—

	1909-10. Number.	1908-9. Number.
Properties valued at £20	57,601	54,215
Properties valued at £30	5,788	5,639
Properties valued at £40	53,489	52,699
Properties valued at over £40 ...	28,266	27,151
Occupiers relieved	1,206	1,255
Properties in arrear	8,701	9,492
	155,051	150,451

There is apparent a satisfactory increase in the numbers of properties contributing, and an equally satisfactory decrease in

the number of those the occupiers of which have been relieved or which remain in arrear.

The small holdings (£40 value and under) amounted to more than 126,000 in number.

26. Reporting on the sale of Crown Lands in small holdings the Surveyor-General writes as follows:—

"Two hundred and fifty purchasers who bought 2,644 acres of land under the Rules for the sale of Crown Lands to small settlers have completed payment of instalments of their purchase money and been given titles for the lands purchased. There were also 42 other purchasers who got titles for land for which they paid cash. No fresh lands have been cut up for sale on payment by instalments. To date, of the total of 30,751 acres of land sold on credit, only about 6,000 acres have been paid for in full by some 600 purchasers, while 9,000 acres have either been taken back for failure to pay instalments or are chronically in arrear. It would be advisable to proceed very slowly and cautiously in the matter of instalment sales, seeing that of the acreage now out on credit, about 25 per cent. is now in arrear or taken back. The total amount of purchase-money received during the year from cash and instalment purchasers amounts to £2,415 5*s*. 4*d*."

27. The following were the most important features of the work of the Department of Agriculture for the year:—

(*a*) *Public Gardens.*

At Hope, 150 acres of ruinate lands were cleaned and planted with guinea grass for the use of stock in connexion with the new Farm School there established. There were increasing demands from the public for the supply of economic and ornamental plants.

The gardens at Castleton now serve as a centre for the distribution of cocoa plants free to small settlers under the guidance of the local agricultural instructor. Over 13,000 cocoa plants were distributed in this way during the year, despite unfavourable seasons for planting.

At Bath, a beginning was made to utilise the old garden as a centre for the distribution of cocoa plants while the garden is being restored and maintained as an object of interest to visitors.

The Hill Gardens are now maintained on the rent received for the residence without any special grant for maintenance from general revenue.

(*b*) *Staple Crops.*

Sugar Cane.—The first issue was made to estates of selected seedlings raised in Jamaica that gave great promise at Hope of affording a high tonnage of canes combined with juice of good average quality. The issue of selected yeasts to Estates distilleries resulted in some striking results in the increased output of common, clean rums from a more efficient alcoholic fermentation, while the assistance of the fermentation chemist enabled an estate that formerly made a valuable rum to recover its standard of quality. The sugar planters strongly supported the continuation of the Experiment Station, founded in 1904 on the basis of the Imperial grant in aid of the sugar industry, as a

permanent branch of the work of the department, and this proposal was accepted by the Legislative Council.

Mangoes.—Efforts are being made to bud a large number of common trees with the Bombay variety, for which there is now a large demand from the public. It is expected that this fruit will eventually prove to be a valuable export crop.

Rubber.—The first reports of the large issue of plants of *Hevea brasiliensis* (Para rubber) to the public in 1906 are uniformly disappointing, and the Director of Agriculture gives his opinion that this rubber tree is not suitable for general planting in Jamaica, while the relative cost of labour in this Colony as compared with such countries as Java he regards as a disadvantage in the commercial production of Para rubber in Jamaica, which demands the serious attention of planters.

The results of tapping Castilloa rubber trees in various parts of the Island indicate that under favourable conditions trees of this variety will after ten years' growth yield 1 lb. of rubber per tree per annum, while trees of 14 to 20 years are capable of yielding 2 (two) lbs. of rubber and over per annum.

(c) *Agricultural Education.*

The operations of the agricultural instructors have been extended during the year, and a complete system of local agricultural instruction for the whole Island was provided for on the votes for the coming year.

Special work has been devoted to the eradication of disease among the cocoa cultivation in St. Mary.

Seeds and plants were distributed under the direction of the Department to the distressed cultivators in the Port Royal Mountains after the floods of November.

A Government farm school was opened at Hope Estate in January, 1910, with a full complement of 26 students, and a stock farm associated with the school was started with a few selected animals at a cost of about £500.

A profit of £327 15*s.* 8*d.* has been made on the first year's operations, of which £246 15s. was spent on buying more cows and horses. The English thoroughbred stallion "Water Jacket" was in great demand, and 31 mares were received for service.

The usual special courses at Hope Gardens for elementary school teachers and distillers were held during the year, while agricultural instruction was also given to the training colleges for elementary school teachers, male and female, as usual.

SHIPPING.

28. There was much activity in shipping during the year. The increase in the number of ships reporting during the year stands at 99 ships, with tonnage 71,673. Divided between those reporting with cargo and those reporting in ballast the figures are:—

Reported with cargo	46	tonnage 34,967
Reported in ballast	53	tonnage 36,706
	99	71,673

The clearances show an increase of 88 ships with tonnage 57,040. Divided between vessels cleared with cargo and vessels cleared in ballast the figures are:—

Cleared with cargo	67	tonnage	17,489
Cleared with ballast	21	tonnage	39,551
	88		57,040

Distinguishing sailing vessels from steamers, there has been a decrease of 15 vessels (with tonnage 5,509) reporting, and a decrease of 18 (with tonnage 4,956) clearing.

The steamers reporting show an increase of 114 with tonnage 77,182. The clearances show an increase of 106 with tonnage 61,996.

The number of steamers reporting with cargo are 59 (with tonnage 36,223) in excess of the previous year. Those reported in ballast are 55 (with tonnage 40,959) in excess of the previous year.

Steamers cleared with cargo stand at 82 (with tonnage 22,848) in excess of the previous year, while the clearances in ballast exceed the previous year by 24 (with tonnage 39,148).

To summarize, 1,462 vessels with tonnage 1,554,396 reported during the year, against 1,363 with tonnage 1,482,724 in the previous year, showing a total increase of 99 vessels with tonnage 71,673:—1,460 vessels with tonnage 1,574,810 cleared as against 1,372 with tonnage 1,517,770 in the previous year, showing an increase of 88 vessels with tonnage 57,040.

29. The arrivals of steam vessels at the ports were as under:—

—	12 months ended 31st March, 1909.		12 months ended 31st December, 1909.		Increase.		Decrease.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
Kingston ...	395	800,674	395	803,472	—	2,798	—	—

Milk River ...	—	—	—	—	—	—	—	—
	—	—	—	—	116	78,709	2	1,527

An analysis of the increase works out at:—

—	12 months ended 31st December, 1909.		12 months ended 31st March, 1909.		Increase.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
British ...	347	564,563	317	527,360	30	37,203
Foreign ...	911	956,336	827	916,357	84	39,979

These divided between steamships with British registers and steamships with foreign registers stand as follows:—

	12 months ended 31st Dec., 1909.	12 months ended 31st March, 1909.
British	347 or 27·6 per cent.	317 or 27·7 per cent.
Foreign	911 or 72·4 per cent.	827 or 72·3 per cent.
	1,258	1,144

30. Tracing the shipping transactions of the Colony through a period of 40 years, and taking the period at ten year intervals, the figures are as under:—

Year.	Ships Entered.		Ships Cleared.	
	No.	Tonnage.	No.	Tonnage.
1869	743	223,956	750	216,828
1880	844	398,636	836	398,310
1890	917	538,297	945	536,592
1900	1,187	897,061	1,180	896,450
1909	1,462	1,554,397	1,460	1,574,810

31. Comparative statement showing the tonnage of vessels entered and cleared at ports in the Colony of Jamaica for the five years ended 31st March, 1910:—

Year.	Ships Entered.		Ships Cleared.	
	No.	Tonnage.	No.	Tonnage.
1905–6	1,353	1,397,611	1,354	1,393,837
1906–7	1,475	1,519,287	1,455	1,507,189
1907–8	1,348	1,513,243	1,348	1,511,101

III.—LEGISLATION.

34. Forty-two Laws were passed in the Session of 1909, of which four were passed and assented to before the 1st of April. The more important were:—

Law 1. To enable Contagious Diseases amongst animals already in the Island to be dealt with.

Laws 2 and 41. Amending the Tariff Law.

Law 2 exempts from duty (1) cement conforming to a standard approved by the Governor in Privy Council; (2) steel bars, &c., specially manufactured for reinforcing concrete in building work; (3) wrought iron and steel work specially manufactured for framed buildings; and (4) artificial limbs, &c., for the relief of bodily disablement.

Law 41 reduces the duty on "oils, petroleum, and its products" from 7*d*. to 4*d*. a gallon.

Law 3. Amends the Institute of Jamaica Law by placing the Institute under more popular control.

Law 4. This law makes an important amendment in the laws relating to prædial larceny. It empowers the police or other persons specially authorised to arrest persons found in possession of certain articles of agricultural produce under such circumstances as cause reasonable suspicion that such article has been stolen or has been received knowing the same to have been stolen, and to take such person before a Justice of the Peace or Clerk of the Courts. If such Justice of the Peace or Clerk of the Courts after enquiry is of opinion that there is reasonable ground for suspicion and that such suspected person does not give a satisfactory account of his possession of such article, he may commit such person for trial by the Resident Magistrate. On the trial before a Resident Magistrate the burden of proving that the suspected person became honestly possessed of any such article is placed upon such suspected person.

Law 9. Supersedes the Board of Agriculture and transfers its rights and powers under the Law to provide for the establishment and maintenance of the Sugar Experiment Station to a Committee of Management of the Sugar Experiment Station, consisting of such number of persons not exceeding five as may be nominated by the Government.

Law 12. Further regulates appeals from the Supreme Court of the Turks and Caicos Islands to the Supreme Court of Jamaica.

Law 13. Extends the Jamaica Rum Protection Law, 1904, for five years.

Law 14. Provides that sentences of death shall not be pronounced or recorded against a child or young person.

Law 15. Extends the provision for the protection of animals in Jamaica.

Law 18. Is a law in aid of the Public Health Law, 1867, empowering Local Boards of Health to require the provision of a sufficient latrine in the case of a house without it.

Law 21. Grants power to the Direct West India Cable Company to establish a wireless telegraphic installation for communication between ships and the shore in Jamaica.

Law 23. Transfers the control of the working of the Registration Law, 1881, and the Marriage Law, 1897, in so far as the Cayman Islands are concerned from the Registrar-General of Jamaica to the Commissioner of the Cayman Islands.

Law 24. Is a law to prevent the embarkation of persons showing symptoms of plague or cholera.

Law 26. Allows the name of the father of the child of a single woman to be entered by the Registrar under the Registration Laws in certain circumstances.

Law 27. Is entitled the Probation of Offenders Law, and is on the lines of the similar Act of the United Kingdom.

Law 28. Deals with Amendments to the Registration of Voters Law.

Law 32. Is "The Earthquake Annuities Law," whereby the payment to certain widows, orphans, and other necessitous persons deprived of support by the Earthquake of the 14th of January, 1907, is transferred from the Government to the Loan Board created by the Earthquake Loans Administration Law.

The amount required for this payment, which has been transferred by the Assistance Committee to the Government, is in turn transferred to the Loan Board under this Law.

Law 34. Provides for the legitimation of any child born before the marriage of his parents, whose parents have intermarried or shall hereafter intermarry, if at the time of the birth of such child there existed no legal impediment to the intermarriage of the parents.

Law 35. Provides for the detention of offenders in institutions other than prisons (*i.e.*, in "Prison Farms" or other Institutions analogous to the Borstal Institution).

Laws 36 and 42. Provide for the duties of the Resident Magistrate for the Parishes of Kingston and St. Andrew, in so far as such duties relate to civil jurisdiction, being discharged by a Judge to be known in future as the Judge of the Kingston Court, and the latter Law makes the necessary amendment in the Judicature Law of 1879, enacting that the full Court of the Supreme Court shall be constituted of the two Judges of the Court and the Judge of the Kingston Court, and that the Judge of the Kingston Court shall while sitting in the full Court have all rights and powers, and not otherwise, of the Judge of the Supreme Court.

Law 38. Provides for the reduction of Stamp duties. The duties on conveyances and leases are reduced by one-half, and other reductions are made under mortgages, policies, and bills of lading. This Law extends from the 18th of July, 1909, to the 30th of June, 1910.

Law 39. Makes certain amendments in the Quarantine Law of 1893, by which, generally, additional powers are granted to the Quarantine Board.

IV.—PUBLIC EDUCATION.

35. The Superintending Inspector of Schools furnishes the following statistics:—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books for Year ended 31st October, 1909.	Average attendance for year ended 31st October, 1909.	Percentage on Average attendance of number on Books.	Total Payments to Elementary Schools and Teachers.
					£
1909–10 ...	693	89,902	57,849	64·34	48,340
1908–09 ...	690	85,470	54,555	62·32	48,699

36. Last year's report showed a considerable decrease in the number of scholars on the books owing to drought and other causes of poverty which had prevailed in the Island. The percentage of the number on the books in average attendance had, however, improved from 60·55 to 62·32. This year, there has been something more than a complete recovery: the number on the books exceeds by 1,040 the number of two years ago, and by 4,432 the number of last year; the average attendance exceeds by 4,158 the total of two years ago and by 4,588 the total of last year, and the percentage of average attendance is further improved to 64·34. The average attendance is the highest in the last 10 years. The number of first-class schools increased from 177 to 192, a number which has never been exceeded except in the one year, 1901.

37. The increase in the attendance shown by the monthly returns has necessitated the addition of £3,700 to the provision for grants for elementary schools during the current year. Notwithstanding the reduction in attendance which the floods of November, 1909, entailed, principally in the parishes of St. Andrew, St. Thomas, Portland, and St. Mary, the monthly returns of the schools since October, 1909, indicate a further advance, the continuance of which will involve a further substantial addition to the Estimates for next year apart from the cost of any improvements or changes in the rates of payments to teachers which may be found practical.

38. A new Government school was built during the year at Chetolah Park on the outskirts of Kingston.

39. The number of school gardens recognised by the Department and receiving a grant increased during the year from 339 to 361 and the amount expended in grants on account of such gardens from £414 10*s*. 6*d*. to £519 5*s*. 7*d*.

40. The teaching of advanced manual training has been continued at the centres at which it has previously been held and a new centre was opened at Brown's Town. There is a decrease in the amounts of grants for this study, which is not satisfactory.

41. The Montego Bay Government Secondary School has fairly maintained its numbers and the efficiency of its work. Provision was voted by the Legislative Council in the recent session for the transfer of this school to a more suitable locality and for the erection of new buildings.

42. During the course of the year, Mr. Thomas Capper, who had for over 29 years occupied the position of Superintending Inspector of Schools retired from the public service. Mr. Capper had rendered signal assistance to the cause of education in Jamaica, and had maintained and advanced the efficiency of his Department in periods of great difficulty owing to financial stress, in the course of which the natural and necessary advance of elementary education in the Island was more than once seriously imperilled by the economies which it was deemed necessary for the Government to adopt. Mr. Capper has been succeeded as Superintending Inspector of Schools by Mr. Rowland Williams, for many years an Inspector of the Department.

43. The enforcement of compulsory school attendance in certain towns which had been approved was unavoidably deferred pending legislation for the creation of local school boards and their investment with necessary authority.

44. The Board of Education has for a long time past had under consideration the question of altering the system of assessing school grants and improving the position of teachers. A scheme was adopted late in the year and has subsequently been approved by the Legislative Council making better provision for the payment of deserving teachers and for the staffing of schools. The Legislature in its last session also approved of an increase in the appliance grant from 3*d*. per unit of average attendance to 6*d*., also a special appliance grant for the current year to bring into line some specially needy schools which the ordinary appliance grant will not suffice to bring up to a proper standard, especially in regard to school furniture and fittings.

Provision has also been made—

(*a*) for removing some difficulties which arise in the staffing of schools when the attendance suddenly increases so that the staff provided on the previous year's average is unable to deal with it effectively; also,

(*b*) for schools which have failed, and need something more than the reduced grant which the code allows them to enable them to remove the causes of failure (generally inefficient teaching) and recover themselves, and

(*c*) for some schools, especially in backward districts, which the opportunity of employing a good teacher may reclaim and which cannot possibly secure such a teacher without temporary supplement to the grant they earn.

45. Provision has also been made for the establishing of a technical school in Kingston, where more advanced work than that of the present manual training school can be undertaken, for the training of youths before and after they leave school, in

handicrafts and, particularly at the outset, in woodwork, affording similar opportunities for adults also in evening classes.

It is contemplated that this will establish the nucleus of a continuation school in which other departments may be gradually developed, such as classes for the instruction of girls in laundry and cookery and domestic work.

46. The old Mico premises having now been vacated by the financial departments, the infant school, which affords opportunity for the attendance of teachers in kindergarten work, is about to be resuscitated.

47. Arrangements have been made for amending the regulations for the £10 scholarships, which have been found ineffective, their amount being insufficient to meet the needs of those who have to board in towns and have no other resources, and their short duration (two years) being insufficient to provide for more than a beginning with secondary education or apprenticeship.

It is proposed to reduce the number of these scholarships from 28 to 16 and to increase the annual value of each from £10 to £17 10*s*., and to provide for the extension of a certain proportion of these scholarships from two to four years in meritorious cases.

V.—GOVERNMENT INSTITUTIONS.

48. The following particulars may be recorded with regard to the operations of certain institutions:—

(*a*) *Public Hospital, Kingston.*

Indoor patients treated, 3,696; outdoor patients, including paupers, 6,749; prescriptions made up, 14,089; surgical operations, 1,329; minor surgical operations, 840; daily average number of beds, 188; total cost of maintenance, £2,950 8*s*. 4*d*.

The Edward Ward was repaired and a new rolled-iron ceiling installed.

The kitchen was screened with gauze-wire and rendered fly-proof.

New out-patient rooms, dispensary, stores, and laboratory were in course of completion.

The Rietti Ward for sick poor was completed.

An incinerator for waste material was erected, and other minor improvements carried out.

(*b*) *Victoria Jubilee Lying-in Hospital.*

Number of patients admitted, 650; 8 pupil nurses admitted for training (7 passed and received certificates); average daily number of beds, 19; receipts, £361 1*s*. 9*d*.; expenditure, £1,256 2*s*. 5*d*.

(*c*) *Lunatic Asylum.*

Number of patients on 31st March, 1910, 1,081, an increase of 28 since beginning of year. Total number of patients under treatment during year, 1,317. Daily average resident, 1,081;

rate of recovery, 37·27 per cent.; admissions, 262; discharges, 97; deaths, 133; death-rate, 12·2 per cent. There was an outbreak of malarial fever after flood rains of October and November, in consequence of which a careful examination was made of the adjacent grounds and all necessary sanitary improvements carried out.

There were two suicides by hanging and one death from injuries inflicted by one patient on another.

The restoration of buildings destroyed by the earthquake was proceeded with and new quarters were provided for private patients.

(*d*) *Lepers' Home.*

Patients on 31st March, 1909		113
Admitted		13
		126
Discharged	1	
Absconded	6	
Died	16	
	—	23
On 31st March, 1910		103

The buildings and grounds were kept in good order.

The farm was in good cultivation and supplied the institution with vegetables.

The admissions were 50 per cent. below those of the previous year.

The death-rate was the average.

The average longevity of leper life, according to the experience of the institution, works out at 30 years for anæsthetic and 10 years for tubercular cases.

49. The accounts of the Government Savings Bank for the year disclose that in the country parishes as a whole (Kingston not being included) there has been a slight increase in the amounts of deposits and a considerable decrease of withdrawals which, in the manager's opinion, are indications of the recovery from the effects of the drought of the previous year. The synopsis of deposits shows an increase of 788 accounts of £5 and under, as compared with the year preceding; but the net decrease in the bank's liabilities at the close of the year amounting to £26,593 would appear to indicate that the larger depositors are investing their money in profitable local undertakings which yield a better return than the 2½ per cent. interest allowed by the Government and also in the savings bank branch of the Bank of Nova Scotia where they receive interest at the rate of 3 per cent. Deposits have also been withdrawn for building purposes.

The balance sheet of the institution on the 31st March, 1910, shows a liability to depositors of £363,796, the full amount of which was covered by investments in British and Colonial securities at that date.

50. The Registrar of Titles to Land reports that the increase of work that took place during the two preceding years has been more than maintained during the past year.

A great impetus was given to the adoption of the system of title by registration, through the volume of conveyancing and mortgaging business that resulted from the earthquake of 1907, and the advantages of this system appear to have now become so generally recognised that it is being increasingly resorted to as occasions for the transfer of property arise.

VI.—JUDICIAL STATISTICS.

51. The judicial statistics for the year show for the most part a continued absence of serious crime. The committals to the prisons during the year numbered 3,702, and to lock-ups for short terms 1,258, making a total of 4,960 as compared with 6,370 in the previous year, a diminution of 1,410, or about 22 per cent.

The re-convictions during the year amounted to 1,470, of which 474 were second convictions, 323 third, and 668 fourth and upwards—a large proportion of habitual offenders. During 1908-9 the re-convictions numbered 1,829.

52. The daily average of prisoners in custody in the penitentiary and St. Catherine District Prison was 1,193 as compared with 1,519 during the previous year. There were 39 deaths in the prisons as compared with 58 during 1908-9. There were two executions of capital punishment for murder, one of a Creole who murdered a young woman out of jealousy, the other of an Indian immigrant.

53. I have from time to time made close enquiry into the particulars of the offences for which any prisoners are serving long terms, with a view to remitting sentences when this might appear advisable. With the exception of the following:—

	Cases.
Arson	1
Murder (commuted)	1
,, (infanticide)	5
Wounding, with intent to murder or to do grievous bodily harm	4
Burglary	5
Cattle stealing and receiving	1

there are practically no prisoners in custody with sentences of 5 years or more, except habitual criminals of apparently irredeemable character and incorrigibly bad prison conduct.

54. The gross expenditure for the General Penitentiary amounted to £15,722 and for the St. Catherine District Prison £6,275, total £22,047. The gross earnings in cash of the General Penitentiary were £3,899 and of the St. Catherine District Prison £938. The yield of the St. Catherine District Prison farm was impaired during the year by the heavy rains of

November, 1909, being valued only at £1,077 as compared with £1,564 the previous year.

55. There was a considerable diminution of the number of cases of prædial larceny dealt with, owing to the improved economic conditions generally prevailing throughout the Island, but the November storms markedly checked the improvement that was taking place. The convictions for this class of offence were 1,303 as compared with 2,510 in the previous year, and 2,542 in the year preceding.

56. The number of convictions for offences against property other than prædial larceny was 1,282 as compared with 1,886. The total number of persons punished in the Resident Magistrates' Courts by fines, imprisonment, or otherwise was 5,514 against 8,038 in the previous year, including 276 persons dealt with under the probation of First Offenders Law, 1889. The summary convictions in petty sessions (mostly for offences entirely trivial) were 12,419 against 12,637. Offences of this order do not decrease in number as prosperity increases, but rather show a contrary tendency.

POLICE.

57. The constabulary force was 19 units below strength at the close of the year. At the close of the year 1906-7 it was 58 units below strength. The deficiency has been in steady course of reparation during the last three years, and the recent efforts to improve the conditions of service in the force have now resulted in bringing it almost completely up to the proper strength. 172 men were enlisted during the course of the year, 85 sub-officers and men were discharged, 36 dismissed, 31 resigned, and 13 died.

58. The records of the operations of the constabulary show a continual and increased activity on the part of the force in maintaining law and order. Special and effectual attention has been paid to the enforcing of the law against cruelty to animals, furious and careless driving, and the adulteration of food and drugs.

59. Considerable expenditure was incurred during the year on the improvement of constabulary stations, and the Government continues to pursue this policy in the interests of the health, efficiency, and contentment of the men. The police band, initiated in 1897, has increased in numbers and musical skill and obtains frequent engagements to play on public occasions.

VII.—VITAL STATISTICS.

60. Estimated population of the Island, 31st March, 1910, 862,422 (males 421,056, females 441,366).

These figures are arrived at by adding the recorded increase and deducting the recorded decrease of population since the enumeration made in the census of 1891.

61. Emigrated during the year, 19,672. Immigrated during the year, 16,680.

The above figures include labourers leaving and arriving at the Port of Kingston as follows:—

Departures	13,579
Arrivals	7,998

These arrivals and departures were chiefly to and from Colon, Cuba, and Costa Rica.

62. *Marriages.*

Marriages.	1909–10.	1908–9.	1907–8.	1906–7.
Number	3,543	3,116	6,251	5,507
Rate per 1,000 of population ...	4·1	4·1	7·4	6·6

The marriage rate per 1,000 is the same as in the previous year, and is the average prevailing during the five years preceding the earthquake of 14th January, 1907. The abnormal rates of 1907-8 and 1906-7 were due (as stated in last year's report) to the emotional effects of that calamity.

63. The effect of the same incident on the proportion of illegitimate to legitimate births would appear to be also waning, as the percentage of illegitimate births amounts this year to 62·00, against 60·59 in 1908-9, and is approaching the average rate of 63·5 which has prevailed during the past ten years. The total births registered numbered 32,402 (16,359 males and 16,043 females) against 31,785 in the previous year. Birth-rate 37·8 per 1,000 of the estimated population against 37·6 in the previous year.

64. Deaths registered: 18,636; 9,202 males and 9,434 females. Rate per 1,000 of estimated population 21·7, the lowest since 1902-3, when the rate was 19·8. In 1908-9 the rate was 22·4, and the average of the past ten years 23·3.

65. It is interesting to note that as shown by the following table the birth-rate of Jamaica is the highest of the Colonies named, while the death-rate is lower than that of Barbados, Trinidad, Antigua, and British Guiana:—

Colony.	Year.	Persons married.	Births.	Deaths.	Illegitimate Births.
		Rate per 1,000 of population.	Rate per 1,000 of population.	Rate per 1,000 of population.	Rate per 100 Births.
Bermuda	1907	—	33·7	18·7	1·84
Barbados	1908	9·9	36·5	29·0	56·7
St. Vincent ...	1908–09	7·79	33·80	18·34	56·58
Grenada	1909	—	34·76	18·82	51·4
Trinidad	1908–09	7·9	33·9	23·0	68·1
St. Lucia	1909	—	30·9	17·5	55·1
Antigua	1909	—	32·55	27·38	72·90
British Guiana ...	1908	—	27·3	30·8	59·2
Jamaica	1909–1.	8·2	37·8	21·7	62·0

66. Of the parishes, Kingston, 32·0 per 1,000, and St. Andrew, 29·0 per 1,000, ostensibly have the highest death-rates, while Manchester, 15·2, and St. Ann, 15·9 per 1,000, have the lowest. The Registrar-General states, however, that the rate is calculated on the population figures of the 1891 census plus the increase of births over deaths only, and it may therefore be confidently asserted that the rates of Kingston and St. Andrew are much lower than those reported, as no account has been taken of very considerable migration which continuously flows into these parishes from other parts of the Island. The ostensible death-rates in these two parishes have been steadily decreasing in the past few years, and St. Andrew has now reverted to the rate (29·1) prevailing in the year before the earthquake (1905-6). It is to be hoped that, in view of the increasing attention now being paid to sanitary conditions the ostensible death-rate in Kingston will also before long not only revert to, but improve on, the rate of 28·0 per 1,000 which was reported in 1905-6.

67. Infantile mortality was accountable for 8,152 deaths (43·7 per cent.) during the year. These figures represent deaths of children under 5 years of age, and of this number 5,657 (or 30·4 per cent. of the total deaths) were those of children under one year. This is 17·4 per cent. of the number of births recorded for the year.

68. The total number of deaths registered in the year was 18,636: causes of death are stated in 12,600 cases, about 67·6 per cent., 6,036 are returned as due to ill-defined or not specified causes, about 32·4 per cent. Thus in only about two out of three cases is any definite account received of the cause of death. There were medical certificates of the cause of death in 4,134 cases, and coroners' certificates in 219; total 4,353 out of 18,636, a little over 23·3 per cent. of the whole. In other cases the cause of death is stated on the authority of the registrar after such enquiries as he has thought it necessary to make. Whilst, however, more than three out of four of the deaths recorded are not medically certified, it is not necessary to infer that so large a proportion of these died without medical attendance. In a great number of cases a doctor is called in once or oftener during the illness but is not applied to for a certificate of the cause of death.

69. I subjoin a table showing the number of deaths in which the causes were defined or not defined in the several parishes, with the percentages of undefined cases:—

—	Causes specified.	Causes ill-defined or unspecified.	Total.	Percentage undefined.
Kingston and Port Royal.	1,399	374	1,773	21·1
Portland	787	254	1,041	24·4
St. Andrew	957	357	1,314	27·1
Hanover	577	238	815	29·2
St. Thomas	690	290	980	29·5
St. Ann	884	384	1,268	30·2
St. Catherine	1,556	721	2,277	31·7

—	Causes specified.	Causes ill-defined or unspecified.	Total.	Percentage undefined.
Westmoreland ...	906	437	1,343	32·5
St. James	554	286	840	34·3
St. Mary	951	500	1,451	34·4
Trelawny	488	297	785	37·8
St. Elizabeth	970	603	1,573	38·3
Clarendon	1,145	782	1,927	40·5
Manchester	736	513	1,249	41·0
Totals ...	12,600	6,036	18,636	Average 32·4

The percentages of deaths from causes unspecified range from 21·4 per cent. in Kingston to 41 per cent. in Manchester.

The variation of the figures is to some extent, though not obviously in all cases, explicable by the different character of the settlement of population in the several parishes.

These figures must be borne in mind in surveying the apparent prevalence of various diseases in different parishes.

70. The following table shows the relative prevalence of the causes of death most frequently recorded:—

Cause of Death as returned.	Kingston.	Other Parishes.	Total.	Case medically testified.
Infantile Diseases—				
Premature Birth, &c. ...	64	208	272	29
Teething, &c.	27	160	187	16
Convulsions	43	1,716	1,759	34
	134	2,084	2,218	
Malarial and Kindred Fevers—				
Malarial Fever	113	423	536	437
Malarial Poisoning	10	20	30	29
Fever (Undistinguished) ...	56	5	3,201	28
	179	448	3,767	
Enteric Fever	88	156	244	205
"Infective Enteritis"	6	4	10	10
Diarrhœa and Choleraic Diarrhœa	76	585	661	211
Dysentery	22	137	159	54
Enteritis and Gastro-Enteritis (not epidemic).	88	96	184	174
Phthisis	116	979	1,095	256
Tubercular Phthisis	47	90	137	137
Pneumonia	51	126	177	155
Bronchitis	32	178	210	56
Asthma	—	119	119	6
Bright's Disease	62	181	243	219
Venereal	22	130	152	138
Parasitic Disease	10	124	134	55
Ulcers	1	184	194	34

71. The highest number of deaths attributed to any one specified cause is 1,759, returned under "Convulsions," presumably almost entirely deaths of infants.

72. The list is headed by "Fever, *undistinguished*," 3,201 cases, and it will be observed that of these, only 56 are returned from Kingston. This indicates the much greater accuracy of the Kingston returns, compared with those from other parishes, a circumstance which was to be expected. With regard to the Kingston returns, it will be observed that as 691 of the deaths were of infants under nine years and 545 of infants under one year, the total number of 347 returned as from ill-defined or unspecified causes may probably be regarded as very largely accounted for by mortality of infants. The same commentary may also be applied, with somewhat less confidence, to the whole of the Island, the deaths of infants under nine years being 8,152 and of infants under one year of age 5,167, whereas the total number of deaths from unspecified causes was only 6,036.

73. "Fever, undistinguished," may probably be safely taken as for the most part malarial fever varying to typho-malarial or enteric affections. From malarial fever so defined, only 536 deaths were reported, and of these 113 are attributed to Kingston. The manifest excess of this proportion confirms the view that a great many of the deaths from "undefined fever" reported elsewhere were probably cases of malarial fever.

It may safely be assumed that the average of deaths from this cause was as high in the Island generally as in Kingston, which has less than one-fifteenth of the whole population. At this rate the deaths from malarial fever in the rest of the Island might be estimated at 1,700, or for the whole of the Island, including Kingston, not less than 1,800.

74. The next most important group is that of 1,232 deaths from phthisis and tubercular phthisis, of which 153 cases are returned from Kingston—a very high proportion, indicating the occupation of close and unsanitary dwellings in the city.

75. Enteric fever is credited with 244 deaths throughout the Island, of which 88 are recorded in Kingston. There can be no question that this fever is prevalent in Kingston in a higher proportion than in almost any other part of the Island, and that this is due, not to any defect in the water supply, but to the transmission of infection by flies and possibly, to a certain extent, by milk. The City Council, the Kingston General Commissioners, and the Government are co-operating in the endeavour to neutralise the conditions which foster this disease in Kingston. In addition to the returns of enteric fever, 10 deaths are reported from epidemic diarrhœa and 661 from choleraic diarrhœa and 159 from dysentery. I should suspect that the distinction between many of these cases and those formally returned as enteric fever was not very reliable, so far as the country returns are concerned.

76. 184 deaths (88 in Kingston) are reported as due to enteritis and to gastro-enteritis not epidemic.

77. Deaths from pneumonia are reported as 177, of which 51 were in Kingston: from bronchitis 110 of which 32 were in Kingston: from Bright's disease 243, of which 62 were in Kingston. The other predominant causes of death are venereal

disease 152, parasitism 134, probably very much understated as parasitic infection and anæmia are frequently associated with deaths reported as fever, chronic rheumatism 139, asthma 119.

78. Some inference as to the prevalence of malarial fever in the Island may be gathered from the following figures:—

There were admitted into the Public General Hospitals of the Island outside of Kingston during the year 968 cases returned as malarial fever, 4,971 returned as intermittent fever (which is the same thing) and 393 returned as remittent fever; total 6,332, (out of a grand total of 19,577 admissions).

There were 48 deaths from these three varieties of malarial fever, that is to say 1 in 132 cases. In the Registrar-General's returns 113 deaths in Kingston are attributed to malarial fever and, as I have pointed out, it may be inferred that there were at least 1,800 deaths from the same cause, in the whole Island, and I should not think this an excessive estimate. If the ratio of deaths to cases is as low outside the hospitals as in the cases which come into hospital (and as a rule Creoles do not go into hospital for malaria), it would be presumable that there had been about 237,600 several cases of malarial affection throughout the Island in the course of the year.

This estimate would probably be excessive, as the majority of hospital fever cases are those of coolies who suffer more frequently from fever, before they are acclimatised, than Creoles: but in any case the number of deaths reported indicates an enormous prevalence of this debilitating but not generally fatal disease. The Island community is not as yet by any means sufficiently awake to the importance of co-operating with the efforts which the Government is now making through the Malarial Commission and the Parochial Boards to abate this very manageable evil.

79. The hospital returns also indicate a considerable prevalence of rheumatism, 898 cases having been treated in the hospitals with, however, only one death. 228 cases of pneumonia are reported, 129 cases of enteric fever were admitted to hospital with 32 deaths, 1,463 cases of other diseases of the digestive system with 60 deaths, 2,242 cases of skin diseases with 4 deaths, 1,274 cases of local injuries with 16 deaths, 665 venereal cases. 932 persons were returned as admitted to hospital suffering from "no disease."

80. The Superintending Medical Officer reports 22,786 cases of successful vaccination in the year, 653 unsuccessful; 461 vaccinated did not report. The Medical Reports represent that whilst the infant population is vaccinated with a fair degree of thoroughness, re-vaccination is practically unknown and the adult population almost entirely unprotected by vaccination. The Superintending Medical Officer urges that steps should be taken to remedy this by the enforcement of re-vaccination. This suggestion is beyond the scope of practical politics, and in view of the long immunity from small-pox in this Island, notwithstanding the alleged unprotectedness of the community, and of the steady abatement of the diseases in surrounding countries, the argument might appear to tend rather to suggest that we are spending a large amount of money in infant vaccination against small-

pox, which is practically thrown away and which might, with more immediate advantage to the health of our population, go towards the abatement of the causes of malarial and other fevers, including typhoid, which do in fact continually impose a heavy drain upon the strength and life of the population. I am inclined to think that if, for instance, the money now devoted to infant vaccination were steadily applied for a few years to the isolation and treatment of all cases of yaws and syphilis, the effect on the vitality of the population would be very much more valuable.

81. The disease known as "vomiting sickness," which breaks out in certain districts in the cold months of the year, continues to be a subject of regrettable perplexity to the medical profession.

620 deaths are attributed to what the Superintending Medical Officer calls "the combination of diseases known popularly as vomiting sickness," and he expresses the opinion that many of these cases may be, indeed undoubtedly are, due to ackee poisoning, cassava poisoning, worms, meningitis, bronchitis, gastritis, and other more familiar diseases, but there is little doubt that beyond these, there remains an unexplained residue which needs investigation.

82. The reports of the District Medical Officers vary in fulness, and are not all compiled from the same point of view, but the extent to which particular diseases are mentioned in them may be taken as a pretty fair indication of their prevalence and of the importance attached to them by the medical officers. Thirty-nine reports were received, in 32 of which reference is made to Malarial Fever as more or less prevalent, in 14 to Yaws, in 13 to Enteric, in 12 to Venereal diseases, and in 10 to Vomiting Sickness. I think these five diseases (all of which can be prevented or abated by hygienic precautions) may fairly be taken as those which are most troublesome in this community although there is an immense amount of constitutional derangement owing to indigestion, and a considerable prevalence of phthisis and pneumonia.

VIII.—POSTAL AND TELEGRAPH SERVICES.

83. The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1909-10 with those of previous years:—

—	1909-10.	1908-09.	1907-08.
	£	£	£
Postages	33,362	32,505	32,465
Commission on money orders ...	425	459	638
Local commission on British postal orders.	212	195	176
Commission on local postal orders ...	777	742	734
Miscellaneous	865	673	764
Telegraphs	6,769	6,221	6,489
Total	42,410	40,795	41,266

These statistics show an increase of £1,615 in gross revenue as compared with the previous year, due to increases of £857 and £549 in postage and telegraph collections and of £245 on commissions on postal orders (British and local respectively) and on miscellaneous. The only decrease has been a small one of £35 on commissions on money orders.

84. The expenditure of the year by the Department amounted to £36,964, as against £34,232 in 1908-9, an increase of £2,732, due to continued expansion in the work of the Department, an improvement in the pay of some subordinate officers and improved facilities afforded the public, among which may be mentioned the opening during the year of four new District Post Offices and the erection in Kingston and the suburban area of five collecting boxes. House to house delivery in that area is now made by carriers on bicycles.

85. The progress of the Department is illustrated by the following figures:—

—	Revenue.	Expenditure.	Deficit.	Surplus.
	£	£	£	£
1899–1900	26,926	37,571	10,645	—
1909–1910	42,409	36,964	—	5,445

In the decennial interval the system of Imperial penny letter postage has been extended to the Colony and numerous District Post Offices have been established, &c.

The great increase in mail matter now handled, has led to an increase in revenue which enables the Department to be worked at a gain instead of a loss.

86. As compared with the two previous years the numbers of letters and postcards were:—

—	At General Post Office.		
	1907–8.	1908–9.	1909–10.
Outwards	3,386,299	3,839,542	4,458,220
Inwards	3,726,957	4,579,495	5,707,807
Total	7,113,256	8,419,037	10,166,027
	At District Post Offices.		
Total	1,523,746	1,550,372	2,054,066
Grand Total ...	8,637,002	9,969,409	12,220,093
Telegrams sent and received ...	109,115	103,471	112,515

87. The Postmaster for Jamaica estimates the expenditure on telegraphs, which is no longer shown separately from that on

Post Offices, as verging on £8,000, while the receipts from telegrams sent amounted to £6,769 in the year under review, so that the gain in revenue over expenditure in 1909-10 of £5,445 previously mentioned was made notwithstanding a loss of about £1,200 on the telegraph branch of the Department. In my report for 1908-9 I referred to the very large growth of postal business during the decade as illustrated by increase in receipts for postages from £21,438 to £32,210 or by a percentage of 50¼, whilst the percentage increase in telegraph business had been less than 2 per cent.

IX.—PUBLIC WORKS.

88. The year under review was one of considerable activity for the Public Works Department, the total expenditure by which was £173,544 5*s.* 6*d.*, made up as follows:—

ESTABLISHMENT.

	£	s.	d.	£	s.	d.
Salaries and other charges ...				14,975	6	5
Works under Public Works Votes and Loan Laws:						
Part 1. Main Roads and Bridges Maintenance ...	92,920	10	0			
Part 2. Main Roads and Bridges —New Works ...	15,023	15	11			
				107,944	5	11
Part 3. Public Buildings and Telegraph Maintenance				9,977	14	11
Part 4. Public Buildings—New Works	21,596	2	7			
Part 4. Public Buildings under Law 6 of 1893, 40 of 1894, 27 of 1897 and 9 of 1904 ...	2,307	18	8			
Part 4. Construction or extension of telegraph and telephone lines	542	19	7			
				24,447	0	10
Part 5. Lighthouses				1,304	7	6
Part 6. Rio Cobre Irrigation Works Maintenance				4,880	0	5
Part 7. Spanish Town Water Works				1,370	7	10
Part 7. Works executed for Public Departments, Parochial Boards, &c.				8,645	1	8
				£173,544	5	6

The cost of the Department was equal to 8·6 per cent. of the total expenditure controlled by it.

The Director of Public Works points out that in the year 1900-1 the cost of the staff was equal to 16 per cent. of the total expenditure, and in 1905-6 13·8 per cent., and observes that although the reduction in the proportions of cost may appear gratifying, it was in some degree obtained by severe stress on the staff of the Department, and may not of necessity tend to increase efficiency. He is of opinion that much of the work detailed above could not get the attention it should have had owing to the shortness of staff. It is reasonable to point out, however, that in the years 1900-1 expenditure on public works had been reduced to a minimum owing to the depressed financial state of the Island and that in 1905-6 the greatest possible economy was again being observed on account of the failure of revenue following the hurricane of 1903.

89. On the other hand, the period since the earthquake of 1907 has been marked by an enormous amount of re-constructive work in public buildings, whilst the improved state of the finances has enabled the Government to spend more freely on new main roads and on overtaking arrears of necessary new buildings and repairs which had been postponed year after year during the period of depression. The expenditure of these latter years therefore may be regarded as above the normal.

90. The average cost of ordinary maintenance of roads per mile for the whole Island was £41 18*s*. (including £11 15*s*. due to special cost of repairing flood damages). The average cost including special work of improvement was £45 8*s*. 2*d*. per mile.

91. The total expenditure included £24,028 for the restoration of flood damages caused by the extraordinary rains of November, 1909, and the local floods of March, 1910. In addition to this special expenditure, the sum of £7,483 has been provided in the estimates of the current year for further works of repair and protection. It may be of interest to record the following extracts from reports made by the Director of Public Works upon the effects of this exceptional rainfall:—

"The greater part of the Island suffered considerable damage to main roads and bridges. The parishes of Hanover and Westmoreland and St. Elizabeth suffered the least. Extensive damages occurred in St. Andrew, St. Thomas, Portland, and St. Mary, also in Clarendon and St. Catherine. The damages to roads and bridges have been estimated at about three times as great as the floods occasioned in June, 1904, which cost £7,432 to restore damages. In St. Andrew alone the damages in November, 1909, amounted to £6,853. The rainfall at Silver Hill, near Newcastle, from 6th to 11th November was 135 inches. At Radnor, under the Blue Mountain Peak, the rain-gauge registered for the month 125·88 (but overflowed). At Farm Hill Pen in the same neighbourhood from 1st to 16th, 120·87 inches.

"By the end of the financial year the greater portion of the damage was restored. The remaining works of permanently restoring approaches to several bridges had to be deferred together with extensive river protective works which are now proceeding."

Kingston and St. Andrew.

"The road from Kingston to Spanish Town was rendered impassable for wheel traffic for four days owing to the flooding of the Bumper Hall Gully, causing a scour of nine feet in depth: this necessitated the erection of a concrete bridge 30 feet wide.

"The Sandy Gully on the Constant Spring Road deposited large quantities of sand and debris upon the road between the 4th and 5th mile posts; at the same time the road surface and water tables were much scoured out.

"For about a week the Windward Road was impassable, principally owing to the flooding of the river and gullies. Every step was taken to quickly restore the damaged parts.

"The Junction Road from Stony Hill was blocked by landslips for several days; retaining walls were carried away. The foot-bridge at Constant Spring near to the 6th mile was destroyed.

"Upon the Gordon Town Road the retaining wall opposite the Waterworks Dam was destroyed, and the road rendered impassable for four days, besides large landslips blocking the road at "Stand Up Hill"; and at the gully near Clarke's stables considerable damage occurred.

"The Newcastle Road was obstructed by numerous extensive landslips, making traffic impossible.

"The new mountain road to Mavis Bank was so badly damaged that, notwithstanding the strenuous efforts made, it could not be rendered passable for traffic for four months.

"The bridges did not suffer to any great extent.

St. Thomas.

"The roads generally suffered from the effects of flood rains taking place in August, September, and November, particularly those sections of the Central and Western portions of the parish. The Yallahs River encroached considerably on the Morant Bay Road near Albion. The Johnson River broke through the embankment below the Dam at Red Hill destroying the main road, besides scouring out the Western approach of the Bamboo Pool Bridge. Fordings of rivers badly injured.

"The Plantain Garden River overflowed with consequent damages to the adjoining road and also at the town of Bath.

"The bed of the Yallahs River, at Ramble, was silted up and raised 16 feet so as to be within 18 inches of the underside of the bridge cross girders. The approach to this bridge on the Cedar Valley end was carried away.

"At Seaforth, the Johnson River encroached so as to wash away the stone dam and groin, and destroyed the road thence to York.

"The stone groin at Morant, built some years ago, was washed away by the Johnson River.

"The Negro River encroached on the road at several places between Serge Island and Cedar Valley; numerous landslips occurred.

"The bridges across the Negro River at Sherwood Forest and Brook Lodge were carried away, and that over the White River damaged and buried by the filling up of the river bed.

"The Easington, Morant, and Stanton Roads suffered considerably also from these flood rains.

"Immediate steps were taken to put traffic through.

"On many roads large culverts were substituted, walls built, widening done, groins provided, wooden foot bridges renewed."

Portland.

"The roads of this parish were kept in good order until the occurrence of the November floods, by which those sections west of St. Margaret's Bay were much damaged. The necessary repairs were promptly taken in hand, but before the work of restoration was complete, towards the end of March, further destructive rains fell, so that at the end of the financial year the condition of the roads was not as would be desired.

"These floods also altered the courses of the Swift, Spanish, Buff Bay, and White Rivers, rendering necessary much protective and training work. A portion of the Swift River Road near to the bridge was widened."

St. Mary.

"The roads were kept in good order until November 11th when the floods occurred. Numerous landslips and severe scour of surface of the hill roads resulted.

"Heavy seas damaged a portion of the sea wall along the section of Port Maria to Oracabessa. Unfortunately at the close of the year (in March) the parish was visited by another flood which occasioned further damage.

"Beyond the injury to the north-east wing wall of the Llanrumney Bridge the bridges in the parish did not suffer damage."

Clarendon.

"Most of the roads of this parish suffered considerably from the effects of the November floods, chiefly landslips and scour. At the eastern approach of the Hermitage Bridge, a small breach some 60 feet long occurred. A 12 feet filling was made so as to serve the purpose of a roadway. The protective works above the bridge were for the most part destroyed and the state of the bridge and approaches would be precarious were a similar flood to recur."

St. Catherine.

"The roads throughout this parish were all in good condition up to November 6th, when the floods did immense damage. The northern approach of the Rio Cobre bridge near Spanish Town was scoured out. On the Bog Walk Road the river rose to 22 feet above ordinary water level and 16 feet above the level of the Flat Bridge. This section was severely scoured and a portion of the roadway washed away. Heavy falls of rock occurred in one instance and a mass of 2,000 tons completely blocked the road, necessitating a deviation of the road temporarily and necessitating the building of a long retaining wall. Both approaches to

Harkers Hall and Devil's River Bridges were washed away, necessitating the building of retaining walls. At the close of the year the condition of the roads was for the most part indifferent."

92. The sum of £15,023 was spent on new works on main roads and bridges. These have consisted principally of improvements in the grades of existing roads by deviation, but some of them have been sections of new main roads or improvements to existing roads with a view to extending them and making new main road connections.

Such have been the works done in improving the road leading from Kingston to Mount Charles on the borders of St. Andrew and St. Mary Parishes, with a view to establishing a connection with a main road recently constructed from Richmond Station in St. Mary towards Rock River. Provision has been made on the Estimates of the current year for further improvements on this road between Kingston and Mount Charles and for the construction of a section in St. Mary's Parish from the direction of Richmond Station. When completed, this road, which passes altogether through fertile and settled lands, will give the shortest line of transit between Kingston and the important railway centre of Richmond. Similarly, £3,916 was spent on a new main road starting from an existing main road two miles from Catadupa Station, connecting that road with the station (a fine bridge being made over the Great River) and passing on into the mountains into a fertile district at an elevation of about 2,500 feet, whence it can easily be extended to join the interior main road in Trelawny. Hitherto there has been no access to Catadupa Station except by bridle roads or very rough and steep cart tracks. A road similarly improving access to Cambridge Station was completed during the year.

93. A considerable amount of the work that is now being done and that has still to be done on main roads consists of improving the roads that were made at the charge of Loan Funds about 20 years ago, and which then followed in some instances the lines of old parochial road with very bad grades. The work was done rapidly, the encouragement of new cultivation to take the place of sugar being urgent at the time. The original expenditure has so far well served its purpose in developing settlement and planting, but the roads in many cases can only be brought to their fullest possible utility by improvements of the character now being carried out. The present rule of the Government in laying out new main roads is to limit the grades to a maximum of 1 in 16, and as a rule not to exceed 1 in 20, over which the rapid haulage so necessary to the banana trade can be effected.

Such roads necessarily cost more to construct in the first instance, but the road policy of former Administrations has so far effected its aim of encouraging cultivation and traffic, that the Island can now afford to carry out the construction of main roads under less urgent pressure of economic necessity, although the slower policy of construction, and the determination to make these improvements out of revenue and not by means of borrowing money, naturally causes some impatience in districts not yet sufficiently served by roads.

94. A considerable amount of work arising out of destruction caused by the earthquake was completed during the year. At the lunatic asylum the work of rebuilding the female ranges, including accommodation for paying patients, medical officers' quarters, clerk's offices, store rooms, dispensary, bathrooms, &c., was nearly completed.

95. At the public hospital all the old buildings at the north-west corner were removed and an entirely new block of two stories erected for the out-patients' department and general offices. A new ward for females, named the Rietti Ward, was nearly completed, the cost having been provided for by a legacy of £2,000 bequeathed by Miss Ann Rietti. Extensive repairs and improvements were carried out in other parts of the hospital premises. The restoration of the Government Printing Office was completed. The work of restoration on the General Penitentiary was proceeded with, leaving but little earthquake damage outstanding. The preparation of a site for the new female prison was completed and a sea wall built. The new Government Rum Stores were completed by the erection of the third warehouse. The total floor area of these stores is about 100,000 square feet, and they are capable of accommodating 4,500 puncheons, exclusive of the space assigned for vats and offices. A new Court House was erected at Stony Hill with accommodation on the lower floor for the police. The old Police Station and Court House, formerly part of the old military barracks, was thus vacated and applied for use as a Girls' Reformatory. The girls, who had hitherto been housed in an enclosure within the adjoining Boys' Reformatory, were removed from this undesirable place of confinement. The erection of new buildings at Sutton Street (Kingston) Police Station was completed and increased accommodation made for cells, kitchens, patrol wagons, and a recreation room. The reconstruction and sanitary improvement of the Police Station at Port Antonio was completed. The reef at the entrance to the harbour of the same port was partially blasted away and the depth of the water was thereby increased from 16 feet to 30 feet. The construction of a reservoir and other improvements of Port Antonio Water Works were completed or continued during the year. A concrete dam, 45 feet high, estimated to impound ten million gallons of water, was built and an additional 6-inch main laid down. Improvements were made on the Spanish Town Water Works by the erection of a high service tower and two hydraulic rams.

96. The Department put forth exceptional efforts to restore communication by road, post, and telegraph after the floods of November, 1909, and succeeded in a creditably short time in removing obstructions to traffic.

Lighthouses.

97. The lighthouses were maintained in a good state of repair and the services efficiently carried out. At Plumb Point general repairs and painting were done. The new incandescent oil vapour lamps (recently installed) continued to give satisfaction.

PLAN (referred to in paragraph 100) showing lines of town improvement in the City of Kingston, and position of new Public Buildings and Gardens.

Plan of part of the City of Kingston showing the improvements that have been effected.

Barry Street widened to 50 feet and reconstructed from Kingston Pen Road to Duke Street, and planted with trees.

Tower Street widened to 50 feet and reconstructed from Orange Street to Duke Stre-t, and planted with trees.

Peters Lane widened to 50 feet and reconstructed from Barry Street to Tower Street, and planted with trees.

Port Royal Street reconstructed to original width of 40 feet for its entire length.

Pechon Street continued to join Port Royal Street, and reconstructed (to be extended to the wharves on the sea front, and planted with trees).

AA Public buildings erected and in course of erection.

BBBB Gardens that have been laid out.

CCCC Surplus lands for sale.

D Site for City Council and Kingston General Commissioners Offices.

(1) Pechon Street, Orange Street, Church Street, Duke Street, and East Street improved by the removal of encroachments on side walks.

(2) Lines of improved streets shown by heavy margin.

(3) Corners of junction of King Street and Harbour Street enlarged by rounding off.

Rio Cobre Irrigation Works.

98. The canals and works were maintained in good order until at the time and after the November floods when the large 36-inch iron syphon at "Jones Dam" was washed out and partly destroyed and the retaining wall at the head works was carried away by the flood in the Rio Cobre resulting in the cutting of the main canal. To restore these damages entailed a large expenditure.

Of the total expenditure £2,911 12*s.* 1*d.*, was due to flood damages expended during that year. The expenditure upon ordinary maintenance was £1,968 8*s.* 4*d.*

The earnings for the year amounted to £9,931 7*s.* 1*d.*, and the collections £9,893 8*s.* 3*d.* The earnings were £359 4*s.* 5*d.* less than the preceding year and the collections £254 19*s.* 2*d.* less than the previous year. The falling off of revenue for the year is due to rebates allowed on charges to consumers in the area north and east of the Rio Cobre River which were cut off on account of the damage to syphon across the river by the floods until February 12th, 1910.

The Rio Cobre rose to an abnormal height—the greatest depth recorded over the dam being 12 feet 9 inches, which is the highest on record, with an estimated discharge of 8¼ million cubic yards per hour.

99. The first block of the new Public Buildings was completed about the end of the year and has since then been opened for public business.

100. From the time (1870) when the seat of Government was transferred from Spanish Town to Kingston, the various Government Departments except the printing office have been housed at haphazard in such domestic mercantile and disused military or municipal buildings as were from time to time found available in various parts of the city. After the earthquake and fire of January, 1907, which destroyed so large a portion of Kingston, the Government acquired a rectangular area extending on both sides of King Street, which is the main thoroughfare of the city, from north to south connecting Harbour Street—which was up to that time the principal business thoroughfare—with the Parade Gardens or Central Park of Kingston. A plan is annexed showing how this area is situated. It will be observed that two blocks of Public Buildings have been provided for, one on each side of King Street, enclosing between them a space laid out with gardens and trees. The western of these two blocks is that which has been completed. It accommodates the Post and Telegraph Offices, the Treasury and Savings Bank, the Collector-General's Offices, the Stamp Office, the Offices of the Collector of Taxes for Kingston, and of the Earthquake Loan Board and the Customs Office, and on the uppermost floor the Audit Office. In short, all the financial offices of the Government and their accounting and controlling staffs are provided for in this building. Since the end of the year, the financial departments have entered upon their new quarters, but the Post Office has not yet been transferred to them, on account of delay in procuring the necessary furniture. New furniture and fittings have been made for the

offices of a very solid character of native hard-wood. Unfortunately the difficulty of procuring seasoned wood and of finding skilled workmen to make the furniture has caused considerable delay in the completion of this equipment.

101. The eastern block of Public Buildings will be devoted for the most part to Judicial departments. It will contain the Supreme Court and all the necessary offices connected with the transaction of business in that Court, the Law Library, the Attorney-General's Offices, the Administrator-General's Offices, and the Registry of Titles to Land. The Kingston Court and its offices will also be housed there. The upper floor will be occupied by the Inspector-General of Constabulary and Prisons, the Surveyor-General's and Land Offices, and the Education Department and Board of Education Offices.

Tenders have been invited for the construction of this block, the eastern façade of which will overlook an open space of ornamental garden extending to Church Street. The streets around and adjacent to the area allotted to the public buildings have been widened and improved. Part of Barry Street, which runs east to west on the northern side, has been widened from Duke Street (in which Headquarters House, with the Colonial Secretary's Office and the Legislative Council Chamber, as well as the offices of most of the legal practitioners are situated) up to the railway station, and has been planted with trees on both sides. Tower Street on the south of the Public Buildings Square has been widened and planted with trees from Duke Street to Orange Street, which is the next most important thoroughfare to King Street running from south to north. Peters Lane, which was a narrow thoroughfare on the western side, has similarly been widened and will be planted with trees. On the southern side of Tower Street a wide strip of ground was acquired in order to give greater space about the public buildings, both for appearance sake and for protection from fire. This has been laid out as ornamental gardens. The Bank of Nova Scotia, which faces the southern end of the financial block, has also laid out a garden along its northern frontage, thus increasing the space devoted to ornamental effect. The façades of the buildings surrounding this square have been carefully controlled under the advice of the Government architects and the surveyor of the building authority.

At the northern end of the open space, where it is traversed by King Street, arcaded crescents have been built to round off the widened area. Photographs* of the public buildings showing part of these improvements are annexed. The new buildings are constructed of reinforced concrete throughout, with steel casements, and are exceedingly cool, airy, and convenient for the transaction of business. They were designed by Messrs. Nicholson and Corlett, Architects, and built by Messrs. W. Cowlin and Sons of Bristol.

102. The rebuilding of King's House was also completed within a few weeks of the close of the year under report. The work was designed by the same architects and carried out by the same contractors. Photographs* of several aspects of the building are annexed.

* Not reproduced.

103. A very considerable amount of new substantial building is now visible in the streets of Kingston. Some of the buildings are architecturally admirable; many of them, having been designed without competent architectural advice, are somewhat unfortunate in appearance, but, for the most part, the effect is an immense improvement on the Kingston of the pre-earthquake period. Gaps in Harbour Street and King Street are suitably and rapidly being filled up, and I believe that in a few years' time, the city will be able to claim to be the best laid out and, architecturally, the most attractive town in the British West Indies. I may mention that, in addition to the widening of the streets immediately around the public buildings, Port Royal Street, the principal business thoroughfare along the water-side, has also been widened since the earthquake and improved access from the railway has been given to the wharves used by the majority of the principal passenger lines by the extension of Pechon Street into Harbour and Port Royal Streets. It is proposed still further to improve this access by removing the ruined buildings hitherto occupied by the Customs Department, so as to give a better approach from Port Royal Street to the wharves.

X.—GENERAL OBSERVATIONS.

104. The year was, on the whole, one of prosperity and progress for the Island, notwithstanding that some districts suffered from drought and others from the exceptional storm of November, 1909. The effects of drought were most felt in those localities which habitually suffer from that cause, viz., the district of Vere towards the end of the sugar crop, the Pedro district of St. Elizabeth (where the winter corn crop was lost) and the southern district of the parish of Manchester, on the circumstances of which I reported fully last year. I regret to say that, owing to recurrence of drought this year, the people of that district have been unable to respond satisfactorily to the efforts made to assist them to improve their cultivation, and pauperism continues to prevail.

105. The damage done by the November storm to bananas, cocoa, yams, and in a smaller degree to other less important crops, was considerable, and seriously affected the export of bananas and cocoa. The generally excellent weather of the succeeding period has, however, now completely re-established the condition of plantations and provision grounds through the Island. At the date at which I write it would appear that the prospects of a good crop for the coming season are assured in all the districts of the Island in which the sugar-cane is cultivated for the production of sugar or rum. Unfortunately the disorganised state of the rum market may discount this advantage for those estates (considerably in the majority) which rely upon the production of Jamaica rum, and are not equipped with modern sugar-making machinery. I am glad to say that the tendency to equip sugar estates for this purpose has received encourage-

ment by the success of recent ventures in the equipment of factories, and bids fair to progress further.

106. The effects of the storm of November, 1909, which, whilst they were much exaggerated to the prejudice of the Island by alarmist telegrams at the time, were unquestionably violent and severe, but were met and combated with great cheerfulness, energy, and resolution by the classes affected by them, should serve as a reminder that the Island is much more largely dependent for its income and support upon one single very easily destructible crop, the banana, than is at all satisfactory. The encouraging experiences of sugar planters during the last ten years, and the improvement in the price of cocoanuts have accordingly been specially valuable in calling attention to the profits of those staples. The attraction of banana cultivation lies in the quick returns and high profits which it yields in successful years; but the periodical losses are considerable, and when the fields are blown down their yield is destroyed for a year. Tougher cultivations, such as cotton, and possibly rubber, will probably not be greatly extended until the profits of planting bananas have been reduced by the exhaustion of soils and the consequent increase of the cost of cultivation, and at the same time money has been saved for investment in more permanent and slower-yielding staples. The extension of the skilled cultivation of bananas (as distinguished from the small peasants' cultivation) still progresses: the United Fruit Company continues to lease or buy neglected properties and turn them into banana plantations; and I am glad to be able to report that similar operations with local capital, by syndicates and individuals, have also been witnessed during the year of report. These developments, when successful, are, however, I regret to say, not very frequently due to capital or personal ability introduced direct from Great Britain, although several opportunities have recently been offered to British investors to take shares in large undertakings for planting in this Island.

107. The enquiry is frequently made whether Jamaica offers a good field for the investment of British capital in planting enterprises, or for a livelihood to young men with a moderate patrimony. There can be no question that planting in Jamaica has been yielding large profits during recent years; but these profits have been earned by the application of high ability in the handling and financing of large enterprises, either by corporations, such as the United Fruit Company or by a few individuals in the Island, and of personal knowledge, ingenuity, and industry on the part of individual agriculturists in no inconsiderable numbers. The young men of the class with regard to whose prospects as immigrants enquiry is made have too frequently neither of these endowments, and both are indispensable to success. They may attain the latter, but they must serve a more than nominal apprenticeship before they can hope to make money in planting here. Nor, I regret to say, have the directors of certain British companies and syndicates that have taken in hand the planting or fruit dealing businesses in Jamaica shown that grasp of sound business methods and that apprecia-

tion of the conditions to be coped with which enables the United Fruit Company and others with American capital continually to extend their profitable interests in this Island, nor even, in some instances, a reasonable modicum of financial conscientiousness or prudence in their engagement. Such enterprises unjustly damage the good repute of the Island's resources which, to capable and straightforward enterprise, have yielded and continue to yield a substantial return.

I have, &c.,

SYDNEY OLIVIER,
Governor.

The Right Honourable
The Earl of Crewe, K.G.,

No. 681.

TURKS AND CAICOS ISLANDS.

(For Report for 1909, *see* No. 646.)

THE ACTING GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
10th June, 1911.

SIR,

I HAVE the honour to transmit herewith for your information, a copy of the Blue Book of the Turks and Caicos Islands for the year 1910, together with two copies of the Commissioner's report thereon.

I have, &c.,
P. C. CORK,
Acting Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State
for the Colonies.

(20669—2.) Wt. 31959—459. 1125 & 85. 7/11. D & S. A 2

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR 1910.

FINANCIAL.

The revenue of the year 1910 amounted to £8,646, while the expenditure was £6,827, there being thus a surplus of £1,819, the largest on record with the exception of that in 1896. The excess of revenue over expenditure was due, in a great measure, to the continued demand for stamps of the new issue and to sales of Crown lands in the Caicos Islands. The royalty on salt and port dues were again below the estimates, being £1,716 and £494 as against £1,816 and £552 in 1909, which falling off was due to the damage done to the salt ponds in November, 1909. The expenditure under Public Works Department includes an amount of £631, mainly for the survey of the Caicos Islands, which is now practically completed.

Finances.

Year.	Revenue. £	Expenditure. £
1906	6,809	7,080
1907	7,391	7,119
1908	7,404	11,430
1909	7,748	7,454
1910	8,648	6,827

including £4,000 in 1908 and £800 in 1909 for hurricane relief.

Revenue.

	1909. £	1910. £
Import Duties	3,198	3,494
Royalty on Salt	1,816	1,716
Port Dues	552	494
Licences and Internal Revenue	227	187
Payments for Specific Services	125	166
Post Office	1,458	1,237
Revenue from Government Property ...	160	1,209
Interest	202	135
Miscellaneous	10	8
	£7,748	£8,646

Expenditure.

	1909. £	1910. £
Pensions	245	333
Commissioner's Department	1,836	1,858
Judicial Department	453	213
Forward	£2,534	£2,404

	1909. £	1910. £
Forward	2,534	2,404
Police and Prisons Department	698	764
Medical Department	545	584
Paupers	283	329
Education	600	600
Registration and Vaccination	17	22

Public Works Extraordinary	2	—
	£6,654	£6,827
Hurricane Relief	800	—
	£7,454	£6,827

Assets stand at £8,994, and Liabilities at £3,326, showing a balance of Assets of £5,668. There is no Public Debt.

LEGISLATION.

The following Ordinances were passed in the Legislative Board:—

No. 1.—Supplementary Appropriation Ordinance, 1909.
No. 2.—Appropriation Ordinance for 1911.
No. 3.—Customs Additional Tariff Ordinance.
No. 4.—Salt Producers Relief Ordinance.

The objects of the last two ordinances will be dealt with later under General Remarks.

VITAL STATISTICS.

There were 187 births, or 35 per thousand, and 87 deaths, or 16 per thousand.

The estimated population to the square mile was:—

	Population.	Per square mile.
Grand Turk	1,751	175
Salt Cay	453	113
Cockburn Harbour	702	87
Caicos Islands	2,381	16
	5,287	31

1,805 persons were employed in the salt industry, 433 in agriculture, and 125 in commerce.

EDUCATION.

In spite of the hard times, the average attendance in the three salt settlements, where the provisions for enforcing attendance are applied, was excellent, and the results of the annual examination were favourable. The average numbers on the roll in the dependency were:—

Grand Turk	309
Salt Cay	73
Cockburn Harbour	168
Kew	97
Blue Hills	97
Lorimers	103
Bottle Creek	111
	958

The population, according to the Census of 1901, was 5,287.

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports and exports during the year were valued at £24,202 and £24,461, as against £25,262 and £18,936 in 1909 respectively. The exports in salt fell from £15,732 to £14,889, in spite of favourable prices, the small shipments being due to the disastrous floods in November, 1909, which did more damage to the industry than the hurricane of the preceding year. The exports of sisal rose from £608 to £7,351, while those of sponges increased from £953 to £1,316.

The value of the imports and exports during the past five years has been:—

	Imports. £	Exports. £
1906	27,572	24,940
1907	27,660	23,817
1908	24,426	24,798
1909	25,262	18,936
1910	24,202	24,461

During the year the trade was with the following countries:—

	Imports. £	Exports. £
United Kingdom ...	422	422
British Colonies... ...	3,629	3,799
Foreign Countries ...	20,151	20,240
	£24,202	£24,461

Articles of Export.

	Value in:— 1909. £	1910. £
Conchs	510	559
Sisal	608	7,351
Salt	15,732	14,889
Sponges	953	1,316
Miscellaneous	1,133	346
	£18,936	£24,461

Shipping.

The total tonnage of vessels entered and cleared during the period 1906 to 1910 was:—

Year.	Tonnage.
1906	357,960
1907	354,453
1908	410,195
1909	433,340
1910	385,763

Comparative statement of shipping cleared for the years 1909 and 1910:—

Nationality.	Sailing.		Steam.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
British	148	8,556	17	44,063	165	52,619
United States	4	3,639	39	58,876	43	62,565
Others	88	2,704	58	74,707	146	77,411
Totals, 1910	240	14,949	114	177,646	354	192,595
Totals, 1909	220	24,064	112	192,786	332	216,850

CRIMINAL STATISTICS.

The Police Force consists of 1 inspector, 2 sergeants, 1 corporal, 2 lance-corporals, 3 constables, 2 revenue constables, and 10 district constables, or 21 in all.

Offences reported to the police	182
Number of persons brought before the magistrates	182
Summary convictions:—	
Offences against property with violence to the person	—
Other offences against property	17
Other offences against the person	35
Other offences	84

Convictions in the Superior Court:—	
Other offences against the person	2
Other offences	2
Number of persons acquitted:—	
In the Superior Court	3
In the Inferior Courts	46

METEOROLOGICAL OBSERVATIONS.

The rainfall, taken at 9 stations scattered throughout the Dependency, recorded 23·40 inches, the wettest month being October, when 3·77 inches were registered, whereas only ·54 inch fell in May. For the following observations the Dependency is indebted to the United States Weather Bureau Station at Grand Turk. The rainfall recorded during the last five years has been:—

	Inches.
1906	28·36
1907	28·49
1908	41·37
1909	39·97
1910	26·73

and was in 1910 considerably below that of 1908 and 1909. The coolest and the hottest months were January and July, the mean being 68·7° and 82·4°, respectively.

Mean temperature for the year	78·2°
Mean pressure	30·072
Lowest temperature (9th March)	62°
Maximum temperature (18th August and 27th December)	91°

During January and February the recording thermometers were out of order, and accurate records were not obtainable.

The prevailing winds during the year were:—

	Days.

Deposits during the year	1,003
Withdrawals during the year	804
Total amount at credit of depositors	2,646

	£
Amount of invested funds	2,436
Interest credited to depositors	49
Interest on investments	65

Number of depositors, 281.

Rate of interest paid to depositors, 2 per cent.

POSTAL AND TELEGRAPHS.

During the year, an internal service for the delivery of letters at the three principal settlements was established on a tentative scale, and an issue of ¼d. stamps was put in circulation for that purpose. Unfortunately, the steamers of the Imperial Direct West India Mail ceased running early in 1911 at the termination of the contract, and the Dependency was deprived of direct communication with the mother country. The only steamer by which letters and parcels post can come through British possessions is now the "Boston," a Norwegian vessel which is subsidised for calling about once a month both on her way to and return from Jamaica, from Nova Scotia. Most of the mails to and from the United Kingdom have to be carried, viâ New York, by the steamers of the Clyde Line, which call at Grand Turk on the voyage to and from San Domingo at intervals of 14 days each way.

The line of the Direct West India Cable Company between Halifax, Bermuda, and Jamaica is connected with Grand Turk. The Company supplies a news bulletin daily, in respect of which an annual grant of £120 is made.

GENERAL.

Early in May the sad and unexpected tidings of the demise of His Majesty King Edward VII. arrived, and unfeigned expressions of deep sorrow were manifested by all classes throughout the Dependency. Memorial services were held in all the churches on the 20th May. On the 12th May, His Majesty King George V. was proclaimed with such ceremony as was possible in the presence of a large gathering of loyal subjects.

As already stated, the rainfall in 1910 was lower than for any year since 1900, so that the weather conditions were extremely favourable for the production of salt, but raking, owing to the loss of brine in the floods of November, 1909, was impracticable before May. The months which are usually the most productive were therefore lost, and, as a considerable quantity of salt already raked had been destroyed by the heavy rains, the shipments throughout the year were light, being even less than those of the previous year, one of the most disastrous on record. The floods of 1909 had, in fact, proved the culmination of a succession of misfortunes to those engaged in the industry now reduced to hopeless pecuniary embarrassment from which it could not be extricated but by exceptional measures. Putting aside one or

two more fortunate than their neighbours, the salt pond owners were compelled to carry on operations by means of advances, and were only able to do this by the forbearance of commercial houses abroad.

The memorial addressed to the Crown, signed by working proprietors responsible for about four-fifths of the salt exported which was mentioned in my last annual report, was forwarded early in the year, praying that a Commission be appointed to inquire into the conditions and prospects of the salt industry, with a view to the immediate repeal of the royalty, in order that the impending commercial ruin and possible ultimate abandonment of the salt ponds might be averted. The memorialists affirmed that the United States which, in years past, had been largely dependent upon foreign salt for their supply, were now, owing to the development of the domestic salt industry, able to produce practically all that was required for their consumption, and that, in consequence of the keen competition of the other salt-producing sources, principally the Mediterranean and the Dutch West Indies, they had been compelled to dispose of their crops at prices below the cost of production. The proportion of the salt imported to the total consumption in the United States had, it was pointed out, fallen from 36·5 per cent. in 1880 to 4·3 per cent. in 1906, domestic salt thus providing 95·7 per cent., while Porto Rico was exporting, in increasing quantities, salt of excellent well-matured quality, which was admitted free into the United States market, before reaching which Turks Islands salt had to pay 6 cents a bushel import duty. Since 1873, the salt industry had contributed largely to the general revenue in the form of royalty and light dues, while other enterprises had escaped the direct burden of an export tax. The incidence of taxation on the produce of these Islands had, in fact, rested solely on the salt exported. With the market price at 3½*d.* a bushel, salt paid £10 on the value of every £100 worth of salt shipped; at 3*d.* a bushel, £11 13*s.* 4*d.*; at 2½*d.* a bushel, £14. In reply the signatories were informed that, although it was not considered anything would be gained by the appointment of a special commission and that the question of the total abolition of the royalty could not be entertained until every other measure of relief had been exhausted, the depressed circumstances of the salt industry were recognised to be of so grave a character that active efforts would be made to improve the condition by grants-in-aid, first, to the working proprietors to rescue them from their more immediate financial difficulties, and, secondly, to a fund to provide for the more economical working of the ponds, the prevention of wastage by exposure to the atmosphere of salt when raked, and the permanent improvement of the common property. The principles to be followed in the distribution of these grants were:—

(1.) That there be no addition to the financial burdens of the Dependency by the grants-in-aid causing an excess of expenditure over general revenue.

(2.) That the reserve funds be not touched to provide such assistance, but be held strictly to meet losses from hurricanes and emergencies arising from similar disasters.

(3.) That the assistance given be met chiefly by retrenchment in the cost of administration and that whatever additional taxation might be required be in a form calculated to be least burdensome to the community in general, and not derived from extra duties on essential articles of food consumed by the labouring population.

(4.) That the grants be given for the present or future relief of the industry and not for the liquidation of existing obligations, and be disbursed through the Treasury in accordance with the official financial regulations.

(5.) That the amounts for the immediate relief of the working proprietors be in the form of payments for manual work performed by labourers in or about the ponds.

(6.) That the grants be given for a certain number of years, so that the owners could have reasonable assurance of aid sufficiently prolonged for them to tide over their difficulties.

In accordance with the foregoing principles, two ordinances, the Salt Producers Relief Ordinance and the Customs Additional Tariff Ordinance, which will remain in force until the end of 1920, were passed by the Legislative Board in November.

Under the former ordinance a Board was appointed to administer a fund established for the improvement and development of the common property. The constitution of the Board is similar to that of the Legislative Board, the Governor having the power to decide the amounts of the grants to be placed on the annual Estimates. If, at any time, it appears that the ordinance is not achieving the objects proposed, it will be possible, by the suspension or material reduction of the grants, to hold its operation in practical abeyance.

So far as retrenchment can be effected consistently with the bare requirements of efficient government, the deficit likely to be occasioned by the proposed measures of relief will be met by rigid curtailment in the cost of administration. It was found possible in the estimates of expenditure for 1911 to make reductions, entailing no serious loss of efficiency, of about £1,400, which, as the amount of £1,800 was required for relief purposes, left £400 to be provided from other sources. After careful thought, it was decided to raise the necessary amount, £400, by increasing the specific duties on alcoholic liquors, tobacco, and oil, leaving untouched articles of everyday consumption. In comparison with the duties levied in other West India Islands from the articles on which the increase is to be gained, the duties are still light.

In December, the survey of Blue Hills, North Caicos, and Middle Caicos, under contract by Mr. E. G. Reid, was completed. The survey was commenced in the early part of 1908, and Mr. Reid spent nearly 19 months in the field, carrying out a lineal mileage of 324 miles, nearly the whole of which had to be cleared by labourers. Much difficulty was encountered by the necessity for re-opening lines of old patented lands in which few traces of natural or artificial features were obtainable. Where such features had been inserted in the old plans, they were found in almost every case to be incorrect or unreliable. Many of the small settlers and squatters laboured under the impression that,

inasmuch as the land belonged to the Crown, it would be allotted to them free of cost, and delayed the work by not putting in applications for their plots until the latest moment possible. The maps of the three islands prepared by Mr. Reid give the following areas:—

Middle Caicos.

	Acres.
Total area	25,379
Less lands privately owned and Crown lands in process of alienation	9,513
Remaining Crown land (11,191 acres in pine)	15,866

North Caicos.

	Acres.
Total area	24,953
Less lands privately owned and Crown lands in process of alienation	8,561
Remaining Crown land (940 acres in salt ponds)	16,392

Blue Hills.

	Acres.
Total area	22,594
Less lands privately owned and Crown lands in process of alienation	4,921
Remaining Crown land (1,189 acres salt pond and 8,540 acres leased)	17,673

	Acres.
Total area of three islands	72,926
Less privately owned and being alienated ...	22,995
Remaining Crown lands	49,931

In North Caicos all applications received were settled, so that there is no claim of any nature for lands as against the Crown, and all the several lots, including private lots, have been surveyed. In Blue Hills all the claims against the Crown have been settled, most of them having arisen through the Executor of the Stamers Estate having sold by mistake Government land to some small proprietors, which matter was satisfactorily arranged. An application dated the 14th January, 1910, for the sale of the remaining Crown lands was made by Mr. Reid, acting on behalf of the Government, for the purpose of ascertaining if there were any other outstanding claims, but, as no caveats were lodged within the period prescribed by law except by the purchasers from the Stamers Estate, whose claims, as has been stated, have been satisfied, no question can arise in the future. In Middle Caicos, also, all authentic claims have been settled. Some persons on this island, claiming lands by virtue of direct purchase

from the Bahamas or the local Government, were called upon by Mr. Reid to establish their claims, but no records being forthcoming and no caveats being lodged against their sale by the Government, the Crown lands are clearly defined.

Since the commencement of the working of the Crown Lands Ordinance of 1896, 833 applications for land throughout the Dependency have been received, 543 for the purchase of unoccupied land and 290 for holdings. Of these applications, 343 were from North Caicos, of which 296 have been surveyed; 62 from Blue Hills, of which 50 have been surveyed; and 46 from Middle Caicos, of which 20 have been surveyed. The plots which have not been surveyed were in possession of applicants who either sent in their claims and applications too late or who withdrew them.

The expenditure under Mr. Reid's contract was:—

	£
1908	422
1909	591
1910	627
Total	£1,640

while during that period the receipts from the sale of Crown land were:—

	£
1908	140
1909	128
1910	1,182
Total	£1,450

Outstanding instalments of payments for small plots and five yearly payments of about £150 each for Crown lands at Blue Hills and North Caicos sold to the Colonial Fibre Planting and Trading Company will more than cover the difference between the receipts and expenditure arising from the cost of the recent survey. It will, I hope, soon be found practicable to replace the Crown Lands Ordinance by one authorising the registration by title of all lands in these Islands.

Although the export of sponges rose from £953 in 1909 to £1,316 in 1910, there are clear indications that, within a short time, a more or less definite depletion of the beds within the Dependency, as elsewhere where the fishery is prosecuted with success, will arise. The demand for sponges, especially for those used in arts and industries, is constantly increasing, and is exceeding the supply. Already substitutes, such as loofah and rubber, are being sold, but they cannot adequately replace sponges for domestic and other purposes. The depletion has been caused by the destructive methods of fishing and the gathering of immature sponges before attaining the size and age when they could give larval sponges for replenishing those taken. Legislative action will be imperative, if the local fisheries are not to be exhausted, to meet the following objects:—

(1.) The determination of the minimum size of the base of sponges allowed to be taken, sold, and exported.

(2.) The restriction or prohibition of certain instruments for gathering the sponges or scouring the bottom of the banks in places where the depth is less than a certain number of fathoms.

(3.) The establishment of close periods, not so much as to seasons as to areas already depleted, so as to allow the young sponges sufficient time to grow to a suitable size for sale and for propagation.

(4.) The encouragement of sponge culture by securing to those engaged in the industry the sole right, within certain well-defined restrictions, of certain areas for raising sponges by artificial means. Sponges may be artificially multiplied and improved by grafting, from the egg, and from cuttings. The first two methods require great skill and are impracticable for those generally engaged in the industry, but the growth of sponges from cuttings is a feasible method of cultivation, provided suitable methods of handling and attachment are adopted. Experiments with small cuttings of about 1 × 1 × 1½ inches, or about 120 cuttings from a 6-inch sponge show that, growing at the rate of 1 inch in a year, they would in 4 years give a size of 75 times that of the original sponge. It has, however, been fairly established that, for commercial purposes, equilateral cuttings of from 8 to 10 cubic inches, or about 1½ × 2½ × 3 inches, are the most suitable. These cuttings are raised on the sea bottom or on discs mounted so as to allow the salt water currents to have full play below the sponges. Discs, about 10 inches in diameter and 1¼ inch thick, perforated by two holes and made of a composition of 1 part cement to 3 to 4 parts of sand, with spindles, are the best form of attachment, and the cuttings are bound to the discs by short pieces of aluminium wire passed through the holes. It will be interesting to see how far scientific cultivation will be able to meet the ever-increasing demand.

The sisal plants are gradually recovering from the effects of the hurricane of 1908, the value of the fibre exported from the Dependency rising from £608 in 1909 to £7,351 in 1910. The present low price obtainable is a serious consideration, and financial success in fibre cultivation can only be obtained by the most rigid economy.

Although the Dependency has a substantial reserve fund to meet serious emergencies and has not suffered, in recent years, as many of the smaller sugar-growing West India Islands, to an extent to require Imperial assistance, the greatest caution in administration will have to be exercised until the staple industries have emerged from their uncertain and embarrassed condition.

F. H. Watkins,
Commissioner of the
Turks and Caicos Islands.

(For Report for 1909-10, *see* No. 662.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House, Jamaica,
10th November, 1911.

SIR,

I HAVE the honour to report on the Blue Book Returns of this Government for the financial year ended the 31st March, 1911.

I.—FINANCIAL.

1. The revenue and expenditure of the year, under the Heads of Estimates, compared with those of the preceding year, were as follows:—

REVENUE.

Heads.	Receipts, 1910-11. £	s.	d.	Receipts, 1909-10. £	s.	d.
Customs	448,448	1	3	465,080	18	6

EXPENDITURE.—*continued.*

Heads.	Payments, 1910-11.	Payments, 1909-10.
Railway	104,003 7 3	110,564 4 11½
Transfer to Insurance Fund	—	50,000 0 0
Manufacture of nickel coin	311 4 11	—
	£987,304 9 5¼	£1,033,794 12 7¼

2. The total revenue and expenditure for the last five years have been as shown below:—

	Revenue. £	Expenditure. £
1906-7	887,228	828,115
1907-8	1,021,937	935,427
1908-9	933,751	911,095
1909-10	992,976	1,033,794
1910-11	990,399	987,304

3. The revenue for 1910-11 exceeded the estimate by £29,081, but was less than the revenue of the previous year by £2,577. Compared with the receipts for 1909-10, decreases of revenue occurred under the following heads:—

Customs, £16,632; Port and Harbour Dues, £874; Railway, £2,216; Rents, £99; Interest, £1,709; Miscellaneous Receipts, £4,010; while there were increases under Rum Duties, £4,611; Tobacco Duty, £1,916; Property Tax, £1,039, Resident Magistrates and Petty Sessions Courts Fees, £990; Irrigation Receipts, £827; Post Office and Telegraph Revenue, £3,699; Land Sales, £410; and face value of Nickel Coin imported, £950.

4. The decrease in Customs duties is in part attributable to the fact that during the year condensed milk, galvanzied iron for roofing, galvanized iron wire for fencing, and artisans' tools were placed on the free list of the tariff law, while the duty on laundry soap was reduced from 5*s.* 6*d.* to 2*s.* 6*d.* per 100 lbs.

5. The expenditure was £987,304, being less than that of the previous year by £46,490.

6. A comparison of the expenditure with that for 1909-10 shows decreases under Printing Office, £1,420; New Government Buildings and King's House, £41,112; Railway, £6,561; Rio Cobre Canal, £1,550; Spanish Town Water Works, £500; Transfer to Insurance Fund £50,000; Maintenance of Main Roads and Bridges, £2,264.

7. There were increases under Charges of Debt, £5,552 (balanced by reimbursements on Earthquake Loans); Pensions, £1,257; Immigration, £3,781; Post and Telegraph Offices, £5,110; Medical, £6,669; Constabulary and Prisons, £3,120; Education, £4,602; New Works on Main Roads, £18,665; Maintenance and restoration of Public Buildings, £4,036.

8. The Government closed the year with a surplus of assets over liabilities on general revenue account amounting to

£169,177 9*s.* 8*d.*, having also £100,000 invested out of surplus balances as an insurance fund to provide for the repair of damage to Government property by hurricane, fire, or earthquake.

9. £36,976 6*s.* 11*d.* stood as advanced on the 31st of March, 1911, to the Earthquake Loan Board in addition to the loans amounting to £200,000 which had been obtained from the Imperial Government. At the same date the Island Government had cash balances of £91,924 to its credit in the Bank of Nova Scotia and £16,000 in the London and Westminister Bank.

10. The Public Debt of the Island (most of which is represented by productive investments) amounted to £3,909,593 on the 31st of March, 1911. This included £192,866 due to the Imperial Government for Earthquake Loans, directly secured by advances on properties. The accumulated sinking funds on the same date amounted to £655,268, leaving a nett liability of £3,254,325. Included in the Debt were guaranteed Public Loans for local purposes secured on municipal rates and undertakings amounting to £321,225, the sinking funds in respect of which amounted to £55,808.

11. The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together, for the last five years, are shown in the following comparative statements:—

Kingston City Council.

	Receipts. £	Expenditure. £
1906-7	27,170	28,165
1907-8	30,775	30,858
1908-9	32,197	30,010
1909-10	32,513	35,739
1910-11	35,755	35,385

Kingston General Commissioners.

	Receipts. £	Expenditure. £
1906-7	26,294	25,809
1907-8	28,251	25,273
1908-9	30,545	26,223
1909-10	31,957	30,707
1910-11	60,082	52,373

Other Parochial Boards (14 *Parishes*).

	Receipts. £	Expenditure. £
1906-7	103,484	100,577
1907-8	105,433	106,891
1908-9	106,231	107,838
1909-10	111,586	117,461
1910-11	135,118	139,032

12. The excess of expenditure over revenue by Parochial Boards in the year 1910-11 is largely owing to expenditure on water supplies in anticipation of loans.

13. The debts of the Parochial Boards to the Treasury for advances made for water-works and markets amounted at the close of the year to £23,251.

14. Power has also been taken under the Parochial Loans Law, 30 of 1903, to borrow £28,887 for the construction or improvement of water-works, markets and streets, and drains, and of this amount £16,500 had been raised by the end of the financial year.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

A. Imports and Exports.

15. The total values of imports and exports for the last five years are as follows:—

	Imports.	Exports.
	£	£
1906-7	2,261,469	1,992,007
1907-8	2,854,042	2,360,702
1908-9	2,420,335	2,268,254
1909-10	2,561,674	2,628,307
1910	2,614,943	2,568,222

16. The Collector-General reports:—

"A noticeable feature in the trade history of the year was a halt after a very promising opening, and then a revival, but not on such strong lines. Various causes have been stated as the reasons for this. There were great expectations for a very busy year and large stocks were obtained to open with, but as the year advanced it was seen that the stocks were larger than the market required. Orders had therefore to be revised and modified. On reducing stock by clearance sales a revival became apparent, but cautious trading disappointed results when reckoned in the Customs accounts. There is no doubt that this is a reasonable explanation, but I suspect that the disturbance of contracts by the discontinuance of the Direct Line, the uncertainty of the coming Tariff, and the tourist trade not coming up to anticipations, have also been factors that have operated in keeping stocks low, the reflex of which was a shrinkage in the Customs collections for the last quarter."

17. The principal articles of import were:—

	Value.	
	1909.	1910.
	£	£
Ale, beer, and porter	41,932	39,240
Beef, wet salted	20,301	19,485
Bread and biscuit	31,038	33,965
Butter and substitutes	31,875	38,227
Coal	50,866	44,097
Corn	45,141	44,390

	Value. 1909.	1910.
	£	£
Fish, dried and salted	124,463	143,014
Fish, pickled or smoked	59,304	56,246
Flour (wheaten)	243,664	266,934
Meal (other than wheaten)	28,000	39,571
Milk, condensed	34,429	43,383
Oats	12,466	14,533
Oils	60,676	68,336
Pork, wet salted	29,059	18,493
Rice	57,852	75,937
Soap	39,233	29,377
Spirits	16,116	17,501
Tobacco (manufactured)	17,619	14,690
Wines	12,590	20,218
Pitch pine lumber	72,099	78,429
White pine lumber	11,833	14,138

18. The effect of the reductions in the Tariff brought about by Law 1 of 1910, and Law 16 of 1910, is commented on by the Collector-General thus:—

"A test applied to the items on which the rate of duty has been reduced shows that there is no doubt that consumers of the commodities are reaping considerable benefit from the concessions."

"The following exhibit shows this:—

—	Imports.				Duty.		
	5 years' average before reduction.	1910–1911.	Percentage increases of consumption.	Percentage of reduction in rate of duty.	5 years' average before reduction.	1910–1911.	Percentage decrease duty collected.
	galls.	galls.			£	£	
Kerosene Oil	796,844	978,840	22·8	46·7	24,610	16,314	33·7
Other Oils ...	219,257	221,803	1·1	44·5	7,009	5,476	21·8
Gasolene ...	8,393	49,380	488·3	55·6	237	823	289·1 (increase)
	lbs.	lbs.					
Soap ...	4,229,054	4,442,764	5·1	54·6	11,137	6,754	39·3

"It will thus be seen in the case of kerosene oil, the reduction of 46·7 per cent. in the rate of duty has influenced consumption in an increase of 22·8 per cent., while the decrease in duty collected is 33·7 per cent. Similarly other oils, on which there is a reduction of 44·5 per cent. in rate, show an increased consumption of 1·1 per cent., and a decrease of 21·8 per cent. in duty collected. Soap, on which the decreased rate is 54·6 per cent., shows an increase in consumption of 5·1 per cent. and a decrease in duty of 39·3 per cent. The large increases which gasolene shows in consumption and duty collected, despite a 45·4 per cent. reduction

in rate, are largely due to the greater number of automobiles now in use. In the case of condensed milk, the passing to the free list of the commodity has influenced the consumption by an increase of 10·2 per cent. over a five years' average. The abolition of duty on wire for fencing and galvanized iron for roofing has resulted in an increased importation of these items—the increase being as under:—

Wire	118·9 per cent.	over the four years' average.
Galvanized and roofing	89·1 per cent.	

"Artisans' tools not having hitherto been classified separately, comparison cannot be made."

19. The consumption of wheaten flour, bread, and biscuits, which increased greatly after the earthquake in 1907, and which showed a tendency in the intervening years to revert to a normal level, has again increased, and the present trend appears to be in the direction of ousting native-grown food by foreign importation. This is probably due, to a considerable extent at least, to the substitution of fruit and minor products in place of native foodstuffs in the cultivations of the peasantry.

20. The values of the imports received from the different parts of the world were as follows:—

	£	Per cent.
United Kingdom	1,112,535	42·6
United States	1,181,892	45·2
Canada	207,885	7·9
Other Countries	112,631	4·3

21. The total imports into the Colony for the past forty years, at intervals of ten years, have been as follows:—

	£
1870—year ended 31st December, 1870 ...	1,300,211
1880—year ended 30th September, 1880 ...	1,475,197
1891—year ended 31st March, 1891	2,190,745
1900—year ended 31st March, 1900	1,844,332
1910—year ended 31st December, 1910 ...	2,614,943

Divided between countries from which supplies were obtained, the figures work out as under:—

—	1870. Year ended 31st December, 1870.	1880. Year ended 30th September, 1880.	1891. Year ended 31st March, 1891.	1900. Year ended 31st March, 1900.	1910. Year ended 31st December, 1910.
	£	£	£	£	£
United Kingdom.	760,431 58·4%	777,627 52·6%	1,229,043 56·2%	873,296 47·3%	1,112,535 42·6%
U.S. of America.	266,559 20·5%	474,116 32·1%	743,261 33·9%	800,527 43·3%	1,181,892 45·2%
Canada ...	247,612 19·2%	171,801 11·7%	162,731 7·4%	118,003 6·6%	207,885 7·9%
Other Countries.	25,609 1·9%	51,653 3·6%	55,710 2·5%	52,506 2·8%	112,631 4·3%
	£1,300,211	1,475,197	2,190,745	1,844,332	2,614,943

22. The import trade has doubled itself since 1870. The growth of trade with different countries is indicated by an increase in imports from the United Kingdom of £352,104 or 46·3 per cent., from the United States £855,333 or 377 per cent., from other countries £87,022 or 339·7 per cent., while Canada has lost £39,727 or 16 per cent. The imports from the United States are for the first time slightly in excess of those from the United Kingdom.

23. The chief articles of export show the following variations:—

	Values.	
	1910.	1909.
	£	£
Annatto	6,306	10,291
Beeswax	3,709	5,539
Cocoa	63,017	110,049
Cocoanuts	78,710	54,941
Coffee	167,409	127,121
Bananas	1,141,710	1,403,830
Grape fruit	23,300	16,145
Oranges	52,902	31,953
Ginger	44,987	36,710
Hides	11,520	13,182
Honey	19,796	19,281
Lime juice	4,634	3,931
Pimento	73,660	68,352
Rum	134,659	234,151
Sugar	261,151	118,733
Cigars*	32,900	36,685
Fustic and bitterwood	15,682	7,771
Logwood	66,218	52,159
Logwood extract	163,600	113,254
Goat-skins	13,196	13,151

24. The total value of the exports shows a decrease of £60,085. The principal decreases are in—

	£
Annatto	3,935
Bananas	262,119
Rum	99,492
Cigars	3,784
Cocoa	47,031

Increases, however, occur in—

	£
Cocoanuts	23,769
Coffee	40,288
Grape fruit	7,155
Oranges	20,949
Ginger	8,276
Pimento	5,308
Sugar	142,417
Logwood	14,059
Fustic	61,910
Logwood extract	50,346

* By inadvertence the values of Cigars exported in 1909 and 1908–9 were incorrectly stated in the Report for 1909–10. The correct figures for 1909 are given above, and those for 1908–9 were £29,981.

25. The distribution of the exports was as follows:—

	1910. Per cent.	1909. Per cent.
United Kingdom	20·6	21·2
United States of America	54·1	61·5
Canada	8·4	4·7
Other Countries	16·9	12·6

26. The total exports from the Colony for the past fifty years at ten-year intervals, have been as follows:—

	£
1870—31st December, 1870	1,161,091
1880—30th September, 1880	1,512,978
1890—31st March, 1891	1,902,814
1900—31st March, 1900	1,868,079
1910—31st December, 1910	2,568,221

27. The following table shows the relative importance of the principal staples and minor products:—

—	1908-9.	1909.	1910.
	Per cent.	Per cent.	Per cent.
Sugar	3·6	4·7	10·8
Rum	8·9	9·4	5·6
Coffee	5·5	5·1	6·9
Dyewoods	2·4	2·3	3·2
Fruit	54·9	59·9	53·6
Cocoa	4·3	4·4	2·6
Pimento	6·8	2·7	3·1
Minor products	13·6	11·5	14·2

28. The following is a comparison between the exports of 1880 and those of 1910:—

	1880. £	1910. £
Sugar	497,824	261,150
	34·9%	10·8%
Rum	209,092	134,659
	14·6%	5·5%
Coffee	254,722	167,408
	17·9%	6·9%
Cocoa	—	63,017
	—	2·6%
Dyewoods	164,918	77,347
	11·5%	3·2%
Fruit	71,907	1,297,952
	5·1%	53·7%
Pimento	145,570	73,659
	10·2%	3·0%
Minor products	83,110	342,292
	5·8%	14·3%
	£1,427,143	£2,417,484

Total increase on the exports of 30 years ago is £990,341, and in that of fruit alone £1,226,045.

29. The acreage returned in 1910-11, grouped under the four principal headings of the return and compared with the average of four years, produces the following figures, viz.:—

	1910-11.	Average of four years.
Tilled lands	273,047	251,325
Guinea grass	142,794	138,634
Commons	510,956	480,718
Wood and ruinate	1,239,205	1,235,349
	2,166,002	2,106,026

30. There has been an increase in 1910-11 over the average, of 21,722 acres or 8 per cent. in the acreage of tilled lands; an increase of 4,160 acres or 3 per cent. in guinea grass; of 30,238 or 6 per cent. in commons; and an inconsiderable advance of 3,856 acres in wood and ruinate.

31. Tilled lands are in turn classified under principal agricultural products, and the comparative figures when so classified give these results:—

	1910-11.	Average of four years.
Canes	31,659	29,688
Coffee	24,706	25,910
Cocoanuts	16,102	11,663
Bananas	79,283	63,423
Ground provisions ...	85,534	107,246
Mixed cultivation ...	19,622	
Cocoa	11,451	9,476
Minor products	4,690	3,943
	273,047	251,349

32. There is an increase of 1,971 acres in cane cultivation fairly distributed over the cane-growing area; a trifling decrease in the aggregate of coffee cultivation totalling 1,104 acres, and very marked in Manchester and St. Catherine; an increase of 4,439 acres in cocoanuts noticeable in St. Thomas, Portland, St. Mary, St. Ann, Hanover, and St. Catherine; an increase of 15,860 in bananas contributed to by practically all the agricultural parishes, but most marked in Westmoreland, Clarendon, and St. Catherine; a decrease of 2,090 acres in ground provisions with which is included mixed cultivation; an increase of 1,975 acres in cocoa, and in minor products an advance of 747 acres.

33. The most noticeable feature in the foregoing figures is the extended area over which the banana has spread itself. While St. Mary, St. Catherine, and Portland are still the main sources of supply, there is a considerable acreage in each of the other parishes, the lowest being St. Elizabeth with 257 acres, but it is

known that even in that parish cultivation is to be attempted on a large scale in the very near future, and if it succeeds Black River will become a banana port of much importance, and the river will be used as a waterway for steam tugs and freight lighters to transport the fruit.

34. This Government in the year 1903 established a system of valuation of real property. The following statement sets out the number and the classification according to value of the separate properties upon which general and parochial direct taxes are assessed, those the subject of temporary relief, and those in arrear, in comparison with the figures of 1909-10.

	1910-11.	1909-10.
Properties valued at £20	60,641	57,601
Properties valued at £30	6,097	5,788
Properties valued at £40	54,208	53,489
Properties valued over £40... ...	29,257	28,266
Occupiers relieved	1,237	1,206
Properties in arrears	8,167	8,701
	159,607	155,051

35. The unit of valuation for taxation being £10 there has been an increase in the number of holdings paid on of 3,040 in those reckoned as of two units, of 209 in those of three units, of 719 in those of four units, and of 991 in those over that limit, and there is a decrease of 534 of those properties shown as having been in arrear at the end of the collecting year. The only debit in the statement is the increase in the number of occupiers temporarily relieved, and the increase in this was only by the small number of thirty-one. Holdings of and under £40 value numbered 120,946, and contributed £11,881 to the property tax, and those over that limit of value numbered 29,257 and contributed £22,922.

36. Reporting on the sale of Crown Lands in small holdings the Surveyor-General writes as follows:—

"Two hundred and twenty-six purchasers who bought 2,359 acres under the Rules for the sale of Crown Lands to small settlers have completed payment of instalments of their purchase money and been given titles for their lands. There were also 53 other purchasers, who paid cash down for 346 acres. No fresh areas have been opened up for sale on payment by instalments. To date of the total of 31,141 acres sold partly on credit since 1896, about 9,000 acres have been paid for in full by some 900 purchasers. Ejectment proceedings have had to be issued against several defaulting purchasers, who after failing to pay their yearly instalments refused to give up the land. In all cases judgment was given for the Crown. Fifty of these ejectment cases were against purchasers at the savanna lands, St. Elizabeth, who had long been in arrear and had assumed a defiant attitude in spite of the consideration extended them. The result has been that since the judgment against them the 50 parties

have paid up the purchase money, with costs, of some 500 acres. I still recommend proceeding slowly and cautiously with sales as there are still a large number of purchasers chronically in arrear. The total amount of purchase money received during the year from cash and instalment purchasers amounts to £2,780 19*s*. 2½*d*."

Leases and Tenancies.

"Sixteen acres and 21 town lots have been leased to 31 persons for £110 a year, and 564 prædial tenancies have been made at rentals of from 12*s*. to 20*s*. per acre per annum. The total amout of rent received for the year amounts to £1,959 19*s*. 11*d*."

Forfeiture of Lands.

"Four hundred and forty-two acres of land have been forfeited, and interlocutory judgment obtained on 9,030 acres. Notification No. 34 covering 12,002 acres has been issued, and proceedings under this and Notification 33 are now pending in respect of the forfeiture of 15,125 acres."

Agriculture.

37. The farm school at Hope Estate, which was opened in January, 1910, completed its first year with a full complement of students. The demand for admission has been so great that arrangements for extending the accommodation by one-half have been made.

38. The stock farm, associated with the school, was operated on a business basis during the year by means of a working account at the Treasury. The stock was valued on the 31st December by two practical stock-breeders and favourably reported on. The balance sheet for the year shows a balance of assets £760 on a capital investment of £950. The Public Hospital and other Government institutions in Kingston are now supplied with milk from the farm at Hope.

39. The appointment of a veterinary surgeon has enabled a start to be made in the development of a branch devoted to the interests of the animal industry, while an officer is now available for service under the Diseases of Animals Law when outbreaks of diseases are notified in the Colony.

40. The results from the use on the large scale of the tick wash, introduced by the Department, have been very satisfactory, and it has now been demonstrated that the tick pest can be controlled in Jamaica by the systematic spraying of cattle with this preparation. The Paranaph compound is made at the laboratory and sold to the public at cost price.

41. The Sugar Experiment Station was operated during the year on the residue of the Imperial grant, a small surplus still remaining to the credit of the fund at the close of the year. The Imperial grant has thus enabled the station to be equipped with laboratories and an experimental distillery, and to provide for experimental plants on estates, while the operating expenses of

the station have been provided for a period of seven years. This work is now being carried on as a part of the operations of the Agricultural Department.

42. The first field results with seedling canes raised at the station indicated that some valuable new canes have been secured. The most promising of these were raised by natural cross-fertilisation of the White Transparent with some Barbados seedling canes in 1903.

43. The work of agricultural instruction was extended during the year by a considerable increase in the grant to the Jamaica Agricultural Society whereby four new instructors were provided. The results of this work are encouraging, and efforts are now being made to operate cocoa and rubber nurseries in certain favourable centres under the care of the local instructors.

44. The Prize Holding Scheme is taking a firm hold on the small settlers, and marked improvements in small holdings can be traced to the operation of this competition in several parishes.

45. Special legislation dealing with the importation of bees and the infectious diseases of plants have been effected to protect the honey industry from the risks of introduced diseases and to give powers for dealing with such dangerous infectious diseases of staple crops as the "bud-rot" disease of cocoanuts and the "Panama disease" of bananas, should the latter ever obtain a footing in the Island.

46. Considerable interest has been taken in the prospects of the rubber industry during the year. The Castilloa rubber, of which three distinct species have been established in the Island, has given the most promising results, and there are indications that on favourable soils in seasonable districts the Castilloa rubber tree is capable of giving good returns of rubber in Jamaica.

47. The erection of a large central sugar factory at Rose Hall, in St. James, has been started, and it is expected the work will shortly be completed. It will deal with the produce of nine sugar estates.

48. On three sugar estates in Westmoreland arrangements have been made to erect plants for boiling molasses sugar.

49. The logwood factory at Lacovia in St. Elizabeth has been acquired by the Trust controlling the West India Chemical Works at Spanish Town, and thus put an end to competition in the purchase of logwood.

50. A new plant of modern design for the manufacture of sugar has been erected at Holland Estate in St. Elizabeth.

SHIPPING.

51. On this subject I am required by instructions to report in somewhat extensive detail:

There was much activity in shipping during the year. The vessels reporting show a decrease in number, but an increase in tonnage. The figures are:—

1909.	1,462	ships	...	with tonnage	1,554,397
1910.	1,375	,,	...	,, ,,	1,916,460
decrease	87	,,	...	,, ,,	362,063 (increase.)

The clearances were:—

1909.	1,460	ships	...	with	tonnage	1,574,471
1910.	1,374	,,	...	,,	,,	1,907,471
decrease	86	,,	...	,,	,,	333,000 (increase.)

Distinguishing between ships reporting with cargo and those reporting in ballast, the account appears as under:—

Reporting with Cargo.

1910.	1,080	ships	...	with	tonnage	1,696,595
1909.	1,044	,,	...	,,	,,	1,265,583
increase	36	,,	...	,,	,,	431,012

Reporting in Ballast.

1909.	418	ships	...	with	tonnage	288,814
1910.	295	,,	...	,,	,,	219,865
decrease	123	,,	...	,,	,,	68,949

Separating steamers from sailing vessels, the analysis shows that the arrivals of steamships were:—

1909.	1,258	ships	...	with	tonnage	1,520,899
1910.	1,201	,,	...	,,	,,	1,883,356
decrease	57	,,	...	,,	,,	362,457 (increase.)

The steamers arriving with cargo were, however, greater in number than in the previous year. The falling off is in the arrivals in ballast. The following exhibit shows the figures:—

Arriving with Cargo.

1910.	946	ships	...	with	tonnage	1,680,781
1909.	876	,,	...	,,	,,	1,246,315
increase	70	,,	...	,,	,,	434,466

Arriving in Ballast.

1909.	382	ships	...	with	tonnage	274,584
1910.	255	,,	...	,,	,,	202,575
decrease	127	,,	...	,,	,,	72,009

The steamers clearing were as under:—

1909.	1,254	ships	...	with	tonnage	1,534,838
1910.	1,207	,,	...	,,	,,	1,874,722
decrease	47	,,	...	,,	,,	339,884

Separating those clearing in ballast from those taking cargo, the figures are:—

Cleared with Cargo.

1909.	1,163	ships	...	with tonnage	1,432,598
1910.	1,153	,,	...	,, ,,	1,826,226
decrease	10	,,	...	,, ,,	393,628 (increase.)

Cleared in Ballast.

1909.	91	ships	...	with tonnage	102,240
1910.	54	,,	...	,, ,,	48,496
decrease	37	,,	...	,, ,,	53,744

52. The arrivals of steam vessels at the ports were as under:—

—	12 months ended 31st December, 1910.		12 months ended 31st December, 1909.		Increase.		Decrease.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
Kingston ...	516	1,243,475	395	803,472	121	440,003	—	—
Morant Bay ...	2	1,488	—	—	2	1,488	—	—
Port Morant ...	64	54,528	68	59,880	—	—	4	5,352
Port Antonio ...	522	450,232	689	520,355	—	—	167	70,123
Annotto Bay ...	—	—	4	2,454	—	—	4	2,454
Port Maria ...	54	40,788	68	48,331	—	—	14	7,543
St. Ann's Bay ...	1	602	1	602	—	—	—	—
Falmouth ...	1	634	3	5,293	—	—	2	4,659
Montego Bay ...	33	82,309	26	76,219	7	6,090	—	—
Sav-la-mar ...	2	2,321	3	3,569	—	—	1	1,245
Black River ...	5	5,360	1	724	4	4,636	—	—
Milk River ...	1	1,616	—	—	1	1,616	—	—
	—	—	—	—	135	453,833	192	91,376

53. An analysis of the figures shows:—

—	12 months ended 31st December, 1909.		12 months ended 31st December, 1910.		Increase.		Decrease.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
British ...	347	564,563	401	856,257	54	291,694	—	—
Foreign ...	911	956,336	800	1,027,099	—	70,763	111	—

54. Reckoned by number of ships, the gain for British ships is 15·5 per cent., while foreign ships show a falling off of 12·1 per cent. But if the tonnage is reckoned with, the result to be

divided is a gain, and not a loss, and the division is:—British ships, 51·8 per cent., foreign ships, 7·4 per cent.

55. Tracing the shipping transactions of the Colony through a period of 40 years, and taking the period at ten year rests, the figures are as under:—

Year.	Ships Entered.		Ships Cleared.	
	No.	Tonnage.	No.	Tonnage.
1869	743	223,956	750	216,828
1880	844	398,636	836	398,310
1890	917	538,297	945	536,592
1900	1,187	897,061	1,180	896,450
1910	1,374	1,916,460	1,374	1,907,471

56. Comparative statement showing the tonnage of vessels entered and cleared at ports in the Colony of Jamaica for the five years ended 31st March, 1911:—

Year.	Ships Entered.		Ships Cleared.	
	No.	Tonnage.	No.	Tonnage.
1906–7	1,475	1,519,287	1,455	1,507,189
1907–8	1,348	1,513,243	1,348	1,511,101
1908–9	1,363	1,482,724	1,372	1,517,779
1909–10	1,462	1,554,397	1,460	1,574,810
1910	1,374	1,916,460	1,374	1,907,471

Entered.

III.—LEGISLATION.

59. Thirty-eight Laws were passed in the Session of 1910-11. The following may be mentioned as the more important:—

Law 1 of 1911. A law to enable the Kingston General Commissioners to improve the water supply of the parishes of Kingston and Saint Andrew, by obtaining water from the Ferry River.

Law 2 of 1911. A law further to amend the laws relating to Elementary Education.

Law 3 of 1911. A law to consolidate and amend the laws relating to the Valuation of Real Property.

Law 10 of 1911. A law to amend the law of Evidence.

Law 21 of 1911. A law to consolidate and amend the laws relating to Duties on Imports.

Law 35 of 1911. A law to prevent the spread of infectious diseases amongst plants.

Law 36 of 1911. A law further to amend Law 18 of 1877, entitled "The Customs Consolidation Law, 1877."

Law 37 of 1911. A law to consolidate and amend the laws relating to Trade Marks.

IV.—PUBLIC EDUCATION.

60. The Director of Education furnishes the following statistics:—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books for Year ended 31st October, 1909.	Average Attendance for Year ended 31st October, 1909.	Percentage on Average Attendance of number on Books.	Total Payments to Elementary Schools and Teachers.
					£
1910-11 ...	698	94,923	59,256	62·40	51,965
1909-10 ...	693	89,902	57,849	64·34	48,340

61. Very considerable increase is shown in the number of scholars on the books of the elementary schools, but the average attendance, while it fulfils the estimates based on the monthly Returns, does not show any corresponding improvement, and the percentage has fallen from 64·34 to 62·4. The only explanation I can offer is the floods of November 1909.

62. There is not much change shown in the efficiency of the schools as indicated by the classes at inspection; what little change there is is in the nature of improvement. The amendment in Art. 37 of the Code of 1911, under which provisionally registered teachers will no longer be able to assume charge of schools, except

temporarily, will no doubt in time help to reduce further the number of third class schools.

63. The number of school gardens recognised by the Department and receiving a grant, increased during the year from 361 to 377, and the amount expended in grants on account of such gardens, from £509 to £746.

64. Practical agricultural teaching has received considerable encouragement under the recent amendments to the Code. The Special grant for the work has been increased; better provision has been made for the supply of tools to small schools and for fencing, and a special grant of £150 made for improving the supply of tools.

65. The teaching of advanced manual training has been continued at the centres at which it was held last year. There is a slight increase in the amounts of grants for this study, which is a satisfactory improvement on last year, when the reverse was the case.

66. The Montego Bay Government Secondary School has fairly maintained its numbers, and the efficiency of its work.

67. The School has not yet been able to move into its new quarters, but the change will be effected shortly, and it is hoped that the improved facilities will then render this school a still more valuable addition to the means for secondary instruction in the Island.

68. Provision has been made for the addition of an Assistant Director to the office staff, and of three officers to the staff of Inspectors. These additions will relieve the pressure due to the greatly increased duties at the central office, and will make it possible for the Inspectors to assist and encourage the teachers of schools by regular visits of inspection and advice, in addition to the annual examinations, and such special visits as have hitherto been practicable. The number of schools in each Inspector's district will be reduced from about 100 to about 70.

69. A considerable event in the educational history of the Island during 1910-11, was the visit of Mr. H. H. Piggott, one of H.M. Inspectors of Secondary Schools under the English Board of Education, who made a tour of inspection of all the secondary schools under the control of the Jamaica Schools Commission. (It is clear that the time is ripe for some development, and in some cases some reorganization, in this branch of our educational work. Several difficulties have to be faced, in the consideration of which the experienced advice of Mr. Piggott will, I am sure, be of the greatest value to the Colony, which has been the first to take advantage of the offer of the Board of Education in England to make the service of its Inspectors available for such a purpose).

70. On the 1st of January, 1911, the regulations for compulsory education in Kingston District (including Port Royal and some adjoining portions of St. Andrew's), in Falmouth and Lucea, came into effect, and the School Boards in these places have energetically undertaken the carrying out of the scheme. It appears likely that the influx of children that will be brought into school in these places is less than many have apprehended. The average attendances in the districts affected by the com-

pulsory regulations for the month of March (after they had been three months in operation) as compared with the same month in the previous year were as follows:—

	March, 1910.	March, 1911.
Kingston	4,786	5,563
Falmouth	149	174
Lucea	187	225

71. The provision referred to in last year's Report for the establishment of a Technical Continuation School in Kingston, has resulted in the appointment of a Technical Instructor, who is about to commence his duties immediately in temporary quarters, while arrangements have been made to accommodate the school more permanently during the coming year.

72. The management of the Technical and Continuation School has been transferred from the Board of Education to the Department, assisted by an advisory committee of gentlemen with special interest and experience in its proposed work. The infant school when re-opened will be managed by the Kingston School Board.

V.—GOVERNMENT INSTITUTIONS.

73. The following particulars may be recorded with regard to the operations of certain institutions:—

(*a.*) *Public Hospital, Kingston.*

Indoor patients treated, 3,376; outdoor patients, including paupers, 8,076; prescriptions made up, 17,438; surgical operations, 1,283; minor surgical operations, 490; daily average number of beds, 193; total cost of maintenance, £3,134 19*s.* 7*d.*

74. Provision has been made for the addition of 10 extra beds to the 220 already provided for the accommodation of constabulary patients.

75. The new out-patient rooms and dispensary, and the Rietti wards for the sick poor have been taken over and occupied.

76. A system has been started of feeding, at hospital expense, all unpaid probationer nurses resident in the Nurses' Home, so as to enable an increased number of suitable country girls to be trained who otherwise would not have the means to support themselves in Kingston during their probationary period.

(*b.*) *Victoria Jubilee Lying-in Hospital.*

77. Number of patients admitted, 600; 8 pupil nurses admitted for training (7 passed and received certificates); average daily number of beds, 17; receipts, £321 1*s.* 9*d.*; expenditure, £1,300 3*s.*

(*c.*) *Lunatic Asylum.*

78. Number of patients on 31st March, 1911, 1,169; an increase of 88 since beginning of year. Total number of patients under

treatment during year, 1,409. Daily average resident, 1,137; rate of recovery, 44·14 per cent.; admissions, 324; discharges, 143; deaths, 91; death-rate, 8·03 per cent. No deaths were caused by malarial fever. This is attributable to the sanitary measures mentioned in last year's Report, also to the regular issue of five-grain doses of quinine three times a week during and after the rainy seasons, and to the steps taken to clear the surrounding grounds of redundant vegetation. Two wards were erected, and the dining hall was restored. Provision has been made for the erection of another ward to accommodate 100 inmates of the female division.

(*d.*) *Lepers' Home.*

Patients on 31st March, 1910		103
Admitted		24
		127
Discharged	3	
Absconded	4	
Died	16	
	—	23
On 31st March, 1911		104

79. The buildings and grounds were kept in good order.

The farm was in good cultivation, and supplied the institution with vegetables.

The death-rate was the average.

The average longevity of leper life of those who died during year works out at 17½ years for anæsthetic, and 12½ years for tubercular, cases.

(*e.*) *Government Savings Bank.*

80. There has been a further decline in the liability of the Government Savings Bank to its depositors on current account of £29,620 12*s.* 11¾*d.*, of which the decrease on ordinary accounts was £9,879 2*s.* 9¼*d.*, and on Government accounts £19,741 10*s.* 2½*d.* The decreases in 1909-10 were £12,168 11*s.* 0¾*d.* and £14,424 17*s.* 4½*d.* respectively, or a total of £26,593 8*s.* 4¾*d.* In these two years the liability of the bank to depositors has fallen off to the extent of £56,214, of which, however, only £22,048 was the property of ordinary depositors. The increased banking facilities obtainable in recent years have led to Government business being largely transacted with the Bank of Nova Scotia rather than with the Savings Bank. Although statistics are not available, it is believed that the same cause has operated with private individuals and that the Government Savings Bank's loss of business is due to its transfer to chartered banks giving higher rates of interest on deposits. The Savings Bank, however, still maintains its usefulness to the depositors of small sums, the number of accounts of £5 and under being 27,733.

81. The balance sheet of the institution on the 31st March, 1910, shows a liability to depositors of £363,796, the full amount

of which was covered by investments in British and Colonial securities at that date.

82. The report by the Registrar of Titles to Land shows the maintenance of a large, though fluctuating, volume of work, but calls for no special comment.

VI.—JUDICIAL STATISTICS.

83. The judicial statistics for the year show for the most part a continued absence of serious crime. The committals to the prisons during the year numbered 4,013, and to lock-ups for short terms 1,764, making a total of 5,777, as compared with 4,960 in the previous year, an increase of 817, or about 16·5 per cent.

84. The re-convictions during the year amounted to 1,826, of which 728 were second convictions, 354 third, and 744 fourth and upwards—a large proportion of habitual offenders. During 1909-10 the re-convictions numbered 1,470.

85. The daily average of prisoners in custody in the Penitentiary and St. Catherine District Prison was 1,192, as compared with 1,193 during the previous year. There were 49 deaths in the prisons, as compared with 39 during 1909-10. There was one execution of capital punishment for murder.

86. Considering the institutions separately, 12 deaths occurred in the General Penitentiary, representing a rate of 18·49 per 1,000. This is the lowest rate of mortality recorded at this establishment since the year 1886-87, when it was 15·05. At the St. Catherine District Prison, 37 deaths occurred, representing a rate of 68·26 per 1,000. Of the 37 prisoners who died, 24 are reported as having been admitted in very poor health.

87. During the year 1910-11, 118 persons were bound over as probationers under Law 27 of 1909. There were 56 probationers from the previous year, making 174 persons under recognizances to report to the Probation Officer. From these probationers, 876 reports were received. The following table shows the increase in the number of probationers, and of reports received since the law referred to was passed (including the ten months of special arrangements made previously:—

Period ending	Convicted.	Under supervision.	Reports received.
31st March, 1909	131	131	461
31st March, 1910	88	132	593
31st March, 1911	118	174	876

Of the 174 probationers under supervision this year, only 9 were brought before the Court for indictable offences subsequent to first conviction. For default in respect of their reports, police assistance was sought to warn probationers in 22 cases, and subsequent proceedings were taken in 17 cases.

88. The several Resident Magistrates were invited to submit reports as to the action taken by them under Law 27 of 1909, "The Probation of Offenders Law," and Law 25 of 1904, "The Young Criminals Punishment Law," and as to the effect of the operation of these laws.

89. From the replies received it is learnt that, except in St. Thomas, both the laws are used to a considerable extent, and with results deemed satisfactory, the instances being few in which offenders dealt with under the laws are brought before a court a second time.

90. The replies also go to show that the appointment of a Probation Officer resident in Kingston has been justified, but it is not thought necessary as yet to appoint such officers for each of the parishes.

91. The gross expenditure for the General Penitentiary amounted to £14,263, and for the St. Catherine District Prison, £6,847; total, £21,110. The gross earnings in cash of the General Penitentiary were £3,330, and of the St. Catherine District Prison, £1,241. The yield of the St. Catherine District Prison farm was valued at £1,254.

92. There is a somewhat remarkable proximity between the daily average number of lunatics in the asylum (1,137), and that of prisoners in the prisons (1,192).

Police.

93. The constabulary force was 36 units below strength at the close of the year, the average deficiency during the year being 28. At the close of 1909-10 it was 19 units below strength.

94. The conclusion arrived at to account for the shortage is that men of the stamp required are attracted elsewhere by better prospects of pay and advancement, notwithstanding all that has been done in recent years to popularize the police force.

198 men were enlisted during the year; 113 Sub-officers and men were discharged, 41 were dismissed, 29 resigned, and 3 died.

95. The records of the operations of the constabulary still continue to show increased activity on the part of the force for maintaining law and order.

96. During the year the headquarters and depôt of the force were inspected by General Sir Ian Hamilton, Inspector-General of the Oversea Forces, who expressed his satisfaction in respect of the general appearance of the officers and men, as well as the equipment, barracks, and internal economy.

97. A new police station was established in the Swift River district of the parish of Portland.

VII.—VITAL STATISTICS AND PUBLIC HEALTH.

98. The total population of the Island, as shown by the census taken on the 2nd April, 1911, and which for all practical purposes may be regarded as the population on the 31st March, 1911, was 831,383 (males, 397,439; females, 433,944).

99. As compared with the returns of the population according to the preceding census the figures are:—

Year.	Males.	Females.	Total.
1911	397,439	433,944	831,383
1891	305,948	333,543	639,491
Increase	91,491	100,401	191,892

100. This is an increase of 30 per cent. over the figures of twenty years ago. The rate of increase for the period 1871 to 1891 was 26·3 per cent. The present increase has been contributed to by every parish except Port Royal. Some have contributed in a much greater proportion than others. This indicates that there has been a considerable movement of persons from some parishes to others. During the last twenty years the population of Saint Mary has increased 70 per cent., and that of Portland 53·7 per cent., while that of Trelawny has only increased 14·4 per cent.

101. Of the electoral divisions of the parishes the following show decreases:—(1) The South-Western Division of Kingston (formerly No. 3 Ward); (2) St. Joseph, Dallas and Metcalfe Division of Saint Andrew; (3) Falmouth Division of Trelawny; (4) Marley and Rose Hall Division of Saint James; and (5) the Goshen Division of St. Elizabeth. The decrease in the latter is accounted for by the transfer to the adjoining Division of Santa Cruz, to which they really belong, of certain districts included in the Goshen Division in 1881. These districts had a total population of 4,169 in 1891, and 5,149 at the taking of the present census.

102. Marriages:—

Marriages.	1910-11.	1909-10.	1908-9.	1907-8.	1906-7.
Number	3,340	3,543	3,116	6,251	5,507
Rate per 1,000 of population ...	4·0	4·3	4·1	7·4	6·6

The marriage rate per 1,000 continues to fall, and the percentage of illegitimate births amounts this year to 62·4 against 62·0 in 1909-1910. The total births registered numbered 31,918 (16,152 males and 15,766 females) against 32,402 in the previous year; birth-rate 38·6 per 1,000 of the estimated population against 39·7 in the previous year.

103. Deaths registered: 19,119; 9,601 males and 9,518 females; rate per 1,000 of estimated population 23·1. In 1909-1910 the rate was 22·8.

104. Of the parishes, Kingston 32·8 and St. Andrew 27·5, per 1,000 have the highest death-rates, while Manchester 13·0, St.

Ann 18·6, and St. Elizabeth 19·0, per 1,000 have the lowest. The Registrar-General states that the rate is calculated on the mean population for 1910-11, *i.e.*, the population on 30th September, 1910.

105. Infantile mortality was accountable for 8,871 deaths (46·3 per cent.) during the year. These figures represent deaths of children under five years of age, and of this number 7,743 (or 40·4 per cent. of the total deaths) were those of children under two years of age. This is 24·36 per cent. of the number of births recorded for the year.

106. The very high death-rate in Kingston and St. Andrew is principally attributable to this fact: 38·9 per cent. of the children born in Kingston and 35·5 per cent. of those born in St. Andrew died before they attained the age of five years, the great majority of the children who died being under two years.

107. I subjoin a table, similar to that given in last year's Report, showing the number of deaths in which the causes were defined or not defined in the several parishes, with the percentage of undefined cases:—

—	Causes specified.		Causes ill-defined or unspecified.		Total.		Percentage undefined.	
	1909–10.	1910–11.	1909–10.	1910–11.	1909–10.	1910–11.	1909–10.	1910–11.
Kingston and Port Royal.	1,399	1,535	374	391	1,773	1,926	21·1	20·3
Portland	787	857	254	256	1,041	1,113	24·4	23·0
St. Andrew	957	1,057	357	393	1,314	1,450	27·1	27·1
Hanover	577	615	238	272	815	887	29·2	30·6
St. Thomas	690	696	290	269	980	965	29·5	27·8
St. Ann	884	860	384	443	1,268	1,303	30·2	34·0
St. Catherine ...	1,556	1,585	721	752	2,277	2,337	31·7	32·1
Westmoreland ...	906	978	437	500	1,343	1,478	32·5	33·8
St. James	554	620	286	291	840	911	34·3	31·9
St. Mary	951	1,073	500	498	1,451	1,571	34·4	31·7
Trelawny	488	531	297	290	785	821	37·8	35·3
St. Elizabeth ...	970	968	603	518	1,573	1,486	38·3	34·8
Clarendon	1,145	1,023	782	684	1,927	1,707	40·5	40·1
Manchester	736	685	513	479	1,249	1,164	41·0	41·1
Totals ...	12,600	13,083	6,036	6,036	18,636	19,119	32·4	31·6

108. The percentages of deaths from causes unspecified range from 20·3 per cent. in Kingston to 41·1 per cent. in Manchester.

The variation of the figures is, to some extent, though not obviously in all cases, explicable by the different character of the settlement of population in the several parishes.

These figures must be borne in mind in surveying the apparent prevalence of various diseases in different parishes.

109. The following table shows the relative prevalence of the causes of death most frequently recorded:—

Cause of Death as returned.	Kingston.		Other Parishes.		Total.		Cases medically testified.	
	1909–10.	1910–11.	1909–10.	1910–11.	1909–10.	1910–11.	1909–10.	1910–11.

In my Report for last year I examined in some detail the significance of these returns as illustrated by the report of the medical officers.

Hospital Statistics.

110. The total number of patients treated in the hospitals of the island during the year was 26,338, of whom 7,542 or 28½ per cent. suffered from malarial fever. This is equal to 9 per 1,000 of the population. The bulk of the cases of malaria were treated in the under-mentioned institutions:—

Annotto Bay Public General Hospital	2,525
Port Antonio ,, ...	1,319
Lionel Town ,, ...	696
Sav-la-Mar ,, ...	634
Kingston Public Hospital	600

Port Maria Public General Hospital	...	...	494
Spanish Town ,,	...	...	423
Buff Bay ,,	...	...	309

The malaria rate commenced to rise in August and continued high for six months:—August, 668; September, 665; October, 809; November, 879; December, 945; January, 925—total, 4,891. This coincided with the period of high rainfall which commenced in July and lasted till January. During the remaining six months of the financial year the cases numbered:—April, 442; May, 342; June, 398; July, 483; February, 574; March, 412—total, 2,651.

111. The total number of deaths from malarial fever, malarial poisoning, and undistinguished fever was 3,443, or 324 less than in 1909-10. There seems, therefore, some ground for the belief that the measures taken for the abatement of malaria are beginning to take effect, and that if they are steadily maintained and filling and drainage works are undertaken from year to year, the mortality from this cause will rapidly decrease.

Yaws.

112. A vigorous campaign against yaws has been pursued as a result of the passing of Law 23 of 1910. The difficulties attendant on dealing with the matter are considerable, and different systems have been adopted in various West Indian islands. Much has been expected from a policy of compulsory segregation instituted in certain of the Colonies, but it has not been attended with such success as might have been attained had the circumstances been more favourable. The initial expense of building asylums and the recurring expenditure of maintenance of a large number of patients usually created so great a financial strain that in some cases the attempt had either to be abandoned or the stringency of the segregation laws relaxed. Many of the people believed that the disease was inevitable, and that it was better for the children to contract it when young so as to become immune in later life, and it is said that they were directly exposed to contagion with that object in view. The confinement in asylums was, moreover, so distasteful to those who had contracted the disease that they frequently hid themselves and were screened from the authorities by their friends.

113. The system now in force in Jamaica is that of affording outdoor treatment at the expense of the Government and employing rural constables to discover and to report cases occurring in their districts, to persuade them to present themselves for treatment, and to return to the doctor and continue doing so until cured. The reports received from the various district medical officers are, on the whole, very encouraging. In some districts there is a considerable decrease in the number of cases and a breaking down of the prejudice against medical treatment, and an increasing willingness to present themselves voluntarily.

The number of cases treated in 1910-1911 was 7,313, and in 1909-1910, 4,555.

114. The district medical officer at Port Antonio specially brings to notice the very satisfactory results obtained by him in the treatment of certain cases of yaws with the remedy known as "606."

115. Dr. Mosely used this remedy in four cases of several years' standing, and in each case the persons treated have to all outward appearances entirely recovered from the disease, and are now practically well. He recommends that the drug should be supplied to every hospital for the treatment of this disease, with a view to its being given a further trial.

Hook Worm Disease.

116. The surgeon of the General Penitentiary called attention to the large percentage of prisoners admitted into the institution who were suffering from this disease, and stated that as a result of examinations it was found that out of 71 persons admitted 51 or over 70 per cent. were found to harbour the worm.

117. Reports from several district medical officers go to show that the disease is much more prevalent than has generally been supposed, not only among the East Indians, but also among the native population, and that many cases which might be attributed to malaria will in future be found to be due to hook worm.

118. Fifty per cent. of the prisoners admitted into the St. Catherine District Prison are reported to harbour the worm.

Syphilis.

119. One of the points brought to notice by the Commission which was appointed to report on the distress in certain portions of the parishes of Manchester and St. Elizabeth in 1909 was that the prevalence of syphilis was a cause of much suffering and inefficiency, and a vote was taken to enable the disease to be dealt with in these districts. As a result 346 cases have been treated at Government expense.

Vomiting Sickness.

120. During the year it was decided to undertake an investigation into the causes of the mysterious malady locally known by the generic title of "Vomiting Sickness," which, as explained in my last year's Report, breaks out in certain districts in the cold season amongst the poorer classes, and, while maintaining a constancy of general characteristics, has hitherto displayed, when subjected to specific examination, a similitude to various forms of vegetable poisoning, to the effect of worms, meningitis, bronchitis, gastritis, and other more familiar diseases. Identified by one district medical officer as the result of poison, it has been speedily proved by another to be due to worms, and as quickly passed on by another as meningitis, and so on through the category. The Secretary of State, on being applied to, appointed, on the advice of the Tropical Diseases Research Committee, Captain Potter, R.A.M.C., to conduct the investigation. Captain Potter's report has not yet been received.

121. With the view also of tracing the means by which enteric fever is disseminated, a Committee has been appointed consisting of Dr. Macdonald, the Health Officer of Kingston, where the greatest number of cases in any one locality in the island occur, and Dr. Turton, of Stony Hill, St. Andrew.

VIII.—POSTAL AND TELEGRAPH SERVICES.

122. The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1910-11 with those of previous years:—

—	1910-11.	1909-10.	1908-9.
	£	£	£
Postages	36,587	33,362	32,505
Commission on money orders ...	390	425	459
Local commission on British postal orders.	225	212	195
Commission on local postal orders ...	831	777	742
Miscellaneous	938	865	673
Telegraphs	6,942	6,769	6,221
Total	45,913	42,410	40,795

123. These statistics show an increase of £3,503 in gross revenue as compared with the previous year, due to increases of £3,224 and £173 in postage and telegraph collections, and of £140 on commissions on postal orders (British and local respectively), and on miscellaneous. The only decrease has been a small one of £35 on commissions on money orders.

124. The expenditure of the year by the department amounted to £42,336 as against £36,964 in 1909-1910, an increase of £5,372 due to continued expansion in the work of the department, an improvement in the pay of some subordinate officers and improved facilities afforded the public, among which may be mentioned the opening during the year of three new district post offices and the erection in Kingston of one collecting box.

125. A large initial outlay for purchase of mules and vans was incurred by taking over the Northside and Windward mail contracts by the Public Works Department.

126. The progress of the department is illustrated by the following figures:—

	Revenue.	Expenditure.
	£	£
1900-1901	26,927	24,227
1910-1911	45,913	42,336

127. As compared with the two previous years the numbers of letters and postcards were:—

—	At General Post Office.		
	1910–11.	1909–10.	1908–9.
Outwards	4,508,686	4,458,220	3,839,542
Inwards	5,688,126	5,707,807	4,579,495
Total	10,196,812	10,166,027	8,419,037
	At District Post Offices.		
Total	1,494,537	2,054,066	1,550,372
Grand Total ...	11,691,349	12,220,093	9,969,409
Telegrams sent and received ...	134,626	112,515	103,471

128. The introduction of sixpenny inland telegrams on January 1st, 1911, has resulted in an increase in the number of telegrams sent during the first three months of 1911 as compared with the corresponding months of 1910. This increase in telegrams has been accompanied by decrease in receipts over the same period; this decrease, however, shows a tendency to diminish, and it is anticipated that statistics covering a longer test period will give better results in this respect.

129. During the year facilities were offered to the public of buying 5-grain doses of quinine for a farthing at all post offices. These facilities were taken full advantage of in every district of the Island.

130. The General Post and Telegraph Offices were transferred to the new public buildings.

IX.—PUBLIC WORKS.

131. The year under review was one of considerable activity for the Public Works Department, the total expenditure by which was £189,436 3*s*. 1*d*., made up as follows:—

Establishment.

	£	s.	d.	£	s.	d.
Salaries and other charges ...				15,815	1	10
Works under Public Works Votes and Loan Laws:						
Part 1. Main Roads and Bridges —Maintenance ...	90,647	10	6			
Part 2. Main Roads and Bridges —New Works ...	33,698	17	9	124,346	8	3

	£	s.	d.	£	s.	d.
Part 3. Public Buildings and Telegraph — Maintenance				14,068	1	10
Part 4. Public Buildings—New Works	15,180	17	10			
Part 4. Public Buildings under Law 6 of 1893, 40 of 1894, 27 of 1897, and 9 of 1904 ...	56	6	11			
Part 4. Public Buildings, Kingston, and King's House, St. Andrew	4,048	15	2			
Part 4. Construction or extension of telegraph and telephone lines	492	18	8	19,778	18	7
Part 5. Lighthouses				1,[illegible]8	2	10
Part 6. Rio Cobre Irrigation Works — Maintenance				3,330	6	8
Part 7. Spanish Town Water Works				886	7	9
Part 7. Works executed for Public Departments, Parochial Boards, &c.				9,842	15	4
				£189,436	3	1

132. The cost of the department was equal to 8·3 per cent. of the total expenditure controlled by it.

133. The average cost of ordinary maintenance of roads per mile for the whole island was £38 8*s*. 2*d*. (including £8 1*s*. due to special cost of repairing flood damages). The average cost, including special work of improvement, was £45 14*s*. 9*d*., including £2,841 15*s*. 6*d*. total expenditure on engines and wagons.

Main Roads Maintenance.

134. The Director of Public Works reports that on the whole the main roads throughout the island were maintained in fair order during the year. Some damage was done to the roads in certain parishes by abnormal rains, but these damages were more or less repaired by the end of the year.

135. The Director of Public Works also calls attention to the growing wear and tear of roads by the use of motor carriages for heavy traffic in St. Mary and Westmoreland, and by the general increase in the banana transport traffic.

New Works, Main Roads, and Bridges.

136. In addition to the building of bridges, culverts, and many other minor improvements, much important work was done on

new lines of communication, partly by taking up and improving sections of existing roads, main or parochial, where ill fitted for wheeled traffic, partly by deviations, and partly by making new lengths of road on the following lines:—

St. Andrew—

1. Between the Junction Road at the foot of Nolan's Hill and Mount Charles on the parish boundary, with a view to through communication with Richmond in St. Mary's, to join 10.
2. Between Stony Hill and St. Christopher's Church, with a view to extension to Above Rocks, and to join the main road from Pedro River to Bog Walk.

St. Thomas—

3. Yallahs Works to Easington, to facilitate motor traffic crossing the Yallahs River.
4. *Serge Island to Mount Vernon.*

Portland—

5. Windsor to Moore Town.
6. Ann's Delight to Berwick Spring, Spanish River.
7. Nonsuch to Islington: East end Interior Road.
8. Shrewsbury to Fruitful Vale and Chipps Hall.
9. Craigmill Road, White River.

St. Mary's—

10. Montrose to Plattfield, to join 1.
11. Newell Spring to New Ramble.
12. Sheep Pen Hill.

St. Ann's—

13. Claremont to Pedro.

St. James—

14. Catadupa—Brothers' Retreat.
15. Springfield Road.

Westmoreland—

16. Beaufort Hill Road.
17. Bethel Town—Duckett's Spring.
18. Springfield Road.
19. Galloway Hill.

St. Elizabeth—

20. Mountainside—Malvern.

Manchester—

21. Devon—Greenvale.

Clarendon—

22. Thompson Town—Smithville.

St. Catherine—

23. Point Hill Road.
24. Marlie and Bartons Hill.
25. Riversdale—Lucky Valley.

Repairs and Maintenance of Public Buildings.

137. The expenditure under this head included the following amounts spent in the restoration of earthquake damage:—

	£
Lunatic Asylum	302

Old Mico Buildings	1,488

There is now only a small amount of earthquake damage remaining to be repaired.

New Works, Public Buildings.

138. The buildings on the lands in Port Royal Street, Kingston, known as "Desnoes," and lately used as offices for the Collector-General and Customs, were remodelled and fitted up as offices for the Director and Kingston Superintendent of Public Works and the Protector of Immigrants.

The old Custom House was demolished and the site fenced.

One of the buildings formerly used as rum stores was remodelled and fitted up as a depôt for East Indian immigrants.

The old stamp office was altered, enlarged, and with additional buildings fitted up for use as the King's warehouse.

An additional dining-shed and a drying-shed were built at the Girls' Reformatory, Stony Hill.

A new range of cells was erected at the police station at Half-Way Tree.

A long range of stables was erected at Hope Gardens, and a stable and coach-house were built at the residence of the Director of Agriculture.

Improvements were made to the Public Works Office at Morant Bay and the several police stations and hospitals in St. Thomas.

The police stations at Port Antonio and St. Margaret's Bay were improved, and the station at Manchioneal was removed from the lower to the upper floor of the premises, the lower floor being converted into a court room.

The Government School at Fair Prospect was enlarged, and teachers' houses erected at Fair Prospect and Manchioneal.

The work on the improvement of the Port Antonio Harbour was continued during the year.

A new explosive magazine was erected at the Public Works Office at Richmond. A new building at the Annotto Bay police station and new stables at the stations at Port Maria and Lucky Hill were also erected.

Stables were added to the police stations at Cave Valley, Moneague, Claremont, and Alexandria, and a teachers' house and outbuildings erected at the Government School at Brown's Town.

New premises were acquired for the post office at Falmouth, and the necessary alterations, additions, and repairs were all but completed during the year.

The approved works for the improvement of the Falmouth water supply were completed.

Alterations, additions, and repairs were done to the new post office premises at Montego Bay, and the police stations at Montego Bay, Adelphi, and Spring Mount were improved. The necessary repairs to the existing buildings at Pleasant Hill, which were acquired for the Montego Bay Secondary School, were carried out,

Ordnance Survey, Southampton, 1911.

and a contract was entered into for the erection of the new school buildings.

Additions were made to the Public Works Office at Lucea, the police stations in the parish, and the hospital at Lucea.

A new office was erected for the Public Works Department at Newport.

The Public Works Offices at May Pen were enlarged by the erection of a pay office, the Chapelton Police Station was improved, and additions were made to the other stations in Clarendon, including the erection of a 4,000 gallon cement concrete tank at the Alley.

Improvements to the sewage discharge from the Spanish Town Hospital, and the St. Catherine District Prison were effected, and additions and improvements were made at the Post Office, Spanish Town, the Government school at Linstead, and Old Harbour Bay and school.

X.—GENERAL OBSERVATIONS.

139. The general tenor of the foregoing Report will have indicated, and the periodical Reports which I have received from the Revenue and Police Departments in each parish substantiate the opinion, that steady, if not rapid, progress was made during the year under review in the economic and social advancement of the Island community.

I have, &c.,

SYDNEY OLIVIER,
Governor.

TURKS AND CAICOS ISLANDS.

(For Report for 1910, *see* No. 681.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
27 July, 1912.

SIR,

I HAVE the honour to transmit herewith for your information a copy of the Blue Book of the Turks and Caicos Islands for the year 1911, together with two copies of the Commissioner's report thereon.

I have, &c.,

SYDNEY OLIVIER,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

(26014—2.) Wt. 29478—571. 1125 & 90. 9/12. D & S. A 2

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1911.

FINANCIAL.

The revenue for the year 1911 amounted to £8,318, while the expenditure was £7,695, as against £8,648 and £6,827 in 1910, respectively. There was a surplus of £623. The expenditure included the grants under the Salt Producers Relief Ordinance, of which £1,767 were allotted for the year. Favourable weather conditions for salt-raking and the continued demand for the new issue of stamps contributed to keep up the revenue.

Finances.

Year.	Revenue.	Expenditure.
	£	£
1907	7,391	7,119
1908	7,404	11,430
1909	7,748	7,454
1910	8,648	6,827
1911	8,318	7,695

including £4,000 in 1908 and £800 in 1909 for hurricane relief.

Revenue.

	1910.	1911.
	£	£
Import Duties	3,494	3,477
Royalty on Salt	1,716	2,183

Salt Industry	—	1,767
	£6,827	£7,695

Assets stand at £9,678 and Liabilities at £3,388, showing a balance of Assets of £6,290. There is no Public Debt and there is a Reserve Fund of £5,229.

LEGISLATION.

The following Ordinances were passed by the Legislative Board:—

No. 1.—The Appropriation Ordinance, 1912.

No. 2.—The Supplementary Appropriation Ordinance, 1910.

No. 3.—The Court of Appeal Ordinance, 1911.

The last-named Ordinance repeals the Court of Appeal Ordinance, 1907, due provision being made under the Jamaica laws in 1908 and 1911 for regulating appeals from the Supreme Court of the Dependency to the Supreme Court of Judicature of Jamaica.

VITAL STATISTICS.

There were 170 births, or 33 per thousand, and 94 deaths, or 16 per thousand.

The estimated population to the square mile was:—

	Population.	Per square mile.
Grand Turk	1,681	168
Salt Cay	398	99
Cockburn Harbour	817	102
The Caicos Islands—		
(*a*) East Caicos	150	9
(*b*) Middle Caicos... ...	717	18
(*c*) North Caicos	1,110	28
(*d*) Blue Hills	593	17
(*e*) West Caicos	141 (2,711)	12 (19)

The Census taken in the Dependency on the 2nd April showed that the population numbered 5,615 persons, of whom seven were foreigners on board vessels in harbour, making the total net population 5,608, and giving an increase of 328, or 5·8 per cent. over

the Census of 1901. Of the total population, 2,505 were men and 3,110 women, or 45 and 55 per cent., respectively: in other words, 9 males to 11 females. The white population decreased from 382 to 296, or 34 per cent., but the coloured and black inhabitants have risen from 1,378 and 3,590 to 1,627 and 3,702, respectively. The great decrease in the white population was caused by many being obliged to emigrate to seek employment in consequence of the succession of bad seasons and unremunerative prices for salt within the past decade, and by the gradual concentration of the ownership of the ponds in fewer hands. 1,464 persons were employed in agriculture, 594 in manufactures, and 116 in commerce.

EDUCATION.

The Census taken in April shows that of a population of 5,615 more than half can read and write, the total number being 2,821, as against 2,409 in 1901, an increase of 412. On the other hand, the number of those who can read only is 414, as against 706 in 1901. The compulsory sections of the Ordinance of 1901 have improved the numbers in the salt settlements—where the attendances compare favourably with those in rural districts in England—wonderfully during the past decade, and this has been accomplished with little or no friction, the parents recognising the advantages of the instruction given in the elementary schools.

The average number on the rolls was:—

Grand Turk	273
Salt Cay	71
Cockburn Harbour	178
Kew	88
Blue Hills...	101
Lorimers	96
Bottle Creek	124
Total	931

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports and exports during the year were valued at £24,722 and £23,703, as against £27,916 and £24,461 in 1910, respectively. The exports of salt rose from £14,889 to £19,503, and of sponges from £1,316 to £1,530, respectively, while those of sisal, chiefly owing to retention of stocks in consequence of low prices in the United States, fell from £7,351 to £1,225.

The value of the imports and exports during the past five years has been:—

	Imports.	Exports.
	£	£
1907	27,660	23,817
1908	24,426	24,768
1909	25,262	18,936
1910	27,916	24,461
1911	24,722	23,703

During the year the trade was with the following countries:—

	Imports.	Exports.
	£	£
United Kingdom ...	3,642	—
British Colonies ...	4,633	4,528
Foreign Countries ...	16,447	19,175
	£24,722	£23,703

Articles of Export.

	1910.	1911.
	£	£
Salt	14,889	19,503*
Sisal	7,351	1,225
Sponges	1,316	1,530
Conchs	559	743
Miscellaneous	346	702
	£24,461	£23,703

Shipping.

The total tonnage of vessels entered and cleared during the period 1907 to 1911 was:—

Year.	Tonnage.
1907	354,453
1908	410,195
1909	433,340
1910	385,762
1911	388,112

Comparative statement of shipping cleared for the years 1910 and 1911.

Nationality.	Sailing.		Steam.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
British	142	10,389	6	15,693	148	26,352

METEOROLOGICAL OBSERVATIONS.

During the year the average rainfall, as recorded at nine stations throughout the Dependency, was one of the lowest ever known, being only 22·91 inches. The wettest month was May, when 5·16 inches fell, whereas ·08 inch was registered in the following month, June.

The rainfall during the past five years has been:—

	Inches.
1907	28·49
1908	41·37
1909	39·97
1910	26·73
1911	22·91
Average annual rainfall for the period 1907-11	31·89

According to observations taken at the United States Weather Bureau Station at Grand Turk, the coolest and hottest months were February and August, the mean temperature for those months being 74·5° and 84·3°, respectively.

Mean temperature for the year	80·4°
Mean pressure for the year	30·060
Lowest temperature (11th March)	61°
Maximum temperature (25th August)	93·2°

The prevailing winds of the year were:—

POSTAL AND TELEGRAPHS.

Early in the year the Imperial Direct West India Mail ceased running, whereby these islands were deprived of direct communication with the Mother Country. A steamer of Messrs. Pickford and Black, which leaves Halifax for Jamaica every month, receives a small subsidy for calling at Grand Turk, both coming and returning. The Clyde Line from New York to San Domingo call every two weeks, both on the outward and on the return voyage. Cable communication with Bermuda and Jamaica has been established since 1898, the rates per word being:—To England, 3*s.*; to Jamaica, 1*s.*; to Halifax, 2*s.*; to Bermuda, 1*s.* 6*d.*; and to New York, 2*s.* 3*d.* Non-express messages are charged half rate.

GENERAL.

The weather conditions of the year were extremely favourable for the production of salt, the value of the exports of the staple product being £19,503, as against £14,889 in 1910. The year was also the first in which the provisions of the Salt Producers Relief Ordinance, 1910, came into operation, and the encouragement given by the grants caused the quality of the salt to be far in advance of that shipped in former years. At the first meeting of the Central Board it was agreed that, in order to prevent the grants under section 10 being frittered away or diverted from the purposes for which they were intended, they should be made, firstly, for maintaining the quality of salt by cleaning and repairing the common reservoirs; secondly, for increasing the quantity

of salt by the erection of salt houses; and, thirdly, for aiming at more economical production by reorganising the ponds, reducing the cost of boatage and cartage and combining interests. At Grand Turk grants were given for cleaning the main reservoirs and the erection of a windmill at Hawk's Nest. The cleaning of the common reservoir at Salt Cay and the raising and extending of the embankment were among the work undertaken in that island, while at Cockburn Harbour similar work, which had been deferred owing to the lack of funds in the past, was taken in hand.

Owing to the low prices obtainable for fibre, the condition of the sisal industry remained unfavourable throughout the year. When land is planted systematically and on a sufficiently extensive scale, and when impossible returns are not expected to meet over-capitalisation, I am confident that there is a future for fibre, which can be grown and shipped under more favourable conditions than anywhere else in the tropics.

The question of the gradual depletion of the sponges found in the banks of these islands is engaging the attention of the Government, and a special report will shortly be made on the industry. During the year a lease of Bell Sound, in South Caicos, was granted to one of the principal exporters of sponges for the purpose of experimenting in the artificial production of sponges. As yet, it is premature to say whether the cultivation can be maintained on a commercial basis, but the cuttings of sponges attached to flat stones have increased in size with remarkable rapidity, clearly proving there is no difficulty in raising sponges by these means. In all 10,236 cuttings were attached and planted, the loss, after the initial stages of inexperience, being less than 10 per cent.

In common with the other parts of the Empire, the King's Coronation was celebrated throughout the Dependency with every demonstration of loyalty possible by all classes.

Total for General Expenditure	£1,155,208	8	6¼	£987,304	9	5¼

2. The total revenue and expenditure for the last five years have been as shown below:—

	Revenue. £	Expenditure. £
1907-8	1,021,937	935,427
1908-9	933,751	911,095
1909-10	992,976	1,033,794
1910-11	990,399	987,304
1911-12	1,161,014	1,155,208

3. The revenue exceeded the original estimate for the year by £171,653, and the receipts for the preceding year by £170,615. In the total there are, however, included sums of £46,401 received from the Earthquake Loan Board for redemption of debt, and £13,500 from special sales of Government property. For purposes of comparison, therefore, the total revenue might be reduced by £59,901 and regarded as £1,101,002, exceeding the estimate by £111,752.

4. The chief excesses in the receipts of 1911-12 over those of 1910-11 were as follows:—

Customs, £45,913; Port, Harbour and Light Dues, £1,042; Licences, Excise, &c., £18,950; Fees of Office, Stamp Duties, Reimbursements, &c. (exclusive of the £46,401 for redemption of Loan Board Debt), £12,948; Post Office and Telegraphs £2,764; Government Railway, £28,374; Miscellaneous, £2,837; Land Sales, £12,910 (Constant Spring Hotel, £10,000, and East Street Wharf, £3,500). There was a decrease of £978 under the head of Interest.

5. The expenditure was £78,656 in excess of the Estimates and Supplementary Estimates as voted, and £167,904 in excess of the expenditure of the preceding year.

6. This increase is more than accounted for by the following transactions:—

(1) An increase in the amount of the annuities payable on Imperial Earthquake Loans outstanding at the beginning of the year.

(2) A repayment of £46,401 to the Imperial Government during the year provided for by an increase of that amount in the advance from the Island Treasury to the Earthquake Loan Board.

(3) Special payments made out of General Revenue into Sinking Funds as follows:—

	£
(*a*) Price of Constant Spring Hotel paid into the Hotel Loan Sinking Fund	10,000
(*b*) Amortisation Fund, Imperial Loan for railway interest	11,262
(*c*) Amortisation Fund, Imperial Loan for railway equipment	23,998
Total special repayments of debt directly out of General Revenue	£45,260

7. The chief excesses in expenditure over that of the previous year were under the following Heads:—Debt Charges, £97,825; Public Works Department, £1,277; Excise and Inland Revenue Department, £1,428; Judicial, £982; Medical, £3,946; Constabulary and Prisons, £1,073; Education, £15,548; Government Printing Office, £2,065; Agricultural Services, £3,222; Miscellaneous, £3,653; Public Works (including new Government buildings), £29,815; and Clarendon Railway, £14,041. It is yet to be decided whether the expenditure under the last item should be finally left to stand as a charge against revenue or be refunded out of the proceeds of a loan.

8. The chief decreases in expenditure were:—Immigration, £6,147; Direct West India Steamship Subsidy, £20,000; and Railway, £5,409.

9. The surplus of assets over liabilities on general revenue account at the close of the year (in addition to the Insurance Fund of £100,000) was £174,983. To this amount may be added a sum of £12,937 which will be transferred to the credit of General Revenue account on the closing, in accordance with a settlement arranged during the year of the long unsettled accounts between the Government and the representatives of the interests of the promoters of the construction of the railway extension: the title to which interests has been for many years the subject of litigation in the United States.

The balance of assets will also be increased by the transfer to the credit of General Revenue account of a sum of £2,271, being the balance of the Prisons Pension Fund, which has been superseded by provision made by law this year for the direct payment of pensions to prison officers out of general revenue.

The total surplus of assets on 31st March, 1912, may thus be computed as having been about £190,191.

10. The Public Debt of the Island (most of which is represented by productive investments) amounted to £3,871,305 on the 31st

March, 1912. This included £139,142 due to the Imperial Government for Earthquake Loans, directly secured by advances on properties. The accumulated sinking funds on the same date amounted to £759,865, leaving a net liability of £3,111,440. Included in the debt were guaranteed public loans for local purposes secured on municipal rates and undertakings amounting to £353,606, the sinking funds in respect of which amounted to £61,296.

11. No addition was made during the year to the Public Debt of the Island forming a charge on general revenue.

On the other hand, £46,401 was refunded to the Imperial Government to close the account of a loan of £50,000 obtained under the Earthquake Loan (Imperial) Law, 1907, and other special additions as stated above, amounting to £45,250, were made to sinking funds for other loans.

12. Provision of £32,940 has been made for further special amortisations of debt in the course of the present year, and another payment will be made to the Imperial Government out of surplus balances in July next to close the account of another £50,000 instalment of the Imperial Earthquake Loan. The total of these loans amounted to £200,000, of which amount one-half will thus shortly have been repaid in full, whilst part of the remainder has already been repaid by annuities. The amount oustanding on 31st March, 1912, was £139,141.

Should the financial position of the Government continue to improve as it has for some years past, it will probably be possible to repay the whole remainder of these loans within a short period.

The healthy condition of the credit of the Island Government is indicated by the fact that within the last 2½ years it has been able to borrow £67,000 on debentures at 3½ per cent. interest having currency of 20 and 30 years, at premiums averaging 1·48 per cent.

13. The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together, for the last five years, are shown in the following comparative statements:—

Kingston City Council.

	Receipts.	Expenditure.
	£	£
1907-8	30,775	30,858
1908-9	32,197	30,010
1909-10	32,513	35,739
1910-11	35,755	35,385
1911-12	46,565	45,846

Kingston General Commissioners.

	Receipts.	Expenditure.
	£	£
1907-8	28,251	25,273
1908-9	30,545	26,223
1909-10	31,957	30,707
1910-11	60,082	52,373
1911-12	69,740	72,875

Other Parochial Boards (14 *Parishes*).

	Receipts.	Expenditure.
	£	£
1907-8	105,433	106,891
1908-9	106,231	107,838
1909-10	111,586	117,461
1910-11	135,118	139,032
1911-12	123,179	124,059

14. The debts of the Parochial Boards to the Treasury for advances made for water-works and markets amounted at the close of the year to £19,943.

15. Power has also been taken under the Parochial Loans Law 20 of 1903, to borrow for the construction or improvements of water-works, markets and streets, and drains, and £26,500 had been raised in this manner by the end of the financial year.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

A. Imports and Exports.

16. The total values of imports and exports for the last five years are as follows:—

	Imports.	Exports.
	£	£
1907-8	2,854,042	2,360,702
1908-9	2,420,335	2,268,254
1909-10	2,561,674	2,628,307
1910-11	2,614,943	2,568,222
1911	2,865,553	2,948,067

17. The Collector-General reports as follows:—

"The year just closed recorded a high-water mark in the values of the Island's imports and exports. There were present many abnormal conditions influencing the year's business in one direction or the other, among which may be mentioned industrial unrest bearing on first cost as well as transport charges; the scarcity and high price of sugar caused by dry weather in Europe; the continued neglect abroad of Jamaica Rum and the exceptionally hot summer experienced both in Europe and America, which created demand for fruit on the one hand and enhanced the cost of dairy produce on the other. In the detailed examination of the year's returns the influence of these factors will be more or less apparent.

"Buoyancy has been a noticeable feature of the trade of the year, and the impression is that the general revival has elements of relative permanence in it. At the same time it must be remembered that the conditions of a small com-

munity dependent on limited industries, the principal of which is easily affected by drought—which prevails in the Island to a considerable extent—and by hurricane—from risk of which we are not free—are necessarily more or less artificial, and are liable to sudden changes and fluctuations. In these circumstances the conservative estimation that a comparison of results over a period of years affords is the only safe rule to be guided by. The figures for such a comparison will be found in the Import, Export, and Shipping statistics given for 50 years, at 10 year rests, later in this report."

18. The principal articles of import were:—

	Value.	
	1910.	1911.
	£	£
Ale, beer and porter	39,240	49,207
Beef, wet salted	19,485	19,473
Bread and biscuit	33,965	31,851
Butter and substitutes	38,227	41,768
Coal	44,097	49,453
Corn	44,390	46,989
Fish, dried and salted	143,014	150,746
Fish, pickled or smoked ...	56,246	75,087
Flour (wheaten)	266,934	255,207
Meal (other than wheaten) ...	39,571	35,318
Milk, condensed	43,383	53,193
Oats	14,533	12,453
Oils	68,336	70,681
Pork, wet salted	18,493	19,347
Rice	75,937	59,055
Soap	29,377	39,201
Spirits	17,501	17,906
Tobacco (manufactured) ...	14,690	10,366
Wines	20,218	17,679
Pitch pine lumber	78,429	94,698
White pine lumber	14,138	12,195
Textiles	532,937	638,331
Hardware and Manufactures of Metal	285,449	304,128
Boots and Shoes	84,104	90,792

19. As much difference of opinion exists as to the result of tariff reduction and as to the degree of benefit reaped by the consumer where the relief is not substantial, some holding that unless the unit of relief is divisible into the smaller measures used in retail trade, there must be failure to reach the consumer, while others maintain that competition may in this country, as in others, be relied on to secure to the actual consumer the fullest measure of what he is entitled to, the following analysis of the imports of those goods affected by Laws 1 and 16 of 1910 is submitted as being of interest.

—	Imports.				Duty.		
	5 years average before reduced duty.	1911–1912.	Percentage of reduction in rate of duty.	Percentage increased consumption.	5 years before reduction.	1911–1912.	Percentage decrease in import duty collections.
	galls.	galls.			£	£	
Kerosene Oil	1,086,180	796,844	46·7	36·3	24,610	18,103	26·4
Other Oils...	258,624	219,257	44·5	17·9	7,009	5,388	23·1
Gasolene ...	66,180	8,393	55·6	688·5	237	1,103	(increase) 365·3
	lbs.	lbs.					(decrease)
Soap ...	4,785,600	4,229,054	54·6	13·1	11,137	5,982	46·2

In the case of condensed milk, wire, and galvanized iron for roofing which have passed to the free list, the figures are as under:—

—	1911.	5 years average before the relief from duty.	Percentage of increase.
Condensed Milk, number of cases...	59,103	44,067	34·1
Wire, value	£9,734	£6,753	44·1
Galvanized iron for roofing, value	£20,665	£11,295	82·9

It is surprising that, notwithstanding, the increase in cost in the country of production, the increase in consumption of condensed milk is so marked.

The explanation appears to be that relief from duty has enabled the risk that a wider distribution entails to be taken—the increase in first cost being offset by the saving in duty.

20. The values of the imports received from the different parts of the world were as follows:—

	£	Per cent.
United Kingdom	1,291,923	45·1
United States	1,200,345	41·8
Canada	244,546	8·5
Other Countries	128,739	4·6

21. The totals of imports into the Colony for the past 50 years, at 10 year intervals, have been:—

	£
1871—year ended 30th September, 1871 ...	1,331,185
1881—year ended 30th September, 1881 ...	1,392,668
1891—year ended 31st March, 1891	2,190,745
1901—year ended 31st March, 1901	1,722,069
1911—year ended 31st December, 1911 ...	2,865,553

Divided between countries from which supplies were obtained, the figures work out as follows:—

—	1871.	1881.	1891.	1901.	1911.
	£	£	£	£	£
United Kingdom ...	777,206	646,052	1,229,043	814,639	1,291,923
	58·5%	46·4%	56·2%	47·3%	45·1%
United States ...	312,171	549,724	743,261	717,033	1,200,345
	23·4%	39·4%	33·9%	41·6%	41·8%
Canada	203,534	147,376	162,731	141,409	244,546
	15·2%	10·6%	7·4%	8·2%	8·5%
Other Countries ...	38,274	49,516	55,710	48,989	128,739
	2·9%	3·6%	2·5%	2·9%	4·6%
	1,331,185	1,392,668	2,190,745	1,722,069	2,865,553

22. The chief articles of export show the following variations:—

	Values.	
	1911.	1910.
	£	£
Annatto	5,530	6,306
Beeswax	3,762	3,709
Cocoa	101,448	63,017
Cocoanuts	98,687	78,710
Coffee	154,131	167,409
Bananas	1,456,581	1,141,710
Grape fruit	19,310	23,300
Oranges	46,985	52,902
Ginger	58,637	44,987
Hides	12,824	11,520
Honey	25,102	19,796
Lime juice	3,400	4,634
Pimento	83,252	73,660
Rum	85,916	134,659
Sugar	247,413	261,151
Cigars	35,923	32,900
Fustic and bitterwood ...	13,029	15,682
Logwood	99,108	66,218
Logwood extract	166,030	163,600
Goat skins	14,052	13,196

23. The total value of the exports shows an increase of £379,844.

The principal increases are in—

	£
Bananas	314,871
Cocoa	38,431
Cigars	3,023
Cocoanuts	19,977
Ginger	13,650
Pimento	9,592
Logwood	32,890
Honey	5,306

Decreases, however, occur in—

	£
Coffee	13,278
Grape fruit	3,490
Oranges	5,917
Rum	88,743
Sugar	13,738

24. Our sales were made as shown in the following summary. (British, foreign, and colonial manufactures imported into the Colony and subsequently exported, and coin and bullion, are included in the figures used in working out the ratios):—

—	1909.	1910.	1911.
United Kingdom	21·2	20·6	14·7
United States of America	61·5	54·1	61·9
Canada...	4·7	8·4	8·6
Other countries	12·6	16·9	14·8

Comparison between the last two years shows a loss of 5·9 per cent. for the United Kingdom, other countries 2·1 per cent.: the United States of America shows an increase of 7·8 per cent. and Canada of ·2 per cent.

25. The total exports from the Colony for the past fifty years, at ten year intervals, were as under. (These figures include British, foreign, and other colonial produce and manufactures imported into the Colony and subsequently exported, also coin and bullion):—

	£
1871—year ending 30th September, 1871 ...	1,248,685
1881—year ending 30th September, 1881 ...	1,178,594
1891—year ending 31st March, 1891 ...	1,902,814
1901—year ending 31st March, 1901 ...	1,797,076
1911—year ending 31st December, 1911 ...	2,948,067

26. The following is a table in which the relative importance of our products is set out:—

—	1909.	1910.	1911.
	Per cent.	Per cent.	Per cent.
Sugar	4·7	10·8	8·9
Rum	9·3	5·5	3·1
Coffee	5·0	6·9	5·5
Cocoa	Included in Minor Products.	2·6	3·6
Dyewoods	2·3	3·2	3·9
Fruit	59·9	53·7	58·3
Pimento	2·7	3·0	3·1
Minor Products	16·1	14·3	13·5

27. The following shows the markets in which we made our sales. (The figures include British, foreign, and other colonial produce and manufactures imported into the Colony and subsequently exported, also coin and bullion):—

—	1871. Year ending 31st March, 1871.	1881. Year ending 30th September, 1881.	1891. Year ending 31st March, 1891.	1901. Year ending 31st March, 1901.	1911. Year ending 31st December, 1911.
	£	£	£	£	£
United Kingdom ...	1,029,833	783,204	614,912	338,976	434,165

	8·4%	18·9%	55·3%	63·8%	62·0%
Canada	35,976	73,449	42,091	31,649	253,269
	2·9%	6·3%	2·2%	1·7%	8·4%
Other Countries ...	79,004	98,357	194,330	280,070	435,001
	6·3%	8·3%	10·2%	15·7%	14·8%

28. The following is a comparison between the exports of 1881 and those of 1911:—

	1881.	1911.
	£	£
Sugar	336,901	247,413
	30·5%	8·9%
Rum	174,406	85,916
	15·8%	3·1%
Coffee	231,383	154,131
	20·9%	5·5%
Cocoa	1,875	101,448
	·2%	3·7%
Dyewoods	136,376	107,277
	12·3%	3·9%
Fruit	44,089	1,624,245
	·4%	58·5%
Pimento	87,843	83,252
	8·0%	3·1%
Minor products	91,533	374,901
	8·3%	13·5%
	£1,104,406	£2,778,583

Total increase on the exports of 30 years ago is £1,674,177, and in that of fruit alone £1,580,156.

29. The acreage returned in 1911-1912 grouped under the four principal headings of the return, and set against an average of four years, exhibit the following:—

	1911-12. acres.	Average of 4 years. acres.
Tilled lands	280,286	255,734
Guinea grass	143,592	139,690
Commons	517,830	489,241
Wood and ruinate	1,230,001	1,227,513
	2,171,709	2,112,178

30. There has thus been an increase under each grouping: the actual figures being 24,552 acres in the case of tilled lands, 3,902 acres in the case of guinea grass, 28,589 acres in the case of commons, and 2,488 acres in the case of ruinate. As 56 per cent. of the alienated land is returned as being in wood and ruinate there would appear to be much room for further agricultural or pastoral development.

31. The tilled lands in turn are classified as far as possible under description of cultivation, and the figures for the past year taken out under crop, and compared with an average of four years give the following summary:—

	1911-12. acres.	Average of 4 years. acres.
Canes	34,766	30,308
Coffee	24,473	25,141
Cocoanuts	16,691	13,243
Bananas	82,435	67,573
Cocoa	13,355	10,192
Ground provisions	74,723	105,036
Mixed cultivation	30,167	
Minor items	3,676	4,279

32. Increase in cane acreage is apparent in St. Thomas, Trelawny, Westmoreland, and St. Catherine; the principal contributors to coffee decrease are Manchester and St. Catherine; increase in cocoanut acreage is fairly general, the great demand for this commodity acting as a good stimulus; the same may be said of the banana, which has now distributed itself over the whole Island, instead of being confined to the east end as was formerly the case. Cocoa holds its own, the cocoa-growing parishes of St. Catherine and St. Mary contributing the major portion of the increase. With ground provisions must be bracketed mixed cultivation, the latter representing the acreage returned by landlords as in the hands of their tenants at will. In the statement is also recorded the number of such tenants, which stands at 23,015. The last item in the summary shows a decrease in acreage of 603 acres.

33. The following abstract of the number of separate properties laid under contribution to general and parochial revenue during the year 1911-12, and the different descriptions set out and compared with the figures of the year preceding, show the following:—

	1911-12.	1910-11.
Properties valued at £20	62,911	60,641
Properties valued at £30	6,445	6,097
Properties valued at £40	55,286	54,208
Properties valued at over £40 ...	29,767	29,257
Occupiers relieved	1,136	1,237
Properties in arrear...	6,693	8,167
	162,238	159,607

34. There has thus been an increase of 2,270 in the smallest description of property paid on, of 348 in the number of £30 properties, of 1,078 in the number of £40 properties, and of 510 in the number of large properties, while the reliefs decreased by 101 and the arrearage by 1,474—altogether a very creditable record. Holdings of and under £40 each in value numbered 124,642, and contributed £12,200 to the property tax, while those over that fixed margin of value numbered 29,767, and contributed £23,335.

35. The Surveyor-General makes the following observations with regard to the sale of Crown Lands, &c., during the year:—

Sale of Land.

Two hundred and thirty-two purchasers who bought 2,223 acres under the Rules for the sale of Crown Land to small settlers have completed payment of instalments of their purchase money and been given titles for their lands. There were also 77 other purchasers who paid cash down for 557 acres. Fresh areas have been offered for sale for cash in St. James at "Brothers Retreat," on the new main road to Catadupa Railway Station, and at "New Battle" and "Jericho." No purchasers have, however, been forthcoming. To date, of the total of 31,000 acres that have been sold partly on credit since 1896, about 11,600 acres have been paid for in full and 3,500 acres taken back for failure to pay. £30,000 has been received to date on account of sales of lands. The total amount of purchase money received during the year from cash and instalment purchasers amounts to £2,220.

Leases and Tenancies.

Two thousand and eighty-six acres and 19 town lots have been leased to 34 persons for £178 a year, and 2,015 small prædial tenants have been taken on at rentals of from 12*s*. to 20*s*. per acre per annum. The total amount of rent received for the year amounts to £2,570 11*s*. 8*d*.

Forfeiture of Lands.

Six thousand five hundred and fifteen acres have been finally forfeited and fresh proceedings taken in respect of 5,626 acres. Proceedings are now pending in respect of 12,141 acres.

Escheatable Lands and Generally.

Two cases of escheat occurred during the year, the lands being subsequently offered for sale. Sites for various school houses, teachers' cottages, and other purposes have been arranged.

Retrospect.

Twenty years ago there were only about 70,000 acres of Crown Land in charge of 16 bailiffs, and the receipts of the Department under all heads were as low as £1,200 a year. Now there are 290,000 acres of Crown Land in charge of 122 baliffs and headmen, and the receipts of the Department are nearly £5,000 a year. This large area represents an asset to the Colony worth fully £400,000. It may be interesting to note that the rents collected from small prædial tenants have risen to £500 a quarter (£523 for quarter ended 31st December, 1911) and are likely to further largely increase.

Agriculture.

36. The farm school at Hope was enlarged so as to enable 12 more students, making 36 in all, to be accommodated. A large number of applications were received for the vacancies, and the institution is again full.

Accommodation for eight more boarders is now being provided.

37. The stock farm imported 41 head of selected dairy cattle from England, Canada, and the United States. As was inevitable, a good many losses were incurred, principally from tick-fever, but by the use of Trypan Blue many valuable animals were saved.

The calves dropped by the imported cows after landing made good the losses by death during the year.

38. A nucleus for the establishment of a herd of well-bred dairy cattle has now been secured, and the lands assigned for the use of the farm at Hope are rapidly being brought into a productive state. The experiment in making silage from guinea grass and guinea corn proved successful and indicated the value of ensilage as a source of fodder for times of scarcity.

39. Seven tons of the special insecticide "Paranaph" were issued by the Department to the public for the treatment of ticks on cattle.

40. Outbreaks of anthrax were dealt with in three parishes during the year. Fortunately, the disease was quickly got under control and the losses were not very serious.

41. The field experiments of sugar estates were continued and demonstrations given of the value of certain manures and of new seedling canes. The locally raised seedling canes, J. 71 and J. 72, have shown good promise under estate conditions.

42. The work of local agricultural instruction has now been so extended that a continuous service of resident instructors has been provided for the whole Island. This, in connection with the branches of the Jamaica Agricultural Society, is bringing

the peasant proprietary into touch with improved methods of agriculture and is a promising means of progress.

43. A good deal of anxiety as to diseases of the banana was occasioned towards the close of the year by the discovery of four specific diseases of this plant, one of them being the dreaded "Panama disease" which has caused serious losses to planters in Central America.

Prompt and energetic steps were taken to deal with these outbreaks, and the indications are favourable for the successful outcome of these measures. A microbiologist has been appointed to investigate these diseases, and valuable information has already been obtained as a result of his investigations.

44. Progress continues in the sugar industry, and much improvement in manufacture has now been secured by the introduction of modern machinery. The centralisation of contiguous estates is proving a successful means of increasing the output of sugar.

Jamaica rum shows signs of recovery, and the prices have improved somewhat from the low level of two years ago.

45. Cassava, castor-oil beans, Castilloa rubber, and Sea Island cotton received attention during the year, and efforts were made by progressive planters to test the commercial possibilities of these crops as grown in Jamaica.

46. In Kingston a factory was erected for the manufacture of biscuits and is now turning out crackers which are considered superior to those manufactured in the United States of America. A branch of the West India Oil Company also started operations in the city and erected large stores for the storage of oil.

47. New and improved machinery for the manufacture of sugar was installed at Serge Island Estate in St. Thomas.

48. A large plant for manufacturing banana figs is being installed at Freeman's Hall in Trelawny.

49. The central sugar factory at Rose Hall in St. James, to which reference was made in last year's report, was completed and is now in active operation. An enterprise for the manufacture of banana food was started in Montego Bay during the year, but so far its operations are confined to the manufacture of banana figs.

50. A company is reported to have been formed for the establishment of a central sugar factory at Phœnix in Hanover.

51. It is understood that further improvements in the sugar machinery on several estates in Westmoreland are contemplated.

52. A factory for the manufacture of aerated water in Mandeville is in course of erection.

53. During the year electric light was installed in the town of Linstead in St. Catherine.

SHIPPING.

54. The ships reporting show an increase in number and tonnage. The figures are:—

Steamers and Sailing Vessels.

	1911.	1,508	ships with tonnage	2,158,647
	1910.	1,375	,, ,, ,,	1,916,460
Increase in ships		133	and in tonnage	242,187

Steamers and Sailing Vessels.

The clearances were:—

	1911.	1,509	ships with tonnage	2,160,465
	1910.	1,374	,, ,, ,,	1,907,471
Increase in ships		135	and in tonnage	752,994

Distinguishing between ships (steamers and sailing vessels) reporting with cargo and those reporting in ballast, the account appears as follows:—

Reporting with Cargo.

	1911.	1,144	ships with tonnage	1,824,363
	1910.	1,080	,, ,, ,,	1,696,595
Increase in ships		64	and in tonnage	127,768

Reporting in Ballast.

	1911.	364	ships with tonnage	334,284
	1910.	295	,, ,, ,,	219,865
Increase in ships		69	and in tonnage	114,419

Separating steamers from sailing vessels, the analysis shows that the arrivals of steamships were:—

	1911.	1,360	ships with tonnage	2,127,165
	1910.	1,201	,, ,, ,,	1,883,356
Increase in ships		159	and in tonnage	243,809

The following table shows the arrivals with cargo and the arrivals in ballast:—

Arriving with Cargo.

	1911.	1,028	ships with tonnage	1,808,481
	1910.	946	,, ,, ,,	1,680,781
Increase in ships		82	and in tonnage	127,700

Steamships Arriving in Ballast.

1911.	332	ships with tonnage	318,684
1910.	255	,, ,, ,,	202,575
Increase in ships	77	and in tonnage	116,109

The steamers clearing were as under:—

1911.	1,363	ships with tonnage	2,130,424
1910.	1,207	,, ,, ,,	1,874,722
Increase in ships	156	and in tonnage	255,702

Separating those clearing in ballast from those taking cargo the figures are:—

Cleared with Cargo.

1911.	1,313	ships with tonnage	2,046,305
1910.	1,153	,, ,, ,,	1,826,226
Increase in ships	160	and in tonnage	220,079

Cleared in Ballast.

1911.	50	ships in tonnage	84,119
1910.	54	,, ,, ,,	48,446
Decrease in ships	4	Increase in tonnage	35,673

55. The arrivals of steam vessels at the ports were as under:—

—	12 months ended 31st December, 1910.		12 months ended 31st December, 1911.		Increase.		Decrease.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.

III.—LEGISLATION.

60. Of the 31 laws passed in the session of 1911-12, the following may be referred to as the more important:—

No. 1.—A law specially declaring the amounts of the Parish General Rates to be collected for the year 1912-13, which was rendered necessary as the result of a decision arrived at in the Legislative Council that Parochial Revenues Rate should be relieved of one-half of the annual charges for pauper lunatics confined in the General Lunatic Asylum, and that this half charge should be borne by general revenue.

No. 3.—To make provision for extending the Government railway from May Pen to Chapelton.

No. 6.—A law for the management of agricultural loan societies, providing for the regulation of such societies and for the advance to them of public funds to be used as part of their loan capital under certain conditions.

No. 10.—A law to amend the tariff, providing for the reduction of the import duty on goods charged with *ad valorem* duty from 16⅔ per cent. to 10 per cent.

No. 11.—A law prescribing that all citrus fruit sold by a measure to a licensed produce dealer shall be sold by the measure of the description and size named in the schedule.

No. 17.—A law to prevent the introduction and spread of plant disease (amending previous law).

No. 22.—A law making provision for the regulation of the position of employees on the Jamaica Government railway, and for the grant of pensions and gratuities to such employees.

No. 23.—A shop assistants' law providing that retail selling clerks in Kingston and other outlying districts shall be engaged at work for only eight hours (8 a.m. to 4 p.m.) on Mondays, Tuesdays, Thursdays, and Fridays, for six hours (8 a.m. to 2 p.m.) on Wednesdays, and ten hours (8 a.m. to 6 p.m.) on Saturdays. The law also provides for certain exceptions to these general provisions, requires proper sitting accommodation for female assistants, and enacts that no person under the age of 15 years shall be employed in a shop for a longer period than 42 hours in any week.

No. 24.—A law further amending the Health Laws of 1910. This law enacts that the powers and authority vested in the Local Boards of Health may, with the approval of the Governor, be exercised by the Director of Public Works in any particular case or class of cases, and lays down the procedure to be followed in such event.

No. 25.—A law enabling Parochial Boards, if they so choose, to grant retiring allowances to their officers.

No. 26.—A law further to amend the Towns' Nuisances Prevention Law of 1887, giving increased powers to Local Boards to deal with buildings or walls in a ruinous state, or lands within the limits of any town that has in it any unsightly ruins. This law will enable many unsightly places and ruins which still remain in Kingston as the results of the late earthquake, to be

satisfactorily dealt with and the foreshores of wharf premises to be properly embanked and walled.

No. 28.—" A law to provide for a yearly return by bankers of unclaimed securities and moneys, and to make certain unclaimed moneys general assets of the Island."

Under this law moneys which have remained in the possession of banks in the Island for 30 years without any claim having been successfully made thereto, will, one year after proper advertisement, without the establishment of proper claims, become part of the assets of the Island.

No. 29.—A law to authorise the transfer of young criminals under the age of 18 years from a prison to a prison farm or similar institution.

No. 31.—A consolidating law dealing with the notification of infective diseases.

IV.—PUBLIC EDUCATION.

61. The Director of Education furnishes the following statistics:—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books for Year ended 31st October, 1910.	Average Attendance for Year ended 31st October, 1909.	Percentage on Average Attendance of number on Books.	Total Payments to Elementary Schools and Teachers
					£
1911–12 ...	698	98,576	61,669	62·55	60,503
1910–11 ...	698	94,923	59,256	62·40	51,965

62. The last previous year showed an increase of 5,021 in the number of scholars names on the school registers: in the year under report there was a further increase of 3,653. The percentage of average attendance out of numbers on the register (62·55) is very slightly better than last year, but is still considerably below that of the preceding year (64·34). With regard to the efficiency of the work of the schools as measured in the inspection results, there is a gratifying increase in the number of first-class schools from 191 to 217. It is also satisfactory to note that the number of third-class schools has diminished by 20, and that of the " failures " by 7.

63. An important addition to the office staff was made during the year in the appointment of an Assistant Director. The vacancy of one Inspectorship caused by the promotion to this new office and the addition of three new Inspectorships to the staff made it necessary to select four new Inspectors. One of these vacancies was filled by the appointment of the Principal Teacher

of the Mico Practising School, this being the first instance of the appointment of an elementary school master to this position.

64. The addition to the staff of Inspectors made it possible to reduce the schools on each Inspector's list from about 100 to 70. No schools in full operation were left uninspected during the year, whilst new duties were undertaken in the form of inspection visits in addition to the annual examinations. These visits are intended to be made during the session of a school, and to enable the Inspector to observe and instruct the teachers in their ordinary work.

65. The appointment of a Supernumerary Inspector was sanctioned towards the close of the year, which it is hoped will mitigate the inconvenience which arises when Inspectors go on leave, and enable the department to secure more uniformity in the standard of the Inspectors' judgment, by rendering it possible to arrange from time to time to relieve an Inspector in one district to see something of the work of his colleagues in another.

The Director of Education draws attention to the very great recent increase in the work of his department, which has prevented him from doing much of the travelling which would help to solve many local difficulties and to keep Inspectors' methods and standards in line. The number of letters received by the department had increased from 28,547 in the previous twelve months to 34,294, and of letters, forms, and circulars despatched from 30,613 to 45,825.

66. Special attention was paid during the year to the inspection of training colleges and a full report furnished, dealing with all matters in regard to which improvements appear to be possible.

67. The total amount expended by the Accounting Officer of the department in 1911-12 was £78,300, as compared with £66,751 in 1910-11. The greater part of this increase was due to the augmentation of the total of grants to elementary schools and teachers from £51,965 to £60,503, of the cost of administration and inspection from £4,991 to £6,244, and to the provision of £607 for building and equipping a Government school in Kingston, and £1,454 for the Technical School in Kingston.

68. Apart from the special grant of £150 for tools, the total amount disbursed for school gardens was £1,217, as compared with £746 last year. The Agricultural Instructors of the Jamaica Agricultural Society devoted increased attention to the school gardens in their districts.

69. The appliance grant was increased from 3*d.* to 6*d.* per head for the scholars in attendance, and the special appliance grant, for which £500 was voted in 1910-11, was repeated and doubled in amount to £1,000. The same amount of £1,000 was again voted by the Legislative Council for the succeeding year, and the grant per unit of average attendance was further increased from 6*d.* to 8*d.* The beneficial effect of the special grant has been noted by all the Inspectors, but it is regrettable to find that, in spite of the guidance in giving and supplying every school with detailed drawings for suitable desks, benches, &c., the results of the local carpenters' efforts are often disappointing and discreditable.

70. The usual agricultural course for teachers was held at the Mico Training College; it was attended by 43 teachers: 33 men and 10 women. The latter attended a course of lectures on domestic economy.

71. The Technical and Continuation School in Kingston was brought into operation during the year. The establishment comprises the Manual Training School, the Technical Department for boys, the Continuation Department for boys and girls, with the Domestic Science Department for girls, evening classes on technical, commercial, and domestic subjects. The work of the school appears to have started with encouraging success. At the close of the year 360 boys were attending the Manual Training School, and 53 were taking the more advanced work of the Technical Department; 134 boys and 38 girls were attending the Continuation Department; 169 girls were attending the preliminary classes for the Domestic Science Department; and 38 the continuation classes; 20 scholars were attending evening technical classes; 16 the commercial classes; and 9 the domestic science classes. The work of the school was a good deal hindered by the building operations proceeding on the premises. Better accommodation will be provided when the Supreme Court moves out of the buildings of the old Mico College into the new block of Public Buildings now nearing completion.

72. Compulsory attendance was enforced as a new institution by the Kingston School Board during the year, and School Boards, with a view to the introduction of compulsion, were also established at Falmouth and Lucea. The effects of compulsion are shown in an increase of attendance in the compulsory areas. At Kingston (including Port Royal) the increase has been from 4,426 to 5,480; at Falmouth from 155 to 199; and at Lucea from 205 to 223.

73. In addition to the vote of £2,000 for building grants, the Legislative Council had appropriated £10,306 on the Estimates for the erection of new Government schools and teachers' houses. The Director of Education reports that some progress has been made with the erection of such schools and houses, but not so much as he had hoped for. The process of obtaining sites is tedious and also found to be very expensive.

74. Three new schools were completed and thirteen Government schools in Government buildings provided with excellent cottages for the principal teachers. Work is in progress in connection with new Government schools at seven other places, in one of which (Ewarton) the Custos of the Parish, the Hon. G. M. McGrath, has presented an admirable site.

Secondary Education.

75. During the year two laws came into operation affecting the control of Secondary Schools, by substituting the Jamaica Schools Commission for the Board of Education in the control of the Montego Bay Secondary School and all other Government schools to be formed in the future, and by raising the number of the members of the Commission from seven to nine. Good

progress is reported in the efficiency of most of the Secondary Schools during the course of the year. Provision was made for additional building at the Jamaica College, Munro, and Dickenson's School at Hampton, Wolmer's School, Titchfield School at Port Antonio, Montego Bay Secondary School. The last mentioned, as well as the Manning's School at Savanna-la-Mar, has recently been housed in completely new premises.

76. Mr. H. H. Pigott, M.A., one of H.M. Inspectors of Schools, reported on the Secondary Education of the Island in the course of the year. Mr. Pigott's report which, with its criticisms and suggestions is on the whole favourable to most of the schools, affords us a useful account of the state of Secondary Education in Jamaica to-day, and gives wise and healthful advice as to the development of such education in the near future.

77. As a result of certain of his recommendations, provision has been made for the establishment of a scholarship available for girls, to enable them to continue their education at some university outside of Jamaica, and grants of the following amounts for building have been made to certain schools:—

	£	s.	d.
Wolmer's School	500	0	0
Montego Bay School	550	8	6
Manning's School	1,200	0	0
Jamaica College	500	0	0
Munro and Dickenson's School ...	1,000	0	0
Titchfield School	170	0	0

78. Other improvements in the provision for Secondary Education are under consideration.

79. New schemes providing for the re-organisation of some of the less developed schools, notably, Manchester Trust School, Beckford and Smith's School at Spanish Town, Rusea's School at Lucea are under consideration.

V.—GOVERNMENT INSTITUTIONS.

(*a*) Public Hospital, Kingston.

80. Indoor patients treated, 3,132; outdoor patients, including paupers, 6,668; prescriptions made up, 16,685; total surgical operations, 1,205; minor surgical operations, 389; daily average number of beds, 217; total cost of maintenance, £3,431 17*s.* 2*d.*

(*b*) Victoria Jubilee Lying-in Hospital.

81. Number of patients admitted, 746; 8 pupil nurses admitted for training (one resigned, and 7 passed and received certificates); average daily number of beds (patients), 20; receipts, £392 11*s.* 6*d.*; expenditure, £1,355 5*s.* 4*d.*

(c) Lunatic Asylum.

82. Number of patients on 31st March, 1912, 1,195, an increase of 26 since beginning of year. Total number of patients under treatment during year, 1,439; daily average resident, 1,183; rate of recovery, 53·89 per cent.; admissions, 268; discharges, 150; deaths, 91; death-rate, 7·6 per cent.

With the exception of slight recrudescence of pellagra among the female inmates, the asylum is reported to have enjoyed the best of health with a marked absence of malarial fever and gastro-intestinal diseases.

The restoration of the buildings destroyed by the earthquake of 1907 was completed during the year, and an additional ward for the accommodation of 100 female inmates was built. This has entirely relieved the overcrowding from which the asylum suffered for many years.

(d) Lepers' Home.

83.

Patients on 31st March, 1911		104
Admitted		26
		130
Discharged	3	
Absconded	3	
Died	10	16
On 31st March, 1912		114

The buildings and grounds were kept in good order.

The death-rate was 7·7 per cent., the lowest for 22 years. The average longevity of leper life of those who died during the year works out at 19½ years for anæsthetic and 13½ years for tubercular cases.

(e) Government Savings Bank.

84. The liability of the bank to its depositors on current account was further decreased during the year by £1,511 3*s.* 7½*d.*, the decrease on ordinary accounts being £1,846 9*s.* 3*d.*, while the Government accounts were increased by £335 5*s.* 7½*d.*, resulting in the net decrease above stated.

The net decreases in liability in the two previous years were £26,593 8*s.* 4¾*d.* and £29,620 12*s.* 11¾*d.*, respectively.

85. The ordinary deposits amounted during the year to £112,085 15*s.* 4¾*d.*, an increase of £4,034 5*s.* 1¾*d.*, and the withdrawals to £113,932 4*s.* 7¾*d.*, a decrease of £3,998 8*s.* 4½*d.*, as compared with the previous year.

86. The balance sheet on 31st March, 1912, shows a liability to depositors of £332,664 12*s.* 1*d.*, the full amount of which was covered by investments in British and Colonial securities at that date.

87. The income and expenditure of the Savings Bank for the year may be summarised as below:—

Income.	£	s.	d.
Interest on Investments	11,588	5	8
Interest on Deposits	303	1	0
Refund by Imperial Government of Income Tax overpaid	1,057	13	1
Miscellaneous	17	3	9
	£12,966	3	6

Expenditure.	£	s.	d.
Interest on Deposits	7,891	14	9
Loss on Sale of Securities	1,954	13	6
Expenses of Management	2,228	2	6
Balance Profit to General Revenue ...	891	2	9
	£12,966	3	6

88. The number of pass books examined was 7,879, or 4,089 more than in the preceding year. A new and improved form of pass book was instituted, and on presentation of any book of the old type for a deposit or withdrawal a new book was issued. This involved special pressure of work on the staff. A new system of (loose leaf) ledgers was instituted at the end of the year and all accounts have since that date been posted into the new ledgers.

(*f*) Registration of Titles.

89. As was the case last year, the report by the Registrar of Titles to Land shows the maintenance of a large, though fluctuating volume of work, but calls for no special comment.

VI.—JUDICIAL STATISTICS.

(Courts, Police, and Prisons.)

90. The judicial statistics show little variation from those of last year, and for the most part a continued absence of serious crime. The total number of convictions in the Circuit Courts was 104, as compared with 122; of convictions in the Resident Magistrates' Courts 6,639, as compared with 6,679; of summary convictions 20,900, as compared with 20,058. These figures, whilst they show some increase on those of the year 1909-10, are markedly less than those of the year 1908-9, when 8,038 persons were punished in the Resident Magistrates' Courts.

91. There was a tendency to increase in the proportion of convictions of offences against the person in all three divisions of the courts. Convictions for prædial larceny show a decrease from 1,547 last year to 1,382 in the year under report. The number of convictions for this offence in 1908-9 was 2,510.

92. There were 4 convictions for murder in the course of the year, and 5 for manslaughter, comparing with 3 in respect of each offence in the previous year. There were 677 convictions for cutting and wounding, compared with 595 in 1910-11 and 540 in 1909-10. Cutting and wounding cases are still on the increase, although a good many of the cases were not very serious, as 333 were discharged and acquitted.

93. The Inspector-General states that the increase in this crime is due principally to two causes, viz.:—

(*a*) to the fact that more money is in circulation recently, particularly in the banana growing parishes, which leads to more drinking of spirits and consequent disorder and crime;

(*b*) to the increased antagonism to constituted authority, especially in the towns and large villages, partly due to the presence everywhere of a large number of men who have returned from the Central American Republics, where acts of violence are very common and the maintenance of law and order is not strictly enforced.

94. With reference to (*a*), I may observe that rum drinking appears to be steadily on the increase in the Island, in a much more rapid proportion than the population, as the subjoined figures of the revenue from Excise Duty on rum for the last seven years will show:—

	£
1905-6	93,531
1906-7	101,352
1907-8	104,399
1908-9	95,168
1909-10	106,977
1910-11	111,589
1911-12	123,414

95. The committals to the prisons during the year numbered 3,993, and to lock-ups for short terms 1,683, making a total of 5,676, as compared with 5,777 in the previous year, a decrease of 101, as compared with the previous year, but an increase of 716 compared with 1909-10.

96. The re-convictions during the year amounted to 1,442, of which 464 were second convictions, 242 third, and 736 fourth and upwards. During 1910-11 the re-convictions numbered 1,826; during 1909-10, 1,472; the year under review showing the lowest number.

97. The daily average of prisoners in custody in the Penitentiary and St. Catherine District Prison was 1,087, as compared with 1,192 during the previous year. There were 29 deaths in the prisons, as compared with 49 during 1910-11. There was no execution of capital punishment. In the previous year there was one for murder.

98. Considering the institutions separately, 12 deaths occurred in the General Penitentiary, the same number as in the previous year, representing a rate of 18·54 per 1,000. This is the lowest

rate of mortality recorded at this establishment, except in 1910-11, since the year 1886-87 when it was 15·05. At the St. Catherine District Prison 17 deaths occurred, representing a rate of 38·65 per 1,000. Of the 17 prisoners who died in the District Prison, 12 are reported as having been admitted in very poor health. The state and discipline of the prisons has been good, and no corporal punishment was inflicted for breaches of discipline.

99. A reformatory branch was started at the District Prison with 21 lads transferred from Stony Hill, which is now being utilised solely as an industrial school. The inmates have a building and compound separate from those occupied by the regular prisoners in the District Prison.

100. During the year 1911-12, 103 persons were bound over as probationers under Law 27 of 1909. There were 102 probationers from the previous year, making 215 persons under recognisances to report to the Probation Officer. From these probationers 1,098 reports were received. The following table shows the increase during the three years ended 31st March, 1912, in the number of probationers, and of reports received:—

Period ending.	Convicted.	Under supervision.	Reports received.
31st March, 1910	88	132	593
31st March, 1911	118	174	876
31st March, 1912	103	215	1,098

Of the 215 probationers under supervision this year, only 11 were brought before the court for indictable offences subsequent to first conviction; 18 probationers are known to have left the Island. For default in respect of their reports by those in the Island, police assistance was sought to warn probationers in 19 cases, and subsequent proceedings were taken in 17 cases.

101. The gross expenditure for the General Penitentiary amounted to £14,560, and for the St. Catherine District Prison, £6,590; total, £21,150. The gross earnings in cash of the General Penitentiary were £3,342, and of the St. Catherine District Prison, £1,572. The yield of the St. Catherine District Prison Farm was valued at £1,292. £529 of that amount is the value of articles grown and consumed by the prisoners, thereby reducing the cost of the prison by that amount.

Police.

102. In reporting on the Police Department, the Inspector-General states that the establishment, including officers, was only four men under the authorised strength on the 31st March, 1912. This is a satisfactory recovery from the depletion from which the Force has suffered during recent years. It may be attributed partly to the improvement in the conditions of service which has been effected as an inducement to recruiting and to persistence in the ranks of the Force, and also to the removal of the depôt from Spanish Town to a more healthy and attractive

situation in Kingston. But the Force is continually depleted by the excessive number of withdrawals from its ranks after comparatively short service and by the high proportion of dismissals for inefficiency.

103. The health of the sub-officers and men appears to have improved during the latter portion of the year. This is attributed to the precautions taken to reduce the risk of malarial infection by mosquitos. The Inspector for Westmoreland reports that since the station at Savanna-la-Mar was enclosed with wire gauze in July, 1911, there had not been a single case of malarial fever, a condition of things which was unprecedented in living memory.

104. Enforcements of the law for the prevention of noises at night, which came into operation on the 22nd May, resulted in the prosecution of 30 persons, of whom 27 were convicted. This law is generally regarded as a useful measure, and has already proved of service in abating the nuisance caused by noisy assemblies at night.

105. Including 69 criminals on licence, there were 4,695 habitual criminals on the register on the 31st March, 1912, against 4,528 on the 31st March, 1911; 922 habitual criminals were re-convicted during 1912, against 910 in 1911.

The class of habitual criminals remains a standing factor in the production of a continuous amount of crime, and no effectual method has been arrived at for reducing this persistent element.

106. The employment of "authorised persons," that is to say, of persons recommended by agricultural societies or magistrates to be empowered to make arrests under the prædial larceny laws, appears to be acting as a check on prædial larceny, less on account of the amount of arrests effected than on account of the greater apprehension diffused in the minds of the prædatory class by their knowledge of the vigilance of persons habitually living among them other than the ordinary police.

VII.—VITAL STATISTICS AND PUBLIC HEALTH.

107. The results of the census taken on the 2nd of April, 1911, were published during the year.

The total population was enumerated at 831,383—397,439 males and 433,944 females,—an excess of 36,505 of the latter.

108. According to the figures of 1891, adding the births since that date and deducting the deaths, the population should have appeared as 874,821, or 43,439 more than it is: these figures give an indication of the excess of emigration over immigration, principally of males, during the 20 years. I am convinced, however, that there are fully 60,000 Jamaicans resident or employed in Central America.

109. The number of East Indians in Jamaica born out of the Island was returned as 7,884. There were also found to be 9,496 persons of East Indian races who had been born in the Island. The proportion of East Indian immigrants is highest

in those parishes from which there is least emigration of Jamaicans.

110. Whilst the increase in the total population during the 20 years is a little over 23 per cent., the increase in St. Mary's parish was 63·6 per cent., in Portland 50 per cent., and in St. Catherine 32 per cent., pointing to the effect of the development of banana planting upon the distribution of population. The population of St. Andrew's parish increased by 42·8 per cent., principally owing to the growth of the suburbs of Kingston.

111. A very remarkable indication of advance in prosperity and comfort is shown in the return of the character of the houses of the people. In 1891 the number of houses floored and with shingle, metal, or concrete roofs was 44,027, in 1911 it was 91,183.

In 1891 the number of floored houses with thatch roof was 35,683, in 1911 only 47,637.

The number of unfloored dwellings, mostly with roofs of thatch, in 1891 was 52,146; in 1911 only 42,241—a positive decrease.

In 1891 the number of dwellings with metal roofs was 994, in 1911 18,135.

The greatest indication of progress in this connection is to be found in the Parish of St. Mary, where in 1891 there were 4,704 unfloored dwellings, but now only 3,913, and in 1891 only 4,443 floored dwellings, but now 12,153. Altogether, whereas there were in 1891 52,146 unfloored dwellings and 79,710 floored dwellings, there are now only 42,241 unfloored and 138,820 floored. These figures afford an interesting supplement to the testimony of our returns of exports and public revenue.

112. The estimated population of the Island on the 31st March, 1912, was 845,767. This figure is arrived at as follows:—

Population by Census of 1911 ...		831,383
Births registered, 1911-12 ...	32,750	
Deaths ,, ,, ...	18,631	
		14,119
		845,502
Migration:—		
Arrivals—general	17,682	
Arrivals—East Indians	813	
	18,495	
Departures—general	18,230	
		265
		845,767

113. The East Indians arriving were indentured immigrants. No time-expired immigrants left for India during the year.

114. Of the general arrivals and departures, 8,984 and 13,109 respectively were labourers, and show a net emigration of 4,125 persons of this class. The remainders, 8,698 arrivals and 5,121 departures, represent a net immigration of 3,577 persons.

115. Migration of labourers took place chiefly in respect of the following countries:—

—	Departures.	Returned.	Excess Departures.	Excess Returns.
Central America	10,829	7,190	3,639	--
Cuba	1,660	1,395	265	—
Hayti	587	353	234	—
Other Countries (all American and West Indian).	33	46	—	13
Total	13,109	8,984	4,138	13

116. The mean Island population for the year, that is, the population on the 30th September, 1911, ascertained by adding to the census figures the excess of births over deaths registered since the census, was 839,247. On these figures the marriages, births, and deaths have been calculated.

117. The following are the number of marriages, births, and deaths registered during the year, with the rates per 1,000 for this and the preceding year:—

—	—	Rate per 1,000.	
		1911–12.	1910–11.
Marriages	3,607	4·2	4·0
Births	32,750	39·0	38·6
Deaths	18,631	22·1	23·1

showing a tendency to increase of population for 1911-12. Of the births, 21,008, or 64·1 per 100 were illegitimate. The rate was 62·4 in 1910-11, and the average for the decade 63·3. Accompanying this rise in illegitimacy was an increase in infantile mortality, although the general death-rate decreased, as the following figures show:—

	Rate per 100 of deaths.	
	1910-11.	1911-12.
Infants under one year	31·4	33·0
Infants under two years... ...	40·4	42·0
Death-rate per 1,000	23·1	22·1

118. In the order named, the parishes of St. Elizabeth, Hanover, Clarendon, and St. Ann show the highest birth rates, while those of Manchester, St. Elizabeth, St. Ann, and St. Mary show the lowest death rates.

Kingston and St. Andrew exhibit the lowest birth and highest death rates of any, but it is satisfactory to note that the death-rate in Kingston fell from 32·8 in 1910-11 to 27·3 in 1911-12, and in St. Andrew from 27·5 to 26·0.

119. *Uncertified cases of death* were 75·2 per cent., compared with 75·1 in 1910-11 for the whole Island. The figures for Kingston were 27·0 in 1911 and 31·1 in 1910-11, a very satisfactory diminution, accompanied also, as has been shown, by a considerable fall in the city's death-rate.

120. The principal causes of death in Kingston, stated in order of number of deaths in 1911-12, were as follows:—

Causes.	1911-12.		1910-11.	
	No. of Deaths.	Rate per 100 of Total Deaths.	No. of Deaths.	Rate per 100 of Total Deaths.
Diarrhœa and Enteritis ...	191	11·8	165	8·5
Phthisis	163	10·0	197	10·2
Heart Disease	83	5·1	93	4·8
Enteric Fever	69	4·2	100	5·1
Malaria	52	3·2	98	5·0
Fever (not otherwise defined)...	43	2·6	62	3·2

Of causes of death from feebleness rather than any named disease, we have 268 cases of "debility, atrophy, and inanition" in 1911-12, compared with 201 in 1910-11.

121. There was an extraordinary epidemic of whooping cough from June quarter, 1910, to the end of March, 1912, resulting in 1,412 deaths, 869 of them in the year under review. "Vomiting sickness," the cause of which is still under investigation, was registered as the cause of death in 85 cases.

Public Health.

122. The expenditure of the Medical Department during the year amounted to £68,625 14*s.*, the approved estimate of expenditure having been £70,526 2*s.* 2*d.*

123. The progressive increase in the expenditure of this department in the course of the last five years is noticeable. The figures are as follows:—

		£
	1907-8	54,839
	1908-9	56,404
	1909-10	58,317
	1910-11	64,986
	1911-12	68,626
Estimates,	1912-13	74,811

124. During the year there were no detentions at the Quarantine Station, but quarantine restrictions were imposed upon ships coming from Trinidad, New York, Brazil, Venezuela, and Mazatlan in Mexico in consequence of reports of cases of infectious diseases in those places.

125. Much work was accomplished during the year by the Central Board of Health in the preparation of by-laws under

the Health Law No. 35 of 1910. Ten out of 14 parishes have adopted the by-laws, in some cases in their entirety and in others with some amendments to suit local conditions.

126. By-laws regulating the duties of medical officers of health have been approved by the Governor for several parishes.

127. Health Officers have been appointed, since the passing of the Law, in nine parishes. The Parish of Kingston was previously provided with an efficient Health Department.

128. The reports of certain of the Health Officers on their several districts furnish interesting information and show that progress is being made in the inculcation of sanitary habits among the population and in the attention to the abatement of nuisances by the sanitary authorities, but indicate that an immense amount of work remains to be done both of an educational and practical character, and that over-crowding of tenements is a common evil, leading to the dissemination of yaws and other contagious diseases. Useful comments on the subject of water supply are also made both by Health Officers and District Medical Officers.

129. During the year increased attention was given to the disease of yaws, in pursuance of the extended powers given by the Yaws Notification Law No. 23 of 1910.

The disease prevails generally in mountainous localities and where water is scarce or not easily accessible and where, consequently, cleanliness, bathing, and proper sanitary precautions are neglected.

130. The following is a return of the numbers and cost of the cases treated for some years past:—

Year.		Cases treated.		Cost.
				£
1907-8		2,853		385

131. Treatment with salvarsan in hospital was employed in 201 cases, of which 192 were discharged cured. Only in 10 cases was a second injection used.

132. In consequence of the new arrangements made for the treatment of out-patients at hospitals, the number so assisted increased considerably: 52,325 cases were so treated during the year as against 40,077 in the previous year. Of this increase 8,077 cases were due to the new facilities given.

133. The total number of patients treated in public general hospitals during the year under review was 26,091. There were 497 deaths in hospitals.

134. The number of operations performed was 2,268 with 20 deaths.

135. Increased attention was given to the hook-worm disease.

The examination of prisoners admitted into the General Penitentiary and the Spanish Town Prison shows the excessive prevalence of this disease among this class of the population. The cases found to be infected by ocular examination and without the aid of the microscope exceeded 70 per cent., and there can be little doubt that were microscopic methods adopted, a much larger percentage of infected cases would have been disclosed. Indian immigrant prisoners were not included in this investigation.

There can be no doubt that a large amount of chronic ill-health and of what is described in the returns as undefined fever among the Creole population is due to this disease.

Apathy and moral degeneracy result amongst large numbers, and the disease is probably responsible for a good deal of the petty crime of the country districts.

Unlike yaws, it is most prevalent among those who come from moist agricultural districts and who have worked in cane and banana fields. The disease is no doubt contracted in the majority of cases by infection through the feet from polluted soil.

136. The daily average of patients accommodated in the public hospitals was 967, against 890 in the previous year and 533 in the year 1904-5.

137. The principal diseases for which patients were admitted into the public general hospitals were as follows:—

Disease.	Cases.	Deaths.
Malarial Fever, Intermittent ...	7,434	37
,, ,, Remittent	327	21
,, ,, Pernicious	87	11
Skin Diseases	4,111	8
Diseases of the Digestive System ...	1,844	75
Local Injuries	1,697	23
Rheumatism	1,528	—
Diseases of the Respiratory System ...	739	63
Diseases of the Circulatory System ...	665	23
Diseases of the Cellular Tissue ...	611	5
Ankylostomiasis (Hook-worm) ...	470	70
Gonorrhœa	434	—
Anæmia	327	7
Diseases of the Eye	308	—

138. The Government Bacteriologist conducted during the year a large amount of important and valuable work. The demands upon this department appear to justify a liberal provision for the increase of its efficiency.

139. Special operations have been continued for the abatement of conditions producing malarial fever.

140. Dr. W. D. Neish completed the series of lantern lectures on malaria prevention which he had begun in the previous year, and he also conducted a course of instruction to Parochial Sanitary Officers, advantage of which was taken by the majority of the Parochial Boards, but not by those of the Parishes of St. Ann, Clarendon, Hanover, Trelawny, and St. Elizabeth. These lectures were also attended by overseers from certain estates where malaria and hook-worm are prevalent among the labourers.

141. Most of the principal coast towns are situated at the mouths of streams or rivers, whose estuaries have filled up into levels. The streams being sluggish, except in floods, their outlets are continually blocked by the sea, and flood water spread over the low-lying lands remains there for a long time without passing away.

142. To permanently reclaim much of these swamps considerable operations in filling would be required, and the Colonial Government has not yet seen its way to meet the large expense for suction dredging plant that would be involved. Experiments are being made in constructing permanent outlets of various forms to keep open channels for the rivers through their bars.

143. A very considerable amount of work has been done within the towns themselves and in their immediate surroundings, either in concreting water courses or in providing concrete drains and water tables along the roadways, and the authorities controlling the water supply have given increased attention to the diminishing of the waste of water causing puddles which form breeding grounds for mosquitos. Much, however, remains to be done in checking this evil. Seventeen police stations in malarial districts have been protected with wire-gauze screening.

144. A great increase in the distribution and consumption of quinine took place during the year. The police consumed 41,650 five-grain doses as against 38,675 doses in the year 1910-11.

145. Owing partly to this precaution, partly to the screening of police stations, and partly to the reclamation of swamps in the neighbourhood of police stations, the cases of malarial fever reported among the police and the number of days lost to the force through absence of men for this sickness have diminished in a remarkable degree, as shown in the following table covering the period during which careful statistics have been kept and special precautions taken in regard to the police. Further progress in this direction may, I believe, be confidently looked for

Return of Malarial Fever Cases among Police.

—	Strength at all stations.	Total number that suffered from malaria.	Percentage of men suffering from malaria.	Total number of days' absence from malaria.	Average days' absence per man of entire strength.
December quarter, 1910 ...	960	277	28·8	2,370	2·47
March " 1911 ...	910	145	15·9	1,493	1·63
June " " ...	903	153	16·9	1,338	1·48
September " " ...	880	134	15·2	1,278	1·45
December " " ...	987	135	13·6	1,255	1·27
March " 1912 ...	919	104	11·3	1,109	1·20

146. The police, in addition to their own consumption, sold 6,000 packets of five-grain tablets. The Malaria Commission distributed 110,600 doses of five-grain tablets, 219,302 doses of

three-grain tablets, and 10,500 doses of two-grain tablets. The post offices distributed 221,100 packets of five-grain tablets, 9,000 packets of three-grain tablets, 8,000 packets of two-grain tablets, and 9,000 packets of one-grain tablets. The various estates where indentured immigrants are employed used 232,750 five-grain doses. The various parochial boards used 13 lbs. 14 ozs. of sulphate of quinine.

147. Quinine distribution to school children has been continued, and this remedy was at the close of the year being administered in 250 schools. Quinine has also been distributed free through the district nurses to poor persons in the west end of Kingston. At all post offices quinine is on sale in farthing packets, which contain one dose suitably made up for adults and children of different ages. A leaflet on the use of quinine as a prophylactic was prepared by the Superintending Medical Officer, and 20,000 copies have been issued through the agency of the post office, constabulary, medical department, and the immigration department.

148. A great deal of excellent work has been done by the Health Officer of the city of Kingston and his subordinates in abolishing malarial conditions, which were limited to a comparatively small number of areas in and near to the city. Within the last few years very great improvement has been made in the streets by laying down concrete water tables and by conducting waste surface water into the sewers. A large drain to the west of the city has been concreted at the expense of the Government down to the sea. Kingston Pen, the largest swampy area adjoining the city, has been made a deposit ground for city refuse and the margins of the swamp have been treated with kerosene oil.

Since the end of the year under report, Kingston Pen has been bought by the Government, another concrete drain has been laid down through it, and the Government is taking in hand the complete drainage and reclamation of this area. The effects of the work done in Kingston in the reduction of malarial cases have been very marked.

149. The City Council also undertook, but has not up to the date of this report completed, the filling up of a small lagoon and swamp lying to the windward of the city. When this work and the reclamation of Kingston Pen have been accomplished, there will remain no important breeding ground for anopheline mosquitos in the neighbourhood of the city, except the Rock Spring Swamp on the Windward Road, part of which is owned by the Admiralty. Protracted negotiations have been in progress with the Admiralty through the Military Authorities with a view to the reclamation of this swamp, but, hitherto, the objections entertained by the Admiralty to the methods proposed for dealing with it have deferred any effectual work being taken in hand.

150. The improvement shown by the decrease of cases admitted to the Public Hospital, Kingston, may be specially noted. There were 600 hospital cases of malaria fever in 1910-1911 and 289 only in the year under review. There were 97 fewer cases in December, 1911, than in the same month of the previous year.

151. Considerable works of reclamation have been carried out at Black River, on that portion of Dickenson's morass lying

between the town and the river; at Port Maria, by works for the draining and the partial filling up of Warner's Pond; at Port Antonio very great and extensive improvements have been made through the extension of concrete drains and the filling up of swampy lands belonging to the Titchfield Trust. The Government has now acquired from the Trust five acres of swamp which is in process of reclamation and which will be used for new buildings for the public hospital, which will be transferred from the Government lands at the Fort. The reclamation of this area will complete the abolition of swamps throughout the large district lying to the east of the town, formerly notorious for its malarial conditions. Great improvements have been made in the main road and the by-streets in this locality, which have been widened and will be beautified with the planting of trees. A broad avenue, for a public promenade, will be laid out along the foreshore of the hospital reclamation.

152. At Savanna-la-Mar some good work, but not sufficient, has been done in the checking of waste from water pipes, the concreting of water tables and the clearing of mangrove swamps. The Government has acquired the area of swampy land around the police station to be reclaimed and improved. Improvements have been effected in the neighbourhood of Lucea and there has been a marked decrease in Lucea in admissions to the hospital for malaria fever.

153. Similar improvements have been effected at Morant Bay, Montego Bay, and in Spanish Town. The large amount of swampy land between Spanish Town and the railway has been drained and filled, and by the diversion of certain irrigation channels a great improvement in the condition of the locality has been effected.

Work is also in progress at Buff Bay and Annotto Bay.

154. In addition to expenditure by Parochial Boards, there was spent by the Island Government during the year £3,171 6*s.* on anti-malarial work, and by the Kingston General Commissioners £251 13*s.* 2*d.* The City Council had a loan advanced to them by the Government and spent £7,000 on the improvement of back streets, by laying concrete curbs and channels and improving the formation and drainage, and £155 in opening, draining, and forming the course of several gullies.

155. The Medical Officer of Health for Kingston, in his report on malaria in Kingston for 1911, draws the following inferences from the statistics of malaria fever and deaths during the year:—

(1) That there is a low rate of fresh infection over the whole parish;

(2) That the cases are relapses and mostly imported;

(3) That a consideration of the distribution of the cases and of the number of admitted previous attacks and of the low haunts of anopheles justifies the inference that during 1911 original malarial infection in Kingston has been comparatively rare.

VIII.—POSTAL AND TELEGRAPH SERVICES.

156. The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1911-12 with those of previous years:—

—	1911-12.	1910-11.	1909-10.
	£	£	£
Postages	39,487	36,587	33,362
Commission on Money Orders	411	390	425
Local Commission on British Postal Orders	240	225	212
Commission on Local Postal Orders ...	891	831	777
Miscellaneous	584	938	865
Telegraphs	7,109	6,942	6,769
Total	48,722	45,913	42,410

157. These statistics show an increase of £2,809 in gross revenue as compared with the previous year, due to increases of £2,900 and £166 in postage and telegraph collections, and of £107 on commissions on postal orders (British and local respectively), and on money orders. The only decrease has been on Miscellaneous, amounting to £354.

158. The expenditure of the year by the department amounted to £42,466, as against £42,336 in 1910-11, an increase of £130.

159. The progress of the department is illustrated by the following figures:—

	Revenue.	Expenditure.
	£	£
1891-92	24,100	20,758
1901-02	28,520	25,517
1911-12	48,722	42,466

160. As compared with the two previous years the numbers of letters and postcards were:—

—	At General Post Office.		
	1911-12.	1910-11.	1909-10.
Outwards	4,461,971	4,508,686	4,458,220
Inwards	5,649,423	5,688,126	5,707,807
Total	10,111,394	10,196,812	10,166,027
	At District Post Offices.		
Total	2,577,412	1,494,537	2,054,066
Grand Total	12,688,806	11,691,349	12,220,093
Telegrams sent and received ...	192,270	134,626	112,515

161. The increase of 57,644 in the number of telegrams sent during the year, and of £166 in telegraph revenue, is attributable in part to the introduction of sixpenny inland telegrams in January, 1911, and also in part to the number of offices being increased from 83 to 90.

162. An electric stamping machine was introduced during the year and has proved of great benefit.

163. Seven new District Post Offices were opened during the year.

164. Books containing penny stamps to the value of two shillings, interleaved with advertisements, were introduced. They form a convenient means of carrying stamps, and, judging from the sale, have been much appreciated. It has been decided to sell half-penny stamps in this way also in future.

165. The value of orders cashed during the year on behalf of the United States of America exceeded that of the previous year by £10,221, and this increase was due principally to remittances from the canal zone.

166. Telephonic communication was established at nine District Post Offices during the year, at one of which it was in substitution for telegraphic communication.

167. The facilities offered to the public of buying 5-grain doses of quinine at a farthing each were continued at all Post Offices.

IX.—PUBLIC WORKS.

168. The total expenditure of the Public Works Department for the year under review was £235,205 18*s.* 1*d.*, summarised as follows:—

	£	*s.*	*d.*
Salaries and other Departmental Charges ...	17,091	17	9
Main Road and Bridges, Maintenance ...	83,518	18	3
Main Road and Bridges, New Works ...	52,952	14	3
Public Buildings and Telegraphs, Maintenance	10,074	0	11
Public Buildings and Telegraphs, New Works	49,397	15	1
Lighthouses	1,381	7	0
Irrigation Works	2,819	2	11
Water Works	1,968	19	10
Post Office, Mail Conveyance, and other Charges	5,295	15	7
Malaria Reclamations	1,461	4	7
School Buildings and Schoolmasters' Houses	6,389	0	0
Work done for Government Railway ...	1,352	14	1
Miscellaneous Minor Works	1,502	7	10
	£235,205	18	1

169. The total length of main roads at the end of the year was 2,180 miles 28 chains, which included about 160 miles of parochial road taken over during the year in order to enable the reduction to be made in the Donkey Tax, which goes to the Parochial Roads Fund.

170. The average cost of ordinary maintenance of roads per mile for the whole Island was £35 7*s.* 10*d.*

The average cost per mile in St. Mary was £72 13*s.* 6*d.* and in Manchester £17 4*s.* 11*d.*, being the highest and lowest respectively.

171. The average rainfall for the whole Island was 86 per cent. of the average, which was favourable to economy and the maintenance of roads. Much of the expenditure of the new works to main roads is devoted to the improvement and reconstruction of existing main and parochial roads, laid out on gradients unsuitable for wheeled traffic, and in the provision and improvement of bridges on such roads.

172. The principal new main roads under construction were:—

(1) A road to connect Stony Hill with the road leading from Bog Walk to Glengoffe. This involved considerable deviation and improvement of the existing St. Christopher's Road and the construction of a finely graded road with two important bridges through the Above Rocks District.

(2) A road from Bath in St. Thomas to Mooretown in Portland crossing the ridge of the Blue Mountain Chain and the Rio Grande.

(3) A new road from Mount Charles in St. Andrew to Montrose in St. Mary's Parish, with deviation and improvement of the road from Lawrence Tavern to Mount Charles. This road will afford the shortest route between Kingston and Richmond and will be on easy grades throughout.

(4) Catadupa in St. James's to Flamstead: across the fine country lying at an elevation of about 3,000 feet in this Parish.

(5) A road from Bethel Town in Westmoreland to Duckett's Bridge, affording an access to Cambridge Station.

(6) Mount Carmel to Morgan's Valley in Clarendon.

(7) Flamstead in St. James's to Shaw Castle on the borders of Trelawny, continuing Road No. 4 above mentioned.

(8) New roads and connections to give access to the terminus of the Branch Railway from May Pen to Craigfield in Clarendon.

173. The most important bridge constructed was that over the Johnson River, at a cost within the year of £5,825. Important bridges were also made over the Sandy Gully, St. Andrew, and the Spanish River at Chepstow.

174. £25,670 9*s.* 8*d.* was spent on the second block of the New Public Buildings, including the Supreme Court and Offices, the Kingston Judges' Court, the Administrator-General's Office, the Land Titles Office, the Surveyor-General's Office, the Attorney-General's Office, the Constabulary Office, and the Education Office.

Government Railway.

175. The very efficient management of the Government Railway continued to produce satisfactory financial results. The total receipts for the year amounted to £190,007, an increase of £28,375 over those of the previous year: the expenditure was £97,829, leaving a nett earning of £92,178.

176. The total amount which has been borrowed for the construction and the capital improvements on the railway is £2,434,365, to which may be added £100,000 of Second Mortgage Bonds issued to the promoters of the railway extension, the interest on which is a charge on the railway. There should also perhaps be properly added £88,000, borrowed by the Government to pay arrears of interest due when the railway was taken over and also the value of public lands assigned to the promoters, which were redeemed by the Government last year at a cost of £18,500, making a total capital investment of £2,640,865.

177. The nett earnings of the year were equivalent to a dividend at the rate of £3 9*s*. 9*d*. upon this investment, and were more than sufficient to cover the actual charges for interest on railway debt paid during the year.

The sinking fund charges payable on account of the railway debt amounted to about £32,575.

178. The gross receipts and nett earnings of the railway considerably exceeded that of any previous year.

			£
Nett earnings in	1907-8	were	49,768
,, ,, ,,	1908-9	,,	42,992
,, ,, ,,	1909-10	,,	53,846
,, ,, ,,	1910-11	,,	57,343

Receipts are summarised as follows:—

	£	s.	d.	Increase. £	s.	d.
Goods, Cattle	113,930	15	11	18,914	8	10
Passengers	59,186	9	3	6,373	0	1
Carriage of Mails	4,000	0	0	108	6	8
Wharf Dues	10,946	5	2	2,406	19	11
Rents	289	7	11	41	14	2
Miscellaneous Receipts ...	1,654	2	8	531	0	10
	£190,007	0	11	£28,375	10	6

179. Of the freight receipts the following were the most important items:—

—	1911–12.	1910–11.	Increase.	Decrease.
	£	£	£	£
General Merchandise	49,610	41,429	8,180	—
Bananas	38,063	27,042	11,021	—
Oranges	6,641	7,121	—	470
Logwood	4,784	6,294	—	1,510
Live Stock	3,086	2,614	472	—
Coffee	2,363	1,742	621	—

Ordnance Survey, Southampton, 1912.

180. The great and increasing importance of the banana traffic to the railway is clearly indicated. The increase of 12 per cent. in the passenger receipts is also a satisfactory evidence of increased prosperity and an increased disposition to travel.

181. Abstract of ordinary expenditure:—

—	1911-12.	1910-11.	Increase.	Decrease.
	£	£	£	£
Main Way and Works	31,197	34,807	—	3,610
Locomotive Power	25,375	24,188	1,187	—
Carriages and Waggons ...	6,694	6,777	—	84
Traffic Expenses including Wharves.	18,727	17,751	976	—
General Charges...	3,739	4,503	—	764

The very moderate increase in the expenditure for locomotive power and traffic expenses, as compared with the increase of earnings, is noticeable.

X.—GENERAL OBSERVATIONS.

182. I have but few general observations to add to those which I have embodied in the text of this Report.

183. The year was, on the whole, one of comparative prosperity and progress, although there is much in the conditions of the Island which calls for expenditure and energy to effect needed improvements. The population is gradually coming to demand a higher and more civilised standard of living, and this demand is exhibited in the increased activities of the Parochial Boards in sanitary matters, and in the growing interest in the subjects of education, postal, telephonic, and railway facilities.

184. The Island is still too greatly dependent upon the banana industry, to which, however, it would be ungrateful not to acknowledge that it has principally owed whatever progress towards prosperity it has made during the last twenty years.

185. I may, however, observe that while the value of the export of bananas last year amounted to nearly one-half that of the whole volume of exports and was £308,871 in advance of the value for 1910, it was only £46,751 in advance of that of the preceding year, when it constituted more than 53 per cent. of the whole of the exports.

186. The comparative advance thus indicated in the proportion of other exports is a healthy sign, and, generally speaking, the export of so-called minor products shows steady and satisfactory increase.

I have, &c.,

SYDNEY OLIVIER,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State
for the Colonies.

No. 754.

CAYMAN ISLANDS (JAMAICA).

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
20th March, 1913.

SIR,

I HAVE the honour to transmit, for your information, a copy of a report by the late Acting Commissioner of the Cayman Islands, in the nature of a report on the Annual Blue Book of that Dependency for the year 1911-12.

2. I would beg leave to explain that the Acting Commissioner's attention had been directed to the need for preparing an Annual Blue Book of the Dependency and for furnishing Annual Reports, and to add that Mr. A. C. Robinson, who has now assumed duty as Commissioner of the Cayman Islands, will be required to furnish a yearly Blue Book and report thereon in future.

I have, &c.,

W. H. MANNING,

Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State
for the Colonies.

(30015—2.) Wt. 35104—688. 1125 & 90. 5/13. D & S. A

FINANCIAL.

The total revenue of the Cayman Islands for the financial year ended 30th September, 1912, amounted to £3,795 9*s.* 5*d.*, and the expenditure totalled £2,700 2*s.* 4*d.*, leaving a surplus of £1,095 7*s.* 1*d.* to swell the assets of the Dependency. Including the year under review, the average revenue for five years is £3,515. The receipts for the past year are therefore £270 above the average. The expenditure for the year is £341 below the average for the five years period, the smaller disbursements on Public Works accounting for the difference. In the five years including 1912 the cost of the maintenance and construction of roads amounted to £3,940, and other expenditure on Public Works made a grand total under this head of £5,806, or an average of £1,161 per annum.

The following tables show the totals of revenue and expenditure for the past five years, and the amounts under separate heads for the past two years:—

FINANCES.

Year.	Revenue.	Expenditure.
	£	£
1907-8	4,569	2,773
1908-9	3,610	3,735
1909-10	2,824	3,282
1910-11	2,779	2,716
1911-12	3,795	2,700
Average five years...	£3,515	£3,041

Head of Revenue.	1910-11.	1911-12.
	£	£
Customs	1,520	1,638
Internal Revenue	328	370
Port Dues	19	23
Payments for Special Service ...	34	43
Post Office	784	1,640
Revenue from Government Property	16	12
Interest	75	67
Miscellaneous	3	2
Totals	£2,779	£3,795

Head of Expenditure.	1910-11	1911-12.
	£	£
Commissioner's Department	681	654
Judicial Department	88	106
Legislative Department	22	23
Medical Department	218	188
Police and Prisons	228	250
Charitable	85	88
Education	243	283
Registration	11	10
Miscellaneous	144	116
Post Office Department	126	202
Lighthouse Department	16	15
Public Works	854	765
Totals	£2,716	£2,700

Assets and Liabilities.

On the 30th September, 1912, the assets of the Dependency were as follows:—

	£	s.	d.
Balance of cash in the Jamaica Treasury	3,027	17	4
Interest due on monthly balances ...	67	3	10
Cash in Treasury, Grand Cayman ...	520	12	7
Cash in Treasury, Cayman Brac	209	4	2
Remittances in transit	6	5	8
Advances recoverable	5	0	0
	£3,836	3	7

The local liabilities were:—

	£	s.	d.
Deposits	105	1	0
Government Savings Bank	364	12	8
	£469	13	8

The account of money order business through Jamaica is not available in exact figures. The balance is, however, in favour of Jamaica by somewhat over £500, so that the balance of assets of the Dependency at the end of the year was, approximately, £2,800.

TRADE AND INDUSTRIES.

Imports.

The value of the imports from all countries has been in—

	£
1907-8	22,774
1908-9	22,091
1909-10	23,858
1910-11	26,232
1911-12	28,444

Average for five years, £24,680.

Exports.

The exports to all countries have totalled in value as follows:—

	£
1907-8	11,629
1908-9	11,995
1909-10	11,371
1910-11	10,992
1911-12	12,323

Average for five years, £11,662.

SHIPPING.

Ships Entered.

—	1910–11.		1911–12.	
	Ships.	Tons.	Ships.	Tons.
British	207	14,095	231	15,775
United States	30	1,854	27	1,173
Central American	9	388	18	825
Other Foreign	1	19	5	4,881
Totals	247	16,356	281	22,654

Ships Cleared.

—	1910–11.		1911–12.	
	Ships.	Tons.	Ships.	Tons.
British	230	15,470	242	15,968
United States	31	1,916	29	1,335
Central American	12	498	16	899
Other Foreign	1	19	5	4,881
Totals	274	17,903	292	23,083

SAVINGS BANK.

The Government Savings Bank, established in 1908, has continued to grow in usefulness. The transactions for the financial year ended the 30th September, 1912, were: deposits, £283 11*s.*, withdrawals, £190 12*s.* 2*d.*

The balances due depositors at the end of each year have been: in 1909, £31 4*s.* 9*d.*; in 1910, £83 8*s.* 7*d.*; in 1911, £264 16*s.*; and in 1912, £364 12*s.* 7*d.*

POST OFFICE.

The Post Office Department has since its establishment contributed largely to the finances of the Dependency, and in the last five years has been responsible for nearly one-half of the revenue.

Year.	Post Office Revenue.	Total Revenue.
	£	£
1907-8	2,275	4,569
1908-9	1,758	3,610
1909-10	769	2,824
1910-11	784	2,779
1911-12	1,640	3,795
Total ...	£8,226	£17,577

As is usual in all small and isolated countries, the sales of postage stamps to collectors are considerable.

The inland postal service would appear steadily growing in favour and the increase in the amount of business is marked. The foreign receipts are large in proportion to the population because of emigration to the Canal Zone, the Central American republics and to the Gulf ports of the United States. The following tables show the amount of mail matter dealt with in two years:—

—	Local Mails.	Foreign Mails.	
	Postal packets handled.	Postal Packets.	
		Received.	Despatched.
1910-11	16,781	29,854	13,903
1911-12	20,544	33,011	16,546

Post Office Orders.

All money order business is done through Jamaica, the offices at George Town, Grand Cayman, and at Cayman Brac alone transacting:—

	Orders issued.	Orders cashed.
	£	£
1910-11	2,921	3,051
1911-12	3,557	2,819

JUDICIAL.

The Grand Court, with unlimited civil and criminal jurisdiction, in which the Commissioner sits as judge, has two semi-annual sessions, in June and December. There are quarterly Petty Courts dealing solely with the smaller civil actions in which two justices sit, and also weekly Petty Sessions of two justices, taking cognizance of minor offences.

Serious crime is almost unknown and the criminal matters enquired into are generally of a trifling nature. It is a very unusual circumstance to have a prisoner in gaol.

LEGISLATIVE.

The Legislative Assembly of the Justices (twelve at present) and Vestrymen (27) meets by statute in September in each year to make provision for the next financial year beginning on the 1st October and, otherwise, when summoned for despatch of business.

By recent resolution the Assembly has agreed to a substantial diminution of its membership, and the matter is now under consideration.

The following Laws were enacted in the years 1910-11-12:—

Law 1 of 1910.—The Appropriation Law, 1910-11. This makes the ordinary appropriation for the financial year, £2,678 9*s*.

Law 2 of 1910.—A Law to amend Law 7 of 1908. This amends the Education Law as regards the composition of the Board of Education.

Law 1 of 1911.—The Appropriation Law, 1911-12. This makes the ordinary appropriation for the financial year, £2,779.

Law 2 of 1911.—A Law to allow and confirm certain expenditure incurred in the financial year 1909-10. This is a supplementary appropriation legalizing excess of expenditure in 1909-10, £834 9*s*. 4*d*.

Law 3 of 1911.—A Law to further amend Law 7 of 1908. This is an amendment of the Education Law with respect to absences of pupils by way of sickness, and provides for the instruction of pupil teachers.

Law 1 of 1912.—A Law to amend Law 4 of 1898, the Cayman Islands Tax Collection and Internal Revenue Law. This increases to two shillings the annual tax on fire-arms and defines the conditions under which a servant may use his master's gun.

Law 2 of 1912.—A Law in aid of the Public Health Law. This is an amendment to enforce the erection and proper maintenance of latrines on occupied house lots.

Law 3 of 1912.—The Appropriation Law, 1912-13. This makes the ordinary appropriation for the financial year, £3,032.

Law 4 of 1912.—The George Town Market Law Amendment Law, 1912. This repeals an amendment of the Market Law requiring all fish sold in the town to be sold through the market.

Law 5 of 1912.—A Law to amend the Cayman Islands Customs Consolidation Law. This provides that proceedings for the recovery of penalties may be taken at any time within six months of any offence against the Customs Law coming to the knowledge of the Collector of Customs.

Law 6 of 1912.—A Law to make provision with respect to vessels engaged in the Nicaraguan Turtle Fisheries. This Law is designed to secure on reasonable terms the privilege to Caymanian vessels of catching turtle in Nicaraguan waters, and is the outcome of diplomatic negotiation. Before starting on the voyage the master of a Caymanian vessel pays a small voyage licence fee of 10*s*., and on his return he pays 2*s*. for each turtle "crawled." These amounts are to be subsequently handed over to the Nicaraguan Government. Assent to this Law has been withheld by the Governor pending the signing of an agreement between the Imperial and Nicaraguan Governments.

Law 7 of 1912.—A Law to provide for the giving of security by public officers in the Cayman Islands. This Law brings the law of the Dependency in line with that of other colonies on the question of bonds for fidelity in office. This Law has not yet been assented to by the Governor.

PUBLIC WORKS.

In the five years 1907-12 substantial sums have been expended under this head, the extension and improvement of roads accounting for the greater part of the expenditure. The main road from George Town, on the west, to Boddentown, half-way to the east end, is in fair condition except in wet weather.

Since 1910 a riding road 12 feet wide has been cut through the bush between George Town and West Bay, a distance of seven miles. The surface is, however, sandy and loose, and it is questionable whether it is possible to convert it into a driving road except at great expense.

SHIPBUILDING.

It would be made to appear from a cursory glance at the register for 1912 that there had been a revival in this industry. The figures for the two previous years were, however, small, and, evidently, unfinished vessels in 1910-11 were launched in 1912. In 1910 two vessels were launched, the largest 47 tons; total tonnage, 87 tons. In 1911 a small sloop of 8 tons was launched. In 1912 seven vessels were completed, the largest 55 tons; total tonnage, 246 tons. The industry is a valuable one and is to be encouraged and fostered.

There are now remaining on the register 25 vessels, with a total tonnage of 1,524 tons. There are, however, many vessels built in the Caymans and manned entirely by Caymanians under the flags of Cuba and the Central American republics, the earnings of which contribute to the support of families in the Dependency.

POPULATION.

The returns of the census in June, 1911, show a total population of 5,564. Of these, 2,322 are white, 2,211 are coloured, and 1,031 black. As regards education, 3,087 were returned as able to read and write, 749 as able to read only, and 1,728, including children, as illiterate. In religious denominations the people are mainly Presbyterians, 3,264 being returned as such. There were 981 Baptists, all in the Lesser Islands; and 357 are returned as of the "Church of God."

During 1912 there were 206 births: 114 males and 92 females. Of these 174 were legitimate and 32 illigitimate. In the same period there were 58 deaths: 33 males and 25 females.

EDUCATION.

At the last inspection of schools in the island of Grand Cayman there were present 359 out of 441 pupils enrolled in the schools visited. No opportunity offered for the inspection of several private schools, and no schools were visited in the Lesser Islands. There are in the Dependency about one thousand children of school age, but hardly more than two-thirds are within reach of ordinary educational advantages. Efforts by many interested in progress are now being directed toward the establishment of a system of free and compulsory education, which will entail special taxation.

Ordnance Survey, Southampton, 1913.

Ordnance Survey, Southampton, 1913.

CIVIL ESTABLISHMENT.

Dr. G. S. S. Hirst, who had been appointed Commissioner and Medical Officer in 1907, died in June, 1912. Affairs were temporarily administered by Mr. Edmund Parsons, the senior justice of the peace, from June till the end of August, when the administration was taken over by Mr. H. H. Hutchings, Assistant Commissioner at Turks Islands, pending the appointment of a Commissioner. At the request of the Assembly arrangements are being made for the appointment of a Medical Officer of Grand Cayman without executive duties.

H. H. HUTCHINGS,
Acting Commissioner.

Grand Cayman,
17th February, 1913.

COLONIAL REPORTS, &c.

No. 763.

TURKS AND CAICOS ISLANDS.

(For Report for 1911, *see* No. 726.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House,
Jamaica,
22 July, 1913.

SIR,

I HAVE the honour to transmit for your information a copy of the Blue Book of the Turks and Caicos Islands for the year 1912, together with a copy of the Commissioner's report thereon.

I have, &c.,
W. H. MANNING,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

(31387—2.) Wt. 35104—688. 1125 & 90. 9/13. D & S. A

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1912.

FINANCIAL.

The revenue for the year 1912 amounted to £8,215, while the expenditure was £8,092, as against £8,318 and £7,695 in 1911 respectively. There was a surplus of £123. The expenditure includes the grants under the Salt Producers Relief Ordinance, of which £1,777 was distributed.

Finances.

Year.	Revenue.	Expenditure.
	£	£
1908	7,404	11,430
1909	7,748	7,454
1910	8,648	6,827
1911	8,318	7,695
1912	8,215	8,092

Including £4,000 in 1908 and £800 in 1909 for hurricane relief.

Revenue.

	1911.	1912.
	£	£
Import Duties	3,477	3,577
Royalty of Salt	2,183	2,161
Port Dues	577	800
Licences and Internal Revenue...	234	227
Payments for Specific Services...	128	183
Post Office	935	865
Revenue from Government Property	448	194
Interest	228	199
Miscellaneous	107	9
	£8,318	£8,215

Expenditure.

	1911.	1912.
	£	£
Pensions	391	412
Commissioner's Department ...	1,868	1,849
Judicial Department	211	180
Police and Prisons Department...	571	589
Medical Department	582	586
Paupers	337	325

	1911.	1912.
	£	£
Education	600	600
Registration and Vaccination ...	33	19
Public Market	21	21
Miscellaneous	533	405
Post Office	191	426
Lighthouses	235	260
Public Works	355	640
Salt Industry	1,767	1,777
	£7,695	£8,092

Assets stand at £9,781 and liabilities at £3,367, leaving a balance of assets of £6,414. £5,363 is invested to meet emergencies, while there is no Public Debt.

LEGISLATION.

The following Ordinances were passed by the Legislative Board:—

No. 1.—The Appropriation Ordinance, 1913.
No. 2.—The Supplementary Appropriation Ordinance, 1911.
No. 3.—The Wild Birds Protection Ordinance.
No. 4.—The Copyright Ordinance.
No. 5.—The Fibre Plant Exportation Amendment Ordinance, 1912.

The Wild Bird Protection Ordinance was virtually a continuation of Ordinance No. 11 of 1907, but power was given to remove from, or add to, the schedule names of birds.

The Copyright Ordinance repealed Act 11 Victoria, c. 6, and brought the Imperial Act of 1911 into operation in the Dependency.

Ordinance No. 5 provides that, whenever it appears advisable, sisal plants may, under such conditions and for such periods as the Commissioner may see fit, be exempt from the export duty of 1½*d.* imposed upon each sisal plant by Ordinance No. 2 of 1908.

EDUCATION.

The average number on the registers of the eight Government schools in the Dependency and the average attendances, together with the cost of maintenance of each school, were as follows:—

School.	On Register.	Average Attendance.	Cost of Maintenance
			£
Grand Turk	248	209	154
Salt Cay	58	48	56
Cockburn Harbour	159	136	93
Lorimers	87	55	40
Kew	80	54	40
Blue Hills	91	62	40
Bottle Creek	117	95	52
Conch Bar	58	47	20
Total	898	706	495

By the inclusion of Conch Bar in the Government schools the number on the registers and the average attendance increased by 37 and 42. The private schools showed an attendance of 78 as compared with 73 in 1911. The total expenditure in 1912 was £628 as against £649 in the previous year, while there is a balance of £21 due the Treasury for advances to the Education Fund.

The primary education of the Dependency is under the management of a Board appointed annually, the Government making a yearly grant of £600. No fees are charged at the Government schools; attendance of children over six and under thirteen being enforced in the three settlements of Grand Turk, Salt Cay and Cockburn Harbour under the provisions of the Education Ordinance, 1901. A school rate of ten shillings for the half-year is payable in respect of every child of school age at the three settlements, but this rate is not collected where a child has been in regular attendance or where satisfactory excuse is offered for his absence. The Bible is a daily class book in every aided school, but no child is excluded on account of his religious denomination.

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports and exports during the year were valued at £27,662 and £25,947 as against £24,722 and £23,703 in 1911, respectively. The exports of fibre rose from £1,225 in 1911 to £4,718, chiefly owing to larger shipments in consequence of better prices, but the shipments of salt and sponges fell from £19,503 and £1,530 to £18,703 and £1,451 respectively. The raking of salt was up to the average, but great difficulties were experienced in chartering vessels.

The value of the imports and exports during the past five years has been:—

	Imports.	Exports.
	£	£
1908	24,426	24,768
1909	25,262	18,936
1910	27,916	24,461
1911	24,722	23,703
1912	27,662	25,947

During the year the trade was with the following countries:—

	Imports.	Exports.
	£	£
United Kingdom... ...	6,111	80
British Colonies	4,837	4,497
Foreign Countries ...	16,714	21,370
	£27,662	£25,947

Articles of Export.

	£	£
	1911.	1912.
Salt: Coarse	15,257	14,918
Salt: Fishery	4,246	3,685
Sisal	1,225	4,718
Sponges	1,530	1,451
Conchs	743	553
Miscellaneous	702	622
	£23,703	£25,947

Shipping.

The total tonnage of vessels entered and cleared during the period 1908 to 1912 was:—

Year.	Tonnage.
1908	410,195
1909	433,340
1910	385,762
1911	388,112
1912	378,773

Comparative statement of shipping cleared for years 1911 and 1912.

Nationality.	Sailing.		Steam.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
British	95	10,998	5	11,469	100	22,467
Foreign	89	11,076	98	153,950	187	165,026
Totals, 1912	184	22,074	103	165,419	287	187,493
Totals, 1911	227	18,695	97	154,841	324	173,536

POSTAL, TELEGRAPH, AND TELEPHONE.

There is no direct communication between England and these islands now that the Imperial Direct Line has ceased running to Jamaica from Avonmouth. Letters are sent and received by the steamers of the Clyde Line which sail from New York for ports in San Domingo about every ten days, while parcels post and freight from England are brought by the subsidized steamer of Messrs. Pickford and Black, which leaves Halifax for Jamaica every four weeks.

The cable of the Direct West India Cable Company connects Grand Turk with Halifax, Bermuda, and Jamaica. The company supplies a news bulletin daily, in respect of which an annual grant of £120 is made. The rate to England is 3*s*. a word, to Halifax 2*s*., to Bermuda 1*s*. 6*d*., to Jamaica 1*s*., and to New York 2*s*. 3*d*.

SAVINGS BANK.

The Savings Bank was established in 1890, the principal Ordinance being No. 4 of 1889. The following statistics are interesting as showing that the institution is self-supporting, and that its benefits are appreciated by the population (5,615) of these islands:—

Number of depositors	349
	£
Amount of deposits in 1912	1,603
Amount of withdrawals in 1912	1,257
Amount to credit of depositors	3,070
Amount of invested funds	3,143
Rate of interest	2 per cent.
	£
Revenue	58*
Expenditure	53

In 1902—ten years ago—the number of depositors was 201, and the amount to their credit £1,418, so that the work of the bank has greatly increased.

METEOROLOGICAL OBSERVATIONS.

The following is the rainfall:—

	Inches.
1908	41·37
1909	39·97
1910	26·73
1911	22 91
1912	27·98
Average rainfall for the period 1908-1912 ...	31·76

* To this amount should be added £35 brought to account in January for interest on investments in Jamaica.

The wettest month was November, when 6·59 inches were measured, of which 4·50 inches fell on the sixth of that month, while the driest month was June, with 27 parts.

The coolest and warmest months were December and September, with mean temperatures of 76·1 and 83·5 respectively.

Mean temperature for the year	80·2
Mean pressure	30·029
Lowest temperature (9th February)	63·5
Highest temperature (29th July)	92

The prevailing winds of the year were:—

GENERAL REMARKS.

The production of salt from sea water by solar evaporation is, in the three chief settlements of the Dependency, the main industry. The special climatic conditions, comparative absence of rain during periods of strong dry winds, and the convenient proximity of the

islands to the markets, are the principal contributing factors. For the salt raker the year 1912, as 1911, was an almost perfect one, large crops being gathered, which, in spite of strong demand, left on hand at the end of December an average annual crop, in consequence of the difficulty of obtaining freights at moderate rates, and this notwithstanding the exports of salt were not below the average quantity annually shipped. The West Indian proverb, "If it's not one thing, 'tis another," was verified, and it seems that, in the salt industry, one difficulty is removed only to give place to another. In the matter of freight, the Dependency, in common with other countries, was suffering from the successful participation of sailing ships in the profits secured in the present boom in the shipping trade. Several years ago, salt was carried exclusively in sailing vessels, but now steamers are frequently chartered, and it seems probable that, after the temporary improvement in the position of sailing ships, steamers will eventually take the place of the rapidly disappearing picturesque "wind jammer." During several months of the year quarantine, in consequence of bubonic plague in Porto Rico, was also an obstacle to obtaining ready charters.

The price of coarse salt was maintained at six cents a bushel throughout the year as a result of an informal mutual understanding between local producers and certain dealers, by whom the trade is apparently controlled, that the coarse salt raked in these islands for the markets in the United States should pass through their hands. Though an improvement upon that obtained several years ago, the price leaves but a narrow margin of profit even for those producing salt under favourable circumstances.

After several years of depression the fishery salt trade with British North America showed signs of improvement, 252,132 bushels of the value of £3,684 being exported.

As more than nine-tenths of the coarse salt is exported to, and as about four-fifths of the total trade of the Dependency are with, the United States, it is imperative to watch closely the conditions of the salt industry in that country. In June, 1911, of the 32 million barrels (280 lbs. to the barrel) consumed annually in the United States only 3·2 per cent. of the approximate value of £75,000, as against 36·5 per cent. in 1880, was imported, chiefly from the West Indies and the Mediterranean, so that these islands have to face fierce competition in an extremely limited and apparently dwindling market. In recent years the increasing production of salt in Michigan and other central States has driven the producers of the State of New York to compete more actively in the markets of the eastern coast where imported salt finds its only market. The Payne-Aldrich Tariff Bill, which reduced the duty by 20 cents on a short ton, afforded the foreign producer but little substantial relief. Sanguine expectations are entertained that, if salt is placed on the free list, Turks Islands salt will benefit both in price and demand, but past experience goes to show that, while the demand may be rendered steady, the price, in consequence of the keen competition of the Mediterranean salt, will not be increased to any appreciable extent. It will be more reasonable to look for the improvement of the industry in the concentration and

combination of local interests, which will facilitate economy in cartage, boatage, and the working of the ponds.

In addition to a grant of £1,000 under Section 11 affording sensible assistance to the individual owners in cleaning and raking operations, the Salt Producers Relief Ordinance, 1910, by a grant of £800 under Section 10 for the improvement of the common property enabled the Salt Pond Boards of the three settlements to carry out useful and important works. At Grank Turk the dams, walls, drains and embankments were repaired or extended in all the salinas, while the shipping places were cleared and the roads placed in good order. At Salt Cay, where the ponds are more concentrated, the improvements strike the eye more quickly. The common reservoir in that island has been dredged and cleaned, whereby the capacity has been largely increased and the flow of water accelerated. But the extension and raising of the embankment of over a mile in length to the east of the reservoir to prevent the wash from the adjoining lands in case of heavy rains, and to protect the ponds, will prove the most lasting and beneficial work ever undertaken at Salt Cay. Similar work has been carried out at Cockburn Harbour, and it is confidently hoped that the expenditure under the Ordinance will assure the future protection of both the private and common ponds and the production of a fine grade of salt.

Despite the fact that no work at all was carried on during the year at West Caicos, the Colonial Fibre Planting and Trading Company being in liquidation, the export of sisal fibre showed an increase in value from £1,225 to £4,718 for 767 bales (about 153 tons) and the prices obtained were better than those for several years.

Although the grants under the Salt Producers Ordinance, 1910, amounting to £800, or more than one-fifth of the expenditure, had to be met, the revenue was sufficient, with economy and without seriously impairing administrative efficiency, to show a small surplus, and it is satisfactory, so soon after the disastrous hurricane of 1908, to be able to point to a balance of assets of £6,413, equal to four-fifths of the annual revenue, of which amount £5,363 is invested to meet future emergencies.

F. H. Watkins,

Commissioner of the Turks and Caicos Islands.

Grand Turk, 13th June, 1913.

JAMAICA.

(For Report for 1911-12, see No. 739.)

THE GOVERNOR to THE SECRETARY OF STATE.

King's House, Jamaica,
11th November, 1913.

SIR,

I HAVE the honour to report on the Blue Book Returns of this Government for the financial year ended the 31st March, 1913.

I.—FINANCIAL.

1. The revenue and expenditure of the year, under the Heads of Estimates, compared with those of the preceding year, were as follows:—

REVENUE.

Heads.	Receipts, 1911-12. £	s.	d.	Receipts, 1912-1913. £	s.	d.
Customs	494,361	9	3	449,433	10	5

Total for General Expenditure ...	£1,155,208	8	6¼	£1,304,929	14	11½

2. The total revenue and expenditure for the last five years have been as shown below:—

	Revenue. £	Expenditure. £
1908-9	933,751	911,095
1909-10	992,976	1,033,794
1910-11	990,399	987,304
1911-12	1,161,014	1,155,208
1912-13	1,206,161	1,304,930

The revenue exceeded the original estimate for the year by £116,117. In the total there are, however, included sums of £87,055 received from the Earthquake Loan Board for redemption of debt, £50,000 from the Insurance Fund in aid of General Revenues and £11,414 15*s.* 10*d.* of Railway Inscribed Stock. For purposes of comparison, therefore, the total revenue might be reduced by £148,470 and regarded as £1,057,691, or less than the estimate by £32,352.

The heads showing decrease of revenue as compared with 1911-12 are Customs, £44,928; Port Harbours and Light dues, £235. Licences, Excise, and Internal Revenue, £1,625; Railway, £7,726; counterbalanced to some extent by increases in Stamp Duties, £5,304; Irrigation receipts, £1,595; Post Office and Telegraphs, £2,755; Rents, £366; Interest, £743.

The principal cause of the falling off in Customs was the remission of import duties, the *ad valorem* rate having been reduced from 16⅔ to 10 per cent. during nine months of the year.

The year started hopefully with a large surplus of nearly £175,000, and an Insurance Fund of £100,000. Moreover the Rio Minho Valley Branch Railway, for which a loan had been authorised by law, was being constructed out of moneys voted from General Revenues, £14,041 having been spent in 1911-1912 which, when recouped, would increase the surplus to £289,000.

As against this surplus there were certain commitments. A Resolution of the Legislative Council passed on the 28th February authorised the amortisation of the balance of the annuities under Imperial legislation (Colonial Loans Act), amounting to £56,937 17*s*. 11*d*. of which, £32,940, was payable in 1912-13, grants of £3,750 were voted to certain secondary schools, £1,037 to the Sailors' Home, £1,000 was re-voted for Kingston Streets, £9,000 for Water Supplies, £6,000 for works for the abatement of malaria, £5,000 for roads in Clarendon to give access to the new branch railway, and £25,000 for the No. 3 Railway Pier, totalling £83,727 and reducing the available surplus to £205,273.

The Estimates of expenditure for 1912-13, as passed, provided for using up £60,863 of this surplus, but as it included £75,000 for the Railway and £25,000 for the Pier, the former being recoverable and the latter already earmarked, the real position on the 1st April was that the forecast for the year, if realised, would have resulted in a surplus of £144,410 on current account and £100,000 in the Insurance Fund on the 31st March, 1913.

Supplementary appropriations of £19,149 10*s*. were, however, made on the 18th April, and a Bill was passed reducing the customs *ad valorem* duties from 16⅔ to 10 per cent. from the 1st July, equal to a remission of duties of about £60,000 a year or £45,000 for the nine months of the year under review—total, £64,149 10*s*.

In October the Council met again and voted further Supplementary Estimates of £10,861 6*s*. 4*d*. and £24,210 = £35,071 6*s*. 4*d*., thus reducing the probable surplus to, say, £45,000, and leaving the Insurance Fund untouched.

Severe hurricanes having occurred in November, the Council was again summoned in December, when £48,000 was voted for relief of hurricane sufferers and to meet extraordinary demands arising out of the hurricane. The Council was informed by the Governor that the estimate of damages to main roads, public buildings, telegraphs and other public works was £41,471, but a vote was not at the time taken for the amount. At the same time the Government was authorised to make loans to the sufferers aggregating £55,000. Naturally some of the works for which the votes had been taken had to be postponed.

The total expenditure for the year as shown by the accounts amounts to £1,304,930, but after deducting the adjusting entry of £87,055 for redemption of Earthquake Loan Board debt the net expenditure was £1,217,875, while £33,248 10*s*. additional was issued in Hurricane and Drought Loans.

The chief increases were Debt charges, £26,805; Pensions, £1,842; Administrative Departments, £2,439; Postal Service, £9,716; Judicial, £1,784; Medical, £5,648; Constabulary and

Prisons, £4,894; Education, £9,083; Harbours and Pilotage, £1,370; Agricultural Services, £923; Miscellaneous, £20,423; Public Works and Buildings, £33,181; Hurricane Assistance, £20,074.

The decreases were small and relatively unimportant.

The surplus of assets over liabilities at the close of the year amounted to £76,215, with £50,000 remaining in the Insurance Fund, but many of the works had been commenced were unfinished and the operations for hurricane and drought relief were in progress and not yet near completion. The financial situation was therefore substantially the same as has been described as existing after the meeting of the Legislative Council in December, namely, that the whole of the surplus and Insurance Fund would be absorbed except a small working balance on current account.

The public debt of the Island (most of which is represented by productive investments) amounted to £3,803,719 on the 31st March, 1913. This included £46,402 due to the Imperial Government for Earthquake Loans, directly secured by advances on properties. The accumulated sinking funds on the same date amounted to £850,866, leaving a net liability of £2,952,852. Included in the debt were guaranteed public loans for local purposes, secured on municipal rates and undertakings, amounting to £357,188, the sinking funds in respect of which amounted to £66,871.

No addition forming a charge on general revenue was made during the year to the public debt of the Island.

On the other hand, £87,055 was refunded to the Imperial Government to close the account of a loan of £100,000 obtained under the Earthquake Loan (Imperial) Law, 1907.

The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioner, and of all the Parochial Boards taken together, for the last five years, are shown in the following comparative statements:—

Kingston City Council.

	Receipt.	Expenditure.
	£	£
1908-9	32,197	30,010
1909-10	32,513	35,739
1910-11	35,755	35,385
1911-12	46,565	45,846
1912-13	41,515	43,846

Kingston General Commissioners.

	Receipt.	Expenditure.
	£	£
1908-9	30,545	26,223
1909-10	31,957	30,707
1910-11	60,082	52,373
1911-12	69,740	72,875
1912-13	44,656	54,842

Other Parochial Boards. (14 *Parishes*).

	Receipt. £	Expenditure. £
1908-9	106,231	107,838
1909-10	111,586	117,461
1910-11	135,118	139,032
1911-12	123,179	124,059
1912-13	148,029	146,491

14. The debts of the Parochial Boards to the Treasury for advances made for water-works and markets amounted at the close of the year to £18,867.

15. Power has also been taken under the Parochial Loans Law, 20 of 1903, to borrow for the construction or improvements of water-works, markets and streets, and drains, and £32,950 had been raised in this manner by the end of the financial year.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(*a*) Imports and Exports.

The total values of imports and exports for the last five years are as follows:—

	Imports. £	Exports. £
1908-9	2,420,335	2,268,254
1909-10	2,561,674	2,628,307
1910-11	2,614,943	2,568,222
1911-12	2,865,553	2,948,067
1912-13	3,050,478	2,709,283

The imports increased by £184,925 and the exports decreased by £238,784. These figures very clearly indicate the grave effect which the prolonged droughts and the hurricanes of 1912 produced in the economic condition of the Colony and the extent to which the prosperity attained in 1911 has been diminished.

The principal articles of import were:—

		1912.	Average of four years.
Ale and Beer	galls.	347,975	260,544
	value	£57,996	£42,668
Bacon	lbs.	47,290	50,579
	value	£1,970	£2,259
Beef, W.S.	brls.	4,427	5,698
	value	£16,934	£20,058
Bread and Biscuits	lbs.	3,071,815	4,222,632
	value	£25,598	£35,188
Butter and Substitutes ...	lbs.	1,121,401	1,035,696
	value	£41,751	£35,524

The imports for the past fifty years at intervals of ten years are as under:—

	£
To 30 September, 1872	1,559,601
30 September, 1882	1,318,450
31 March, 1892	1,759,890
31 March, 1902	1,755,921
31 December, 1912	3,050,480

and were obtained from the following countries:—

—	1872.	1882.	1892.	1902.	1912.
	£	£	£	£	£
United Kingdom ...	932,768	722,086	862,345	857,952	1,333,353
	59·8%	54·8%	49%	48·9%	43·7%

	2·7%	3·9%	3·4%	2·7%	5·0%

The Collector-General remarks:—

"In forty years the value of the imports has just doubled, but were it possible to measure by quantity or volume, I think it would have been found that the rate of progress has been very much more rapid. In that span of years Great Britain has yielded 16·1 per cent. of her proportion of the Island's trade to other countries, and the United States has improved her position by no less a proportion than 18·2 per cent. Canada has lost ground and "other countries" made some little progress. It remains to be seen how far the new imperial movement will affect these relations, and what period of time will be required for full fruition."

	£
Of the total exports, amounting in value to £2,709,283, the proportion attributable to Island produce was	2,572,275
Against the like figures in 1911 of	2,778,583
Or a decrease of	206,308
And the proportion attributable to British and foreign goods re-exported	137,008
Against the like figures for 1911 of... ...	169,484
Or a decrease of	32,476

This decrease in the value of Island produce exported as compared with 1912 is made up of Bananas, £215,394; Sugar, £114,615; Rum, £18,816; Citrus Fruit, £10,850; Ginger, £10,600; Honey, £6,759; Pimento, £4,864; Fustic and Bitterwood, £5,075; Logwood, £15,034; counterbalanced in part by increases in Coffee, £120,599; Cocoa, £38,385; Coconuts. £9,940; Hides, £3,233; and various other minor products.

The figures for the two years brought into contrast grouped under the general Board of Trade classification work out thus:—

	1912.	1911.
	£	£
Class I.—Live Animals, Food, Drink, and Narcotics	2,239,447	2,451,137
Class II.—Raw Material and Articles mainly unmanufactured	149,818	160,713
Class III.—Articles wholly or mainly manufactured	216,176	207,263
Class IV.—Miscellaneous unclassified	2,150	
Class V.—Bullion and Specie	101,692	133,952

The growth of the total export trade in the forty years commencing 1872 is as follows:—

	£
1872—Year ending 30 September	1,418,443
1882— ,, ,, ,, ...	1,549,058
1892— ,, ,, 31 March	1,722,096
1902— ,, ,, ,, ...	1,939,142
1912— ,, ,, 31 December	2,709,283

The increase during that period is £1,290,840. In this connection the following figures showing the trend of trade will also possess interest. The markets accepting the Island's exports in each of the years specified and the proportions falling to each were as under:—

—	1872.	1882.	1892.	1902.	1912.
	£	£	£	£	£
United Kingdom ...	1,152,783	968,323	562,913	409,858	358,516
	81·3°/₀	62·5°/₀	32·7°/₀	21·1°/₀	13·2°/₀
United States ...	149,629	275,703	877,274	1,272,540	1,618,614
	10·5°/₀	17·8°/₀	50·9°/₀	65·7°/₀	59·8°/₀
Canada	9,649	199,787	59,764	31,849	148,943
	·7°/₀	12·9°/₀	3·5°/₀	1·6°/₀	5·5°/₀
Other Countries ...	106,382	105,245	222,145	224,895	583,210
	7·5°/₀	6·8°/₀	12·9°/₀	11·6°/₀	21·5°/₀

In forty years the island's export trade has been practically weaned from the mother country and transferred in an ever-increasing degree to the United States, though discrimination in favour of Cuban sugars has in recent years had the effect of somewhat checking this trend.

The chief articles of export show the following variations:—

		1912.	Average of four years.
Annatto	lbs.	959,943	822,355
	value	£5,999	£8,108
Beeswax	cwt.	525	722
	value	£3,185	£4,536
Cocoa	cwt.	65,675	49,317
	value	£139,833	£91,357
Coconuts	No.	22,949,450	15,769,770
	value	£108,627	£69,216
Coffee	cwt.	89,586	72,873
	value	£274,730	£141,207

	value	£48,038	£45,978
Hides	lbs.	513,843	440,018
	value	£16,057	£11,551
Honey	cwt.	15,951	21,408
	value	£18,343	£19,626
Horses and Mules	No.	71	74
	value	£1,799	£1,500
Limejuice	galls.	95,107	104,314
	value	£3,863	£4,179
Logwood Extract	pkgs.	24,898	18,657
	value	£175,677	£139,336
Pimento	cwt.	107,504	135,194
	value	£78,388	£92,221

		1912.	Average of four years.
Rum	galls.	894,679	1,347,584
	value	£67,100	£160,382
Sugar	cwt.	197,960	280,396
	value	£132,798	£176,085
Skins, Goat	lbs.	157,247	136,716
	value	£14,086	£12,375
Tobacco, Cigars	lbs.	68,942	69,229
	value	£35,561	£33,872
,, Cigarettes ...	lbs.	17,272	7,245
	value	£2,500	£803
,, Leaf	lbs.	27,769	38,315
	value	£1,230	£1,467
Tortoise shell	No.	6,523	5,674
	value	£6,371	£4,725
Turtle	No.	1,000	1,093
	value	£2,095	£2,814
Wood, Bitter	tons.	2,317	2,240
	value	£3,486	£3,382
,, Fustic	tons.	2,027	3,067
	value	£4,468	£7,382
,, Logwood	tons.	37,295	29,481
	value	£84,070	£65,971
Yams	cwt.	10,879	8,539
	value	£4,162	£2,839

The relation which each of the staples bears to the total is indicated by the following figures for the past three years:—

—	1910.	1911.	1912.
	Per Cent.	Per Cent.	Per Cent.
Sugar	10·8	8·9	5·1
Rum	5·5	3·1	2·6
Coffee	6·9	5·5	10·7
Cocoa	2·6	3·6	5·4
Dyewoods	3·2	3·9	3·4
Fruit	53·7	58·3	54·7
Pimento	3·0	3·1	3·0
Minor Products	14·3	13·5	15·1

The acreage returned in 1912-1913, grouped under the four principal headings of the return, and set against an average of four years, exhibits the following:—

—	1912–13.	1911–1912.	Average of Four Years
	Acres.	Acres.	Acres.
Tilled lands	267,276	280,286	263,443
Guinea grass	152,527	143,592	140,642
Commons	502,830	517,830	497,699
Wood and ruinate	1,222,699	1,230,001	1,223,530
Total	2,145,332	2,171,709	2,125,314

As compared with 1911-12 the tilled lands show a decrease of 13,010 acres, and the commons 15,000 acres, while the area in guinea grass has increased by 8,935 acres. On the average of four years there has been a net increase, but the droughts of 1912-1913 have checked progress and resulted in less land being cultivated than in the previous year.

The tilled lands in turn are classified as far as possible under description of cultivation, and the figures for the past year taken out under crop, and compared with 1911-12, and with an average of four years give the following summary:—

—	1912–13.	1911–12.	Average of Four Years.
	Acres.	Acres.	Acres.
Canes	31,753	34,766	31,197
Coffee	22,275	24,473	24,873
Cocoanuts	17,377	16,691	14,781
Bananas	81,071	82,435	72,641
Cocoa	11,236	13,355	11,458
Ground provisions	66,153	74,723	80,128
Mixed cultivation	33,479	30,167	24,894
Minor items	3,932	3,676	4,135

The only increases on 1911-1912 are in cocoanuts 686 acres, mixed cultivation 3,312 acres, and in minor items 256 acres, while canes have decreased 3,013 acres, coffee 2,198 acres, bananas 1,364 acres, cocoa 2,119 acres, and ground provisions 8,570 acres. In comparison with the average of 4 years, however, there has been very general progress except in coffee and ground provisions, which show serious progressive decline.

The following abstract of the number of separate properties laid under contribution to general and parochial revenue during the year 1912-13, and the different descriptions set out and compared with the figures of the year preceding, show the following:—

	1912-13.	1911-12.
Properties valued at £20 ...	62,554	62,911
Properties valued at £30 ...	6,618	6,445
Properties valued at £40 ...	53,240	55,286
Properties valued at over £40...	30,177	29,767
Occupiers relieved	920	1,136
Properties in arrear	12,600	6,693
	166,109	162,238

The Collector-General states that the hurricanes of November are doubtless responsible for the arrears in St. James, 77, Hanover, 237, and Westmoreland, 497, but that the formidable figures in St. Elizabeth, 1,391, Manchester, 1,516, Clarendon, 1,085 and St. Catherine, 1,338 are attributable to the long continued drought.

The Surveyor-General makes the following observations with regard to the sale of Crown lands, &c., during the year:—

Sale of Land.

215 purchasers who bought 1,820 acres under the Rules of the Sale of Crown Lands to small settlers have completed payment of instalments of their purchase money and been given titles for their lands. There were also 86 other purchasers who paid cash down for 727 acres. Fresh areas have been offered for sale for cash in St. James, in Trelawny, and in Portland. Very few purchasers have, however, been forthcoming. Excellent land is, among other places, now offered for sale at 30*s.* an acre up the Spanish River, to which a new road has been made. To date, of the total of 31,000 acres that have been sold partly on credit since 1897 about 13,420 acres have been paid for in full, 3,020 acres taken back for failure to pay, 14,560 acres still remain unpaid for. £31,780 has been received to date on account of sales of land since 1896. The total amount of purchase money received during the year from cash and instalment purchasers amounts to £1,778 9*s.* 9*d.* 22 persons were given refunds of one-fifth of purchase money for establishing in permanent bearing cultivation one-fifth of the area purchased or making building improvements on town lots.

Leases and Tenancies.

6,690 acres and 64 town lots have been leased to 72 persons for £247 a year and 718 small prædial tenancies have been taken on at rentals of from 12*s.* to 20*s.* per acre per annum. The total amount of rent received for the year amounts to £3,085 2*s.* 4*d.*

Forfeiture of Lands.

2,403 acres have been forfeited and interlocutory judgment entitling the Crown to possession obtained on 2,289 acres. Notification No. 36, covering 1,522 acres, has been issued and proceedings under this and previous notifications are now pending in respect of 11,260 acres.

Escheatable Lands and Generally.

Two cases of escheat and squatting occurred during the year. Sites for various school houses, teachers' cottages, hospitals, police stations, and other purposes have been arranged for.

AGRICULTURE.

A further extension of the Farm School at Hope so as to accommodate 44 students at that institution was made during the year.

The school opened with a full complement of students in January, while several applications for admission had to be refused.

Of the pedigree Red Poll cattle imported from England in May for the Government Farm, only one was lost during the year, while the imported cows produced 13 calves, which have all been safely reared. The attempts to establish pedigree dairy cattle from England and the United States during the past three years at the Government Farm have resulted in a herd of 63 pedigree animals being established, while the dairy cattle now number 180.

A number of well-bred young bulls are being reared for sale to the public by auction in March next. Promising results have been obtained by crossing Jerseys with Indian Zebu cattle.

By the use of ensilage made from guinea grass and guinea corn the dairy herd was enabled during the dry months of the year to produce the best yield of milk yet recorded at the farm. This experiment has demonstrated the value of the silo for the feeding of cattle during the dry months of the year when green fodder is not obtainable.

The demand for the Departmental tick wash increases and this preparation is now extensively used by stock-breeders all over the Island.

An outbreak of anthrax was reported from St. Catherine. Vaccination was carried out on a large scale with striking success.

Equine influenza was very general during the spring months, and a good many young foals were lost in consequence.

Sugar planters are extending their areas in seedling canes; about 1,500 acres of B. 208 are now established. The Demerara seedling D. 625 is giving large returns on heavy soils in Westmoreland. The local seedling canes Nos. 70, 71, and 72 have done well in estate trials and are considered to be valuable introductions.

The establishment of local plant nurseries in connection with the work of the agricultural instructors has been found a successful means of extending the planting of permanent crops such as cocoa by small settlers.

Over 72,000 cocoa plants were distributed from the nurseries during the period under review.

The work of the newly appointed microbiologist during the year has served to determine the causative organisms of the four diseases of the banana scheduled under the Diseases of Plants Law. A good deal of activity has been shown lately by planters, both great and small, in seeking for cases of disease and in their treatment. It is satisfactory to record that the Panama disease does not appear to be spreading and that the few cases dealt with last year appear to have been satisfactorily stamped out.

A marked revival in the exports of coffee and good progress with cocoa and cocoanuts have been recorded for the year, while the banana and sugar industries were affected adversely by drought and storms.

Jamaica rum now appears to have recovered its former position and is again merchantable at standard prices.

Sea-island cotton has made marked progress in Vere, where small growers have taken up this crop. The area in cotton is now increasing.

Cassava meal is to be prepared for export to the United States next year, and 500 acres of cassava have been established in Trelawny with this object.

The successful outcome of the pioneer efforts in building up a trade in dried bananas or "banana figs" has encouraged an extension of this industry, and several factories have been erected for drying the fruit during the past year. The chief outlet for banana figs at present is Germany.

Good results have followed from active measures under the Adulteration of Food Law, and such articles as lard, butter and condensed milk are now supplied to the public in a satisfactory manner. All kerosene oil used in the Island now appears to satisfy the requirements of the law as to flash point.

The Rio Cobre Irrigation Works have at length come to their full development. The average of irrigated lands in cultivation in the plains of St. Catherine and the amount of water taken per hour for the different crops may be of interest.

—	Acres.	Cubic Yards per Hour.	Cubic Yards per Acre.
Bananas	10,000	15,000	1·5
Canes	750	720	1·0
Grass	2,300	1,013	·4
Provision grounds	100	100	1·0
Oranges	610	300	0·5
	13,760	17,133	1·24 average.

Unless it should prove feasible to construct an extensive impounding reservoir to conserve the surplus flood waters which now flow into the sea no extension of cultivation will be possible.

SHIPPING.

The ships reporting show an increase in number and tonnage. The figures are:—

Steamers and Sailing Vessels.

1911.	1,508	ships with tonnage	2,158,647
1912.	1,471	,, ,, ,,	2,341,823
Decrease in ships	37	Increase in tonnage	183,176

Steamers and Sailing Vessels.

The clearances were:—

1911.	1,509	ships with tonnage	2,160,465
1912.	1,453	,, ,, ,,	2,346,615
Decrease in ships	56	Increase in tonnage	186,150

Distinguishing between ships (steamers and sailing vessels) reporting with cargo and those reporting in ballast, the account appears as follows:—

Reporting with Cargo.

1911.	1,144	ships with tonnage	1,824,363
1912.	1,169	,, ,, ,,	2,068,855
Increase in ships	25	and in tonnage	244,492

Reporting in Ballast.

1911.	364	ships with tonnage	334,284
1912.	302	,, ,, ,,	272,968
Decrease in ships	62	and in tonnage	61,316

Separating steamers from sailing vessels, the analysis shows that the arrivals of steamships were:—

1911.	1,360	ships with tonnage	2,127,165
1912.	1,282	,, ,, ,,	2,300,272
Decrease in ships	78	and increase in tonnage	173,107

The following tables show the arrivals with cargo and the arrivals in ballast:—

Steamships arriving with Cargo.

1911.	1,028	ships with tonnage	1,808,481
1911.	1,033	,, ,, ,,	2,050,711
Increase in ships	5	and in tonnage	142,230

Steamships arriving in Ballast.

1911.	332	ships with tonnage	318,684
1912.	249	,, ,, ,,	249,561
Decrease in ships	83	and in tonnage	69,123

The steamers clearing were as under:—

1911.	1,363	ships with tonnage	2,130,424
1912.	1,285	,, ,, ,,	2,310,835
Decrease in ships	78	and increase in tonnage	180,411

Separating those clearing in ballast from those taking cargo the figures are:—

Cleared with Cargo.

1911.	1,313	ships with tonnage	2,046,305
1912.	1,234	,, ,, ,,	2,198,245
Decrease in ships	79	and increase in tonnage	151,940

Cleared in Ballast.

1911.	50	ships in tonnage	84,119
1912.	49	,, ,, ,,	112,590
Decrease in ships	1	increase in tonnage	28,471

The arrivals from the United Kingdom and British Possessions were:—

Sailing vessels 199	... tonnage	13,994	
Steam vessels 131	... tonnage	322,152	
			336,146
from foreign countries:—			
Sailing vessels 70	... tonnage	27,557	
Steam vessels 1,151	... tonnage	1,978,120	
1,471			2,005,677
			2,341,823

The nationalities of the steamships were Norwegian, 524, tonnage, 401,697; British, 493, tonnage, 1,294,424; German, 193, tonnage, 522,448; American, 70, tonnage, 86,287; Cuban, 3, tonnage, 2,835; and Danish, 2, tonnage, 3,144.

Chartered Norwegian steamers are much employed in the fruit trade with the United States, and ply regularly between ports in the northern states and Jamaica. The Germans have much improved their freight and passenger trade by putting on large ships of the Hamburg-American line.

III.—LEGISLATION.

Of the 36 Laws passed in the session of 1912-1913, the following may be referred to as the more important:—

Law 3.—To make provision for extending the Jamaica Railway from May Pen to Danks Estate in the parish of Clarendon.

Law 6.—For the encouragement of Agricultural Loan Societies.

Law 36.—The Agricultural Societies (Special Loans) Law.

Law. 10.—To amend the Tariff Law, reducing the customs duties on *ad valorem* goods from £16 13*s*. 4*d*. to £10 per cent.

Law 17.—To prevent the introduction and spread of plant disease.

Law 18.—To facilitate the recovery of possession of small tenements after determination of the tenancy.

Law 19.—To amend the Customs Consolidation Law, substituting declarations on invoices for oaths.

Law. 22.—The Railway Employees Law, granting pensions or grtauities to railway servants and regulating their employment.

Law 23.—The Shop Assistants Law, regulating hours of employment.

Law 24.—An amendment of the Health Law giving the Public Works Department power in certain cases to perform sanitary works on private property.

Law 25.—To provide for granting compassionate allowances to certain parochial officers.

Law 26.—An amendment of the Towns Nuisances Prevention Law.

Law 28.—To provide for a yearly return by bankers of unclaimed securities and moneys and to make certain unclaimed moneys general assets of the Island.

Law 29.—To authorise the transfer of young criminals from a prison to a prison farm or similar institution.

Law 31.—To provide for the notification of infective diseases.

Law 33.—To amend the Immigration Law in the direction of increasing the wages of indentured immigrants.

Law 35.—To amend the Elementary Education Law in the direction of providing for School Boards.

It will be observed that nearly all the legislation is social or industrial, having for its object improvement of railway communication, the bettering of the condition of labourers, encouraging thrift amongst small farmers, assisting them through troubles induced by drought and hurricane by means of loans, lightening the burden of taxation, improving conditions conducive to ill-health, and mitigating the punishment of young criminals.

IV.—PUBLIC EDUCATION.

The Director of Education furnishes the following statistics:—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books for Year ended 31st October, 1910.	Average Attendance for Year ended 31st October, 1909.	Percentage on Average Attendance of number on Books.	Total Payments to Elementary Schools and Teachers.
					£
1911–12 ...	698	98,576	61,669	62·55	60,503
1912–13 ...	698	100,179	60,900	60·79	66,847

In the last three years there has been an increase of 10,277 in the number of scholars' names on the school registers. The percentage of average attendance out of numbers on the register (60·79) is, however, considerably below that of 1910 (64·34). With regard to the efficiency of the work of the schools as measured in the inspection results, there is a gratifying increase in the number of first-class schools from 217 to 254 in the year under review. It is also satisfactory to note that the number of third-class schools has diminished by 12. The "failures," however, increased by 5.

The annual examination of teachers and training college students shows the following results:—There were 118 Jamaica students presented, of whom 104 passed, 36 obtaining honours. Of the 4 female and 6 male students from British Guiana all passed except one whose health interfered with her studies.

For the Pupil Teachers' Examination 414 were presented and 256, or 61 per cent. passed; of Volunteer Candidates 1,930 were presented and 943, or 48 per cent., passed.

The total amount expended on elementary education through the Department was £91,387, and by the Public Works Department in the building of Government schools and schoolmasters' houses £6,248, aggregating together £97,635 or over 9 per cent. of the total revenue of the Government collected during the year.

Special attention was devoted to providing appliances for the various schools where these were lacking, and to improving the sanitary arrangements.

Progress was made in kindergarten instruction of teachers and pupils and in manual training, and the technical and continuation school has been kept busy with day and night classes training teachers and instructing pupils.

Two locally produced text-books are now in use in the schools, one dealing with agriculture and the other with hygiene and sanitation. The recent development of education has been an attempt to add a utilitarian and industrial element to the ordinary literary instruction and to inculcate in the young the elementary methods to be observed in the preservation of good health.

Laws have been passed regulating the creation of School Boards with the object of extending the areas of compulsory education and of strengthening the hands of these Boards.

Regulations have been framed for granting pensions to elementary school teachers with the intention of making the profession more attractive.

The year, which commenced favourably, proved later to be a very trying one for the Education Department no less than for all others, on account of unfavourable seasons. Droughts prevailed over the greater portion of the Island during most part of the year, while in November destructive hurricanes struck several districts. In Westmoreland, Hanover and St. James, out of a total of 126 schoolhouses 57 were completely destroyed and 41 more or less seriously damaged; 19 teachers' houses were destroyed and 26 damaged, while in other parts of the Island four schoolhouses and one teacher's house were destroyed and six schoolhouses and 46 teachers' houses were damaged. The Director of Education bears testimony to the courage with which the managers and teachers faced the disaster.

Industrial Schools.

The number of inmates of the Industrial Schools, male and female, was:—

Stony Hill	462
Shortwood	39
Alpha Cottage	153
Belmont	19
Happy Grove	25
A total of	698

Secondary Education

The expenditure of the enlowed schools during the year was as follows:—

	£
Jamaica College	3,435
Munro and Dickenson's	6,345
Wolmer's	3,668
Manning's	1,110
Rusea's	364
Tichfield	1,637
Beckford and Smith's	362
Manchester Schools	291
Vere Schools	488
Montego Bay School	619
Guthrie Davidson's	66
	£18,385

The total number of pupils was 1,478, including those receiving elementary education in the Tichfield Schools. One boy from Munro and Dickenson's obtained the Rhodes Scholarship, one from the Jamaica College took the Jamaica Scholarship, and one from Wolmer's the £60 Scholarship; 93 boys and girls passed the Cambridge Local Examinations, 33 of them taking honours.

A Girls' Scholarship of the value of £150 a year, tenable for three years, was established during the year by a vote from general revenue.

V.—GOVERNMENT INSTITUTIONS.

(*a*) Public Hospital, Kingston.

Indoor patients treated, 3,148; outdoor patients, including paupers, 9,290; dressings done for out-patients, 18,022; prescriptions made up, 20,461; total surgical operations, 1,027; daily average number of inmates, 222·7; total cost of maintenance, £10,540; receipts, £702 16*s*. 1*d*.

(*b*) Victoria Jubilee Lying-in Hospital.

Number of patients admitted, 653; 8 pupil nurses admitted for training (one was unable to finish her term owing to ill-health, and 7 passed and received certificates); average daily number of patients, 17; receipts, £366 8*s*. 6*d*.; expenditure, £1,430.

(*c*) Lunatic Asylum.

Number of patients on 31st March, 1913, 1,314; an increase of 119 since beginning of the year. Total number of patients under treatment during year, 1,547; daily average resident, 1,272; rate of recovery, 38·94 per cent.; admissions, 349; discharges, 135; deaths, 97; death-rate, 7·46 per cent.

The proportion of insane is one to 632 population. A new ward for the safe custody of criminal lunatics has been commenced.

Cost of maintenance, £18,414; receipts, £9,321.

(*d*) Leper's Home.

Patients on 31st March, 1912		114
Admitted		14
		128
Discharged	3	
Absconded	—	
Died	14	
		17
On 31st March, 1913		111

The buildings and grounds were kept in good order. The death-rate was 10·9 per cent. The average longevity of leper life of those who died during the year works out at 7¼ years. Cost of maintenance, £2,584; receipts, nil.

(*e*) Government Savings Bank.

The liability of the bank to its depositors on current account was further decreased during the year by £15,693, the decrease on ordinary accounts being £13,491, while the Government accounts were decreased by £220 2*s*.

The net decreases in liability in the two previous years were £29,620 12*s*. 11¾*d*. and £1,511 3*s*. 7½*d*. respectively.

The ordinary deposits amounted during the year to £107,561 0*s*. 2¾*d*., a decrease of £4,524 15*s*. 2*d*., and the withdrawals to £121,052 4*s*. 6½*d*., an increase of £7,119 19*s*. 11*d*., as compared with the previous year.

The balance sheet on 31st March, 1913, shows a liability to depositors of £316,971, the full amount of which was covered by investments in British and Colonial securities at that date.

The income and expenditure of the Savings Bank for the year may be summarised as below:—

Income.

	£	s.	d.
Interest on Investments	11,912	14	8
Interest on Deposits	350	2	6
Refund by Imperial Government of Income Tax overpaid...	379	6	2
Miscellaneous	13	15	11
	£12,655	19	3

Expenditure.

	£	s.	d.
Interest on Deposits	7,721	12	6
Expenses of Management	2,385	0	7
Balance Profit to General Revenue ...	2,549	6	2
	£12,655	19	3

The number of pass books examined was 4,299.

During the past ten years the ordinary deposits in the Savings Bank have declined by £119,000. The institution no longer meets the needs of any but the depositors of very trifling amounts, as better rates of interest can be secured in the Canadian Banks doing business in the country and in all industrial or agricultural undertakings.

(*f*) Registration of Titles.

The number of titles registered is steadily increasing at the rate of between 300 and 400 each year. The Titles Assurance Fund amounted at the end of the year to £5,438.

VI.—JUDICIAL STATISTICS.

(Courts, Police and Prisons.)

The judicial statistics show that the total number of convictions in Circuit Courts was 131, as compared with 104 in 1911-12; of convictions in the Resident Magistrates' Court 7,935, as compared with 6,639; of summary convictions 15,028 as compared with 15,037.

There was a marked increase in the proportion of convictions of offences against property in all three divisions of the courts. Convictions for prædial larceny show an increase from 1,382 last year to 2,369 in the year under report.

The causes of this sudden increase are the long period of drought which prevailed in the greater portion of the Island and the occurrence of a hurricane in the western parishes which destroyed much property.

There was 1 conviction for murder in the course of the year, and 5 for man-slaughter, comparing with 4 and 3, respectively, in the previous year.

The committals to the prisons during the year numbered 5,076, and to lock-ups for short terms 1,929, making a total of 7,005, as compared with 5,676 in the previous year, an increase of 1,329.

The re-convictions during the year amounted to 1,690, of which 548 were second convictions, 319 third, and 823 fourth and upward. During 1911-12 the re-convictions numbered 1,442.

The daily average of prisoners in custody in the Penitentiary and St. Catherine District Prison was 1,259, as compared with 1,087 during the previous year. There were 39 deaths in the prisons, as compared with 29 during 1911-12. There were 3 executions of capital punishment. In the previous year there were none.

Considering the institutions separately: 24 deaths occurred in the General Penitentiary, representing a rate of 32·9 per 1,000. At St. Catherine District Prison 15 deaths occurred, representing a rate of 28·2 per 1,000. The state and discipline of the prisons has been good, and no corporal punishment was inflicted for breaches of discipline.

The reformatory branch at the District Prison contained 23 lads on 31st March. The inmates have a building and compound separate from those occupied by the regular prisoners in the District Prison.

During the year 1912-13, 185 persons were bound over as probationers under Law 27 of 1909. From these probationers 668 reports were received. 47 probationers were directed to make their reports to the Police Station nearest to their homes, 8 were allowed to report by letter and 130 reported in person to the Probation Officer.

Of the 185 probationers under supervision this year, 14 were brought before the court for offences subsequent to first conviction and sentenced to imprisonment. Proceedings were taken against 20 probationers who failed to report.

The gross expenditure for the General Penitentiary amounted to £15,587, and for the St. Catherine District Prison, £7,365, total, £22,952. The gross earnings in case of the General Penitentiary were £3,710, and of the St. Catherine District Prison, £1,350. The yield of the St. Catherine District Prison Farm was valued at £1,126. £605 of that amount is the value of articles grown and consumed by the prisoners, thereby reducing the cost of the prison by that amount.

POLICE.

In reporting on the Police Department, the Inspector General states that the establishment, including officers, was nine men under the authorised strength on the 31st March, 1913. This maintained recovery from the depletion from which the Force has suffered during recent years is satisfactory.

The health of the sub-officers and men appears to have improved during the year. 1,301 days less were spent in hospital than in the preceding year.

There were 84 criminals under police supervision and 2,584 habitual criminals under surveillance during the year; 1,831 habitual criminals were re-convicted during 1913, against 1,438 in 1912.

VII.—VITAL STATISTICS AND PUBLIC HEALTH.

The estimated population of the Island on the 31st March, 1913, was 855,682. This figure is arrived at as follows:—

Estimated population on 31st March, 1912			845,767
Births registered, 1912-13 ...	33,159		
Deaths ,, ,, ...	21,450		
			11,709
			857,476
Migration:—			
Arrivals—general	25,178		
Arrivals—East Indians	1,985		
		27,163	
Departures—general	28,428		
Departures—East Indians ...	529		
		28,957	
			1,794
			855,682

The East Indians arriving were indentured immigrants.

Of the general arrivals and departures, 8,954 and 14,993 respectively were labourers, and show a net emigration of 6,039 persons of this class. The remainders, 18,209 arrivals and 13,964 departures, represent a net immigration of 4,245 persons, of whom 1,456 were East Indians.

Migration of labourers took place chiefly in respect of the following countries:—

—	Departures.	Returned.	Excess Departures.	Excess Returns.
Central America	13,091	7,347	5,744	—
Cuba	1,373	798	575	—
Hayti	367	649	—	282
Other Countries (American and West Indian).	162	160	2	—
Total	14,993	8,954	6,321	282

During the five years from April, 1908 to March, 1913, the Collector-General's returns show that 65,895 labourers emigrated and 45,843 returned. The difference of 20,058 gives an average loss of 4,011 per annum.

The mean Island population for the year, that is, the population on the 30th September, 1912, ascertained by adding to the census figures the excess of births over deaths registered since the census, was 854,136. On these figures the marriages, births, and deaths have been calculated.

The following is the number of marriages, births, and deaths registered during the year, with the rates per 1,000 for this and the preceding year.

—	—	Rate per 1,000.	
		1912–13.	1911–12.
Marriages	3,218	3·7	4·2
Births	33,159	38·8	39·0
Deaths	21,450	25·1	22·1

Of the births, 21,313, or 64·2 per 100, were illegitimate. The rate was 64·1 in 1911-12, and the average for the decade 63·3.

There was a decrease of infant mortality in proportion to the general death-rate, which increased by 3 per cent.

—	1910–11.	Rate per 100 of deaths.	
		1911–12.	1912–13.
Infants under one year ...	31·4	33·0	29·9
Infants under two years ...	40·4	42·0	38·8
Death-rate per 1,000	23·1	22·1	25·1

This does not denote any improvement in the ratio of infantile deaths to births, which for the whole Island has increased from 17·5 per cent. in 1908-9 to 19·3 per cent. in 1912-13 in the case of children under 1 year of age, and from 25·1 per cent. to 29·5 per cent. in the case of children under 5 years of age, while the figures for Kingston show an increase from 26·2 to 26·8 per cent. for children under one year and from 32·8 per cent. to 35 per cent. for children under 5 years during the same period.

In the order named, the parishes of Hanover, Clarendon, St. Ann, and Westmoreland show the highest birth rates, while those of St. Ann, Manchester, St. Mary, and Trelawny show the lowest death rates.

St. Andrew, St. Elizabeth, Portland, and St. Thomas exhibit the lowest birth rates.

Uncertified cases of death were 73·3 per cent., compared with 75·2 in 1911-12, for the whole Island. The figures for Kingston were 18·8 in 1912-13 and 27·0 in 1911-12, a very satisfactory diminution.

The principal causes of death in Kingston, stated in order of number of deaths in 1912-13, were as follows:—

Causes.	1912-13.		1911-12.	
	No. of Deaths.	Rate per 100 of Total Deaths.	No. of Deaths.	Rate per 100 of Total Deaths.
Diarrhœa and Enteritis ...	332	7·2	191	11·8
Phthisis	174	9·0	163	10·0
Heart Disease	118	6·1	83	5·1
Enteric Fever	85	4·4	69	4·2
Atrophy, Icterus and Scleroma of new born (under 1 year).	235	12·2	190	11·7
Atrophy, Icterus and Inanition (1 year and upwards).	52	2·6	78	4·8

Malaria is no longer a serious item in the mortality of Kingston. The Registrar-General remarks with reference to it—"It is satisfactory to note that malaria, which in 1909-10 was accountable for 6·9 per cent. of the deaths in Kingston, has gone steadily down since then, the rate being 6·9 in 1909-10, 5·0 in 1910-11, 3·2 in 1911-12, and 1·2 in 1912-13."

Of the few cases of malaria now reported in Kingston a proportion represents arrivals from elsewhere.

It may also be noted that fever (not otherwise defined) has also steadily declined to 1·5 per cent.

Bowel and lung complaints, enteric fever, and heedlessness of infant life are the causes of death against which the sanitary and education authorities may hope to wage a beneficent campaign.

The epidemic of whooping cough which commenced in the June quarter, 1910, has at length spent itself after claiming 1,505 victims, 17 of whom died in 1912-13. "Vomiting sickness," the

cause of which is still under investigation, was registered as the cause of death in 188 cases, while 12 deaths were certified as cerebro-spinal fever, and 98 were registered as meningitis, of which 97 were certified.

These facts are mentioned because the term "vomiting sickness" which might with equal cogency be applied to sea sickness, having been loosely used in certain cases in which medical men failed to diagnose some disease accompanied by the symptom of vomiting, the term has been seized on by the public, encouraged by the profession, and used as a kind of shibboleth to describe any illness accompanied by sickness at the stomach. Cases reported as "vomiting sickness" have from time to time proved on investigation to be due to a multiplicity of ailments, such as malaria, biliousness, worms, &c., but there was always a residue ascribed by certain medical men to meningitis, a diagnosis which was not accepted by others. It was then suggested that this residue of cases might be due to yellow fever, but this suggestion was scouted by the older medical men who had had the opportunity of seeing cases of this disease in the distant past and failed to couple the symptoms with those of the residue of the cases of "vomiting sickness." Moreover, as no effort had been made to trace the disease through the medium of the Stegomyia mosquito, and it attacked the class of people hitherto immune and at the wrong time of year, there was profound distrust of the theory. About this time the Bacteriologist had the opportunity of examining specimens and he found in some of them the germs of meningitis. The investigation is not yet concluded. Dr. Seidelin was sent out by the Liverpool School of Tropical Medicine to make investigations and his report has not yet been received. In the meantime it seems proper to group together the cases reported as vomiting sickness with those certified as meningitis pending more complete and authoritative information.

Public Health.

The expenditure of the Medical Department during the year amounted to £74,621, as against £68,626 in 1911-12.

The progressive increase in the expenditure of this department in the course of the last six years is noticeable. The figures are as follows:—

	£
1907-8	54,839
1908-9	56,404
1909-10	58,317
1910-11	64,986
1911-12	68,626
1912-13	74,621

This does not include the cost of building, which was £8,743 in the past year, bringing up the total to £83,364, or nearly 8 per cent. of the revenue collected.

During the year, 43 persons were detained at the Quarantine Station, and quarantine restrictions were imposed upon ships coming from Trinidad, Brazil, Venezuela, Porto Rico, Cuba,

and other countries in consequence of reports of cases of infectious diseases in those places.

During the year the increased attention given to the disease of yaws, in pursuance of the extended powers given by the Yaws Notification Law No. 23 of 1910, was continued, and 8,285 new cases were treated, 21,410 visits being paid altogether, and 10,866 persons returned as treated, though the returns are incomplete.

The disease prevails generally in mountainous localities and where water is scarce or not easily accessible and where, consequently, cleanliness, bathing, and proper sanitary precautions are neglected.

Treatment with salvarsan in hospital was employed in 349 cases, of which 327 were discharged cured. Only in 14 cases was a second injection used, and more than two in one.

The arrangements made for the treatment of out-patients at hospitals in 1910-11 resulted in a further increase in the numbers treated. During 1912-13 the numbers were:—

At Kingston Hospital	9,290
At public general hospitals	11,599
In districts	45,186
Under the ticket system of reduced payment	1,597
	67,672

The total number of patients treated in public general hospitals during the year under review was 27,781. There were 665 deaths in hospitals. Adding the cases treated in the Kingston Public Hospital, 3,148, the Jubilee (Lying-in) Hospital, 653, the Lunatic Asylum, 1,314, the Lepers' Home, 128, the total number of patients treated in Government hospitals and asylums total 33,024.

The number of operations performed was 2,552, with 25 deaths.

Continued attention was given to the hook-worm disease.

The Bacteriologist examined 897 specimens and found 702, or 78 per cent., harbouring the worm, while in the Spanish Town Prison 1,378 cases were examined, with positive results in 71·55 per cent., and in the General Penitentiary 339 cases, with 70 per cent. In the public general hospitals 3,641 cases were thymolised and 1,147 East Indian immigrants who arrived were landed at the Quarantine Station, and 711 found to be infected were treated. The Surgeon Superintendent of one of the immigrant ships had treated 180 cases during the voyage until his supply of thymol and naphthol B had run out. The Medical Board that examined the immigrants on arrival state that it is evident there is no insuperable obstacle to treating coolies on board during the voyage from India, and are of opinion that the period on board ship offers the completest facilities for thoroughly thymolising them.

The daily average of patients accommodated in the public hospitals was 1,094·83, against 967 in the previous year, and 533 in the year 1904-5.

The principal diseases for which patients were admitted into the public general hospitals were as follows:—

Disease.	Cases.	Deaths.
Malarial Fever, Intermittent ...	8,068	49
,, ,, Remittent	353	21
,, ,, Pernicious	45	10
Skin Diseases	3,614	10
Disease of the Digestive System ...	2,010	100
Local Injuries	1,935	33
Rheumatism	1,194	—
Diseases of the Respiratory System ...	672	56
Disease of the Circulatory System ...	172	27
Diseases of the Cellular Tissue ...	696	4
Ankylostomiasis (Hook-worm) ...	1,594	16
Gonorrhœa	316	—
Syphilis	628	11
Anæmia	195	11
Diseases of the Eye	326	—

The Government Bacteriologist conducted during the year examinations of 6,194 specimens covering a wide field of investigation, the most important as affecting the mortality in the Island being enteric fever, ankylostomiasis, vomiting sickness, malaria and dysentery. After fumigation of a ship from Cuba two out of 67 rats killed on board were found to be infected with plague, but test examinations of rats caught in the Island have all yielded negative results. Of 183 cases of "vomiting sickness" examined, 52, or 28·4 per cent., were traced to cerebro-spinal meningitis. So great has been the demand on the Bacteriologist's services that it has been found necessary to provide for the appointment of an Assistant

A considerable amount of work in connexion with improved drainage of the coast towns was carried on during the past year. The filling of the swamp to the eastward of Kingston was completed by convict labour. The Government purchased Kingston Pen, to the west of the city, and greatly improved the property which had for many years been in a very insanitary condition, and the Health Department of the Mayor and Council devoted increased attention to obliterating the breeding places of mosquitoes, with the result, already stated, that the death rate from malaria has fallen to 1·2 per cent., including deaths of patients admitted to the Public Hospital from other parishes.

Pipe outlets into the sea for draining swamps or streams have been constructed at Morant Bay, Annotto Bay, and Port Maria, and many drains have been cemented to facilitate the passage of water and abolish stagnant pools. Unfortunately work has had to be discontinued in order to provide funds for repairing the damage occasioned by the hurricanes of November last.

11,422 ounces of quinine were issued for use in institutions on estates, by the police, in schools, or for sale at the post offices at ¼*d.* per packet.

Bowel complaints, variously returned as dysentery, colitis and enteritis, have been very prevalent during the year and caused several deaths. In those parts of the Island in which there has been a drought and no hurricane it has been attributed to the drought, and in those where there has been a hurricane and no drought to the hurricane. To the statistician collating the returns and reports it would appear probable that the disease, having been introduced, has been carried from place to place by human agency, possibly contaminating water supplies by neglect of sanitation and food by means of insects, house flies, &c.

VIII.—POSTAL AND TELEGRAPH SERVICES.

156. The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1911-12 with those of previous years:—

—	1912–13.	1911–12.	1910–11.
	£	£	£
Postages	40,992	39,487	36,587
Commission on Money Orders	364	411	390
Local Commission on British Postal Orders	754	240	225
Commission on Local Postal Orders ...	403	891	831
Miscellaneous	583	584	938
Telegraphs	8,125	7,109	6,942
Total	51,221	48,722	45,913

These statistics show an increase of £2,499 in gross revenue as compared with the previous year, due to increases of £1,505 and £1,016 in postage and telegraph collections, and of £514 on commission on British postal orders, which have been in use since September last in lieu of local orders. The consequent decrease on local postal orders and on money orders has been £535.

The expenditure of the year by the Department amounted to £51,211 as against £42,466 in 1911-12.

The progress of the department is illustrated by the following figures:—

	Revenue.	Expenditure.
	£	£
1892-93	24,966	22,405
1902-03	33,105	27,696
1912-13	51,221	51,211

160. As compared with the two previous years the numbers of letters and postcards were:—

—	At General Post Office.		
	1912–13.	1911–12.	1910–11.
Outwards	4,493,416	4,461,971	4,508,686
Inwards	5,499,762	5,649,423	5,688,126
Total	9,993,178	10,111,394	10,196,812
	At District Post Offices.		
Total	1,486,638	1,577,412	1,494,537
Grand Total	11,479,816	11,688,806	11,691,349
Telegrams sent and received ...	223,635	192,270	134,626

An increase of 31,365 in the number of telegrams sent during the year, and of £1,017 in telegraph revenue, is attributable in part to the introduction of sixpenny inland telegrams in January, 1911, and also in part to the number of offices being increased from 90 to 94.

Seven new District Post Offices were opened during the year, making the total number 197.

The value of orders cashed during the year on behalf of the United States of America exceeded that of the previous year by £3,606, and this increase was due principally to remittances from the Canal Zone.

The facilities offered to the public of buying five-grain doses of quinine at a farthing each were continued at all post offices, the amount of the sales being £239 1*s.* 3*d.*

IX.—PUBLIC WORKS.

The total expenditure of the Public Works Department for the year under review was £280,153 18*s.* 6*d.*, summarised as follows:—

	£	s.	d.	£	s.	d.
Salaries and other Departmental Charges ...				19,262	4	9
Main Roads and Bridges, Maintenance ...				108,697	3	1
New Works	64,281	18	7			
New Bridges under Law 20 of 1892	2,080	19	7			
New Roads to improve access to Railway Stations, Clarendon	5,004	5	9			
Relief Work	3,237	4	3			
				74,604	8	2

	£	s.	d.
Public Buildings, Maintenance	12,453	2	5
Public Buildings, New Works...	36,302	10	9
Lighthouses	1,731	14	8
Rio Cobre Irrigation Works	2,335	16	9
Spanish Town Water Works	1,025	18	9
Government Schools	6,247	15	3
Malaria Reclamations	7,125	3	9
Mail Conveyance and Telegraph and Telephones	6,967	9	1
Miscellaneous Services	13,400	11	1
	£280,153	18	6

The total length of main roads at the end of the year was 2,211 miles 33½ chains, exclusive of about 34 miles taken over for reconstruction.

The average cost of ordinary maintenance of roads per mile for the whole island was £45 9*s.* 10*d.*, and including special works of improvement £49 2*s.*; of this sum flood damages amounted to £10 5*s.* 5*d.* per mile.

The average cost per mile in St. Mary was £93 19*s.* 2*d.*, and in St. Elizabeth £21 3*s.* 2*d.*, being the highest and lowest, respectively.

The weather for ten months of the year was favourable for road work, being dry in almost all parts except the extreme west and east of the Island, but hurricanes accompanied by floods occurred in November in the western parishes and in St. Andrew, St. Catherine, Clarendon and Manchester, the rainfall for that month being 26·74 inches, as against the average of 7·44 inches. Serious damage was done to main roads, public buildings, and telegraphs, estimated at £41,471; school houses suffered to the extent of about £5,000, and parochial roads and buildings were also very much damaged.

The extent to which the expenditure of the Public Works Department has increased, and the relative cost of supervision are indicated by the following figures:—

	£		
1902-3	118,980		
1903-4	129,514		
1904-5	114,929		
1905-6	100,563	supervision per cent.	13·8
1906-7	111,310	,, ,,	12·6
1907-8	138,914	,, ,,	10·6
1908-9	165,276	,, ,,	9·2
1909-10	173,544	,, ,,	8·6
1910-11	189,436	,, ,,	8·3
1911-12	235,206	,, ,,	7·3
1912-13	280,154	,, ,,	6·8

The progressive cost of maintenance and special works on main roads from £32 2*s.* 0*d.* per mile in 1906-1907 and £29 5*s.* 9*d.* in 1907-1908 to £49 2*s.* 0*d.* in 1912-1913 is attributed to flood

damages £10 5*s*. 5*d*. per mile, to heavier traffic, to damage by motor cars, motor trucks, and traction engines and to lack of sufficient supervision in consequence of the great increase of work which has devolved on the staff. Much of the work done during the past year was performed under great stress of urgency during the heavy rains which followed the hurricane, when roads were blocked, telegraph and telephone lines blown down and public buildings unroofed or damaged.

The inadequacy of the staff had been recognised and in October last a resolution had been passed by the Legislative Council authorising the appointment of a divisional engineer and the employment for a term of three years of a hydraulic engineer to consider and supervise certain schemes for water supplies, &c., which were in contemplation. On account of the heavy expenditure due to drought and hurricane and the reduction of revenue from remission of taxation and other causes only the hydraulic engineer has been engaged.

£11,196 14*s*. 3*d*. was spent on the second block of the new public buildings, including the Supreme Court and Offices, the Kingston Judge's Court, the Administrator General's Office, the Land Titles Office, the Surveyor General's Office, the Attorney General's Office, the Constabulary Office, and the Education Office.

Both blocks of the new public buildings in King Street are now completed at a cost of—

	£
West Block	42,914
East Block	43,905
Land	30,632
Total	£117,451

These buildings were paid for out of current revenue as well as King's House, which cost the additional sum of £20,400 They replace buildings damaged or destroyed by the earthquake of 1907.

Government Railway.

The total receipts were £183,279, the expenditure, exclusive of debt charges, £95,157, making the net earnings, £88,122. The receipts fell short of those for 1911-1912 by £6,728, due to diminished traffic consequent on the hurricanes which occurred in November and the droughts which prevailed during the greater part of the year. There was, however, a decrease of expenditure of £2,672, so that the deficiency of net revenue as compared with the previous year was £4,056.

After paying debt charges on the capital expenditure of £2,640,865 the net loss to the public treasury on the working of the railway system amounted to £29,611 for the year. The average loss for the past twelve years has been £62,514 or a total of £750,168, but it appears evident that the railway is slowly approaching a condition of equilibrium between revenue and

expenditure. But for the excessive capital cost, amounting to £14,313 per mile, no loss would accrue.

The railway was taken over by the Government on 16th August, 1900, under an Order of the Supreme Court, the Company having defaulted in the payment of interest on the First Mortgage bonds. The line when taken over proved to be in indifferent condition, the rolling stock insufficient and to a great extent unsuitable, and there were certain debts remaining unpaid. The average gross earnings for the two preceding years had been £115,997 and the working expenses £97,423, leaving only £18,574 per annum to go towards the payment of debt charges. Since then the most careful and economical management has been necessary, particularly as the mountain sections of the line had been constructed with such steep grades and sharp curves that much difficulty was experienced in obtaining rolling stock of a suitable description, the type of engine ultimately adopted being of American manufacture with immense boiler capacity.

Owing to the increase of traffic the rolling stock has become inadequate and will have to be considerably increased, some of the main road bridges over which the Company was allowed to run its lines may have to be strengthened and other works undertaken, but in other respects the line is in very good order, well ballasted, and provided with hard-wood sleepers.

The history of this line is instructive as an indication of what should be avoided in Colonial Railway development. The line, for a distance of 14 miles 5 furlongs, was opened for traffic by a private company in 1845. Representing capital expenditure of over £267,000 it was purchased by the Colonial Government for £93,932 in 1879; extensions of 38¾ miles constructed by contractors were opened for traffic in 1885: in 1890 it was sold to an American Syndicate: in 1894 an extension of 66 miles was completed and in 1896 a further length of 54½ miles. The Syndicate having defaulted, the Government resumed possession in 1900, with the result stated above.

Railway extension could not be resumed until 1912, when the annual loss showed a marked diminution. A branch up the Rio Minho Valley was then commenced, but the lessons of the past having been taken to heart, the Director of the Railway, who had been in charge since 1900, was entrusted with the construction, and a section of 10 miles to Suttons was opened on the 10th March, the balance of 3½ miles being well advanced. The expenditure to the end of the year amounted to nearly £68,000, or less than £7,000 per mile. The difference between this sum and the capital cost of the old line—£14,313 per mile—is sufficiently striking to indicate the advantage of conducting the work of railway construction under well organised direct control rather than by means of contracts with private companies.

The Acting Director of the Railway in his report states:—

> "In consequence of Mr. James Richmond going on sick leave on March 10th, 1913, which has since been followed by his retirement on a well earned pension, the duty of writing this report has devolved on me. A very cursory examination of the various comparative statements annexed

to this report bear testimony, better and more lasting than any words of mine can do, to the remarkable development of the railway and to the improved financial results due to his single-minded devotion to his onerous duties."

X.—GENERAL OBSERVATIONS.

During the year the Colony has suffered from the two catastrophes of drought and hurricane. The former was the more widespread and caused very lasting distress, while the latter appealed more to the imagination, on account of the swift destruction which marked its path. Fortunately, the public finances were in a strong position and it was possible to provide for the relief of the sufferers out of surplus revenue. The Island has been the sport of circumstances for some years past. Slowly and painfully emerging from the depression caused by the almost total destruction of the sugar industry, portions of it have been devastated by hurricanes in 1880, 1886, 1899, 1903, and 1912, and a destructive earthquake in 1907. The matter which has caused the greatest financial embarrassment to the Government was, however, the sale of the Railway in 1890, which had to be taken back in 1900 after the company to which it had been handed over had defaulted. Since then the loss incurred on it, after paying debt charges and working expenses, has amounted to more than £750,000.

My predecessor, Sir Sydney Olivier, left the Colony on the 18th January, 1913, to take up other duties in His Majesty's Service, and I arrived on the 6th March and entered upon the duties of Governor of the Colony on the 7th.

Due to the heavy demands for the relief and re-housing of the poorer classes who suffered from the effects of drought and hurricane, and for loans to assist in the restoration of crops damaged or destroyed by the hurricane of November, 1912, a period of economy in expenditure has become necessary, and many useful public works have had to be postponed to a more propitious season.

I have, &c.,

W. H. Manning,

Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State
for the Colonies.

TURKS AND CAICOS ISLANDS.

(For Report for 1912, see No. 763.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
6th June, 1914.

SIR,

I HAVE the honour to transmit for your information a copy of the Blue Book of the Turks and Caicos Islands for the year 1913, together with a copy of the Commissioner's report thereon.

I have, &c.,
W. H. MANNING,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

(C49) Wt.36076/850. 1125 & 20. 7.14. B.&F. Ltd. Gp.11/4.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS POR THE YEAR 1913.

FINANCIAL.

The revenue for the year 1913 amounted to £10,867 and the expenditure to £8,505, as against £8,215 and £8,092 in 1912, respectively. There was a surplus of £2,362. The expenditure includes the grants under the Salt Producers' Relief Ordinance of £1,994, £300 for school buildings in the Caicos Islands and £50 for the improvement of the sea frontage at Grand Turk.

FINANCES.

Year.	Revenue.	Expenditure.
	£	£
1909	7,748	7,454
1910	8,648	6,827
1911	8,318	7,695
1912	8,215	8,092
1913	10,867	8,505

Including £800 in 1909 for Hurricane Relief.

For the period 1909–13 the average annual revenue was £8,759 and the average annual expenditure £7,715, showing an average yearly surplus of £1,045.

REVENUE.

	1912.	1913.
	£	£
Import Duties	3,577	3,971
Royalty on Salt	2,161	2,585
Port Dues	800	626
Licences and Internal Revenue ..	227	246
Payments for Specific Services ..	183	195
Post Office	865	2,627
Revenue from Government Property	194	248
Interest	199	210
Miscellaneous	9	159
	£8,215	£10,867

EXPENDITURE.

	1912.	1913.
	£	£
Pensions	412	403
Commissioner's Department.. ..	1,849	1,938
Judicial Department	180	187
Police and Prisons Department ..	589	607
Medical Department	586	608
Paupers	325	316
Education	600	600
Registration and Vaccination ..	19	26
Public Market	21	21
Miscellaneous	405	418
Post Office	426	201
Lighthouses	260	224
Public Works	640	962
Salt Industry	1,777	1,994
	£8,092	£8,505

Assets stand at £13,947 and liabilities at £5,171, leaving a balance of assets of £8,776. £5,543 is invested to meet emergencies, while there is no public debt.

LEGISLATION.

The following Ordinances were passed by the Legislative Board :—

No. 1. The Appropriation Ordinance, 1914.

No. 2. The Supplementary Appropriation Ordinance, 1912.

No. 3. The Escheat Ordinance 1870 Amendment Ordinance 1913.

No. 4. The Pensions Ordinance 1904 Amendment Ordinance 1913.

No. 5. The Cinematograph Ordinance, 1913.

The Escheat Ordinance, No. 3 of 1913, in order to minimize the cost of procedure in cases of escheat, reduces the number of jurors required from 12 to 5.

No. 4 of 1913 precludes officers drawing pensions from the Dependency from acting as directors of commercial companies connected with the Islands except with the previous approval of the Secretary of State.

No. 5 of 1913 regulates and controls cinematograph and similar entertainments.

EDUCATION.

The average numbers on the registers of, and the average attendance at, the eight Government Schools in the Dependency during 1913 may be seen in the following table :—

School.	On Register.	Average Attendance.
Grand Turk	238	206
Salt Cay	57	48
Cockburn Harbour ..	161	144
Lorimers	107	62
Kew	86	58
Blue Hills	95	58
Bottle Creek	115	96
Conch Bar	59	48
	918	720

The total cost of maintenance of these schools during the year amounted to £489.

The number on the roll and the average attendance have increased by 20 and 14 respectively.

The number of children attending private schools was at Grand Turk 25 and at Cockburn Harbour 22, a total of 47 as compared with 78 in 1912. A few children are recognized as receiving private tuition.

The total expenditure of the Board, as compared with £607 8*s.* 3*d.* of the previous year, amounted to £639 16*s.* 1*d.*, disbursed as follows :—

	£	*s.*	*d.*
Salaries of Teachers	478	11	8
Salaries of Pupil Teachers	18	10	0
Tuition of Pupil Teachers	10	0	0
Aided Schools	7	10	0
Inspection Expenses	13	8	0
Salary of Inspector	25	0	0
Furniture and upkeep of buildings ..	21	6	10
Books and materials	22	13	2
Rewards for regular attendance ..	9	1	6
Contingencies	1	19	9
Refund of Treasury advance	27	13	11
Preliminary work on new schoolhouse at Kew	6	1	3

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports and exports in 1913 were valued at £30,231 and £27,808, as against £27,662 and £25,947 in the previous year, respectively. Owing to the fall in prices no sisal fibre was shipped during the year, whereas in 1912 the value of the fibre exported was £4,718, but the shipments of salt and sponges rose from £18,703 and £1,451 to £23,032

and £1,835, respectively. The weather conditions were most favourable for the staple industry. Bullion to the amount of £3,874 was imported from Jamaica to meet salvage claims, and £1,920 was shipped to the same island.

The value of the imports and exports during the past five years has been :—

Year.	Imports.	Exports.
	£	£
1909	25,262	18,936
1910	27,916	24,461
1911	24,722	23,703
1912	27,662	25,947
1913	30,231	27,808

During the year the trade was with the following countries :—

	Imports.	Exports.
	£	£
United Kingdom	3,861	Nil
British Colonies	9,088	7,806
Foreign Countries	17,282	20,002
	£30,231	£27,808

Foreign	162	193,546
Totals, 1913	264	203,699
Totals, 1912	287	187,493

POSTAL AND TELEGRAPH.

The Clyde Line of steamers run regularly to and from New York direct, about every ten days, carrying mails, passengers and freight, and accomplish the single voyage each way in 4½ days. There is also a monthly mail service by a Pickford & Black steamer, which calls at Grand Turk both on the outward and return passage from Halifax to Jamaica.

The Dependency is connected with the outer world by the cable of the Direct West India Cable Company. A news bulletin is published daily, for which a subsidy of £120 per annum is paid. The rate to England is 3*s.* a word, to Halifax 2*s.*, to Bermuda 1*s.* 6*d.*, to Jamaica 1*s.*, and to New York 2*s.* 6*d.* Non-express messages are sent at half rates.

The estimated number of letters and postal matter dealt with in 1913 was :—

Letters	31,500
Post Cards	3,750
Newspapers	19,250
Books	2,050
Parcels	894

The amount of Money Order transactions was :—

	£
Issued in the Dependency	1,282
Paid in the Dependency	451

SAVINGS BANK.

The number of depositors in the Savings Bank was 415; the amount of deposits in 1913, £1,837; the amount of withdrawals in 1913, £1,273; the amount to credit of depositors, £3,634; and the rate of interest, 2 per cent.

METEOROLOGICAL OBSERVATIONS.

The following is the annual rainfall for the period 1909 to 1913 :—

	Inches.
1909	39·97
1910	26·73
1911	22·91
1912	27·98
1913	30·56
Average rainfall for the period	29·63

7·99 inches were recorded in December, of which 4·55 inches fell on the 9th December, whilst in May only 64 parts were measured.

The coolest and warmest months were April and August, with mean temperatures of 76·2° and 83·5° respectively.

Mean temperature for the year	79·3°
Mean pressure	30·044
Lowest temperature (24th February)	62°
Highest temperature (18th August)	92·5°

The prevailing winds of the year were :—

GENERAL REMARKS.

The year under review was one of financial prosperity, the revenue, £10,867, being the largest on record since the Islands became a Dependency of Jamaica in 1873, while the climatic conditions for the staple industry were as favourable as in the two previous years.

Although the revenue collected included, it is true, the fortuitous amount of about £2,000 from the sale of the new issue of stamps, it is satisfactory to note that the ordinary sources of revenue, especially the import duties, £3,974, which exceeded those of any year, showed a tendency to expand, while the expenditure, £8,505, provided for the extraordinary items of £1,994 for grants under the Salt Producers' Relief Ordinance 1910, £300 for the erection of new school, and £50 for the improvement of the sea frontage at Grand Turk, leaving £6,161 for the ordinary cost of administration. The assets exceeded the liabilities by £8,775, more than the amount of the revenue of many favourable years, while the amount of £5,543, which is being automatically increased by the investment of the interest, was at the end of the year already funded to provide against contingencies. Although a hurricane or a succession of wet seasons might at any time upset the most conservative precautions, the finances of these Islands, after many years of anxiety, may be said to have been re-established on a sound basis.

In addition to the ideal conditions for salt raking which prevail during the year, the outlook for the staple industry was brightened by the placing of salt on the free list of the United States Tariff, which will, even if the price is not increased, aid in rendering a steady demand for what is produced in the islands. The difficulty of obtaining charters of vessels at moderate rates still continues, the result being that a quantity equal to an average annual raking remained on hand at the end of the year. The present time is one of comparative prosperity to the salt pond owners, who, in view of the lessons of the past will be well advised to take advantage of the Government grants and propitious years to free themselves as much as possible from the burden of debt which has overwhelmed them in the past, and to combine in measures for the reduction of the cost of production to enable them to meet on more equal terms their competitors in the limited markets still remaining open to salt imported into the United States.

The favourable prices for sisal obtained in 1912 were not maintained; not a single bale, in consequence, being exported during the past year, which is a convincing proof of the fluctuating character of the fibre industry, which can only be carried on with financial success by strict adherence to rigid economy in cultivation and by the absence of heavy charges on borrowed capital.

After a decade of misfortunes and depression, it is pleasant to be able to point to signs of improvement in the immediate future, but, in writing of Islands so wholly dependent on precarious industries and uncertain climatic conditions, it is safer to indulge in pious hopes than in sanguine prophecy, and to consolidate their financial position to meet as far as possible every conceivable emergency.

F. H. WATKINS,

Commissioner of the Turks and Caicos Islands.

Grand Turk,

CAYMAN ISLANDS (JAMAICA).

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
20th August, 1914.

SIR,

I HAVE the honour to transmit, for your information, a copy of the Blue Book of the Cayman Islands for the year 1912–13, together with a copy of the Commissioner's Report thereon.

I have, &c.,
W. H. MANNING,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State
for the Colonies.

	£	£
Commissioner's Department	654	779
Judicial Department ..	106	102
Legislative Department	23	23
Medical Department ..	188	317
Police and Prisons ..	250	257
Charitable	88	53
Education	283	155
Registration	10	13
Miscellaneous	116	202
Post Office Department	202	286
Lighthouse Department	15	16
Public Works	765	902
Totals	£2,700	£3,105

The revenue of the Cayman Islands for the financial year ended the 30th September, 1913, amounted to a sum total of £3,397 and the expenditure to £3,105, leaving a surplus of £292 towards the assets of the Dependency. Including, therefore, the year under review, the average revenue for the last five years is £3,279. The receipts for the past year are therefore £118 above the average.

During the past year £902 1*s*. 3*d*. has been spent on public works. Of this sum £435 17*s*. 10*d*. was applied to the maintenance and construction of roads and £466 3*s*. 5*d*. to Government buildings and other purposes, in which sum is included all expenditure on the construction of school-houses.

The chief sources of revenue are the import duties and the sale of postage stamps. With reference to the import duties, 5 per cent. ad valorem duty is imposed on all imported goods, together with an additional sum of four shillings per gallon on distilled spirits and one shilling and sixpence per gallon on all wines. The general prosperity of these islands depends to a very large extent in the case of Grand Cayman on the price obtained from the sale of turtle. Contracts have been entered into, which will take effect from January 1st, 1914, and be in force throughout the year, at prices remunerative to the contractors. There is therefore every reason to anticipate a promising year, in so far as the import duties are concerned, while in the year that has passed, namely, 1913, there has been no scarcity of buyers of turtle. In the Lesser Islands coconuts form the staple industry, and if budrot and other diseases peculiar to that article of commerce, which during the last year have made their appearance, can be effectually controlled and kept within bounds there seems no reason to doubt the continued prosperity of that portion of the Dependency. The Post Office contributes a very large sum annually towards the general revenue, the sale of postage stamps amounting to £1,137. This sum has been due to the new 1913 issue of various denominations from a farthing upwards.

Export Duty :—There is an export duty of 1s. per 1,000 on coconuts, which realized £61 during the past year. There is no other export duty.

Assets and Liabilities.

On the 30th September, 1913, the assets of the Dependency amounted to £3,097. The liabilities were £925, being £245 due to depositors in Government Savings Bank, £39 due to depositors in Treasury, and £641 Money Order Account. With reference to money order transactions through Jamaica, the precise figures are not at present available, but it is estimated that a sum of approximately £641 represents the liability of the Dependency under this head

---

TRADE AND INDUSTRIES.

Imports.

The value of the imports from all countries has been in :—

Year.	£
1908–9	22,091
1909–10	23,853
1910–11	26,232
1911–12	28,444
1912–13	25,000

Average for five years, £25,122.

Exports.

The exports to all countries have amounted in value as follows :—

Year.	£
1908–9	11,995
1909–10	11,371
1910–11	10,992
1911–12	12,323
1912–13	10,000

Average for five years, £11,336.

It will be observed that there is a large difference between the value of imports and exports, which is due to several causes. Shipbuilding is one of the most important industries in these islands, and one in which a large number of people engage from time to time. Part of the materials used in the construction of vessels is imported from abroad and therefore included under the head of imports, while, though a few are sold to foreigners, most of them are owned locally and do not appear as exports. The majority of the male inhabitants are forced to seek for a means of subsistence in the United States, Central American Republics, Cuba, Colon, and other places, and in so doing leave their relatives behind, to whom large sums are remitted. It is estimated that approximately £3,469 has been received by way of

remittance during the past year from wage-earners abroad by people in Grand Cayman. When not engaged in the turtle fisheries trade between various foreign countries, schooners and their earnings may be said to be a national asset. But by far the most important reasons for the disparity lies in the comparative isolation of Grand Cayman from the outside world, the want of reliable communication, the lack of capital to develop industries for which the soil is best fitted and the entire absence of any initiative or enterprise on the part of the inhabitants, who seem in most cases to be quite content with their lot and show no disposition or desire to ameliorate their condition in life.

At present the Seeberg Line, of Mobile, U. S. A., operate two steamers which call at Georgetown on the way to Jamaica, and, though this in itself is of great advantage to the island, yet no reliability can be placed on the precise hour of arrival and departure. It is currently reported that the company have decided to withdraw their vessels. It is to be hoped that by the end of this year a schooner will be built with auxiliary power and cabin accommodation for passengers and that a tourist trade will gradually be built up. Efforts are being made in the direction of establishing a canning factory for turtle, fish, crayfish, etc., and also in the growing of cotton and the resuscitation of the coconut industry in Grand Cayman, which would prove an inestimable boon to the island.

Shipping.

Georgetown, Grand Cayman, is a port of registry having 36 vessels with an aggregate tonnage of 2,002 tons. The number of ships entered and cleared during the year 1912–13 is as follows :—

Entered.

	No.	*Tonnage.*
British	104	5,864
Foreign	49	18,411
Total	153	24,275

Cleared.

	No.	*Tonnage.*
British	115	6,545
Foreign	48	11,716
Total	163	24,261

SAVINGS BANK.

The Government Savings Bank, established in 1908, has proved of great use to those desirous of availing themselves of the opportunity offered for safe investment. For the financial year ended the 30th September, 1913, deposits amounted to £493 and withdrawals to £248.

The balance due to depositors at the end of the year 1913 was £246.

POST OFFICE.

The Post Office Department has since its establishment amply proved its usefulness and has contributed largely to the finances of the Dependency. As will be seen from the tabular statement below, in the last five years it has been the mainstay of these islands and has been responsible for nearly one half of the total revenue, the sale of postage stamps to collectors forming a very appreciable item.

Year.	*Post Office Revenue.*	*Total Revenue.*
	£	£
1908–9	1,758	3,600
1909–10	769	2,824
1910–11	784	2,779
1911–12	1,640	3,795
1912–13	1,247	3,316
Total	£6,198	£16,314

The inland postal service shows a steady and favourable increase in the amount of business transacted, while the large receipts in respect of the foreign mail are due to the number of Caymanians who have been compelled to seek a livelihood in the Canal Zone, Cuba, Central and South American Republics, and the United States.

The following table is indicative of the amount of mails, inland and foreign, despatched and received for the two years :—

	Local Mails.	*Foreign Mails.*	
	Postal Packets Handled.	*Postal Received.*	*Packets Despatched.*
1911–12	20,544	33,011	16,546
1912–13	20,600	35,000	20,600

Post Office Orders.

All money order business is transacted through Jamaica, the issue of orders in the Cayman Islands being at present confined to Georgetown, Grand Cayman, and Cayman Brac.

	Orders issued.	*Orders cashed.*
	£	£
1911–12	3,557	2,819
1912–13	3,791	3,469

JUDICIAL.

There are two sittings of the Grand Court in each year, namely, in June and December. The Commissioner presides as Judge. The Court has an unlimited civil and criminal jurisdiction except in cases of capital felony—Jamaica Law 11 of 1911. Quarterly Petty Courts and weekly Petty Sessions are held, in which two Justices sit, the former dealing with smaller civil actions and the latter taking cognizance of minor offences. Cases of serious crime are few and isolated, while the minor offences are generally the result of drink. In all cases in the Grand Court there is a right of appeal to the Jamaica Supreme Court and in the Petty Court to the Grand Court.

The following is a return of the cases before the Courts in the last two years :—

	1911-12.	1912-13.
Weekly Petty Sessions—		
Minor criminal offences ..	39	45
Quarterly Petty Courts—		
Minor civil actions	10	8
Half-yearly Grand Court—		
Criminal cases	1	2
Civil actions	13	10
Judgment summonses	4	6
Totals	67	71

LEGISLATIVE.

The Legislative Assembly is styled "The Justices and Vestry," and is composed of all the Justices of the Peace (thirteen in number) and 27 vestrymen. The Vestry meets by statute in September in each year to make provision for the next financial year, beginning on the 1st October, and otherwise when summoned for the despatch of business.

In accordance with a recent resolution of the assembly a Bill has been framed and will be passed through the Legislative Council of Jamaica providing for a diminution of its membership, which is at present about one vestryman for every 143 inhabitants, and establishing a local franchise, together with property and pecuniary qualifications for candidates, and bringing the elections more into line with modern conditions.

The following Laws were passed during the year 1913 :—

Supplementary Appropriation Law for 1911-12.
Law to remit payment of dues and taxes by Mail Steamships.
Commissioner's Pension Law.
Coconut Palm Disease Law.
Public Officers Security Law.
Appropriation Law 1913-14.
Auditors Law.
Public Holidays Law.

PUBLIC WORKS.

Substantial sums have been spent during the five years 1907-12 on the construction, extension and improvement of roads throughout the Dependency, while during the year 1913 £138 9*s*. 9*d*. has been expended in the construction of a road from West Bay to Batabano, the present width of which is four feet, but which it is ultimately intended to widen to twelve feet. The road is only half completed and is 1½ to 1¾ mile in length. It is estimated that an additional outlay of £120 will be required to complete it. The absence of stone in the immediate neighbourhood of the road has contributed largely to its expense. The stone has had to be brought from a considerable distance, but the construction up to date has been satisfactorily executed and the workmanship neat and durable. It is proposed during the coming year to extend Hirst Road and render it more suitable for traffic by removing the soft sand. During the five years 1908-9 to 1912-13 the total expenditure on works has been £1,952 and that on roads £3,580.

The sum of £300 a year is allotted to the maintenance and upkeep of roads, which owing to the continual rains and to the prolific growth of vegetation and weeds require constant attention and repair.

SHIPBUILDING.

During the last financial year there were 13 vessels, amounting in the aggregate to 512 tons, built and launched in these islands. Shipbuilding constitutes an important industry and one deserving of every encouragement. The Caymanians possess a natural aptitude for shipbuilding, and if only more orders could be obtained from countries abroad which, perhaps, know little or nothing of the native skill and workmanship, a very lucrative source of employment could be opened up. In 1912 seven vessels were completed, the largest 55 tons, total tonnage 246 tons. There are at present on the register 36 vessels, with a total tonnage of 2,002 tons.

Many vessels built by the Caymanians and manned in great part by them are serving under the flags of Cuba and the American Republics.

AGRICULTURE.

A branch of the Jamaica Agricultural Society was established in Georgetown in 1908, but does not appear to be progressing as satisfactorily as such a movement deserves. There is always a lamentable scarcity of ground provisions, though Georgetown affords a ready market for their sale. The depredations of wild rabbits and crabs, and to a small extent prædial larceny, tend to discourage enterprise and individual industry. £18 a year is voted for agricultural purposes, and for the granting of prizes at the annual agricultural show by way of encouragement. Quarterly meetings of the Agricultural Society are held in January, April, July and October. The larger portion of the land in Grand Cayman is devoted to the growing of guinea grass and the rearing of cattle and horses. There are in Grand Cayman about 2,000 head of cattle and about 250 horses.

POPULATION.

In June, 1911, a census of the Cayman Islands was taken, showing a total population of 5,564. Of these 2,322 are white, 2,211 are coloured and 1,031 black. 3,087 were returned as able to read and write, 749 as able to read only, and 1,728, including children, as illiterate. In religious denomination the people are mainly Presbyterian, 3,264 being returned as such. There were 981 Baptists, all in the Lesser Islands, and 357 are returned as of the "Church of God." During 1913 there were 199 births, 108 males and 91 females. Of these 163 were legitimate and 36 illegitimate. In the same period there were 41 deaths, 20 males and 21 females.

EDUCATION.

The state of education in the Dependency is far from satisfactory, especially in the country districts. £250 a year is devoted to education. The conditions obtaining at the present time do not offer any attractions to good and reliable teachers. The latter in all "registered" schools receive a capitation grant from the Government of 5*s*. a year for every pupil on his books, and a fee of 3*d*. up to the third standard, and 6*d*. from the fourth standard upwards in the case of destitute children. All parents and guardians pay a similar fee of 3*d*. and 6*d*. for the education of their children. While the Government grant is of great assistance to the teachers, they are largely dependent on the collection of fees from private individuals, who cannot always be relied upon to pay, and in a large number of cases offer payment in kind instead of cash. The result is that teachers, whether fit or unfit, must be tolerated or the schools must close, as in the case of North Side, Gun Bay and East End, where children are growing up in ignorance. All children between the ages of six and fourteen years residing within two miles of a school are required to attend 75 per cent. of the sessions of the school every term. It is estimated that there are about 1,030 children of school age in Grand Cayman. There are many who attach no importance whatsoever to the education of their children, and who do not consider even reading or writing as in any way essential to a child's future welfare. A Bill having as its object the establishment of free and compulsory education will be submitted at the forthcoming meeting of the Justices and Vestry, together with a bill for increasing by 2½ per cent. the present ad valorem duty of 5 per cent., in order to defray the expense of such a system and to make due provision for the payment of efficient teachers.

HOSPITAL.

There is a small building kept for the purpose of isolating infectious diseases, but is not generally used. Government Medical Officers are appointed for the Lesser Islands and Grand Cayman, whose duty it is to visit all the outlying districts.

PRISONS.

There are no prisons in the Dependency. Prisoners sentenced to more than six months' imprisonment are sent to Jamaica. There are three cells at Grand Cayman and one at Cayman Brac, which are used for the detention of those awaiting trial or sentenced to short terms.

CRIME.

There is very little crime, and offences are generally of a trivial nature, in most cases the result of excessive drinking.

POLICE.

The police force consists of an Inspector, five policemen and one district constable. The Inspector also performs the duties of Tide Waiter and Visiting Officer, while the services of the police in the country districts are utilized in the carriage of inland mails.

LIGHTHOUSES.

There are three lights, one at Georgetown, one at East End, Grand Cayman, and the third at Stake Bay, Cayman Brac. They consist of large lanterns hoisted on masts about seventy-five feet high, and are visible from ten to twelve miles out at sea. The lights of Georgetown and East End are of the same colour, namely, white.

MOSQUITOS.

The mosquito season begins in April and continues until September, when they begin to abate, and from November to February almost disappear. Householders adopt the method of lighting a smoke fire to ward off the attacks of these insects, which swarm in myriads and render life a torture to man and beast. A few houses are mosquito screened. There are fortunately very few of the anopheline or malaria transmitting variety. During the course of the last year there have only been two cases of malaria in persons who have never lived outside Grand Cayman, and these both resident in the same district, Red Bay. Although these islands are practically immune from the recognised mosquito-borne diseases, as malaria, yellow fever and filariasis, the mosquito is nevertheless seriously detrimental to health in other respects, the conditions of anæmia and general debility met with being attributed by the Government Medical Officer to the blood-sucking powers of these insects. Swamps are found in various places, but as these are below the level of the sea they could only be drained at a large expenditure of money.

CLIMATE.

The Cayman Islands are among the healthiest places in the world. There are no cases of illness attributable to climatic conditions. The weather is warm for the greater part of the year. The prevailing breeze is from the south-east from April until October, when the cool season begins with a change of the wind to the north-west in the early part of November. The following table shows the average temperature :—

	Morning.	Mid-day.	Evening.
Hot months	83°	89°	86°
Cool months—Nov. to March ..	71°	80°	74°

GENERAL HEALTH.

The death rate for the year was 7·1 per 1,000.

From the yearly report of the Government Medical Officer it would appear that pulmonary tuberculosis is on the increase, there being at present four cases, as compared with one at the beginning of the year. There have been a number of cases of fish poisoning, especially in the West Bay district. Almost all the fish in these waters are poisoned and unfit for human consumption, but until the precise cause and nature of the condition have been ascertained neither preventive nor curative measures can be effectually undertaken.

Generally the health of the inhabitants is eminently satisfactory.

BIRTHS, DEATHS, AND MARRIAGES.

There were 199 births during the year, or 22 per 1,000, of which 36 were illegitimate. There were 41 deaths, or 7·1 per thousand, and 36 marriages.

A great amount of intermarrying takes place.

CIVIL ESTABLISHMENT.

Dr. G. S. S. Hirst, who had been appointed Commissioner and Medical Officer in 1907, died in June, 1912. The affairs of the Dependency were temporarily administered by Mr. Edmund Parsons, the Senior Justice of the Peace, from June till the end of August, when the administration was taken over by Mr. H. H. Hutchings, Assistant Commissioner at Turks Islands. Mr. A. C. Robinson was appointed Commissioner and assumed duties on February 20th, 1913.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:—

JAMAICA.

(For Report for 1912–13, see No. 783.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House, Jamaica,
9th October, 1914.

SIR,

I have the honour to report on the Blue Book Returns of this Government for the financial year ended the 31st March, 1914.

I.—FINANCIAL.

1. The revenue and expenditure of the year, under the heads of Estimates, compared with those of the preceding year, were as follows :—

Revenue.

Heads.	Receipts, 1912–13.			Receipts, 1913–14.		
	£	s.	d.	£	s.	d.
Customs	449,433	10	5	426,686	18	11

Public Works and Buildings ..						
Lighthouses	227,363	14	2	144,344	10	10
West India Improvement Company's Lands, Cost of purchase						
New Public Buildings—Second Block	11,188	7	7	—		
Hurricane Assistance	20,073	18	2	338	8	10
Total for General Expenditure..	£1,304,939	14	11½	£1,065,434	19	2¼

2. The total revenue and expenditure for the last five years have been as shown below :—

	Revenue.	Expenditure.
	£	£
1909–10	992,976	1,033,794
1910–11	990,399	987,304
1911–12	1,161,014	1,155,208
1912–13	1,206,161	1,304,930
1913–14	1,048,639	1,065,435

The revenue exceeded the original estimate by £40,370 9*s.* 1*d.* £20,000 of this amount is however a refund of part of the money advanced in previous years from revenue for building the Rio Minho Branch Railway, that sum having been raised by loan.

The heads showing material increase over the estimate are Fees of Office Stamp Duties, &c., £15,725, Railway, £11,677, and Post and Telegraphs, £792, while there was a deficiency of £3,313 in Customs revenue and £4,348 in Interest.

The expenditure exceeded the Budget estimate by £13,660 8*s.* 9*d.*, but as supplementary appropriations amounting to £32,026 17*s.* 11½*d.* were voted, there was a saving of £18,366 9*s.* 2½*d.* on the total sums voted for the services of the year. The principal items of extraordinary expenditure have been £13,123 on the Rio Minho Branch Railway, £12,610 on the construction of Railway Pier No. 3, and an excess of £17,371 on the maintenence of the railway and the provision of new rolling stock. There was also considerable expenditure for re-housing and for relief works consequent on the hurricane of 1912 and the severe droughts. The excess of expenditure over revenue, amounting to £16,796, has reduced the surplus on 31st March, 1914, to £59,418.

The public debt of the Island (most of which is represented by productive investments) amounted to £3,810,447 on the 31st March, 1914. The accumulated sinking funds on the same date amounted to £908,379, leaving a net liability of £2,902,068. Included in the debt were guaranteed public loans for local purposes, secured on municipal rates and undertakings, amounting to £407,233, the sinking funds in respect of which amounted to £73,197.

The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together, for the last five years, are shown in the following comparative statements :—

Kingston City Council.

	Receipt.	Expenditure.
	£	£
1909–10	32,513	35,739
1910–11	35,755	35,385
1911–12	46,565	45,846
1912–13	41,515	43,846
1913–14	39,100	37,610

Kingston General Commissioners.

	Receipt. £	Expenditure £
1909–10	31,957	30,707
1910–11	60,082	52,373
1911–12	69,740	72,875
1912–13	44,656	54,842
1913–14	48,479	44,503

Other Parochial Boards (14 *Parishes*).

	Receipt. £	Expenditure. £
1909–10	111,586	117,461
1910–11	135,118	139,032
1911–12	123,179	124,059
1912–13	148,029	146,491
1913–14	154,813	148,199

The debts of the Parochial Boards to the Treasury for advances made for water-works and markets amounted at the close of the year to £22,648.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(*a*) *Imports and Exports.*

7 The total values of imports and exports for the last five years are as follows :—

	Imports. £	Exports. £
1909–10	2,561,674	2,628,307
1910–11	2,614,943	2,568,222
1911–12	2,865,553	2,948,067
1912–13	3,050,478	2,709,283
1913–14	2,837,446	2,430,207

The imports decreased by £213,032 and the exports by £279,283. These figures afford additional proof of the grave effect which the

prolonged droughts and the hurricanes of 1912 produced in the economic condition of the Colony, and the extent to which the prosperity attained in 1911 has been diminished. The exports of 1912 were £238,784 and those of 1913 £517,860 less than those of 1911.

The principal articles of import were :—

		1913.	Average four years.
Ale and Beer	galls.	295,715	289,978
	value	£49,285	£47,094

The Collector General remarks :—In the span covered by these summaries the Colony's import trade has increased by over a million, but the latter half of the period has witnessed the rapid declension of trade with Britain and a commensurate advance in the trade relations with the United States, and while "Other Country" makes a bid, Canada stands stationary. These are features that one would wish otherwise.

Of the total exports, amounting in value to £2,430,207, the proportion attributable to Island produce was	£2,216,211
Against the like figures in 1912 of	2,572,275
Or a decrease of	356,064
And the proportion attributable to British and foreign goods re-exported	213,995
Against the like figures for 1912 of.. ..	137,008
Or an increase of	£76,987

This decrease in the value of Island produce exported as compared with 1913 is made up principally of Bananas, £252,951; Cocoa, £25,095; Coffee, £16,152; Ginger, £11,400; Honey, £3,100; Yams, £1,018; Logwood extract, £5,250.

The figures for the two years brought into contrast, grouped under the general Board of Trade classification, work out thus :—

	1913.	1912.
	£	£
Class I. Live Animals, Food, Drink and Narcotics..	1,846,703	2,239,447
Class II. Raw Material and Articles mainly unmanufactured..	184,565	149,818
Class III. Articles wholly or mainly manufactured	216,579	216,176
Class IV. Miscellaneous unclassified ..	1,541	2,150
Class V. Bullion and Specie	180,816	101,692

The growth of the total export trade in the forty years since 1872 is as follows:—

1873 year ending 30th September	£1,226,011
1883 year ending 30th September	£1,469,446
1893 year ending 31st March	£1,759,806
1903 year ending 31st March	£2,292,335
1913 year ending 31st December	£2,430,207

In this connexion the following figures showing the trend of trade will also possess interest. The markets accepting the Island's exports in each of the years specified and the proportions falling to each were as under :—

	1873.	1883.	1893.	1903.	1913.
	£	£	£	£	£
United Kingdom ..	998,779	800,306	511,550	436,593	424,491

The chief articles of export show the following variations :—

		1913.	Average of four years.
Annatto	lbs.	613,044	856,175
	value	£5,108	£7,031
Beeswax	lbs.	57,904	72,268
	value	£3,257	£4,048
Cocoa	cwt.	46,359	53,449
	value	£114,738	£103,586
Coconuts	number	23,769,600	18,724,420
	value	£135,486	£85,241
Coffee	cwt.	58,193	77,668
	value	£158,578	£180,847
Divi Divi	lbs.	249,530	380,474
	value	£534	£903
Fruit, Bananas	stems	11,597,881	15,171,714
	value	£988,236	£1,310,826
,, Grapefruit ..	pkgs.	81,983	54,323
	value	£28,355	£18,939
,, Oranges	number	45,863,600	38,283,837
	value	£58,967	£42,565
Ginger	cwt.	21,234	24,972
	value	£36,637	£47,376
Hides	lbs.	619,707	464,338
	value	£23,239	£13,395
Honey	galls.	109,334	164,111
	value	£15,261	£20,630
Horses and Mules ..	number	122	79
	value	£2,101	£1,726
Limejuice	galls.	89,010	102,163
	value	£3,708	£3,956
Logwood Extract ..	pkgs.	23,965	21,101
	value	£170,427	£154,640
Pimento	cwt.	135,612	107,215
	value	£88,148	£75,912
Rum	galls.	953,677	1,259,915
	value	£101,328	£130,456
Sugar	cwt.	97,821	299,067
	value	£52,171	£190,023
Skins, Goat	lbs.	156,397	146,500
	value	£14,336	£13,620
Tobacco, Cigars	lbs.	74,473	70,311
	value	£36,025	£35,267
Tobacco, Cigarettes ..	lbs.	2,905	10,530
	value	£342	£1,330
Tobacco, Leaf	lbs.	43,303	30,268
	value	£1,473	£1,269
Tortoise Shell	lbs.	5,571	5,957
	value	£6,008	£5,116
Turtle	number	624	871
	value	£1,379	£2,063
Wood, Bitter	tons	3,441	2,602
	value	£5,162	£3,907
Wood, Fustic	tons	3,449	2,985
	value	£7,416	£7,176
Wood, Logwood	tons	50,081	33,409
	value	£106,423	£75,388
Yams..	cwt.	8,970	9,410
	value	£3,144	£3,122

The relation which each of the staples bears to the total is indicated by the following figures for the past three years :—

	1911.	1912.	1913.
Sugar	8·9%	5·1%	2·3%
Rum	3·1%	2·6%	4·6%
Coffee	5·5%	10·7%	7·1%
Cocoa	3·6%	5·4%	5·2%
Dyewoods	3·9%	3·4%	5·2%
Fruit	58·3%	54·7%	48·6%
Pimento	3·1%	3·0%	4·0%
Minor Products ..	13·5%	15·1%	23·0%

The acreage returned in 1912–1913, grouped under the four principal headings of the return and set against an average of four years, exhibits the following :—

	1913–14.	1912–13.	1911–12.	Average of four years.
	Acres.	Acres.	Acres.	Acres.
Tilled Lands	264,656	267,276	280,286	270,058
Guinea Grass	153,718	152,527	143,592	144,144
Commons	521,754	502,830	517,830	507,242
Wood and ruinate ..	1,173,120	1,222,699	1,230,001	1,232,024
Total	2,113,248	2,145,332	2,171,709	2,153,468

As compared with 1911–1912 the tilled lands show a decrease of 13,010 acres in 1912–1913 and 2,620 in 1913–1914, and the commons and guinea grass net increases of 3,924 and 9,126 acres, respectively. The droughts have resulted in a restriction of cultivation and an increasing of grazing.

The tilled lands in turn are classified as far as possible under description of cultivation, and the figures for the past year taken out under crop and compared with 1911–1912 and with an average of four years give the following summary :—

	1913–14.	1912–13.	1911–12.	Average for four years.
	Acres.	Acres.	Acres.	Acres.
Canes	31,160	31,753	34,766	32,083
Coffee	20,023	22,275	24,473	24,171
Coconuts	19,955	17,377	16,691	16,170
Bananas	85,468	81,071	82,435	77,964
Cocoa	10,849	11,236	13,355	11,848
Ground Provisions ..	61,834	66,153	74,723	82,785
Mixed Cultivation ..	31,238	33,479	30,167	27,756
Minor Items	4,129	3,932	3,676	4,217

The lesson taught by these figures is that the cultivation of bananas, coconuts and minor items is increasing at the expense of all other staples, and that the peasantry are rapidly abandoning the production of native foodstuffs. The general increase in tilled lands within the past 40 years has been very considerable, having risen from 123,428 acres in 1873–1874 to 264,656 in 1913–1914, while the pastoral industry has also made some progress, the number of acres in guinea grass having increased from 119,642 to 153,718, and in commons from 312,693 to 521,754 in the same period. The result of this access of industry on the part of the inhabitants is that the exports have increased practically 100 per cent., while the population has increased by about three-fifths.

The following abstract of the number of separate properties laid under contribution to general and parochial revenue during the year 1913–1914 and the different descriptions, set out and compared with the figures of the year preceding, show the following :—

	1913–14. Number.	1912–13. Number.
Properties valued at £20	62,889	62,554
" " at £30	6,653	6,618
" " at £40	53,428	53,240
" " over £40	30,715	30,177
Occupiers relieved	1,005	920
Properties in arrear	12,757	12,600
	167,447	166,109

The Surveyor General makes the following observations with regard to the sale of Crown Lands, &c., during the year :—

Sale of Land.

250 purchasers who bought 2,322 acres under the rules for the sale of Crown Lands to small settlers have completed payment of instalments of their purchase money and been given titles for their lands. There were also 43 other purchasers who paid cash down for 204½ acres. To date, of the total of 32,814 acres that have been sold partly on credit since 1897, about 22,734 acres have been paid for in full, 3,206 acres taken back for failure to pay, and 6,874 acres still remain in possession of purchasers to be paid for. £32,912 has been received for sale of lands since 1896. The total amount of purchase money received during the year is £1,132 11*s.* 4¾*d.* 29 persons were given refund of one-fifth of purchase money for establishing in permanent cultivation one-fifth of the area purchased or making building improvements on Town Lots.

Leases and Tenancies.

449¾ acres and 22 Town Lots have been leased to 33 persons for £349 10*s.* 6*d.* per annum, and 506 small prædial tenants have been taken on at rentals of from 12*s.* to 20*s.* per acre per annum. The total amount of rent received for the year is £2,834 13*s.* 6*d.*

Forfeiture of Lands.

247½ acres of land have been finally forfeited. Two notifications, 37 and 38, covering 2,785½ acres, have been issued, and forfeiture proceedings for non-payment of taxes in respect of this and 12,813¾ acres proceeded against in former notifications are now pending.

Escheatable Lands and Generally.

Four cases of escheat and squatting occurred during the year and the lands recovered are in possession of this Department. Sundry sites for Teachers' Cottages, School Houses, Hospitals, Court Houses, etc., etc., have been surveyed and title arranged for.

AGRICULTURE.

Despite the marked deficiency in the total rainfall for the year the distribution has been on the whole favourable for the growth of crops all over the Island, and the prospects for the resulting export in 1914 are good.

The effect of the hurricane and drought of the previous year is shown by the record of the exports of bananas, sugar, rum and cacao, which were all markedly below the average. Coconuts, however, show a gratifying increase despite the damage done to the groves at the west end of the Island by the recent storms, while orange oil has attained a position of importance as a standard article of export from Jamaica.

The work of plant sanitation has progressed during the year and the appointment of a special field officer to carry out the treatment of diseased bananas and coconuts under the Diseases of Plants Law has enabled the Department to maintain a close supervision of the areas where disease had been found. The Panama disease of bananas has been controlled by the drastic measures which were carried out by the Department and only a few sporadic cases occurred during the year on the original sites where it was first discovered in January, 1912. An outbreak of this disease, however, occurred in an isolated field in Hanover and has been dealt with during the year. Speaking generally, the Colony may be congratulated on the health and promise of its banana fields at the present moment.

Sisal hemp figures for the first time in a material way in the export statistics of the Colony, due to the enterprise of a planter in the district of Vere, who has been markedly successful in the cultivation of the true sisal (*Agave sisalana*) on a soil of limestone formation. This plant had failed when cultivated on alluvial soils some twenty years ago owing to its habit of polling prematurely. It has now been demonstrated that it can be grown with success and profit on a limestone soil in the dry and hot district of Vere and a good deal of planting is now taking place.

A perennial wild cotton from Cuba has been grown on a small scale during the year and the results were so promising that a large extension of this crop is now being undertaken by planters in districts suitable for the growing of cotton.

Diseases of animals have not occasioned much concern during the year, the livestock of the Island having been unusually free from serious diseases.

A few cases of anthrax were dealt with, while trypan blue was employed on a large scale on working cattle suffering from tick fever with quite remarkable results.

The Government Stock Farm closed the year with a healthy improvement in its finances, while the first sale of pedigree bulls in February attracted a good number of buyers, some 23 dairy bulls being sold by public auction.

The experiment with silage has been continued, and a further proof obtained of the efficacy of the silo for preserving fodder in districts where dry weather has to be contended with by stock raisers and dairymen. An improved formula for spraying cattle for ticks was tested out at the farm during the year, and the materials—paranaph and arsenite of soda—are now being supplied to the public at cost.

The recently established Farm School at Hope continues to progress, and it is satisfactory to find that a large proportion of the students already trained are finding useful occupations in various branches of agriculture.

The work of plant distribution has recently been enlarged by the establishment of local nurseries in Portland, St. Thomas, Clarendon, and St. James under the direction of the Agricultural Instructors of the Jamaica Agricultural Society.

In this way 125,000 cocoa plants have been distributed, mainly to small settlers, during the year. This enterprise should in a few years result in a marked increase in the exports of cacao from the Colony.

The total number of plants distributed to the public during the year was 233,000, as against 172,000 last year and 159,000 in 1911-1912. These figures indicate that planting enterprise is on the up-grade and that the cultivation of permanent crops is steadily progressing.

The work of the Government Laboratory shows a substantial increase in the number of samples dealt with during the year. Through the activity of the Police a satisfactory check on the quality of foods and drugs has been maintained.

The records of the Laboratory indicate that on the whole the public is being honestly served by the purveyors of these articles.

The public supply of milk alone remains unsatisfactory, 29 per cent. of the samples tested having been found to be diluted with water.

SHIPPING.

The ships reporting show a decrease of 70 in number and an increase of tonnage of 206,473 tons. The figures are :—

Steamers and Sailing Vessels.

1912—1,471 ships with tonnage	2,341,823
1913—1,401 ships with tonnage	2,548,296
Decrease in ships, 70 ; increase in tonnage, ..	206,473

Steamers and Sailing Vessels.

The clearances were :—

1912—1,453 ships with tonnage	2,346,615
1913—1,400 ships with tonnage	2,569,827
Decrease in ships, 53 ; increase in tonnage ..	223,212

Distinguishing between ships (steamers and sailing vessels) reporting with cargo and those reporting in ballast, the account appears as follows :—

Reporting with Cargo.

1912—1,169 ships with tonnage	2,068,855
1913—1,123 ships with tonnage	2,201,382
Decrease in ships, 46 ; increase in tonnage	132,527

Reporting in Ballast.

1912—302 ships with tonnage	272,968
1913—278 ships with tonnage	346,914
Decrease in ships, 24 ; increase in tonnage	23,946

Separating steamers from sailing vessels, the analysis shows that the arrivals of steamships were :—

1912—1,282 ships with tonnage	2,300,272
1913—1,201 ships with tonnage	2,498,859
Decrease in ships, 81 ; increase in tonnage	198,587

The following tables show the arrivals with cargo and the arrivals in ballast :—

Steamships arriving with Cargo.

1912—1,033 ships with tonnage	2,050,711
1913— 991 ships with tonnage	2,183,805
Decrease in ships, 42 ; increase in tonnage..	133,094

Steamships arriving in Ballast.

1912—249 ships with tonnage	249,561
1913—210 ships with tonnage	315,054
Decrease in ships, 39 ; increase in tonnage	65,493

The steamers clearing were as under :—

1912—1,285 ships with tonnage	2,310,835
1913—1,207 ships with tonnage	2,525,255
Decrease in ships, 78 ; increase in tonnage	214,420

Separating those clearing in ballast from those taking cargo, the figures are :—

Cleared with Cargo.

1912—1,236 ships with tonnage	2,198,245
1913—1,122 ships with tonnage	2,304,464
Decrease in ships, 114 ; increase in tonnage	106,219

Cleared in Ballast.

1912—49 ships with tonnage	112,590
1913—85 ships with tonnage	220,791
Increase in ships, 36 ; increase in tonnage..	108,201

The arrivals from the United Kingdom and British possessions were :—

Sailing vessels	145	..	tonnage	15,943
Steam vessels	515	..	tonnage	1,442,556
	660			1,458,499

From foreign countries :—

Sailing vessels	55	..	tonnage	33,494
Steam vessels	686	..	tonnage	1,056,303
	741			1,089,797

III.—LEGISLATION.

Seventeen Laws were passed during 1913, the most important being :—

Nos. 16 and 17, relating to Irrigation in the parish of Clarendon (Vere) ;

No. 15, giving effect to the International Opium Convention ;

No. 14, for the better Regulation and Control of Cinematograph and similar Exhibitions ;

No. 11, the Westmoreland Relief Law, granting loans for the restoration of dwellings destroyed by the hurricane of November, 1912 ; and

No. 12, repealing the Copyright Laws.

The usual financial measures and certain amending Laws complete the list.

IV.—PUBLIC EDUCATION.

The Director of Education furnished the following statistics :—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Schools on Books for Year ended 31st October.	Average Attendance for Year ended 31st October.	Percentage on Average Attendance of Number on Books.	Total Payments to Elementary Schools and Teachers.
1912–14 ..	698	100,179	60,900	60·79	£66,847
1913–14 ..	697	96,757	59,666	61·66	£66,344

The annual examination of teachers and training college students shows the following results :—

There were 123 Jamaica students presented, of whom 92 passed, 27 obtaining honours. Of the 16 students from British Guiana and the Leeward Islands all passed except one.

For the Pupil Teachers' examination 462 were presented and 235, or 51 per cent., passed ; of volunteer candidates 2,099 were presented, and 809, or 39 per cent., passed.

The total amount expended on elementary education through the Department was £83,937, as compared with £91,387, and by the Public Works Department, in the building of Government Schools and schoolmasters' houses, £10,407, as compared with £6,248 in the previous year.

The principal developments in education matters during the year have been the better housing of a few of the schools in Government buildings, the bringing into full operation of the Technical and Continuation Schools, and the establishment of School Boards throughout the Island. Progress has also been made in the teaching of hygiene, sanitation, and agricultural instruction.

The Director of Education has submitted a report from Colonel Hicks, one of the Inspectors, who has served in the Department for thirty-eight years, and he gives some interesting particulars as to the progress of education during that period. He points out that the average school attendance has increased by 122 per cent., while the population has increased 65 per cent.; that the number of first-class schools has increased from 8 to 37 per cent., second class schools from 28 to 45 per cent., and that third class schools have decreased from 57 to 17 per cent. He also shows that the merit of the schools in the different classes has attained a much higher standard, the comparison being as follows:—

Year.	1st, 62 marks.	2nd, 51 marks.	3rd, 40 marks.
1876 ..	8 per cent.	Less than 1 per cent.	Less than 1 per cent.
1912–13 ..	40 per cent.	51 per cent.	63 per cent.

This retrospect indicates that not only has literary education improved greatly in quality, but that a wider scope has been given to teaching in the elementary schools, embracing preparation for industrial pursuits.

With reference to teachers' salaries Colonel Hicks states:—

"A specially gratifying festure of the progress made since 1876 is the improvement in the income of teachers. Comparing the salary of the principal teacher of an elementary school in Jamaica in the years 1876 and 1913, the increase is 76 per cent. I know of no class of workers in the Island, professional or otherwise, the proportionate increase of whose average income has been equally great. Let it be confessed that it is not easy to name any class whose work has shown an average increase of merit equal to that of the school teachers. The teachers and the Government have combined to produce the result, the Government little by little, in successive steps, enlarging the scope of its grants, and the teachers by increased merit earning larger grants. . . . The pension scheme, just brought into force, is a factor that will still further increase the difference between the financial prospects of the teacher 38 years ago and now."

The Director of Education reports that:—

"The proportion of schools in the first, second and third classes remains almost unchanged, which is probably testimony to the consideration allowed (and properly allowed) by the Inspectors for the distressful conditions under which school work was carried on in very many schools in the three western parishes which were slowly recovering from the effects of the hurricane of the preceding year, and in Southern Saint Elizabeth and Southern Manchester from the effects of drought."

Industrial Schools.

The number of inmates of the Industrial Schools, male and female, was :—

Stony Hill	481
Shortwood	23
Alpha Cottage	183
Belmont	19
Happy Grove	25
A total of ..	731

Secondary Education.

The expenditure of the endowed schools during the year was as follows :—

	£
Jamaica College	3,405
Munro and Dickenson's	8,068
Wolmer's	3,627
Manning's	994
Rusea's	279
Titchfield	1,836
Beckford and Smith's	370
Manchester Schools	294
Vere Schools	1,264
Montego Bay School	806
Guthrie Davidson's	62
	£21,005

The total number of pupils was 1,432, including those receiving elementary education in the Titchfield Schools. One boy from the Jamaica College obtained the Rhodes Scholarship, one from Wolmer's took the Jamaica Scholarship, and two scholarships for girls were awarded to pupils from Wolmer's, the £60 scholarship being gained by a pupil from Munro and Dickenson's.

Owing to an outbreak of mumps the Cambridge Local Examination was not held at Potsdam (Munro and Dickenson's), but at the other centres 173 boys and girls passed the examinations, 29 of them taking honours.

V.—GOVERNMENT INSTITUTIONS.

(a) *Public Hospital, Kingston.*

Indoor patients treated 2,919; outdoor patients, including paupers, 8,299; dressings done for outpatients, 26,227; prescriptions made up, 16,983; total surgical operations, 929 daily. Dental cases, 1,276; daily average number of inmates, 216; total cost of maintenance £10,692; receipts, £741 17*s.* 7*d.*

(b) *Victoria Jubilee Lying-in-Hospital.*

Number of patients admitted, 634; 10 pupil nurses admitted for training, all of whom passed and received certificates; average daily number of patients, 15; receipts, £373 16*s.* 4*d.*; expenditure, £1,245 4*s.* 3*d.*

(c) *Lunatic Asylum.*

Number of patients on 31st March, 1914, 1,341, an increase of 27 since beginning of the year. Total number of patients under treatment during year, 1,634; daily average resident, 1,323; rate of recovery, 49·82 per cent; admissions, 320; discharges, 163; deaths, 130; death-rate, 9·90 per cent.

The proportion of insane is one to 645 population.

A new ward for the safe custody of criminal lunatics has been completed.

Cost of maintenance £19,613; receipts, £9,941.

(d) *Lepers' Home.*

Patients on 31st March, 1913		111
Admitted		22
		133
Discharged	4	
Absconded	1	
Died	8	
	—	13
On 31st March, 1914		120

The death-rate was 6 per cent.; cost of maintenance, £1,087 8*s.* 3*d.*; receipts nil.

The Medical Superintendent reports that he has abandoned the treatment by Nastin after a fair trial, and that he has been using "Antileprol" for over two years with very excellent and gratifying results. He explains that "Antileprol" is a refined product of chaulmoogra oil.

(e) *Government Savings Bank.*

The liability of the bank to its depositors on current account was increased during the year by £2,854, the decrease on ordinary accounts being £6,877, while the Government accounts were increased £9,731.

The ordinary deposits amounted during the year to £106,647, a decrease of £914, and the withdrawals to £113,524 a decrease of £7,528, as compared with the previous year.

The balance-sheet on 31st March, 1914, shows a liability to depositors of £319,826.

The income and expenditure of the Savings Bank for the year may be summarised as below.

Income.

Interest on investments	12,026	10	1
Miscellaneous receipts	17	0	7
Deficiency provided out of General Revenue ..	724	13	10
	£12,768	4	6

Expenditure.

Interests on deposits	7,139	16	2
Loss on realisation of investments	5,628	8	4
	£12,768	4	6

The number of pass books examined was 6,532.

(f) *Registration of Titles.*

The number of titles registered is steadily increasing at the rate of between 300 and 400 each year.

The Titles Assurance Fund amounted at the end of the year to £5,858 18*s.* 11*d.*

VI.—JUDICIAL STATISTICS.

Courts, Police, and Prisons.

The judicial statistics show that the total number of convictions in Circuit Courts was 85, as compared with 131 in 1912–1913; of convictions in the Resident Magistrates' Court 8,628, as compared with 7,935; of summary convictions 14,832, as compared with 15,028.

The proportion of convictions of offences against property continued high. Convictions for prædial larceny show an increase from 2,369 last year to 2,643 in the year under report.

These high figures are attributable to the long period of drought which prevailed in the greater portion of the Island, and the effects of the hurricane in the western parishes which occurred in 1912.

The Attorney General, commenting on these statistics, remarks :—

"The prædial larceny figures are disheartening. Convictions for the offence show an increase of 273 as compared with the figures for 1912–1913, and the latter figures showed an increase of nearly 1,000 when compared with those for the previous year. It will perhaps be possible, when experience has been gained of the working of the Detention of Habitual Criminals Law, 1914 (Law 30 of 1914), to devise some means for the prolonged detention and reformation of the prædial thieves who do so much harm to agriculture, especially that of the peasantry, in the country districts."

There were 7 convictions for murder in the course of the year, and 3 for manslaughter, comparing with 1 and 5, respectively, in the previous year.

The committals to the prisons during the year numbered 7,079, and to lock-ups for short terms 2,197, making a total of 9,276, as compared with 7,005 in the previous year, an increase of 2,271.

The re-convictions during the year amounted to 984, of which 275 were second convictions, 200 third and 500 fourth and upward. During 1912–1913 the re-convictions numbered 1,690.

The daily average of prisoners in custody in the Penitentiary and Saint Catherine District Prison was 1,456, as compared with 1,259 during the previous year. There were 59 deaths in the prisons, as compared with 39 during 1912–1913. There were 4 executions of capital punishm[illegible] In the previous year there were 3.

Considering the institutions separately: 23 deaths occurred in the General Penitentiary, representing a rate of 26·5 per 1,000. At Saint Catherine District Prison 36 deaths occurred, representing a rate of 60·94 per 1,000. The state and discipline of the prisons has been good, and no corporal punishment was inflicted for breaches of discipline.

The reformatory branch at the District Prison contained 29 lads on 31st March. The inmates have a building and compound separate from those occupied by the regular prisoners in the District Prison.

During the year 1913–1914, 135 persons were under supervision as probationers under Law 27 of 1909. From these probationers 835 reports were received. Six probationers were brought before the Court for subsequent offences, showing 4·5 per cent. of lapses.

The gross expenditure for the General Penitentiary amounted to £16,182, and for the Saint Catherine District Prison, £7,554, total £23,736. The gross earnings in the case of the General Penitentiary were £3,817, and of the Saint Catherine District Prison, £1,785. The yield of the Saint Catherine District Prison Farm was valued at £1,948. £974 of that amount is the value of articles grown and consumed by the prisoners, thereby reducing the cost of the prison by that amount.

Police.

The monthly average number of officers and men below the allowed strength during the year was 46, but the improvement in health of the force was so marked that the number of days absent from duty on account of illness was 4,722 less than in 1912–1913, and 6,044 less than in 1911–1912. 202 fewer men were treated in hospitals, and 192 fewer in barracks or in private quarters than in 1912–1913. This seems to indicate that the anti-malarial measures adopted have, at any rate, in the case of the Police, been attended with gratifying results as regards both economy and efficiency.

The number of cases reported to the Police and Magistrates was 37,710, those prosecuted 31,430, and convictions were obtained in 19,672 cases, the number of persons prosecuted being 37,842 and those convicted 23,545. 37 were under remand for trial. The incidence of crime per 10,000 of population was 453·59, against 424·25, 408·92, and 383·95 for the three previous years.

There were 46 habitual criminals under police supervision and 2,576 under police surveillance during the year.

The sub-officers and men travelled 651,774 miles in the execution of their duty, and generally it may be observed that it has been an arduous year for the Police.

VII.—VITAL STATISTICS AND PUBLIC HEALTH.

The estimated population of the Island on the 31st March, 1914, was 864,864. This figure is arrived at as follows :—

Estimated population on 31st March, 1913			855,682
Births registered, 1913–14	30,527		
Deaths registered, 1913–14	18,741		
			11,786
			867,468
Migration :—			
Arrivals—general	23,632		
Arrivals—East Indians	293		
		23,925	
Departures—general..	26,310		
Departures—East Indians	219		
		26,529	
			2,604
			864,864

The East Indians arriving were indentured immigrants.

Of the general arrivals and departures 11,817 and 15,096, respectively, were labourers, and show a net emigration of 3,279 persons of this class. The remainders, 12,108 arrivals and 11,433 departures, represent a net immigration of 675 persons, of whom 74 were East Indians.

Migration of labourers took place chiefly in respect of the following countries :—

	Departures.	Returned.	Excess. Departures.	Excess. Returns.
Central America	12,089	9,835	2,254	—
Cuba..	2,422	1,500	922	—
Hayti	318	358	—	40
Other Countries (American and West Indian) ..	267	124	143	—
Total	15,096	11,817	3,319	40

The mean Island population for the year, that is, the population on the 30th September, 1913, ascertained by adding to the census figures the excess of births over deaths registered since the census, was 863,427. On these figures the marriages, births, and deaths have been calculated.

The following is the number of marriages, births, and deaths registered during the year, with the rates per 1,000 for this and the preceding year :—

		Rate per 1,000.	
		1912–13.	1913–14.
Marriages	2,683	3·7	3·1
Births	30,527	38·8	35·3
Deaths	18,741	25·1	21·7

Of the births, 19,691, or 64·5 per 100, were illegitimate. The rate was 64·2 in 1912–13, and the average for the decade 63·3.

The general death-rate decreased by 3·4 per 1,000, and the proportion due to deaths of infants under 5 years of age shows a reduction of 4·3 per cent. Of the total mortality the deaths of infants were :—

Under one year	5,241	or 27·9 per cent.
One year ..	1,469	or 7·8 per cent.
Two years ..	464	or 2·5 per cent.
Three years ..	337	or 1·8 per cent.
Four years ..	254	or 1·4 per cent.
	7,765	or 41·4 per cent.
1912–1913 ..	9,799	or 45·7 per cent.

Comparing the infant mortality with the births during the year, 30,527 infants were born, and 6,710 died at one year of age or under, equal to 21·98 per cent. The percentage under 5 years was 25·4. These figures indicate that the most critical age for children is one year and under, and especially in Kingston, where 2,013 births occurred, while 635 infants, or 31 per cent., died at that age during the year.

There was great variation in both the birth and death rates in different parts of the Island. The birth rate in Hanover, 38·6 per 1,000; Clarendon, 38·3; St. Ann, 38·1; Saint Catherine, 37·2, were the highest, and Manchester, 31·6; Saint Elizabeth, 32·3; Saint Andrew, 32·6; Kingston, 33·7, were the lowest. The death rate of Kingston, 29·1; Hanover, 27·7; Westmoreland, 25·3; Trelawny and Saint Catherine each 22·6, and Saint Thomas 22·2, were highest, and Saint Ann, 17·4; Saint Mary and Manchester each 17·7 and Saint Elizabeth, 18·3, the lowest.

Uncertified cases of death were 70·0 per cent., compared with 73·3 in 1912–1913 and 76·6 in 1909–1910 for the whole Island. The figures for Kingston were 15·7 in 1913–1914 and 18·8 in 1912–1913.

The principal causes of death in Kingston were as follows :—

Causes.	1913–14.		1912–13.	
	Number of Deaths.	Rate per 100 of Total Deaths.	Number of Deaths.	Rate per 100 of Total Deaths.
Diarrhœa and Enteritis	290	16·7	332	17·2
Phthisis	163	9·4	174	9·0
Heart Disease	110	6·3	118	6·1
Enteric Fever	73	4·2	85	4·4
Atrophy, Icterus and Scleroma of new born (under 1 year).. ..	185	10·6	235	12·2
Atrophy, Icterus and Inanition (1 year and upwards)	45	2·5	52	2·6
Chronic Bright's Disease	74	4·2	48	2·4
Bronchitis	59	3·4	49	2·5
Dysentery	47	2·7	35	1·8

Deaths from malaria in Kingston numbered 22, against 25 in 1912–1913, and from fever (not otherwise defined) 21, against 29. There was no vote for the abatement of malaria during the year, and the Commission was dissolved, leaving the works contemplated not quite complete. It is satisfactory to note that the position reached in 1912–1913 has been maintained and that there has been a further slight decrease in the number of victims from this malady. It must, however, be recollected that until measures for abatement of malaria are universal throughout the Island the disease cannot be wholly eliminated from the statistics of Kingston, as the General Penitentiary, the Lunatic Asylum, the Public Hospital and other institutions draw their inmates from all parts of the Colony and many persons come from the country for medical advice and treatment. Emigrants returning from the malarious portions of Central America also contribute materially to the number of cases.

Public Health.

The expenditure of the Medical Department during the year amounted to £75,292, as against £74,621 in 1912-1913.

The progressive increase in the expenditure of this department in the course of the last seven years is noticeable. The figures are as follows :—

1907–8	£54,839
1908–9	£56,404
1909–10	£58,317
1910–11	£64,986
1911–12	£68,626
1912–13	£74,621
1913–14	£75,292

This does not include the cost of building, which was £9,229 in the past year, bringing up the total to £84,521, or nearly 8 per cent. of the revenue collected.

During the year 225 persons were detained at the Quarantinee Station, and quarantine restrictions were imposed upon ships coming from Trinidad, Brazil, Venezuela, Cuba, Grenada, Pensacola, Baltimore, St. Lucia, the Pacific Coast of South America, Santa Marta, Martinique, Galveston, Argentine, Haiti and other countries, in consequence of reports of cases of infectious disease in those places.

Salvarsan was utilized in the treatment of yaws and syphilis in the public general hospitals in 788 cases and in 90 at out-stations, the patients returning to their homes after the operation on these last-mentioned occasions. One death occurred in hospital, 46 patients remained under treatment, while all the others are reported to have had their symptoms cured. Reports have also been received of 40 cases treated in the Kingston and Saint Andrew Poor House, and 14 in the Saint Ann Poor House. One patient died 21 days after a second injection and one 73 days after the first (but unfortunately no post mortem examination was made in either case and the causes of the deaths have not been ascertained) one remained under treatment, the remainder having their symptoms cured or much improved. Some of these cases were of seven to ten years' duration and apparently hopeless under the treatment formerly resorted to, the patients lapsing into pauperism and becoming inmates of the Poor Houses. Nearly all of them had a complete recovery and several were able to return to work. This remedy promises under proper safeguards to solve the problem of preventing the ravages due to yaws and syphilis. There were 11,945 attendances on yaws patients without salvarsan treatment, 6,272 being first visits. The deaths registered as due to yaws and syphilis during the year numbered 244.

A special feature of the medical returns is the decrease of 2,347 in the number of cases of malaria treated in the hospitals, and of 25 in the mortality from that disease as compared with the previous year. The decrease exceeds 27 per cent. in the cases treated and 31 per cent. in the death rate. The Registrar General's returns show a decrease of 168 in the total number of deaths in the Island attributed to malaria, equal to 31·21 per cent. Eighty of the deaths are not medically certified, but as the percentage of decreases shows so near an approximation to the hospital cases the figures may be regarded as sub-

stantially accurate. The Superintending Medical Officer has submitted no comments on these figures, but he has furnished reports by various District Medical Officers showing, in most cases, that some attention is being paid to the question of mosquito reduction by the local health authorities. As the matter is of great importance, I cull from these reports the following extracts :—

The Medical Officer for Kingston :

"*Malaria.*—Twenty-two deaths were recorded under this head. This indicates that the anopheline has not yet been banished from Kingston. I think, however, a tribute is due to the successful efforts of the late Malaria Commission in this connection, for undoubtedly the prevalence of malaria has been greatly reduced. I think the above-quoted figures place the city in an unduly unfavourable light, as I feel pretty certain a considerable proportion were imported from outside. At all events, I am sure of this, that the majority of cases that I treated came from other parishes."

The Medical Officer for Port Antonio :

"It affords me very great pleasure to call attention to the marked decrease in the number of cases of malarial fever treated during the past year. The admissions to hospital for malarial fever numbered 892, as compared to 2,428 cases during the preceding year.

"It is difficult to account for this decided falling off in the malarial admission rate. It might be thought that the lessened malarial rate among the coolies was the cause of it, but the falling off was more noticeable among the creoles.

. . . . . .

"It might also be thought that the few sanitary improvements that have been carried out, such as the laying of the concrete water tables along the new streets recently taken over from the Titchfield Trust and the filling in of the Bound Brook Swamp, may have been the cause of this very satisfactory condition of affairs. As regards the former, the people living on the streets are all in good circumstances and never come to the Hospital, while as regards the Bound Brook Swamp, this was covered by tidal waters.

"I have never found anopheline mosquitoes breeding in salt water. That some other cause is in operation is apparent from the fact that few cases of malarial fever have been admitted to the Hospital from places where no sanitary work has been carried out, places that hitherto have furnished a considerable number of cases, such as Fellowship and Breastworks. Whatever the cause may be, it is a matter for congratulation, and it is to be hoped that the reduction in the admission rate will be permanent."

I understand that the late Malaria Commission, acting, as they believed, on the theory and practice which has proved effective elsewhere, endeavoured to abate the breeding of malarial mosquitoes, and to diminish the sources from whence the reduced number of mosquitoes could become infected, thus rendering as many as possible harmless as transmitters of the disease. With this object in view, they caused search to be made in the malarious districts for breeding places, and furnished particulars to the local health authorities, assisting, as far as funds permitted, in destroying these breeding places. They established classes to teach the Sanitary Inspectors how to identify the different descriptions of mosquito larvæ, and to destroy them, and employed an officer to go round the country and deliver free illustrated lectures of a popular description, so that the householders might be interested in the matter, with a view to their co-operation. The issue of quinine to school children, the police, and indentured coolies, and its sale at cost price to the general public at the Post Offices, was started. They also urged the stocking of all tanks and other bodies of stagnant water with mosquito-destroying fish.

Whether or not these measures have been the cause of the diminution of malaria may be a question of the degree to which they have been given effect to, and I regret to say that the evidence at my disposal on the point is not sufficient to be regarded as conclusive, but I have no doubt that the lady and gentlemen who gave their services in this useful work, and outlined the principles on which it should be conducted, will study the statistics with the hope that the labour which thay have devoted to the matter will result in much ultimate benefit to the Colony, and will be gratified that so far there seems reason to infer that the considerable saving of life and decrease of sickness from malaria during the past year are in some measure attributable to their efforts, and that the small public vote of £2,000 per annum which was placed at their disposal in the years 1911–1912 and 1912–1913 has been expended in such a manner as to indicate how the work of malaria abatement can be continued without straining the resources of the Colony.

The number of persons thymolised for hook-worm during the year was 8,204.

The arrangements made for the treatment of out-patients at hospitals in 1910–11 resulted in a further increase in the numbers treated. During 1913–14 the numbers were :—

At Kingston Hospital	8,299
At public general hospitals	11,893
In districts	51,066
Under the ticket system of reduced payment ..	1,181
	72,439

The total number of patients treated in public general hospitals during the year under review was 30,716. There were 617 deaths in hospitals. Adding the cases treated in the Kingston Public Hospital, 2,919, the Jubilee (Lying-in) Hospital, 634, the Lunatic Asylum, 1,634, the Lepers' Home, 133, the total number of patients treated in Government hospitals and asylums total 36,036.

The principal diseases for which patients were admitted into the public general hospitals were as follows :—

Diseases.	1913–14.		1912–13.	
	Cases.	Deaths.	Cases.	Deaths.
Malarial Fever—				
Intermittent	5,885	29	8,068	49
Remittent	217	23	353	21
Pernicious	9	2	45	10
Skin Diseases	6,408	5	3,614	10
Disease of the Digestive System ..	1,610	91	2,010	100
Local Injuries	2,089	30	1,935	33
Rheumatism	1,081	—	1,194	—
Diseases of the Respiratory System	940	45	672	56
Disease of the Circulatory System	198	38	172	27
Diseases of the Cellular Tissue ..	722	7	696	4
Ankylostomiasis (Hook-worm) ..	1,815	17	1,594	16
Gonorrhœa	459	—	316	—
Syphilis	761	15	628	11
Anæmia	164	16	195	11
Diseases of the Eye	402	—	326	—
Blackwater Fever	8	1	—	—

The Government Bacteriologist and his assistant conducted during the year examination of 6,697 specimens.

The routine work embraced the usual examination of specimens for the correct diagnosis of diseases, for testing the purity of water supplies, &c., and the "special investigations" embraced pellagra, streptothrix and vomiting sickness.

Dr. Seidlin, of the Liverpool School of Tropical Medicine, paid a visit to the Island for the purpose of investigating "vomiting sickness," and Dr. Scott, the Government Bacteriologist, was associated with him in so far that he assisted him in certain portions of his work, the Government Laboratory being placed at his disposal. By the process of eliminating cases, loosely termed "vomiting sickness," which were traceable to specific causes, and grouping the remainder which showed similar characteristics, it was hoped that the disease would be recognised, but the results have been negative. The theory of yellow fever has been exploded, and Dr. Scott advances the suggestion that the "rapidity of progress (or, in rarer instances, rapid and complete recovery) rather indicates the action of a poison," adding that "since feeding experiments have proved negative and chemical tests (which in former years have been repeatedly tried by the Island Chemist) have revealed none of the usual poisons, and no signs of alkaloids, the poison (if such it be) is one which rapidly leaves the stomach, or is rapidly discomposed; for example, it may be of the nature of a glucoside," and "the only suggestion I can offer as to the source of this hypothetical poison is that, since one can never obtain any history to implicate any particular article of food, it is due to something which is apparently dangerous only at certain times of the year, some fruit, perhaps, or vegetable, or, what in my opinion is more probable, some growth (fungus, yeast, moulds, &c.) on or in this food rendering it toxic."

Dr. Sambon, also of the Liverpool School, likewise visited the Island, accompanied by Captain Siler, M.D., of the United States Army, to make investigation into the prevalence of pellagra, and the Government bacteriological staff is continuing the investigation.

The Central Board of Health has given much attention to questions of public health, and especially in connection with measures for the prevention of plague, for the destruction of the hook-worm, for the avoidance of infection from consumption, &c. Certain leaflets prepared or obtained by them have been widely circulated, and the local health authorities are now in possession of regulations embracing a wide range of duties bearing on the prevention of diseases, the notification of infectious diseases, &c.

Some system is gradually being infused into the operations of the local health authorities, and as these become more efficient it may, I think, be confidently expected that the health of the population will improve.

VIII.—POSTAL AND TELEGRAPH SERVICES.

The Postmaster for Jamaica furnishes the following figures, com-

paring the postal revenues for 1913-1914 with those of the previous years :—

	1912–13.	1913–14.
	£	£
Postages	40,992	42,213
Commission on Money Orders	364	315
Local Commission on British Postal Orders	754	787
Commission on Local Postal Orders	403	—
Miscellaneous	583	751
Telegraphs..	8,125	7,811
Total	£51,221	51,877

These statistics show an increase of £656 in gross revenue as compared with the previous year, due to increases in postage and British postal orders; telegraph and other business fell off. The expenditure of the year by the department amounted to £50,710, as against £51,211 in 1912-1913.

The progress of the department is illustrated by the following figures :—

	Revenue.	*Expenditure.*
	£	£
1893–1894.	26,687	20,504
1903–1904.	33,096	36,217
1913–1914.	51,877	50,710

As compared with the two previous years the number of letters and postcards were :—

	At General Post Office.		
	1913–14.	1912–13.	1911–12.
Outwards	4,895,811	4,493,416	4,461,971
Inwards	6,170,649	5,499,762	5,649,423
Total	11,066,460	9,993,178	10,111,394
	At District Post Offices.		
Total	3,144,523	1,486,638	1,577,412
Grand Total	14,210,983	11,479,816	11,688,806
Telegrams sent and received	226,497	223,635	192,270

There is an increase of 2,862 in the number of telegrams sent during the year, but a decrease of £313 15s. 2d. in telegraph revenue, which the Postmaster ascribes to greater economy being exercised by the public in the wording of messages.

Seven new District Post Offices were opened during the year, making the total number 200.

4,900 money orders, for £16,339 11*s.* 2*d.*, were issued in Jamaica, and 33,895 orders, for £84,106 15*s.* 10*d.*, the issues of other countries, were paid here. The principal item is £76,393 18*s.* 0*d.* paid on behalf of the United States, chiefly on account of remittances from the Canal zone.

British postal orders were issued of the face value of £76,844 18*s.* 0*d.* and orders for £42,210 10*s.* 8½*d.* were cashed in the Colony.

50,087 parcels, of the declared value of £56,959 1*s.* 2*d.*, were imported by parcels post, and 13,596, of the value of £13,281 11*s.* 11*d.*, despatched.

Government Railway.

The total receipts were £176,677, against £183,279 in 1912–1913, the expenditure, exclusive of debt charges, £112,529, against £95,157 in 1912-1913, making the net earnings £64,148, against £88,122. The receipts fell short of those for 1912-1913 by £6,602, due to diminished traffic consequent on the hurricane which occurred in November, 1912, the droughts which prevailed during a part of the year, and a falling off of tourist traffic. There was an increase of expenditure of £17,372, so that the deficiency of net revenue as compared with the previous year was £23,974. These figures do not include an expenditure of £12,610 on Railway Pier No. 3. After paying debt charges on the capital expenditure of £2,721,725, the net loss to the Public Treasury on the working of the railway system amounted to £53,543 for the year. The loss for the twelve years to 1912-1913 had been £750,168, bringing up the total since the line was taken over by the Government to £803,711.

During the year the second mortgage bonds amounting to £100,000, which were not in the hands of the Government, were purchased for £45,000, thus securing to the Island the full ownership of the railway.

PUBLIC WORKS.

The total expenditure of the Public Works Department for the year under review was £174,618 6*s.* 10½*d.*, summarised as follows :—

	£	*s.*	*d.*
Salaries and other Departmental Charges ..	19,121	16	9½
Main Roads and Bridges, Maintenance ..	89,038	17	0
New Works	6,795	6	0
Public Buildings, Maintenance	9,827	4	10
Public Buildings, New Works	19,370	0	10
Lighthouses	1,591	6	10
Rio Cobre Irrigation Works	2,677	1	10
Spanish Town Water Works	551	12	7
Government Schools	10,407	10	10
Telegraph and Telephones	3,625	5	1
	£163,006	2	7½
Adding the work done for other Departments and Parochial Boards and paid for from other votes	11,612	4	3
	£174,618	6	10½

This amount is £105,535 11*s.* 8*d.* less than the expenditure of the previous year.

The total length of main roads at the end of the year was 2,225 miles, 20½ chains.

The average cost of ordinary maintenance of roads per mile for the whole Island was £35 3*s.* 3*d.*, and, including special works of improvement, £40 0*s.* 3*d.*, of which £3 0*s.* 0*d.* per mile was due to flood damage.

The average cost per mile in Saint Mary was £65 10*s.* 8*d.*, and in Saint Elizabeth £18 6*s.*, 0*d.* being the highest and lowest, respectively.

With a view to ascertaining the actual use to which certain of the roads of the Island are put, the Director of Public Works instituted a system of road census based on the method adopted by the Road Board in Great Britain, including the weight of everything passing over the roads, passengers, animals, vehicles, &c., as well as freight.

The results disclosed at the census in the following instances were :—

Spanish Town Road :—

3,437 tons traffic, equal to 98 tons per yard width per day.

Road into Port Antonio :—

2,878 tons traffic, equal to 88 tons per yard width per day.

Road into Port Maria :—

4,564 tons traffic, equal to 69 tons per yard width per day.

The Director of Public Works remarks :—

"The result on the Spanish Town Road is almost to a ton identical with a result obtained on the East Coast Road near Georgetown, Demerara, which is similarly situated as regards a railway."

These remarks are instructive as showing the difficulty experienced by railways in attracting certain classes of traffic when the haulage is for short distances.

These roads cost for maintenance £129 12*s.* 9*d.*, £221 17*s.* 4*d.*, and £125 13*s.* 8*d.* per mile respectively.

The weather was favourable for road maintenance, the rainfall being over 64 inches, or about 84 per cent. of the general average. The road surfaces generally were maintained in good condition, but, owing to the need for retrenchment, no new works of any magnitude were commenced, except the resurfacing of the Spanish Town road with hard river metal. Such expenditure as took place was for settling claims, for land cultivation, fencing, &c., for roads projected or commenced before the hurricane of November, 1912.

Similarly, the expenditure for new works on buildings was mainly to carry forward or to complete works to which the Government had already been committed.

GENERAL OBSERVATIONS.

The year has been one of stress for the Colony, due to the after effects of the hurricane of November, 1912, and to droughts which occurred in certain portions of the Island, rendering relief works necessary. Prosperity was diminished by short crops and a lessened tourist traffic, and this was reflected in an increase of crime and a larger prison population. The exports have diminished in the past two years by £517,860, or about 17½ per cent. As the year drew to its close, however, this condition was gradually becoming ameliorated and a hopeful tone prevailed. The indications were that, if no untoward event occurred, trade would regain most, if not all, the lost ground.

The public revenue did not suffer to the extent which had been anticipated, as the receipts were £20,370 above the estimate, due to railway receipts and stamp duties exceeding the forecast. Customs duties, however, were less than anticipated.

The loans made to sufferers from the hurricane and droughts through the Agricultural Societies Loan Board and the Loan Societies were :—

Direct loans to property owners	£41,030
Loans to peasantry through Agricultural Loan Societies	£48,821
	£89,851

The latest returns show that on the 6th August the owners of properties had paid off £4,041 12*s.* 10*d.*, and nine of them were in arrear for £1,612 10*s.*, while the Loan Societies had paid up £10,322 12*s.* 11*d.*, or £2,185 16*s.* 3*d* more than the instalments due to 31st July. It is curious that a proportion of the larger planters should be less able to meet their obligations promptly than the small cultivators, but it is believed that all the debts are fully secured, and will be paid in full.

After the hurricane of 1903 and the earthquake of 1907, the Government came to the relief of the sufferers with loans of money. A few bad debts were incurred in 1903, but these were much more than covered by the interest received. The transactions in connexion with earthquake loans have so far not been attended by any losses, the instalments of principal which have fallen due and the interest having been paid and a substantial reserve against any future loss built up.

During the year there has been manifested considerable desire to extend the railway system, with the object of opening up land suited to fruit cultivation ; preliminary surveys have been made in certain districts to determine the practicability of these projects.

With the practical completion of the Panama Canal Works, a large number of Jamaica labourers has been thrown out of employment in the Canal Zone. The lucrative wages paid to these men while employed upon the Canal Works has not been without its effect upon the revenues of the Colony, since considerable remittances have been made in the past to relations in the Colony. The decrease in the number and amount of these remittances has already been felt, and is likely to be more marked in the future.

I have, &c.,

No. 839.

CAYMAN ISLANDS (JAMAICA).

(For Report for 1912-13 see No. 810.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
12th February, 1915.

SIR,

I have the honour to transmit to you herewith a copy of the Blue Book of the Cayman Islands for the year 1913–14, together with a copy of the Commissioner's report thereon.

2. The satisfactory financial position of the Dependency has been remarked upon by the Commissioner and is evidence of the greater prosperity of the people, as well as of Mr. Robinson's economical administration.

3. You will observe that the Commissioner on the third page of his Report refers to the existence of "bud-rot" disease in the Lesser Islands, which seriously threatens the coconut industry. This disease is reported to have first appeared in the Lesser Islands after the hurricane of November, 1912, and steps were immediately taken against it under Cayman Islands Law 4 of 1913. Specimens from diseased trees were also sent to Jamaica and the Government Microbiologist reported that there was evidence that "bud-rot" was the cause. A copy of the Microbiologist's report and of a lecture which he gave on Coconut Diseases, together with a copy of a letter from the Director of Agriculture containing recommendations for dealing with the outbreak, have been sent to the Commissioner, and I now await his report on the steps which he has subsequently taken in the matter.

I have, &c.,

W. H. MANNING,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
&c., &c., &c.

FINANCE.

General Revenue and Expenditure.

The following tables show the Revenue and Expenditure for the five years from 1909–10 to 1913–14, and the amounts under separate heads for the past two years :—

Year.	*Revenue.*	*Expenditure.*
1909–10	£2,824	£3,282
1910–11	2,779	2,716
1911–12	3,795	2,700
1912–13	3,397	3,105
1913–14	5,044	2,836
Av. 5 years	£3,568	£2,928

Revenue.

Head of Revenue.	1912–13	1913–14
Customs	£1,622	£1,706
Internal Revenue ..	359	372
Port Dues	22	29
Payments for Specific Services	44	83
Post Office	1,247	2,750
Revenue from Government Property ..	16	20
Interest	83	80
Miscellaneous	4	4
Totals	£3,397	£5,044

Expenditure.

Head of Expenditure.	1912–13	1913–14
Commissioner's Dept. ..	£779	£712
Judicial Dept.	102	122
Legislative Dept. ..	23	23
Medical Dept.	317	158
Police and Prisons ..	257	344
Charitable	53	117
Education	155	127
Registration	13	11
Miscellaneous	202	160
Post Office Dept. ..	286	264
Lighthouse Dept. ..	16	22
Public Works	902	776
Totals	£3,105	£2,836

The revenue of the Cayman Islands for the financial year ended the 30th September, 1914, has amounted to a sum total of £5,044 and the expenditure to £2,836, thus leaving a surplus of no less than £2,208 towards the assets of the Dependency, which amount at the present time to £5,008, an increase of £1,911 during the year.

The year under review has been the most prosperous in the annals of these islands. The revenue has shown an increase under each head of the Estimates, while the expenditure shows a considerable decrease in comparison with that of last year. Several circumstances have combined to bring about this gratifying result. The receipts derived from the Customs display unmistakable signs of moving upward, thus manifesting a corresponding advance, however slight, in the prosperity of the people. The Post Office receipts have also increased and the sale of postage stamps alone during the year has amounted to £2,630, while the absence of a Government Medical Officer, though a matter of much regret, has accounted in a great measure for the saving in expenditure. £776 has been expended on public works, of which sum £494 was applied to the maintenance and construction of roads and £282 to Government buildings and other purposes.

With reference to the import duties, 5 per cent. ad valorem duty is imposed on all imported goods, together with an additional sum of six shillings—recently increased from four—per gallon on distilled spirits and one shilling and sixpence per gallon on all wines. It has also been found necessary to increase the duty on all bay rum imported into the Dependency and to place it on the same footing as wines, with a view to preventing as far as possible the use of that article as a beverage.

The general prosperity of the Cayman Islands depends to a very large extent in the case of Grand Cayman on the price obtained from the sale of turtle. Contracts which hitherto have been entered into for one year with foreign buyers have been superseded during the last year by contracts in the majority of cases of five years' duration to take effect from the 1st of January next. The contracts have been made by the representative of a company that contemplates establishing a turtle-canning factory in Grand Cayman. In the Lesser Islands coconuts form the staple industry, but, unfortunately, in spite of the most strenuous measures, the dreaded bud-rot disease still continues to make headway, a circumstance that gives rise to grave anxiety for the future of these islands.

The Cayman Islands, though far removed from the immediate theatre of warlike operations, feels and will feel with ever increasing pressure the unfortunate effects caused by the outbreak of hostilities in Europe. The sale of postage stamps must of necessity considerably decrease, while works of public utility in the United States of America, the Spanish-American Republics, and Colon have been shut down, thus throwing out of employment a large number of Caymanians who are forced to seek for a means of subsistence in a foreign land.

Export Duty.—There is an export duty of 1*s.* per 1,000 on coconuts, which realized £54 during the past year. There is no other export duty.

Assets and Liabilities.

On the 30th September, 1914, the assets of the Dependency amounted to £5,008.

The liabilities were £554 due to depositors in Government Savings Bank and £53 due to depositors in Treasury, making £607 in all.

TRADE AND INDUSTRIES.

Imports.

The value of the imports from all countries has been in

1909–10	£23,858
1910–11	26,232
1911–12	28,444
1912–13	25,000
1913–14	33,000

Average for five years, £27,306.

Exports.

The exports to all countries have amounted in value as follows :—

	£
1909–10	11,371
1910–11	10,992
1911–12	12,323
1912–13	10,000
1913–14	8,000

Average for five years £10,537.

It will be observed that there is a large difference between the value of imports and exports, which is due to several causes. Shipbuilding is one of the most important industries in these islands, and one in which a large number of people engage from time to time. Part of the materials used in the construction of vessels is imported from abroad and therefore included under the head of imports while, though a few are sold to foreigners, most of them are owned locally and do not appear as exports. The majority of the male inhabitants are forced to seek for a means of subsistence in the United States, Central American Republics, Cuba, Colon, and other places, and in so doing leave their relatives behind, to whom large sums are remitted. It is estimated that approximately £3,767 has been received by way

of remittance during the past year from wage earners abroad by people in Grand Cayman. This is exclusive of cash sent in by relatives, which amounts to a considerable sum. Schooners, when not engaged in the turtle fisheries, trade between various foreign countries and their earnings may be said to be a national asset. But by far the most important reasons for the disparity in value between exports and imports lies in the comparative isolation of Grand Cayman from the outside world, the want of reliable communication, the lack of capital to develop industries for which the soil is best fitted, and the entire absence of any initiative or enterprise on the part of the inhabitants, who seem in most cases to be quite content with their lot and show no disposition or desire to ameliorate their condition in life.

Negotiations were entered into with the Williams Shipping Agency of New York with a view to the establishment of direct steamship communication between America, Jamaica, and Georgetown, Grand Cayman. The negotiations have been brought to a successful issue, and the Company have decided to operate between the above-mentioned ports and the Isle of Pines, returning by the same route to New York. Such a line would be of the greatest possible advantage to the island, as nearly all the merchants obtain their supplies from New York, which could be brought direct from port to port, thus obviating the necessity of transhipment in Jamaica, with the additional benefit of less expense to them and the certainty of being able to estimate the arrival of goods with greater accuracy than at present obtains in the case of reliance on schooners and irregular communication between Georgetown and Jamaica. Owing to the outbreak of war the service has been temporarily postponed. It is hoped also that tourists in search of peace and quiet will be induced to visit the island, which, though possessing few attractions to offer, is yet entirely free of dust, with good sea-bathing in parts and wild duck shooting.

Shipping.

Georgetown, Grand Cayman, is a port of registry, having vessels with an aggregate tonnage of 2,784. The number of ships entered and cleared during the year 1913–14 is as follows :—

166 entered.
165 cleared.

SAVINGS BANK.

The Government Savings Bank, established in 1908, has proved of great use to those desirous of availing themselves of the opportunity offered for safe investment. The transactions for the financial year ended the 30th September, 1914, were :—

Deposits £454. Withdrawals £136.

The balances due to depositors at the end of each year have been :—

	£	s.	d.
1911	264	16	0
1912	364	12	7
1913	245	13	4
1914	554	6	6

POST OFFICE.

The Post Office Department has since its establishment amply proved its usefulness and has contributed largely to the finances of the Dependency. For the last six years it has been the mainstay of these islands and has been responsible for nearly one half of the total revenue.

Year.	*Post Office Revenue.*	*Total Revenue.*
	£	£
1909–10	769	2,824
1910–11	784	2,779
1911–12	1,640	3,795
1912–13	1,247	3,316
1913–14	2,750	5,047
Total ..	£7,190	£17,761

The sale of postage stamps to collectors forms a very appreciable item in its revenue. The inland postal service shows a steady and favourable increase in the amount of business transacted, while the large receipts in respect of the foreign mail are due to the number of Caymanians who have been compelled to seek a livelihood in the Canal Zone, Cuba, Central American Republics, and the United States.

The following table is indicative of the amount of mails inland and foreign, despatched and received for the two years :

	Local Mails.	*Foreign Mails.*	
	Postal Packets.	Postal Packets.	
	Handled.	Received.	Despatched.
1912–13 ..	20,600	35,000	20,600
1913–14 ..	18,169	22,967	27,459

Post Office Orders.

All money order business is transacted through Jamaica, the issue of orders in the Cayman Islands being at present confined to Georgetown, Grand Cayman, and Cayman Brac.

	Orders issued.	*Orders cashed.*
	£	£
1912–13	3,791	3,469
1913–14	3,311	3,768

JUDICIAL.

There are two sittings of the Grand Court in each year, namely, in June and December. The Commissioner presides as judge. The court has an unlimited civil and criminal jurisdiction except in cases of capital felony—Jamaica Law 11 of 1911. Quarterly Petty Courts and Weekly Petty Sessions are held, in which two Justices sit. The former deal with smaller civil actions, and the latter take cognizance of minor offences. Cases of serious crime are few and isolated while the minor offences are generally the result of drink. In all cases in the Grand Court there is a right of appeal to the Jamaica Supreme Court and in the Petty Court to the Grand Court.

The following is a return of the cases before the Courts in the last two years :—

	1912–13.	1913–14.
Weekly Petty Sessions :		
Minor criminal offences ..	45	11
Quarterly Petty Courts :		
Minor civil actions	8	26
Half-yearly Grand Court :		
Criminal cases	2	6
Civil actions	10	11
Judgment summonses ..	6	1
Totals	71	55

LEGISLATIVE.

The Legislative Assembly is styled "The Justices and Vestry" and is composed of all the Justices of the Peace (thirteen in number) and 27 Vestrymen The Vestry meets by statute in September in each year to make provision for the next financial year, beginning on the 1st October, and otherwise when summoned for the despatch of business. Elections for the new Vestry were held in August. The question of a Constitution for the Cayman Islands differing materially from that which at present obtains is still under consideration and it is hoped soon to effect some diminution of the membership of the Vestry, which is at present about one Vestryman for every 143 inhabitants, and the establishment of a local franchise, together with property and pecuniary qualifications for candidates, thus bringing the elections more in line with modern conditions.

The following Laws were passed during the year 1914 :—

Lights on Carriage Law ;
Cinematograph Law ;
Law to repeal Law 2 of 1883 and part of Law 1 of 1894.
Cayman Islands Pension Law ;
Auditors' Law Amendment Law ;
Pension Law Amendment Law.

PUBLIC WORKS.

During the year under review the roads throughout the Dependency have been thoroughly cleaned and cleared, a process that requires to be annually resorted to owing to the continual rains and to the prolific growth of vegetation and weeds The sum of £300 is allotted yearly to the maintenance, and £200 to the construction, of roads. In recent years construction has taken the form of adding sections to already existing thooughfares, and nearly all the districts have participated in this expenditure. Batabano and Hirst Roads have received additions, together with the road leading in to East End.

Owing to the heavy rains and to the fact that the construction of roads lacks the adequate tools and appliances, such, for instance, as a steam roller, together with the expert knowledge on thoroughly modern lines necessary for scientific road construction, they do not stand the wear and tear of wheeled traffic as well as they perhaps might be expected to do, were only the above-mentioned requirements available, the expense of which the Dependency is not yet in a position to undertake. The roads, however, possess one great advantage, and that is that they are entirely free of dust, the marl with which they are constructed being of a soft clinging nature that tends to harden after a time, and if only costly experiments could be indulged in they might well be made almost ideal throughout the Dependency. During the five years 1909–10 to 1913–14 the total expenditure on works has been £1,669, and that on roads £3,035.

SHIPBUILDING.

During the last financial year there were seven vessels, amounting in the aggregate to 1,128 tons, built in these islands and launched. Shipbuilding constitutes an important industry and one deserving of every encouragement. The Caymanians possess a natural aptitude for shipbuilding and if only more orders could be obtained from countries abroad, which perhaps know little or nothing of the native skill and workmanship, a very lucrative source of employment could be opened up. There are at present on the register 38 vessels, with a total tonnage of 2,784 tons.

Many vessels built by the Caymanians and manned in great part by them are serving under the flags of Cuba and the American Republics.

AGRICULTURE.

A branch of the Jamaica Agricultural Society was established in Georgetown in 1903, but does not appear to be progressing as satisfactorily as such a movement deserves. There is always a lamentable

scarcity of ground provisions though Georgetown affords a ready market for their sale. The depredations of wild rabbits and crabs and to a small extent prædial larceny, tend to discourage enterprise and individual industry. Eighteen pounds a year is voted for agricultural purposes, and for the granting of prizes at the Annual agricultural Show by way of encouragement. Quarterly meetings of the Agricultural Society are held in January, April, July, and October. The larger portion of the land in Grand Cayman is devoted to the growing of guinea grass and the rearing of cattle and horses. There are in Grand Cayman about 2,000 head of cattle and about 250 horses.

POPULATION.

In June, 1911, a census of the Cayman Islands was taken, showing a total population of 5,564. Of these 2,322 are white, 2,211 are coloured, and 1,031 black. 3,087 were returned as able to read and write, 749 as able to read only, and 1,728, including children, as illiterate. In religious denomination the people are mainly Presbyterian, 3,264 being returned as such. There were 981 Baptists, all in the Lesser Islands, and 357 are returned as of the "Church of God." During 1914 there were 195 births, 99 males and 96 females. Of these 160 were legitimate and 35 illegitimate. In the same period there were 39 deaths, 21 males and 18 females.

EDUCATION.

The state of education in the Dependency is far from satisfactory, especially in the country districts. £250 a year is devoted to Education. The conditions obtaining at the present time do not offer any attractions to good and reliable teachers. In all "registered" schools each of the latter receives a capitation grant from the Government of 5*s*. a year for every pupil on his books, and a fee of 3*d*. up to the third standard, and 6*d*. from the fourth standard upwards in the case of destitute children. All parents and guardians pay a similar fee of 3*d*. and 6*d*. for the education of their children. While the Government grant is of great assistance to the teachers, yet they are largely dependent on the collection of fees from private individuals who cannot always be relied upon to pay, and in a large number of cases offer payment in kind instead of cash. The result is that teachers, whether fit or unfit, must be tolerated or the schools must close, as in the case of North Side, Gun Bay, and East End, where children are growing up in ignorance. All children between the ages of six and fourteen years residing within two miles of a school are required to attend 75 per cent. of the sessions of the school every term. It is estimated that there are about one thousand and thirty children of school age in Grand Cayman.

There are many who attach no importance whatsoever to the education of their children and who do not consider even reading or writing as in any way essential to a child's future welfare. A Bill having as its object the establishment of free and compulsory education, to which reference was made in last year's report, was submitted to the Justices and Vestry in March, but withdrawn owing to the previous rejection of the Tariff Bill, providing for the imposition of an additional 2½ per cent. to the existing 5 per cent. ad valorem duty, the object of which was to defray the cost of the establishment and maintenance of the new system.

There is every reason to believe that in the new Vestry—elections for which were held in August last—there is a decided majority in favour of free and compulsory education and the Tariff Bill; but owing to the outbreak of war and the consequent rise in the price of food stuffs, it was not considered desirable or politic to introduce the above measures in September.

HOSPITAL.

There is a small building kept for the purpose of isolating infectious diseases but it is not generally used. Government Medical Officers are appointed for the Lesser Islands and Grand Cayman, whose duty it is to visit all the outlying districts.

PRISONS.

There are no prisons in the Dependency. Prisoners sentenced to more than six months imprisonment are sent to Jamaica. There are three cells at Grand Cayman and one at Cayman Brac, which are used for the detention of those awaiting trial or sentenced to short terms.

CRIME.

There is very little crime and offences are generally of a trivial nature and in most cases the result of excessive drinking.

POLICE.

The police force consists of an Inspector, five policemen, and one district constable. The Inspector also performs the duties of Tide Waiter and Visiting Officer, while the services of the police in the country districts are utilized in the carriage of inland mails.

LIGHTHOUSES.

There are three lights, one at Georgetown, one at East End, Grand Cayman and the third at Stake Bay, Cayman Brac. They consist of large lanterns hoisted on masts about 75 feet high, and are visible from 10 to 12 miles out to sea. The lights of Georgetown and East End are of the same colour, namely white. It is hoped in the near future, to erect a flash light at one of the three dangerous points of Grand Cayman at a cost of £150, and as time goes on to add to their number.

MOSQUITOS.

The mosquito season begins in April and continues until September, when they begin to abate, and from November to February almost disappear. Householders adopt the method of lighting a smoke fire to ward off the attacks of these insects, which swarm in myriads and render life a torture to man and beast. A few houses are mosquito screened. There are fortunately very few of the anopheline or malaria-transmitting variety. Although these islands are practically immune from the recognised mosquito-borne diseases, as malaria, yellow fever, and filariasis, the mosquito is nevertheless seriously detrimental to the health in other respects, the conditions of anæmia and general debility met with being attributed by the Government Medical Officer to the blood-sucking powers of these insects.

Swamps are found in various places, but as these are below the level of the sea they could only be drained by a large expenditure of money. So far as it is possible to ascertain the people generally seem to display a more marked interest in hygiene, and, as this subject is taught in all the Government schools and particular importance attached to the subject, the rising generation may no doubt be taught to realize to the full the benefits to be derived from living in healthy surroundings.

CLIMATE.

The Cayman Islands are among the healthiest places in the world. There are no cases of illness attributable to climatic conditions. The weather is warm for the greater part of the year. The prevailing breeze is from the south-east from April until October, when the cool season begins with a change of the wind to the north and north-west in the early part of November.

The following table shows the average temperature :—

	Morning.	Mid-day.	Evening.
Hot months	83°	89°	86°
Cool months (Nov. to March) ..	71°	80°	74°

TURKS AND CAICOS ISLANDS.

(For Report for 1913 see No. 800.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
18th May, 1915

SIR,

I HAVE the honour to transmit for your information a copy of the Blue Book of the Turks and Caicos Islands for the year 1914, together with a copy of the Commissioner's report thereon.

I have, &c.,
W. H. MANNING,
Governor.

The Right Honourable
Lewis Harcourt, M.P.,
Secretary of State for the Colonies.

(C166) Wt.36076/850. 1125 & 90. 7.15. B.&F.Ltd. Gp.11/2.

REPORT ON THE

BLUE BOOK OF THE TURKS AND CAICOS ISLANDS

FOR THE YEAR 1914.

FINANCIAL.

The revenue of the Dependency for the year 1914 exceeded the estimate by £696 and amounted to £9,051. The decrease in 1914 as compared with the revenue for the previous financial year is due entirely to a falling off of receipts under the head of Post Office, the stimulus due to sales of the new stamps issued in 1913 having expended itself.

Notwithstanding this, as the result of persistent and watchful economy in every item of recurrent disbursement, and after the inclusion of the sum of £1,000, contributed at the unanimous wish of the inhabitants towards the War Fund, the expenditure for the year under review exceeded revenue by only £340.

Considering that there is no direct taxation and that the Customs tariff, the chief source of revenue, is the lowest, and the "free" list the largest, of any in the West Indies, the financial condition of the Dependency cannot be regarded as otherwise than satisfactory.

The following statement illustrates the several heads of revenue and expenditure in 1914 as compared with the preceding five years.

REVENUE.

Head of Revenue.	1914. £	1913. £	1912. £	1911. £	1910. £
Import Duties	3,997	3,971	3,577	3,477	3,494

Salt Industry	1,969	1,994	1,777	1,767	—
Totals	£9,391	8,505	8,092	7,695	6,827

* Includes £1,000 contribution to War Fund.

On the 31st December of the year under record assets stood at £15,079, and liabilities at £6,644, thus leaving a balance of assets of £8,435 to be carried forward to the credit of the Dependency towards the year 1915.

There is no public debt.

LEGISLATION.

Four Ordinances were passed during the year. These were:—No. 1. The Supplementary Appropriation Ordinance, 1913; No. 2. The Wild Birds Protection Ordinance, 1912—Amendment Ordinance, 1914; No. 3. The Larceny Ordinance, 1914; and No. 4. The Appropriation Ordinance, 1915.

VITAL STATISTICS.

According to the census of 1911 the population of the Dependency was 5,615 (2,505 males and 3,110 females) composed as follows:—Whites, 286; coloured, 5,329. Of these 1,279 reside in the Turks Islands, and 4,336 in the Caicos Islands.

During the year there were 192 births, or 34 per thousand, and 112 deaths, or 20 per thousand.

The general state of the public health of the Dependency was good and no diseases of a zymotic character were reported.

EDUCATION.

A.—Primary Education.

The control and management of primary education in the Dependency has for many years been administered by a Board, to which the Government makes an annual grant of £600 for the purpose.

The following table illustrates the growth in attendance at the schools in the three principal settlements of Grand Turk, Salt Cay and Cockburn Harbour since the year 1901, when the Ordinance enforcing regular attendance came into operation.

Government Schools at	1901. No. of pupils on roll.	1901. Average attendance.	1914. No. of pupils on roll.	1914. Average attendance.
Grand Turk	163	79	224	192
Salt Cay..	49	31	45	38
Cockburn Harbour ..	100	68	160	139

In addition to those above enumerated, Government Schools are also maintained at the undermentioned settlements in the Caicos Islands.

Settlement.	On register.	Average attendance.
Lorimers	104	54
Conch Bar	50	33
Bottle Creek	122	93
Kew	90	63
Blue Hills	103	67

and assistance is given towards the employment of teachers in the sparsely populated districts of the Bight and Five Cays.

The total expenditure of the Board for management, books, materials and other expenses for the year under review amounted to £632 15s. 2d.

Besides school management the statement of expenditure for 1914 also mentions the sum of £219 disbursed towards completing the new school house at Kew, and initial expenses, amounting to £14, towards the erection of a similar building at Lorimers.

It may be gathered from the foregoing that primary education in the Dependency has now passed the limits of the amount allowed. Education being such an important factor in the moral progress of the community, it is hoped to give this question early attention.

B.—Secondary Education.

There is no provision for secondary education, and parents desirous of their children enjoying such advantages are compelled to send them

abroad. Undoubtedly this occasions considerable inconvenience, particularly among those in moderate circumstances, but, under present financial conditions, it does not seem possible to advocate any scheme involving comparatively heavy recurring expenditure.

HOSPITALS AND ASYLUMS.

There is no hospital or asylum. Cases of lunacy are fortunately very rare, and, when occurring, are sent to the Lunatic Asylum at Jamaica and maintained there at the cost of the Dependency.

Although undoubtedly cases of illness frequently occur which would be the better for treatment at a properly equipped hospital, yet the scattered nature of the population throughout the islands of the Dependency, and the difficulties which exist in the way of getting sick persons from outlying districts to Grand Turk in small open boats (often a distance of 50 to 60 miles), render the question of establishing such an institution one of doubtful general utility. This matter is, however, receiving consideration with a view to providing a small emergency hospital for the treatment of infectious diseases, serious cases of illness, where home nursing is impossible, and such cases as may occur among seamen landed from vessels in harbour.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and exports to the value of £28,192 and £28,348, respectively, are recorded for the year.

The following table gives particulars in this connection during the past five years :—

Year.	Imports.	Exports.
	£	£
1910	27,916	24,461
1911	24,722	23,703
1912	27,662	25,947
1913	30,231	27,808
1914	28,192	28,348

The direction of trade during the same period may be gathered from the following :—

Countries.	Year.	Imports.	Exports.
		£	£
United Kingdom ..	1910.	5,518	422
British Colonies ..	—	4,941	3,799

Miscellaneous ..	346	702	622	2,671	1,022

Salt.—The steady development of the salt industry since 1910, as indicated in the foregoing table, leads one to hope that high water mark has not yet been reached in the direction of this important export. Commendable efforts continue to be made on the part of some of our salt producers to extend the trade in fine or "fishery" salt. Results, so far, are of an encouraging character.

Sponges.—In common with all other important sponge beds in the world, those of the Caicos Islands have been fished in the past in such a manner as to cause grave concern as to their depletion. In these islands the threatened extinction would not appear to be due to improper methods of fishing, but to the indiscriminate taking of small immature sponges and to the wanton destruction which such a system involves. These sponges, of little practical use and value, if left to grow for two years, or even less, would not only greatly increase in value, but would furnish large supplies of larval sponges to replenish those taken during the ordinary operations of fishing.

The difficulties to be encountered in the way of enforcing such obviously sound remedial measures as the establishment of a closed season, restricted areas, and the protection of undersized sponges, are many; but there can be no doubt that recourse will eventually have to be made to legislative measures if the industry is to be saved from extinction.

Shipping.

254 vessels, with a total of 192,811 tons, entered, and 260 vessels, representing 192,786 tons, cleared at the various ports of entry in the Dependency during the year under review. The following statement discloses the numbers and tonnage of vessels which have cleared for the past three years.

Nationality.	1912.		1913.		1914.	
	No.	Tons.	No.	Tons.	No.	Tons.
British ..	100	22,467	102	10,153	110	17,276
Foreign ..	187	165,026	162	193,546	150	175,510
Total ..	287	187,493	264	203,699	260	192,786

Agriculture.

Agriculture in the real sense of the word may be described as non-existent in the islands of Grand Turk, Salt Cay, and South Caicos. Nor does it appear how it could be otherwise, since the climatic con-

ditions which favour the making of salt are diametrically opposed to those which are required for the culture of plants. At Middle and North Caicos and at Blue Hills, however (large islands with a sparse and scattered population), the outlook for agriculture is of a more hopeful character and, provided the people, who at present possess no knowledge whatever of the subject, can be instructed and induced to take up the cultivation of cotton, there seems to be no reason why the condition of landholders in these islands should not be materially improved.

POSTAL AND TELEGRAPHS.

The Clyde line of steamers continue to ply regularly to and from New York direct, about every ten days, carrying mails, passengers, and freight, the voyage taking either way about 4½ days. The monthly service, which for many years had been maintained by a Pickford and Black steamer, which called at Grand Turk, both on the outward and return voyage from Halifax to Jamaica was interrupted by the stranding of the steamship "Anita" on a reef at Middle Caicos on the 20th December. Much inconvenience to the people of these islands has been occasioned thereby.

The cable of the Direct West India Cable Company, Limited, connects the Dependency with the outer world. A news bulletin is published daily, for which a subsidy of £120 per annum is paid. The rate to England is 3s. per word, to Halifax 2s., to Bermuda 1s. 6d., to Jamaica 1s., and to New York 2s. 6d. Non-express messages are sent at half rates.

The estimated amount of postal matter dealt with in 1914 was:—Letters, 28,000; postcards, 1,300; newspapers, 2,700; books, 17,600; parcels, 1,002.

The amount of Money Order transactions was:—

	£	s.	d.
Issued in the Dependency	1,681	10	6
Paid in the Dependency	260	0	11

SAVINGS BANK.

The amount standing to the credit of the depositors on the 31st December was £3,981, or £347 in excess of the amount shown on the 31st December, 1913. There were 446 depositors. Deposits during

1914 amounted to £1,500 and withdrawals to £1,152, thus disclosing a credit of £348 on the working of this department for the year under review.

METEOROLOGY.

The rainfall recorded during the year was 33·94 inches, or 2·98 inches in excess of that recorded for the year 1913. November was the wettest month, with 9·58 inches, and June the driest, when only ·47 inches were recorded.

The coolest and warmest months were January and July, with mean temperatures of 69·1° and 89·8°, respectively. The lowest temperature for the year, 62°, occurred on the 28th February and the highest, 92°, on the 14th September.

CRIMINAL STATISTICS.

Other offences	5
Number of persons acquitted :—	
In the Inferior Courts	42
In the Superior Courts	Nil

CIVIL ESTABLISHMENT.

Mr. F. H. Watkins, I.S.O., who had administered the affairs of the Dependency since 1906, was appointed to be Colonial Secretary of Grenada in July of the year under review. Mr. G. Whitfield Smith, F.L.S., Commissioner of Carriacou (Windward Islands), was appointed to succeed him and arrived in the Dependency on the 2nd December. During the period between Mr. Watkins's departure and Mr. Smith's arrival (five months) the duties of Commissioner were performed by Mr. H. H. Hutchings, Assistant Commissioner, who holds a dormant commission to administer the government on such occasions. His Honour C. H. Yorke Slader, one of the Resident Magistrates of Jamaica, was specially deputed by the Governor of Jamaica in December to adjudicate certain important matters pending in the Supreme Court.

GENERAL REMARKS.

The year under review was again a year of financial prosperity. From the revenue point of view it may be regarded as distinctly the most satisfactory for some time. Abnormal receipts from sales of the new issue of stamps having entirely disappeared, the revenue has resumed its normal character, and it is now possible to estimate with greater certainty the future revenue and recurrent expenditure of the Dependency.

It is encouraging to record that with the closing days of December favourable prices for sisal were quoted in the American market, and it is hoped that the year 1915 will see a resumption of work at the factory of the East Caicos Company, on which a large number of labourers in the Caicos Islands depend for employment.

The year under review was otherwise of an uneventful character and there are no other matters calling for remark.

G. WHITFIELD SMITH,

Commissioner.

Grand Turk, Turks Islands,
6th April, 1915.

JAMAICA

(For Report for 1913–14, see No. 820.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House, Jamaica,
26th August, 1915.

SIR,

I have the honour to report on the Blue Book Returns of this Government for the financial year ended 31st March, 1915.

I.—FINANCIAL.

The revenue and expenditure of the year, under the heads of Estimates, compared with those of the preceding year, were as follows:

Revenue.

Heads.	Receipts, 1913-14.			Receipts, 1914–15		
	£	s.	d.	£	s.	d.
Customs	426,686	18	11	396,045	1	11
Port, Harbour, and Lighthouse Dues	8,195	18	2	6,894	19	4
Licences, Excise, and Internal Revenue not otherwise classified	208,655	14	9	201,832	7	7
Fees of Office, Stamp Duties, Reimbursements-in-aid, and Irrigation Receipts	128,217	12	1	111,331	9	5

	£1,065,436	18	10	£1,054,969	0	9

The total revenue and expenditure for the last five years have been as shown below :—

	Revenue.	Expenditure.
	£	£
1910–11	990,399	987,304
1911–12	1,161,014	1,155,208
1912–13	1,206,161	1,304,930
1913–14	1,048,639	1,065,437
1914–15	980,174	1,054,969

The revenue for 1914–1915 was less than the original estimate by £84,117 10*s*. 3*d*. Nearly every Head of Receipts showed material decrease as compared with the estimate, thus :—Customs, £43,955 ; Port, Harbour, and Light-house Dues, £1,605 ; Licences, Excise, and Internal Revenue, £8,092 ; Fees of Office, Stamp Duties, &c., £9,487 ; Post Office and Telegraphs, £2,255 ; Railway, £20,612 ; and Interest, £2,906. The only increase of consequence was £3,608 under Miscellaneous. These shrinkages in revenue were chiefly due to the great war, and on the 17th September, 1914, a law was passed reimposing the additional 6⅔ per cent. import duty on the value of all goods which fall without the specific and free schedules of the tariff law. This additional levy to the end of the financial year realized £25,206, but in spite of this the total yield of the Import Duties for the year was, as is stated above, £43,955 less than the original estimate based on, the lower duty. If, therefore, the extra duty had not been put on, Customs Dues would have been £69,161 less than the estimate. If the yield of the reinforced Import Duties (£396,045) be compared with the amount received in the preceding year (£425,686), the falling off is £30,641. This would have been increased to £55,847 if the extra 6⅔ per cent. had not been added to the *ad valorem* duty of 10 per cent. in force at the beginning of the year.

The expenditure was less than the Budget estimate by £52,305 12*s*. 2*d*., but as supplementary appropriations amounting to £60,000 were voted, there was a saving of £112,305 12*s*. 2*d*. on the total sums voted for the services of the year. The supplementary appropriations voted at the War Sessions in August and September were respectively £10,000 for defence and £50,000 to be expended in the purchase of sugar as a gift to the Home Government.

There were savings on almost every head of expenditure as the result of the action taken at the beginning of the war, which is hereinafter referred to. If the payments are considered against the votes, the following are the chief points of difference, £1,000 and over only being taken, viz :—Decreases under Charges of Debt of £3,632 ; under Public Works Department of £1,821 ; under Lands Department of £1,008 ; under Post Office and Telegraphs of £4,913 ; under Medical of £3,113 ; under Constabulary and Prisons of £2,280 ; under Harbours and Pilotage of £1,107 ; under Agricultural Services, £1,097 ; under Public Works and Buildings, £57,316 ; under Railway, £13,771 (includes £4,359 under Pier No. 3) ; and under Chapelton Railway Estimates of the whole Vote of £1,400, less a few shillings. Apart from sugar and defence the only similar increases were £1,457 under

Excise, Internal Revenue, and Customs, and £7,475 under Miscellaneous. This latter excess is more than accounted for by a deferred expenditure from the previous year for new pumps for the Kingston Pumping Station (£4,591), and the costs of appeal in certain tramway cases (£1,704), and Interest on Temporary Advances (£2,471).

If the payments are considered against those of the preceding year the following are the chief points of difference :—Increases of £1,580 under Pensions of Public Officers ; of £1,089 under Pensions of Widows and Orphans of Public Officers ; of £3,589 under the Revenue Department ; of £2,515 under Postal and Telegraphs ; of £1,936 under Medical ; of £3,917 under Constabulary and Prisons ; of £1,107 under Education ; of £10,218 under Military (Defence) ; and of £25,879 in respect of the gift of sugar to the Home Government.

The chief decreases were £5.134 under Agricultural Services ; £10,510 under Miscellaneous ; £11,588 under Railway (£6,290 of which was in respect of Pier No. 3) ; £13,122 under Clarendon Railway extension ; and £23,180 under Public Works and Buildings.

The receipts during the year being £980,174 and the expenditure £1,054,969 ; there was a deficit on the year's transactions of £74,795. As the surplus balance in the Surplus and Deficit Account of the Government on the 1st April, 1914, was £59,417, the year ended with a deficit of £15,378 to be met from the Insurance Fund. It had been expected, when the revised estimates of 1914–1915 were being made up prior to the passing of the estimates of the year 1915–1916, that this deficit would be £40,872, a difference of £25,494 ; but it was not found possible to spend within the year as much as was expected in the matter of the gift sugar. This accounted for about £12,400 of the apparent saving and, of course, meant that it was simply expenditure deferred until the year 1915–1916 ; about £600 represented other unavoidable deferred expenditure, so the remainder, say £12,500, represented further savings than had been expected at the date the revised estimates were made up.

Immediately on the outbreak of the great war, in order to make provision for the decrease in revenue, which I felt sure would ensue, I ordered the suspension of all those new works on roads, buildings, etc., which were not of absolute necessity and called upon every department of Government to suspend for the time, all but the unavoidably necessary expenditure. By these means the pressure of the situation on the island's finances was reduced as much as possible and there resulted savings on the votes (excluding from consideration the matter of the vote and expenditure on account of the gift of sugar) amounting to a total of £88,165.*

	£	£
*Total votes	1,167,275	
Less sugar vote	50,000	
		1,117,275
Total expenditure	1,054,969	
Less sugar expenditure ..	25,879	
		1,029,090
		88,165

These savings (£88,165—excluding sugar) added to the yield of the additional taxation put on as a result of the war (£25,206) came to £113,371, by which amount the Colony would have been in a worse position financially at the end of the year if the measures above briefly alluded to had not been taken in the early days of war.

The public debt of the Island (most of which is represented by productive investments) amounted to £3,854,305 on the 31st March, 1915. The accumulated sinking funds on the same date amounted to £968,739, leaving a net liability of £2,885,566. Included in the debt were guaranteed public loans for local purposes, secured on municipal rates and undertakings, amounting to £467,801, the sinking funds in respect of which amounted to £79,874.

The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together, for the last five years, are shown in the following comparative statements :—

Kingston City Council.

	Receipts. £	Expenditure. £
1910–11	35,755	35,385
1911–12	46,565	45,846
1912–13	41,515	43,846
1913–14	39,100	37,610
1914–15	38,420	37,777

	Kingston General Commissioners.		*Other Parochial Boards (14 Parishes.)*	
	Receipts. £	Expenditure. £	Receipts. £	Expenditure. £
1910–11 ..	60,082	52,373	135,118	139,032
1911–12 ..	69,740	72,875	123,179	124,059
1912–13 ..	44,656	54,842	148,029	146,491
1913–14 ..	48,479	44,503	154,813	148,199
1914–15 ..	49,919	52,074	136,107	129,187

The debts of the Parochial Boards to the Treasury for advances made for water-works and markets amounted at the close of the year to £18,623.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(a) *Imports and Exports.*

The total values of imports and exports for the last five years are as follows :—

	Imports. £	Exports. £
1910	2,614,943	2,568,222
1911	2,865,553	2,948,067
1912	3,050,478	2,709,283
1913	2,837,446	2,430,207
1914	2,565,820	2,904,533

The imports decreased by £271,626 and the exports increased by £474,326. With the passing of a cycle of years, characterised by deficient rainfall, the year 1914 was agriculturally prolific, and notwithstanding the handicap of war conditions and the competition in the island's principal fruit market of a phenomenally abundant crop of home-grown fruits, the domestic exports of the year actually constituted a record, having been in excess of those of 1911 by upwards of £22,000 when from the figures are eliminated the value of re-exports. Nor is there reason to doubt that but for the interposition of unlooked for factors the volume of imports also would have approached high water mark.

If a perspective of forty years be taken at intervals of ten years the growth of the imports and exports is thus indicated :—

	Imports. £	Exports. £
1874	1,759,942	1,442,080
1884	1,487,832	1,483,989
1894	2,191,745	2,075,689
1904	1,682,355	1,436,725
1914	2,565,820	2,904,533

The imports and exports under the approved statistical grouping for 1914 and 1913 compare thus :—

	1914.		1913.	
	Imports. £	Exports. £	Imports. £	Exports. £
1.—Animals, Food, Drink, and Tobacco,	1,020,654	2,422,748	1,224,389	1,846,703
2.—Raw Material or Articles mainly unmanufactured ..	281,465	192,188	121,825	184,565
3.—Manufactured wholly or mainly	1,250,280	214,606	1,488,666	216,579
4.—Miscellaneous unclassified	940	1,139	2,163	1,541
5.—Bullion and Specie ..	12,481	73,852	403	180,816
	£2,565,820	2,904,533	2,837,446	2,430,207

Tables giving the trend of trade are given by the Collector General for forty years as below—countries from which imports are drawn, with values and rates in each case :—

	1874.	1884.	1894.	1904.	1914.
	£	£	£	£	£
United Kingdom ..	966,469	789,506	1,106,284	788,452	986,218
	54·9%	53·1%	50·5%	46·8%	38·5%
United States ..	540,124	469,692	803,340	719,262	1,221,150
	30·8%	31·6%	36·6%	42·7%	47·6%
Canada ..	187,366	177,260	186,320	115,891	208,884
	10·6%	11·8%	8·5%	6·8%	8·1%
Other Countries ..	65,983	51,374	95,801	58,750	149,567
	3·7%	3·5%	4·4%	3·7%	5·8%

Countries to which exports are distributed, with the like information in each case :—

	1874.	1884.	1894.	1904.	1914.
	£	£	£	£	£
United Kingdom ..	1,141,459	643,628	554,082	271,209	529,803
	79·2%	43·4%	26·7%	18·9%	18·2%
United States ..	21,071	461,877	1,189,618	768,121	1,769,464
	1·5%	31·1%	57·3%	53·5%	60·9%
Canada ..	8,034	198,660	35,681	126,693	208,516
	·6%	13·4%	1·7%	8·8%	7·2%
Other Countries ..	271,516	179,824	296,308	270,702	396,750
	18·7%	12·1%	14·3%	18·8%	13·7%

The following table gives a birdseye view of the relative importance to the island during each of the last three years of its staples and of minor products :—

	1912.	1913.	1914.
Sugar	5·1%	2·3%	7·0%
Rum	2·6%	4·6%	3·6%
Coffee	10·7%	7·1%	5·9%
Cocoa	5·4%	5·2%	5·5%
Dyewoods	3·4%	5·2%	4·5%
Fruit	54·7%	48·6%	54·5%
Pimento	3·0%	4·0%	1·6%
Minor Products ..	15·1%	23·0%	17·4%

The acreage returned in 1914–15 grouped under the four main divisions of the Agricultural returns and compared with the average acreage under these headings in the four preceding years produces the following abstract :—

	1914–15.	Average 1910–14.
	Acres.	Acres.
Tilled Lands	273,111	271,316
Guinea Grass	172,864	148,157
Commons	566,153	513,342
Wood and ruinate	1,114,283	1,216,256

There is an increase in each description of land subjected to some sort of care and culture, with consequent falling off in the area returned as being in wood and ruinate.

Lands subject to tillage are further classified under the particular crops to which they are dedicated, and the following is an abstract of such classification showing the figures for 1914–15 against a four-years' average :—

	1914–15.	Average 1910–14.
	Acres.	Acres.
Canes	31,727	32,334
Coffee	18,175	22,869
Coconuts	29,731	17,531
Bananas	85,854	82,064
Cocoa	11,088	11,722
Ground Provisions	63,640	72,061
Mixed Cultivation	28,603	28,626
Minor Items	4,293	4,106

In connection with this abstract the Collector-General remarks :—

"Last year it was recorded that the cultivation of canes, coffee, and cocoa were on the down grade, and the figures here given show that the downward tendency has not yet been arrested, canes showing a further decrease of 607 acres, coffee 4,694 acres, and cocoa 634 acres. The very strong present position of sugar in the world markets and the favourable position of cocoa, will doubtless result in much more attention being given to these products in the immediate future, but the indications are that coffee will continue to give way to fruit-growing. The great increase in the coconut area—12,000 acres—is no doubt due to the return to bearing of groves that were destroyed in the hurricane of 1903, and had to be replanted. Bananas show an increase of 3,790 acres over the average, and if only a proportion of the rumours reaching us as to the condition of this industry in Central American Republics be well grounded, confidence in the future of the banana in this country will be justified. Ground provisions show a falling off of 8,421 acres, probably due to lands being less exclusively devoted to root crops than was formerly the case, and minor items exhibit an improved acreage of 187 acres."

The following abstract of the number of separate properties laid under contribution to general and parochial revenues during the year 1914–1915 and the different descriptions, set out and compared with the figures of the year preceding, show the following :—

	1914–15. Number.	1913–14 Number.
Properties valued at £20	63,921	62,889
" " at £30	6,653	6,653
" " at £40	53,098	53,428
" " over £40	31,275	30,715
Occupiers relieved	1,307	1,005
Properties in arrear	13,463	12,757

The year just past is the eleventh since the direct taxation for general and parochial purposes was transferred to its present basis of real property, and the following comparative table given by the Collector-General of the progress made in that period will possess interest :—

	Approximate number of properties on roll.		Number in arrears.		Percentage uncollected.	
	1903–04.	1914–15.	1903–04.	1914–15.	1903–04.	1914–15.

Manchester ..	12,110	14,288	234	1,854	2·	12·9
Clarendon ..	14,657	17,620	1,702	2,798	11·6	15·8
St. Catherine ..	14,942	19,408	2,806	2,291	18·7	11·7
Port Royal ..	199	205	5	1	2·5	·4
	138,044	169,415	18,569	13,463		

In the parishes of Westmoreland, Manchester, Clarendon, and St. Catherine the percentage of arrearage may perhaps be higher than it should be, but there were local causes accounting for this in the shape of the aftermath of hurricane in one case and drought in the others, but with minimum imposts of from 3*s*. 2*d*. to 4*s*. 4*d*. per holding of real property it is difficult to admit that the causes enumerated are sufficient to account for arrears so high as from 11·7 to 15·8 per cent. On this point the Collector-General reports as follows :—" The general sentiment of the bulk of the peasantry is opposed to direct taxation in any

form, a sentiment which it is feared is fostered by those higher up the social scale. Prior to 1903 the direct taxes were levied on rental values of houses, on cultivation, and on holdings according to area, but the small holder became so overweighted and arrears accumulated to such an extent, that legislative intervention was sought and arrears were forgiven and a new start made under more favourable auspices, but I am afraid that whatever the incidence and however small the rating, the repugnance to direct taxation will always constitute a handicap to efficient collection."

The Surveyor-General makes the following observations with regard to the sale of Crown Lands, &c., during the year :—

Sale of Land.

Three hundred and fourteen instalment purchasers, who bought 2,881 acres under the Rules for the sale of Crown Lands to small settlers have completed payment of their instalments of purchase money and been issued titles for their lands. There were also 53 other purchasers who paid cash down for 193 acres. To date, of the total of about 33,029 acres that have been sold partly on credit since 1897, about 25,807 acres have been paid for in full, about 3,336 acres taken back for failure to pay, and about 3,489 acres still remain in possession of the purchasers to be paid for. On 3rd December, 1914, the Rules for the sale of Crown Lands to settlers, which had been partly suspended during the past few years, owing to the large amount of land that was out on credit, were issued afresh with some slight amendments, and since that date 70 applications to purchase 538 acres have been received, of which 35 applicants have been allotted 216 acres in satisfaction of their applications. More applications are still coming in and debt collecting and retaking of lands for failure to pay will, as in the past, continue to be undertaken. Twenty-three purchasers were issued refunds of £42 10*s*. 6*d*. for establishing one-fifth of their purchased area in bearing cultivation of permanent crops or making building improvements on town lots ; £34,440 has been received for sale of lands since 1897. The purchase money received during the year is £1,527 4*s*. 10*d*. Roads were made to Crown lands at Grant Bailey's and Clover Hill, St. Ann, and at Mount Donald, St. Thomas, at a cost of £218 4*s*. 2*d*.

Leases and Tenancies.

51¾ acres and 12 town lots have been leased to 14 persons for £203 18*s*. 0*d*. per annum, and 865 praedial tenancies have been made at rentals ranging from 12*s*. to 20*s*. per acre per annum. The total amount of rent received for the year is £3,182 15*s*. 5½*d*.

Forfeiture of Lands.

1,760¾ acres have been finally forfeited. No fresh notifications of forfeitable land have been issued owing to the considerable area on which forfeiture proceedings are pending, covering no less than 9,431¾ acres, on which the half way stage of interlocutory judgment has been reached on only 2,492 acres.

Generally.

No fresh squatters or escheat cases have been concluded ; two are still pending. Sundry prosecutions of trespassers, tenants, etc., had to be undertaken. Titles and surveys for several schools and teachers' cottages were completed.

AGRICULTURE.

A serious drought in the summer months, which particularly affected some of the best banana and sugar districts, caused a reduction in the major crops of the island that would otherwise have attained a very gratifying standard of production.

The exports of cacao for the year achieved a record both in quantity and value, while the recent increase in the price has encouraged planters to pay still more attention to this staple. The various plant nurseries distributed 145,000 cacao plants during the year, mainly to small settlers. By these agencies 340,000 cacao plants have been distributed to the peasantry during the past three years. The indications are that cacao will become of increasing commercial importance to Jamaica in the near future.

The export of coconuts also established a record coincident with the recovery of this industry from the severe blow administered by the hurricane of 1903. Large plantings have recently been made and this staple is rapidly assuming a position of importance in the resources of the Colony.

Sugar and rum have received some encouragement from recent happenings and the estates are looking forward to a profitable year. But for the drought the sugar industry would have benefited greatly from the rise in price of sugar due to the war. Progress is being made with the Cockpit irrigation works in Vere, which should serve to establish the sugar industry in this area on a sound basis in the near future.

The banana industry has had a prosperous year in 1914, but, owing to the summer drought and the collapse of the European market for bananas due to the war, there has recently been not only a reduced demand for the fruit, but also a lack both of quality and of quantity in the output of bananas from Jamaica.

The " Panama Disease " has given some cause for anxiety, owing to the difficulty in securing adequate measures of quarantine among the small owners whose fields were infected with the disease.

A stringent law was therefore passed and the staff of Inspectors has been increased so as to secure efficient control of this and other serious diseases of plants. The actual number of banana plants affected with Panama disease was small, but it appeared that the disease was being spread owing to the carelessness and disobedience of persons whose fields were attacked and that larger powers of control were necessary in order to stamp out the infection.

Only two cases of anthrax were dealt with during the year under the Contagious Diseases of Animals Law, and the general health of the livestock of the Colony has been good.

The Government Stock Farm at Hope seems now to be on a sound basis and closed the year with a surplus of £1,053 on the balance sheet, while the revenue earned was £1,778, as against the original estimate of £1,350.

Despite the loss of imported cattle to the value of £1,400, the live stock valuation shows a surplus of over £600 over the original expenditure.

Of the 55 bulls that have been distributed from the Farm to various breeders in the island, 21 were pedigree Red Polls, and 14 pedigree Jerseys from imported parents of the best breeding.

The experiments with guinea corn silage have shown that this valuable fodder can be produced at a cost of less than 6*s*. per ton, while the effects of a prolonged drought were successfully offset through the feeding of silage to the herd of cattle.

The educational work at the Farm School continues to progress, and despite war conditions there has been a full attendance of students at that institution.

A new station was established during the year on the Savanna, at Lititz, where trials are being made of drought-resistant crops suitable for this depressed district, where the rainfall is so scanty and irregular.

The staff of the Department of Agriculture has recently been strengthened by the addition of an entomologist.

Shipping.

The number and tonnage of ships reported in 1914 compared with the numbers reported in the year preceding were as follows :—

1914—1,434	vessels	with	tonnage	of 2,164,185	tons.
1913—1,401	,,	,,	,,	,, 2,548,296	,,

The corresponding figures in regard to vessels cleared were :—

1914—1,424	vessels	with	tonnage	of 2,142,663	tons.
1913—1,400	,,	,,	,,	,, 2,569,827	,,

Admiralty requirements due to the war and soaring charter rates, sufficiently account for decrease in tonnage and for the increase in the number of smaller craft employed.

The numbers of steam and sailing vessels reported are shown by the following figures :—

1914—1,261	steamers	with	tonnage	of 2,122,083	tons.
1913—1,201	,,	,,	,,	,, 2,498,859	,,
1914— 173	sailing vessels		,,	,, 42,102	,,
1913— 200	,,	,,	,,	,, 49,437	,,

The corresponding figures in regard to vessels cleared were :—

1914—1,253	steamers	with	tonnage	of	2,101,603 tons.
1913—1,207	,,	,,	,,	.	2,525,255
1914— 171	sailing vessels		,,	,,	41,060 ,,
1913— 193	,,	,,	,,	,,	44,572 ,,

The division of the island's carrying trade between British and foreign tonnage will be sufficiently indicated by the following summary of the vessels reporting in 1914 and in 1913 :—

	Vessels.	Tons	Vessels.	Tons.
British steam in 1914 ..	445	1,115,934		
British sailing in 1914 ..	127	11,733		
			572	1,127,667
Foreign steam in 1914 ..	816	1,006,149		
Foreign sailing in 1914..	46	30,369		
			862	1,036,518
British steam in 1913 ..	515	1,442,556		
British sailing in 1913 ..	145	15,943		
			660	1,458,499
Foreign steam in 1913 ..	686	1,056,303		
Foreign sailing in 1913..	55	33,494		
			741	1,089,797

The following further abstract taken from the Collector-General's separate report and designed to show the growth within the last forty years of shipping visiting the island is of much interest :—

	Ships Reported.		Ships Cleared.	
	No.	Tonnage.	No.	Tonnage.
1874 ..	808	381,777	829	384,601
1884 ..	845	475,752	849	469,529
1894 ..	1,131	774,014	1,136	790,326
1904 ..	1,135	1,220,209	1,135	1,220,533
1914 ..	1,434	2,164,185	1,424	2,142,663

In 1874 the average tonnage of a visiting ship was 468 tons; during the past year the average tonnage per ship was over 1,500 tons.

III.—LEGISLATION.

Forty-one Laws were passed during the year 1914, nearly all of which were assented to by me in the financial year under review and 23 during the ordinary session of the Legislative Council in 1915, which,

owing to the closing of the session at an earlier date than usual, were also assented to by me in the same financial year. Of these the most important were :—

Law 6 of 1914 to amend the Criminal Law Amendment Law, 1906.

Law 19 of 1914 providing for the compulsory treatment of persons suffering from yaws.

Law 22 of 1914 to make provision with respect to the laying out of building lots and the opening of new streets.

Law 24 of 1914 prohibiting the navigation of aircraft for certain purposes.

Law 25 of 1914 to further amend Law 28 of 1904 entitled a "Law to consolidate and amend the Resident Magistrates Laws."

Law 26 of 1914 to provide for the apportionment between general revenue and parochial funds of certain expenses incurred in connection with the care of lunatics.

Law 31 of 1914 for preventing overcrowding on ships bringing steerage passengers to Jamaica and for providing life-saving appliances on such ships.

Law 33 of 1914 consolidating the Laws relating to the protection of birds and fish.

Laws 34 and 35 of 1914 consolidating the Laws relating to secondary and elementary education respectively.

Law 36 of 1914 providing for Bank notes being made legal tender.

Law 37 of 1914 providing for the establishment of the Jamaica Volunteer Defence Force.

Law 38 of 1914 to prevent the publication and transmission of naval and military intelligence at times to be determined by the Governor.

Law 39 of 1914 to render the Jamaica Constabulary Force liable to military service in case of invasion.

(The last four Laws were passed at the special session of the Legislative Council called in August shortly after the outbreak of war).

Law 1 of 1915 empowering the Governor to fix maximum retail prices of foodstuffs, etc.

Law 3 of 1915 to prevent the introduction and spread of plant disease.

Law 6 of 1915 to provide for the imposition of restrictions on aliens in time of war, etc.

Law 7 of 1915 to secure the obtaining of information during the present war as to stocks of articles of commerce and to take possession thereof.

Law 9 of 1915 giving powers for securing the public safety and defence of the island during the present war.

Law 13 of 1915 to provide for the protection of public stores.

Law 21 of 1915 to enable orders to be given for restricting the sale or consumption of intoxicating liquor during the war.

Law 22 of 1915 relating to trading with the enemy.

The usual financial measures and certain amending Laws were also passed.

IV.—PUBLIC EDUCATION.

The Director of Education furnished the following statistics :—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books.	Average Attendance for Year ended 31st March.	Per-centage on Average Attend-ance of Number on Books.	Total Payments to Ele-mentary Schools and Teachers.
1914–15 ..	696	94,955	56,333	67·32	£67,440
1913–14 ..	697	96,757	55,411	61·66	£66,847

The annual examination of teachers and Training College students shows the following results :—

There were 127 Jamaica students presented, of whom 109 passed, 13 obtaining honours. Of the 17 students from British Guiana and the Leeward Islands all passed except four.

For the Pupil Teachers' examination 445 were presented and 225, or 51 per cent., passed; of volunteer candidates 2,349 were presented, and 810, or 34 per cent., passed.

The total amount expended on elementary education through the Department was £85,010, as compared with £83,937, and by the Public Works Department, in the building of Government Schools and schoolmasters' houses, £2,725, as compared with £10,407 in the previous year.

Notwithstanding the curtailment of expenditure consequent upon the war, it was found possible to provide better accommodation in certain places where it was needed, and to complete and equip three new Government Schools; seven sites for Government Schools were also acquired. The Director of Education remarks that gradually a healthier attitude of the question of school sanitation is being adopted. The scheme for the creation of Parish and District School Boards was practically completed and the success with which the work of these

Boards has been started is stated to be most encouraging. The Kingston Infant School was closed during the year. The immediate ground for this was the urgent need for economy which was disclosed on the consideration of the estimates for the current year. A party of 50 English teachers, members of the London Teachers' Association, visited Jamaica and spent a week in the island during the month of August.

The number of schools placed in the first class on the results of the annual examination is less by four, and those in the second class less by two than in the previous year; the number of third class schools has remained the same and the failures have increased from four to seven.

Industrial Schools.

The number of inmates of the Industrial Schools, male and female, was :—

Stony Hill	505
Shortwood	—
Alpha Cottage	208
Belmont	20
Happy Grove	10
Broughton	20
A total of ..	763

The Industrial School at Shortwood was closed on the 10th February, 1915, and the inmates, 15 girls and one boy, returned to the care of parents or others able and willing to take them. The question of closing this school had long been under consideration and was decided on after reports from the Director of Education that the Institution was not sufficiently serving the purpose for which it was established, and was costing a high rate of maintenance which fell heavily on the parishes.

Secondary Education.

The expenditure of the endowed schools during the year was as follows :—

	£
Jamaica College	3,272
Munro and Dickinson's	5,686
Wolmer's	3,191
Manning's	No report.
Rusea's	403
Titchfield	1,915
Beckford and Smith's	341
Manchester Schools	330
Vere Schools	1,327
Montego Bay School	888
Guthrie Davidson's	68
	£17,421

Exclusive of Manning's and Beckford and Smith's, the total number of pupils was 1,396, which include those receiving elementary education in the Titchfield Schools.

The Jamaica Scholarship for Boys for 1915 was won by a pupil from the Jamaica College, and that for girls by a pupil from Hampton (Munro and Dickenson). The £60 scholarship was awarded to a pupil from Potsdam.

192 boys and girls are reported to have passed the Cambridge examinations, 52 of whom did so with honours.

V.—GOVERNMENT INSTITUTIONS.

(a) *Public Hospital, Kingston.*

Indoor patients treated, 3,123; outdoor patients, including paupers, 9,007; dressings done for outpatients, 22,667; prescriptions made up, 17,652; total surgical operations, 1,289; dental cases, 1,966; daily average number of inmates, 207; total cost of maintenance, £10,869; receipts, £725 15*s.* 4*d.*

(b) *Victoria Jubilee Lying-in-Hospital.*

Number of patients admitted, 651; 8 pupil nurses admitted for training, seven of whom passed and received certificates; average daily number of patients, 16; receipts, £545 6*s.* 1*d.*; expenditure, £1,243 19*s.* 1*d.*

(c) *Lunatic Asylum.*

Number of patients on 31st March, 1915, 1,399, an increase of 58 since beginning of the year. Total number of patients under treatment during year, 1,670; daily average resident, 1,386; rate of recovery, 47·27 per cent; admissions, 329; discharges, 161; deaths, 110; death-rate, 7·87 per cent.

The proportion of insane is one to 631 population.

Cost of maintenance, £20,337; receipts, £9,827.

(d) *Lepers' Home.*

Patients on 31st March, 1914..		120
Admitted		21
		141
Discharged	5	
Absconded	8	
Died	10	
	—	23
On 31st March, 1915		118

The death-rate was 7 per cent.; cost of maintenance, £1,099 7*s.* 8*d.*; receipts nil.

The Medical Superintendent reports that the treatment by "Antileprol" has been continued in suitable cases during the year, and observes that when the drug is administered in cases which present themselves in the early stages of the disease, the results are excellent and most encouraging.

(e) *Government Savings Bank.*

The liability of the bank to its depositors on current account was decreased during the year by £33,886, the decrease on ordinary accounts being £26,987, and in Government accounts £6,899.

The ordinary deposits amounted during the year to £85,212, a decrease of £21,435, and the withdrawals to £112,199, a decrease of £1,325, as compared with the previous year.

The balance-sheet on 31st March, 1915, shows a liability to depositors of £285,939.

The income and expenditure of the Savings Bank for the year may be summarised as below.

Income.

Interest on investments..	£10,061 10 10
Miscellaneous receipts	8 17 1
	£10,070 7 11

Expenditure.

Interest on deposits	£6,824 15 0½
Loss on realisation of investments	1,297 18 3
Balance carried to general revenue	1,947 14 7½
	£10,070 7 11

The number of pass books examined was 5,346.

(f) *Registration of Titles.*

Work was steadily carried on; the number of titles registered during the year was 882.

The Titles Assurance Fund amounted at the end of the year to £6,281 8*s*. 3*d*.

VI.—JUDICIAL STATISTICS.

Courts, Police, and Prisons.

The judicial statistics show that the total number of convictions in Circuit Courts was 98, as compared with 85 in 1913–1914; of convictions in the Resident Magistrates' Courts, 8,234, as compared with 8,628; and of summary convictions 15,973, as compared with 14,832.

Convictions for praedial larceny were 2,009, as compared with 2,369 in the previous year.

Commenting on these latter figures the Attorney General remarks:

> "Efforts are being made to check this class of offence by encouraging the action of 'Authorized persons' under the provisions of Law 4 of 1909."

There were 3 convictions for murder in the course of the year and 3 for manslaughter, comparing with 7 and 3 respectively in the previous year.

The committals to the prisons during the year numbered 5,575, and to lock-ups for short terms 2,204, making a total of 7,779, as compared with 7,788 in the previous year, a decrease of 9.

The re-convictions during the year amounted to 2,470, of which 763 were second convictions, 538 third, and 1,169 fourth and upwards. During 1913–1914 the re-convictions numbered 1,918.

The daily average of prisoners in custody in the Penitentiary and Saint Catherine District Prison was 1,314, as compared with 1,456 during the previous year. There were 31 deaths in the prisons, as compared with 59 during 1913–1914. There were 3 executions of capital punishment. In the previous year there were 4.

Considering the institutions separately: 19 deaths occurred in the General Penitentiary, representing a rate of 24·39 per 1,000. At Saint Catherine District Prison 12 deaths occurred, representing a rate of 22·64 per 1,000, which is a very great improvement on the previous year, when it was 60·94 per 1,000. The state and discipline of the prisons have been satisfactory; four corporal punishments were inflicted for breaches of discipline.

The reformatory branch at the District Prison contained 28 lads on 31st March. The inmates have a building and compound separate from those occupied by the regular prisoners in the District Prison.

During the year 1914–1915, 168 persons were under supervision as probationers under Law 27 of 1909. From these probationers 852 reports were received. Fourteen probationers were brought before the Court for subsequent offences, showing 8 per cent. of lapses.

The gross expenditure for the General Penitentiary amounted to £15,729, and for the Saint Catherine District Prison £7,452, total £23,181. The gross earnings in the case of the General Penitentiary

were £3,225, and of the Saint Catherine District Prison, £1,452. The yield of the Saint Catherine District Prison Farm was valued at £1,138. £611 of that amount is the value of articles grown and consumed by the prisoners, thereby reducing the cost of the prison by that amount.

Police.

The monthly average number of officers and men below the allowed strength during the year was 22. The number of days absent from duty on account of illness was 11,431, 1,641 more than 1913–1914, and 1,491 less than 1912–1913; 847 men were treated in hospitals, and 619 in barracks or in private quarters. The figures in 1913–14 were 626 and 641 respectively.

The number of cases reported to the Police and Magistrates was 36,823, those prosecuted 31,069, and convictions were obtained in 21,394 cases, as compared with 37,710, 31,430, and 19,672, respectively; in the previous year 131 were under remand for trial. The incidence of crime per 10,000 of population was 442·91 against 453·59, 424·25, and 408·92 for the three previous years.

There were 33 habitual criminals under police supervision, and 2,461 under police surveillance during the year.

The sub-officers and men travelled 632,876 miles in the execution of their duty, as compared with 651,774 miles in the previous year.

VII.—VITAL STATISTICS AND PUBLIC HEALTH.

The estimated population of the Island on the 31st March, 1915, was 883,158. This figure is arrived at as follows :—

Estimated population on 31st March, 1914			864,864
Births registered, 1914–15	34,208		
Deaths registered, 1914–15	18,802		
	—		15,406
			880,270
Migration :—			
Arrivals—general	15,218		
Arrivals—East Indians	Nil		
		15,218	
Departures—general..	12,280		
Departures—East Indians	50		
		12,330	
			2,888
			883,158

Of the general arrivals and departures 9,978 and 6,643, respectively, were labourers, and show a net emigration of 3,335 persons of this class. The remainders, 5,240 arrivals and 5,687 departures, represent a net emigration of 447 persons, of whom 50 were East Indians.

Migration of labourers took place chiefly in respect of the following countries :—

	Departures.	Returned.	Excess. Departures.	Excess. Returns.
Central America	5,788	8,910	—	3,122
Cuba..	749	639	110	—
Hayti	61	84	—	23
Other Countries (American and West Indian) ..	45	345	—	300
Total	6,643	9,978	110	3,445

The mean Island population for the year, that is, the population on the 30th September, 1914, ascertained by adding to the census figures the excess of births over deaths registered since the census, was 878,003. On these figures the marriages, births, and deaths have been calculated.

The following is the number of marriages, births, and deaths registered during the year, with the rates per 1,000 for this and the preceding year :—

		Rate per 1,000.	
		1914–5.	1913–14.
Marriages	2,721	3·0	3·1
Births	34,208	38·9	35·3
Deaths	18,802	21·4	21·7

Of the births, 22,861, or 66.8 per 100 were illegitimate. This is the highest island rate recorded since the compulsory registration of births commenced in 1878. The rate was 64·5 in 1913–1914.

The general death-rate decreased by ·3 per 1,000, but the proportion, due to deaths of infants under 5 years of age, shows an increase of 3·8 per cent. Of the total mortality the deaths of infants were :—

Under one year	5,722	or 30·4	per cent.
One year ..	1,584	or 8·4	per cent.
Two years ..	569	or 3·0	per cent.
Three years ..	370	or 2·0	per cent.
Four years ..	257	or 1·4	per cent.
	8,502	or 45·2	per cent.
1913–1914 ..	7,765	or 41·4	per cent.

Comparing the infant mortality with the births during the year, 34,208 infants were born, and 7,306 died at one year of age or under, equal to 21·3 per cent. The percentage under 5 years was 24·8.

There was great variation in both the birth and death-rates in different parts of the island. In the case of the former the lowest were in St. Andrew, 54·9; St. Ann, 60·5; and Manchester, 62·4, while the highest were in St. Thomas, 72·1 and Hanover, 71·7. The death-rate in the parishes of St. Andrew, 26·3; St. Thomas, 24·5; Portland, 23·8; St. Mary, 22·7; Trelawny, 22·8; and St. Catherine, 22·8, were higher than in 1913–14; in Kingston, 26·8; St. Ann, 17·1; St. James, 21·9; Hanover, 22·2; Westmoreland, 20·3; St. Elizabeth, 17·4; and Manchester, 15·9, they were lower and in Clarendon there was no change.

Uncertified cases of death were 71·6 per cent., compared with 70·0 in 1913–1914 and 75·1 in 1910–1911 for the whole Island. The figures for Kingston were 14·1 in 1914–1915 and 15·7 in 1913–1914.

The principal causes of death in Kingston were as follows :—

Causes.	1913–14.		1914–15.	
	Number of Deaths.	Rate per 100 of Total Deaths.	Number of Deaths.	Rate per 100 of Total Deaths.
Diarrhœa and Enteritis	290	16·7	241	14·9
Phthisis	163	9·4	146	9·0
Heart Disease	110	6·3	103	6·3
Enteric Fever	73	4·2	67	4·1
Atrophy, Icterus, and Scleroma of new born (under 1 year).. ..	185	10·6	169	10·4
Atrophy, Icterus, and Inanition (1 year and upwards)	45	2·5	31	1·9
Chronic Bright's Disease	74	4·2	72	4·4
Bronchitis	59	3·4	45	2·7
Dysentery	47	2·7	49	3·0
Pneumonia	41	2·3	59	3·6
Pellagra	20	1·1	21	1·2

Deaths from malaria in Kingston numbered 22, the same as in 1913–1914, and from fever (not otherwise defined) 5 against 21.

Public Health.

The expenditure of the Medical Department during the year amounted to £77,183, as against £75,292 in 1913–1914.

The expenditure of this department in the course of the last seven years is as follows :—

1908–9	£56,404
1909–10	£58,317
1910–11	£64,986
1911–12	£68,626
1912–13	£74,621
1913–14	£75,292
1914–15	£77,183

This does not include the cost of building, which was £1,816 in the past year, bringing up the total to £78,999, or nearly 8 per cent. of the revenue collected.

By special request of the officer in charge of the Royal Army Medical Corps, Dr. Scott, the Government Bacteriologist, was given permission to attach himself for duty at camp in order to assist in the medical work there, due to shortage of medical officers caused by the war.

With a view to obtaining a better educated and generally higher class of dispensary student than has in some instances been entering the dispenser's profession in recent years, it was decided to make the preliminary examination to be passed by such students somewhat more severe than in the past.

During the year there was established a travelling dispensary with a hospital tent to accommodate 12 patients, with a view specially to the treatment of yaws and also for the purpose of affording medical relief to that class of persons in the country districts, who, though not paupers, are yet too poor to afford the lowest fee for attendance by a District Medical Officer under the Ticket System. 2,322 cases of yaws were treated with salvarsan in the several Public General Hospitals and Medical Districts during the year.

The new hospital buildings at Port Maria were completed during the year and the old premises vacated. The new buildings are a great improvement on the old premises, which was formerly a rum store, providing accommodation for 120 ordinary patients and many more in case of emergency, and having an infective diseases block.

A Cottage Hospital, providing accommodation for six patients, was opened at Ulster Spring in the upper part of the parish of Trelawny, thus supplying a long felt want in this district.

Towards the end of the year, Dr. H. H. Howard, Inspecting Medical Officer of the Rockefeller International Health Commission, visited Jamaica in order to make investigations of the incidence of Hookworm disease and infection in Jamaica. In company with the medical officers of the districts he visited various insanitary spots and several estates employing coolie labour.

He subsequently submitted a report of his investigations and made recommendations with a view to the eradication of the disease; unfortunately, on account of the financial position, it has not been found possible to act, for the present, on his suggestions, but it is hoped that some permanent benefit to the Island will result from Dr. Howard's visit.

The treatment by thymol has been continued during the year, 8,408 cases having been treated at the various country hospitals. In addition, 227 East Indian immigrants were thymolised on the estates.

The Surgeon of the General Penitentiary reports that out of 376 newly admitted prisoners who were tested, 235, or about 61 per cent., were found to be infected.

The Surgeon reports that most encouraging results are being obtained from the use of a strong infusion of quassia (bitterwood) and that these compare so favourably with those obtained from thymol that, for reasons of safety, the use of the latter drug had been entirely discontinued.

The reports of the District Medical Officers on the sanitary conditions of the estates employing East Indian labour show that while they may be regarded as being, in the main, satisfactory, there is much room for improvement, especially with regard to the provision of proper latrine accommodation. This is a matter which has been given much consideration from time to time, and steps have recently been taken to obtain particulars of a type of latrine which will be acceptable to the East Indians.

Quinine appears to be regularly administered on most of the estates.

Vomiting Sickness.

This disease is reported as having been very rife this year, the number of deaths being 196, 106, or 54 per cent., of which were medically certified. In the previous year 133 deaths occurred, 51·1 per cent. of which were certified. The largest numbers of deaths were in St. James, 42; Clarendon, 41; Trelawny, 32.

The outbreak in St. James was exceptionally severe in the Montego Bay District, so much so that the Government Bacteriologist was sent down to make investigations.

The investigations were commenced towards the end of the financial year under review, and were continued in the current year, and the results would seem to uphold the suggestion which had previously been advanced by Dr. Scott, that certain symptoms of the disease indicated the action of a poison.

In the first report submitted by Dr. Scott, he stated that after making enquiries into 32 cases, there was sufficient evidence to make out a strong case against the "ackee," which is largely used as an article of food by the class of persons who are generally attacked by this so-called "vomiting sickness," but that the chain of evidence could not be regarded as complete without confirmation by means of animal experiment.

People generally in the Island have always regarded ackees as poisonous under certain conditions. The condition to which most suspicion is attached is where ackees have not opened naturally but have been forced open after falling from the tree unopened.

Dr. Scott obtained specimens of these suspicious ackees and treated them in the same way as in the cases in St. James, using the water in which they had been boiled for experimental administration to animals. Three kittens and a dog were experimented upon and in each case post-mortems were performed, the results being very similar to those seen in cases of human "vomiting sickness."

The soup or pot-water given to these animals is that which is usually given to children, amongst whom the number of cases of so-called vomiting sickness is greatly preponderant.

Dr. Scott also shows that the disease corresponds exactly with the main ackee season; that the ackee does not grow, at all events to any extent, in any other of the West Indian Islands, thus explaining the limitation of the disease to Jamaica; that the symptoms are those of an acute intoxication; and that the symptoms were most acute in the cases of the younger children of a family who receive the pot-water. Dr. Scott also shows that the disease has no preference for sex, and explains that its attacking West Indian natives in greater numbers than the East Indian or white population, is due to the East Indian rarely eating ackee and being much more careful of his children, while the white are more particular in the selection of the fruit used.

The symptoms, post-mortem appearances, and histological findings in the animals experimented on, Dr. Scott reports, are the same as in cases of human vomiting sickness and his opinion is that the condition is an acute intoxication by a hot aqueous extract of unopened or unwholesome ackees. It should be mentioned that the experiments on animals were made after the close of the year under review and the matter will be further referred to in the Report on 1915–16.

Malaria.

It was not found possible to continue the special vote of £2,000 for the abatement of malaria.

The number of cases admitted to the various hospitals, other than in Kingston, for malaria was 6,975.

The District Medical Officer for Kingston reports that malaria seems to be disappearing from Kingston; a similar comment is made by the District Medical Officer of the Four Paths District of Clarendon in respect of that district. In some of the other districts of the Island there were outbreaks of more or less severity.

General.

The water supplies of the several towns and villages are on the whole satisfactory. A good and ample pipe supply was installed in Chapelton during the year.

Sanitation generally is reported as having improved since the passing of the Health Law, No. 35, of 1910, more interest and action having been taken by the several local Boards of Health.

The arrangements made for the treatment of out-patients at hospitals in 1910–11 resulted in a further increase in the numbers treated. During 1914–15 the numbers were :—

At Kingston Hospital	9,007
At public general hospitals	16,561
In districts	49,071
Under the ticket system of reduced payment ..	925
	75,564

The total number of cases treated in public general hospitals during the year under review was 26,875. There were 610 deaths in hospitals. Adding the cases treated in the Kingston Public Hospital, 3,123, the Jubilee (Lying-in) Hospital, 651, the Lunatic Asylum, 1,670, the Lepers' Home, 141, the total number of patients treated in Government hospitals and asylums was 32,460.

The principal diseases for which patients were admitted into the public general hospitals were as follows :—

Diseases.	1913–14.		1914–15.	
	Cases.	Deaths.	Cases.	Deaths
Malarial Fever—				
Intermittent	5,885	29	6,710	40
Remittent	217	23	183	18
Pernicious	9	2	14	4
Skin Diseases	6,408	5	4,533	8
Diseases of the Digestive System..	1,610	91	1,395	88
Local Injuries	2,089	30	1,701	17
Rheumatism	1,081	—	896	1
Diseases of the Respiratory System	940	45	682	54
Disease of the Circulatory System	198	38	174	40
Diseases of the Cellular Tissue ..	722	7	798	10
Ankylostomiasis (Hook-worm) ..	1,815	17	1,595	17
Gonorrhœa	459	—	513	1
Syphilis	761	15	630	16
Diseases of the Eye	402	—	309	—
Blackwater Fever	8	1	2	1
Enteric Fever—Typhoid	304	88	226	58
Paratyphoid ..	85	9	19	5
Yaws	569	1	696	—

Besides the investigation of vomiting sickness previously referred to, the Government Bacteriologist and his Assistant conducted examinations of specimens for correct diagnoses of diseases, of rats for plague infection, the results of which were uniformly negative, and for testing the purity of water supplies. Special research work was carried out in regard to typhoid bacillus carriers and contagious abortion of cattle amongst the cattle at the Government Stock Farm. With the help of the new Assistant Bacteriologist the total number of specimens examined during the year was 12,930; in the previous year it was 6,697.

608 passengers were confined at the Quarantine Station during the year; 47 vessels were fumigated; 2,068 packages of passengers' baggage were disinfected, and 68 bags of mails.

During the year arrangements were made with the British Consular officers in the Central American and certain of the South American Republics for the immediate notification by telegram of cases of infective disease and in the case of plague of suspected cases also, and it is hoped that this arrangement will tend to keep the Island free from plague or serious infective diseases.

Qualified medical men were appointed as Port Health Officers at Port Antonio and Montego Bay during the year, but the arrangement was discontinued at the end of the year on account of the necessity for retrenchment, and it being thought that no risk would be run by reverting to the former system of Visiting Officers at those ports, the quarantine arrangements for dealing with vessels being now so strict.

VIII.—POSTAL AND TELEGRAPH SERVICES.

The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1914-1915 with those of the two previous years:—

	1912–13.	1913–14.	1914–15.
Postage	£40,992 13 4	£42,213 8 1	£38,790 1 8
Commission on Money Orders	364 3 10	315 0 6	684 15 11
Local commission on British Postal Orders..	753 19 4	787 2 0	943 3 1
Commission on Local Postal Orders	402 14 2	——	——
Miscellaneous	583 3 9	750 16 10	1,068 17 9
Telegraph	8,125 4 10	7,811 9 8	8,255 4 11
	£51,221 9 3	£51,877 17 1	£49,742 3 4

These statistics show a decrease of £2,135 in gross revenue as compared with the previous year. The expenditure of the year by the department amounted to £52,651, as against £50,710 in 1913-1914.

The progress of the department is illustrated by the following figures :—

	Revenue.	*Expenditure.*
	£	£
1894–1895.	27,962	33,904
1904–1905.	33,447	31,725
1914–1915.	49.742	52,651

As compared with the two previous years the numbers of letters and postcards were :—

	At General Post Office.		
	1912–13.	1913–14.	1914–15.
Outwards	4,493,416	4,895,811	4,105,119
Inwards	5,499,762	6,170,649	5,162,326
Total	9,993,178	11,066,460	9,267,445
	At District Post Offices.		
Total	1,486,638	3,144,523	2,007,910
Grand Total	11,479,816	14,210,983	11,275,355
Telegrams sent and received	223,635	226,497	228,172

There is an increase ot 1,675 in the number of telegrams sent during the year, and of £443 15*s*. 3*d*. in telegraph revenue.

One new District Post Office was opened during the year; the total number in existence was 199.

During the year it became necessary to increase the rates of commission on Money Orders on the United Kingdom, United States of America, and Canada, on account of the rise in bank rates as a result of the war.

5,778 money orders, for £54,012 1*s*. 6*d*. were issued in Jamaica, and 26,559 orders for £65,285 10*s*. 4*d*., the issues of other countries,

were paid here. The principal item is £58,851 13*s*. 11*d*. paid on behalf of the United States, chiefly on account of remittances from the Canal Zone.

British Postal Orders were issued of the face value of £74,33 13*s*. 6*d*.; the amount actually sold was £74,991 16*s*. 6*d*., and Orders for £45,192 were cashed in the Colony.

47,469 parcels, of the declared value of £56,860 0*s*. 1*d*. were imported by parcel post, and 11,997 of the value of £11,164 3*s*. 5*d*. despatched.

IX.—GOVERNMENT RAILWAY.

The total receipts were £179,381, against £176,677 in 1913–14, the expenditure, exclusive of debt charges, £107,265, against £112,529 in 1913–14, making the net earnings £72,116, against £64,148. The receipts exceeded those of 1913–1914 by £2,704. There was a decrease of expenditure ot £5,264 as compared with the previous year. These figures do not include an expenditure of £6,284 on Railway Pier No. 3. After paying debt charges on the capital expenditure, which amounts to £2,666,725, the net loss to the Public Treasury on the working of the railway system amounted to £45,972 for the year. The loss for the thirteen years to 1913–14 had been £803,711, bringing up the total since the line was taken over by the Government to £849,683.

X.—PUBLIC WORKS.

The total expenditure of the Public Works Department for the year under review was £160,823, summarised as follows :—

	£	s.	d.
Salaries and other Departmental Charges ..	19,330	2	2
Main Roads and Bridges, Maintenance ..	86,860	13	8
New Works	11,769	5	11
Public Buildings, Maintenance	7,266	19	4
Public Buildings, New Works	4,694	4	3
Lighthouses	1,529	16	8
Rio Cobre Irrigation Works	2,636	6	9
Spanish Town Water Works	755	2	1
Government Schools	2,725	9	0
Telegraph and Telephones	2,804	12	8
	£140,372	12	6
Adding the work done for other Departments and Parochial Boards and paid for from other votes, and for Relief Works	20,450	12	3
	£160,823	4	9

This amount is £13,801 15*s*. 2*d*. less than the expenditure of the previous year, and the smallest since 1907–1908.

The total length of main roads at the end of the year was 2,213 miles, 5½ chains.

The average cost of ordinary maintenance of roads per mile for the whole Island was £33 17*s*. 0*d*. and, including special works of improvement, £38 9*s*. 9*d*., of which £2 4*s*. 7*d*. per mile was due to flood damage.

The average cost per mile in Kingston was £80 2*s*. 3*d*., and in Manchester £21 9*s*. 6*d*., being the highest and lowest respectively.

Owing to the necessity for economy as a result of the war, expenditure was deferred on every work which could be postponed without positive risk or loss to the Government.

The average rainfall for the whole financial year was over 62 inches, or about 81 per cent. of the general average. The expenditure on flood damage was therefore small.

The road surfaces generally were maintained in good condition. The system of rolling the roads appears to increase the life of the material 50 per cent. and over.

No specially important new works were executed. The new Hospital at Port Maria and the Cottage Hospital at Ulster Spring were completed.

All light-houses were maintained in good repair and the services efficiently rendered.

Certain works for the Imperial Government were undertaken during the year. These works involved the haulage of 2,500 tons of machinery, buildings, and building material, over many miles of hilly road to a site some 3,500 feet above sea level.

During the year the Railway and Public Works Stores were separated. This has made it possible to provide for the better care of the "plant" used by the Public Works Department, besides being the means of finding use for certain forgotten articles.

XI.—GENERAL OBSERVATIONS.

The abnormal conditions consequent upon the European war have very seriously affected the Colony. Shortage of shipping facilities has been the foremost factor in this connection, affecting both the export of produce and the import trade.

In spite of these circumstances the revised estimate of revenue has been more than realised.

The one industry in the Colony which the war has materially benefited is the sugar industry, which has reaped the advantage due to the diminished output of beet sugar.

The demand for cocoa has been of benefit to growers of this product in enhancing prices.

Dyewoods also have, to a limited extent, profited by the increased demand.

The drought in the early part of 1914 resulted in a serious diminution both in the quality and the quantity of the fruit produced in the banana industry. Seasonable weather in the latter part of the year 1914 and early in 1915, gives promise of a much improved condition of affairs in this respect.

I am of opinion, provided no set-back is experienced during the forthcoming year, now that the circumstances inevitable to the conditions arising from the war have been realised and dealt with, there is no need for serious anxiety as to the prospects for the future, except as to the provision of adequate shipping facilities for the Island produce.*

Upon the outbreak of war the small settlers were urged to plant increased quantities of foodstuffs in view of the expected rise in the cost of imported foods and due to this precaution, and helped by good rains, there has been an ample supply of provisions, counteracting to some considerable extent the diminution of purchasing power brought about by the effects of the war.

The steps taken upon the outbreak of the war and later by legislation, to prevent an unwarrantable increase in the price of imported food has kept prices within reasonable limits, and has satisfactorily achieved its purpose.

The tourist traffic to the Island suffered seriously and the falling off in the number of tourists was very marked.

The expressions of loyalty to the Empire and to the Mother Country, and the patriotism of all classes since the outbreak of the war, demonstrate the close ties of affection which bind this Colony to the Empire and to the Mother Country, and practical proof of this sentiment may be found in the generous contributions from all sections of the people of Jamaica to the funds for the war, and to their gifts of fruit and presents to the soldiers at the front and to sailors of the Grand Fleet. About £20,000 has been collected, in the majority of cases in small sums, and has been, or is being, transmitted to the various war funds. In addition to this the Colony has voted £50,000 to purchase sugar as a gift to the Mother Country.

---

* Since the above was written the hurricane of the night of 12–13 August has occurred.

The Colony has likewise raised and maintained a defence force of mounted troops and infantry, which has reached a very creditable standard of efficiency, and which is a valuable addition to the regular forces of the Island.

Considerable numbers of young men also have proceeded to the United Kingdom with the object of joining the army, and many have obtained commissions in the new armies.

I have &c.,

W. H. MANNING,

Governor.

The Right Honourable
A. Bonar Law, M.P.,
&c., &c., &c.,
Secretary of State for the Colonies.

CAYMAN ISLANDS (JAMAICA).

(For Report for 1913-14 see No. 839.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
12th February, 1916.

SIR,

I have the honour to transmit to you herewith a copy of the Blue Book of the Cayman Islands for the year 1914–15, together with a copy of the Commissioner's report thereon.

I have, &c.,

W. H. MANNING,
Governor.

The Right Honourable
A. Bonar Law, M.P.,
&c., &c., &c.

(C252) Wt.45316/1003. 1000 & 90. 4.16. B.&F.Ltd. Gp.11/2.

REPORT FOR 1914-15.

FINANCE.

The revenue of the Cayman Islands for the financial year ended the 30th September, 1915, amounted to a sum total of £3,343, and the expenditure to £3,038. The average revenue for the last five years is £3,671.

When regard is had to the present depressing effect on the trade of all countries in consequence of the War, with the natural and inevitable concomitants of uncertainty and anxiety, it cannot be said that the revenue has suffered to any very appreciable extent during the past year, though signs are apparent that these islands will not for long be permitted to enjoy such a favoured position.

Unlike the inhabitants of Grand Cayman who fish exclusively for the green turtle, those of the Lesser Islands confine their operations to the "Hawk's bill" turtle, from which tortoise shell is derived. There is at present more than £1,000 worth of shell on the London market which cannot be disposed of, Continental nations being the principal purchasers, while the market price has dropped considerably. The merchants and storekeepers refused to give credit, hence it was that those who possessed savings were forced to draw on their slender reserves of money, while others were compelled to live a hand-to-mouth existence. The price of coconuts too, on which commodity so many depend for a means of subsistence, has been comparatively low. Such were the conditions obtaining up to the month of August 1915.

On Friday, the 13th August, a hurricane of unprecedented severity devastated the island of Cayman Brac within the period of one hour, rendering the inhabitants homeless and in many cases destitute. Fortunately the death of one child only was reported. Of two hundred and sixty-one houses only one remained intact, while 75 per cent. were totally destroyed; 98 per cent. of the coconut trees at Cayman Brac have been blown down; at little Cayman 40 per cent. have met with a similar fate. All provision grounds were destroyed. Of Government property, in addition to the new Government Building completed two weeks before the storm which was unroofed and forced from its foundation, the old Court House, school house, lighthouse, and boat house, have been completely swept away. The actual damage sustained in respect of house property amounts approximately to between £7,000 and £8,000, and to coconut trees, £20,000, taking the average annual yield of a tree at one pound.

The road which runs by the seashore throughout the island has been for the most part obliterated and will require no inconsiderable sum to restore.

Many of the people who have habitually constituted Mother-earth their banker and deposited their savings within her apparently secure vaults, were unable to trace the hidden places in consequence of the effects of the hurricane.

The Government Medical Officer of Grand Cayman at once proceeded to the island with a supply of drugs. A supply of foodstuffs was as soon as possible forwarded to the sorely stricken inhabitants from Jamaica and clothes from Grand Cayman. This was supplemented a few weeks after by generous gifts of food from the merchants of Montego Bay, the Bank of Nova Scotia, the United Fruit Company, and by food, clothes, and subscriptions made in response to an appeal through the medium of the "Register" and "Daily Item" newspapers of Mobile, United States of America, in which town a considerable number of Caymanians reside.

A Relief Committee was duly appointed to distribute the food and clothing, and steps were taken by means of leglislation for the granting of loans at a small rate of interest to those requiring the same in order to enable the inhabitants to rebuild their shattered houses.

Grand Cayman was not for long allowed to enjoy immunity from Nature's visitations. At 7 p.m. on Saturday evening, the 25th of September, strong winds sprang up which blew uninterruptedly with spasmodic gusts of great and increasing intensity until 6 p.m. on the following Monday morning.

The sea swept to a distance inland never experienced within the memory of the oldest living inhabitants, since the year 1846, completely destroying all ground provisions and much pasture land, and damaging the public roads to the extent of £250. Fortunately no appreciable loss was sustained in respect of house property.

Export Duty.—There is an export of 1*s.* per 1,000 on coconuts.

Assets and Liabilities.

On the 30th September, 1915, the assets of the Dependency amounted to £4,878.

The liabilities were £418 due to depositors in the Government Savings Bank and £53 due to depositors in Treasury; Money Order Account £1,697, making £2,168 in all.

TRADE AND INDUSTRIES.

Imports.

The value of the imports from all countries in 1914–15 has been £17,345.

The average for five years is £26,004,

EXPORTS.

The value of the exports to all countries amounted in 1914–15 to only £1,810.

The average for five years is £8,625.

The trade of these islands during the year under review cannot be said to have been affected by the war to the extent anticipated. A turtle-canning factory was erected in Georgetown and canning operations began in July. Five hundred turtle were canned in twenty-two days. This represents nine hundred and sixty cases, each case containing two dozen tins.

The calipee and skin of the turtle are put up separately from the meat itself. These are placed in cans of varying sizes, namely, 2 lbs. and 3 lbs., and in future 1 lb. tins will be added.

The prices paid under contracts of five years' duration are as follows:—51*s.* for grown females from 120 lbs. upwards, and 32*s.* 6*d.* for males of 120 lbs. upwards, These prices are somewhat in excess of those previously obtaining. Estimating the amount of turtle caught in the course of a year at two thousand head, this would yield approximately four thousand cases of twenty-four tins each.

There are at present forty people employed in the factory, with every prospect of an increase in this number as time goes on.

There was every reason to believe that the establishment of the factory would in a great measure have contributed towards the unimpaired maintenance of the economic life of the people inasmuch as the whole output was consigned to the United States of America with every prospect of a ready and reliable market; but, unfortunately, whether due to the war or other causes, the sales have been so slow—only a very few cases having been disposed of—that the promoters decided to suspend operations for the present until their efforts to place the consignment were rewarded with greater success. There does not, however, appear to be any reason at present to justify a verdict of failure. Foreign buyers, on whose support the people of Grand Cayman have hitherto depended have, as a result of the war, considerably curtailed their purchases.

Efforts will also be made to stimulate an interest in the cultivation of sponges. When regard is had to the success of this industry from small beginnings in other parts of the Empire, there does not appear to be any reason why equal success should not attend the establishment of it in the Cayman Islands, The only difficulty would seem to be the expert knowledge that would perhaps be required to initiate the people in the proper method of growing and curing. The growing of sponge would be a blessing to the people of the Lesser Islands now that the Hawk's bill turtle trade is at a standstill and the coconut industry crippled.

Unfortunately, the Williams Shipping Agency, of New York, with whom negotiations were entered into some time ago with a view to the establishment of direct steamship communication between

America, Jamaica, and Grand Cayman, have been forced to relinquish all idea of such an undertaking owing to the difficulty experienced in chartering vessels as a result of the war.

SHIPPING.

Georgetown, Grand Cayman, is a port of registry, having vessels with an aggregate tonnage of 307. The number of ships entered and cleared during the year 1914–15 is as follows:—

Entered	159
Cleared	169

SAVINGS BANK.

The Government Savings Bank, established in 1908, has proved of great use to those desirous of availing themselves of the opportunity offered for safe investment. The transactions for the financial year ended the 30th September, 1915, were:—

Deposits, £57. Withdrawals, £204.

The balances to the credit of depositors at the end of the year amounted to £418 7*s.* 8*d.*

POST OFFICE.

The Post Office Department has since its establishment amply proved its usefulness and has contributed largely to the finances of the Dependency. For the last six years it has been the mainstay of these islands and has been responsible for nearly one half of the total revenue. In 1914–15 the Post Office revenue amounted to £1,355; the total revenue being £3,343.

The sale of postage stamps to collectors forms a very appreciable item in its revenue. The inland postal service shows a steady and favourable increase in the amount of business transacted, while the large receipts in respect of the foreign mail are due to the number of Caymanians who have been compelled to seek a livelihood in the Canal Zone, Cuba, Central American Republics, and the United States.

POST OFFICE ORDERS.

All money order business is transacted through Jamaica, the issue of orders in the Cayman Islands being at present confined to Georgetown, Grand Cayman, and Cayman Brac.

JUDICIAL.

There are two sittings of the Grand Court in each year, namely, in June and December. The Commissioner presides as Judge. The court has an unlimited civil and criminal jurisdiction except in cases of capital felony—Jamaica Law 11 of 1911. Quarterly Petty Courts and Weekly Petty Sessions are held, in which two Justices sit. The former deal with smaller civil actions, and the latter take cognizance of minor offences. Cases of serious crime are few and isolated, while the minor offences are generally the result of drink. In all cases in the Grand Court there is a right of appeal to the Jamaica Supreme Court and in the Petty Court to the Grand Court.

LEGISLATIVE.

The Legislative Assembly is styled "The Justices and Vestry," and is composed of all the Justices of the Peace (13 in number) and 27 Vestrymen. The Vestry meets by statute in September in each year to make provision for the next financial year, beginning on the 1st October, and otherwise when summoned for the despatch of business.

PUBLIC WORKS.

During the year under review £740 has been expended on public works, which includes the upkeep and improvement of Government property and the maintenance and construction of roads. Owing to the urgent necessity of effecting repairs to the main road from Georgetown to Boddentown, a distance of twelve miles, no road construction was undertaken, the sum of £547 being devoted exclusively to repair and maintenance on an extensive scale. The road is, for the greater portion of its length, constructed of soft marl, and its condition by reason of the ordinary wear and tear of traffic and continual rains was far from satisfactory before these repairs were executed. Efforts will be made during the coming year to connect Georgetown and West Bay by a driving road. The latter town is fast becoming a busy and prosperous centre of trade, and the necessity of opening up this portion of Grand Cayman is urgent.

A sea wall was built in Georgetown and a large part of the ground in front of the Court House has been filled in, thus removing one of the most dangerous spots for vehicular traffic in the island. The Government pier at Northsound has also been put in a thorough state of repair.

In consequence of the damage done to the roads in various portions of Grand Cayman by the high seas, a result of the hurricane, an expenditure of about £250 has been necessary. The road for one mile and a half through Spotts having been completely obliterated and the sea wall demolished, this portion of road alone has cost £180 to restore.

A new and commodious two-storey building has been erected at Stake Bay, Cayman Brac, consisting of the Post and Customs offices on the ground floor and Court House above. Unfortunately, the building, completed two weeks before the hurricane, was forced from its foundation, unroofed, and damaged in other parts by the storm.

AGRICULTURE.

A branch of the Jamaica Agricultural Society was established in Georgetown in 1908, but does not appear to be progressing as satisfactorily as such a movement deserves. There is always a lamentable scarcity of ground provisions, though Georgetown affords a ready market for their sale. £18 a year is voted for agricultural purposes and for the granting of prizes at the annual Agricultural Show by way of encouragement. During the past year no meetings have been held. The attendance at meetings in the past has been most unsatisfactory, and it would seem that the members have lost interest in the subject.

The provision grounds throughout the Cayman Islands were, with very few exceptions, totally destroyed by the hurricanes and high seas. The larger portion of the land in Grand Cayman is devoted to the growing of guinea grass and the rearing of cattle and horses. There are in Grand Cayman about 2,000 head of cattle and about 250 horses.

POPULATION.

In June, 1911, a census of the Cayman Islands was taken, showing a total population of 5,564. Of these 2,322 are white, 2,211 are coloured, and 1,031 black. 3,087 were returned as able to read and write, 749 as able to read only, and 1,728, including children, as illiterate. In religious denomination the people are mainly Presbyterian, 3,364 being returned as such. There were 981 Baptists, all in the Lesser Islands, and 357 are returned as of the "Church of God." During 1915 there were 171 births, 81 males and 90 females. Of these 143 were legitimate and 28 illegitimate. In the same period there were 44 deaths, 26 males and 18 females.

EDUCATION.

The state of education in the Dependency is far from satisfactory, especially in the country districts. £250 a year is devoted to education. The conditions obtaining at the present time do not offer any attractions to good and reliable teachers. The latter in all "registered" schools receive a capitation grant from the Government of 5*s*. a year for every pupil on his books, and a fee of 3*d*. up to the third standard, and 6*d*. from the fourth standard upwards in the case of destitute children. All parents and guardians pay a similar fee of 3*d*. and 6*d*. for the education of their children. While the Government grant is of great assistance to the teachers, they are largely dependent on the collection of fees from private individuals, who cannot always be relied upon to pay, and in a large number of cases offer payment in kind instead of cash. The result is that teachers, whether fit or unfit, must be tolerated or the schools must close, as in the case of Gun Bay, and East End, where children are growing up in ignorance. All children between the ages of six and fourteen years residing within two miles of a school are required to attend 75 per cent. of the sessions of the school every term. A Government school has been established at Northside during the past year. Owing to the increased price of foodstuffs and the probable effect on the revenue of the Islands in consequence of the war and the hurricanes, it has not been considered advisable to bring forward the contemplated Bill in respect of increasing the present *ad valorem* duty of 5 per cent. by 2½ per cent. to provide for free and compulsory education. The probability of this measure being adopted within the near future appears very remote.

HOSPITAL.

There is a small building kept for the purpose of isolating infectious diseases but it is not generally used. Government Medical Officers are appointed for the Lesser Islands and Grand Cayman, whose duty it is to visit all the outlying districts.

PRISONS AND CRIME.

There are no prisons in the Dependency. Prisoners sentenced to more than six months' imprisonment are sent to Jamaica. There is very little crime, and offences are generally of a trivial nature, in most cases the result of excessive drinking.

POLICE.

The police force consists of an Inspector, five policemen, and one district constable, the services of the police in the country districts being utilized in the carriage of inland mails.

GENERAL HEALTH.

The death rate for the year was 8 per 1,000.

The following is the Government Medical Officer's Annual Report on the Cayman Islands:—

"I propose to deal with Grand Cayman as a whole there being nothing peculiar to any one district as regards temperature, situation, or vegetation.

"*Diseases of the Digestive System.*

"1. Acute Tonsilitis has been frequent, especially during the past three months. This, I should like to impress upon the inhabitants is a simple ailment, occasionally with serious and ever fatal complications, hence the necessity of immediate and careful treatment.

"2. Indigestion and Dyspepsia:—This is widespread and attacks all ages, even those of tender years. It is due to the excessive consumption of a carbohydrate or starchy diet in the form of the cassava and sweet potato. It being impossible to eliminate these from the every day dietary, I have advised the people to boil their cassava longer, also to eat it younger, and to use the sweet potato boiled instead of roasted.

"3. Dysentery:—During the months of June and July, 13 cases were brought to my notice, but I am glad to say there were no deaths, all being of the ordinary catarrhal type. Here I have advised the boiling of drinking water, this being the source of infection.

"4. Typhoid Fever:—Eight cases have occurred during the year, five in Boddentown, three in Georgetown. All were of a mild type with the exception of one case in Boddentown which proved fatal. Three of the Boddentown cases I traced to a common water supply. When one appreciates the number of ways typhoid fever may spread and be contracted, it is often a difficult matter to trace the source. It will be as well for me to offer a few words of advice here, at the same time stating some of the ways in which it may be contracted. (1) Water contaminated by proximity to closets; (2) Flies; (3) Typhoid carriers. By (3) is meant a person who has had typhoid fever, and though completely recovered harbours the causative bacillus, sooner or later to be passed into a closet, to become a prey for the housefly. It will therefore be seen how necessary it is to keep the closets well disinfected. A very cheap and effective method is to pour ordinary white lime on the deposits two or three times weekly.

"*Diseases of the Respiratory System.*

"Six cases of pulmonary tuberculosis or consumption have come under my notice, three of which were far advanced and have since died. There are, however, many other early cases. Here the smoke-fire question is an important one. The irritating nature of the smoke tends to aggravate the persistent cough so often present and is most injurious. Equally so is this the case in the disease known as bronchial asthma, cases of which are quite as numerous as digestive troubles. The true cause of asthma not being definitely decided I may here venture an opinion.

"The cause I believe is geographical and geological. By this I mean the low-lying nature of the Islands and sandy nature of the soil in general —an atmospheric and an irritating cause. It is a common practice all over these Islands for children and others to go around at night with heads uncovered—this is an injurious habit for healthy people, still more so for asthmatical patients—the paroxysms well known to all who suffer from it being more severe at night.

"*Special Diseases.*

"I was struck on my arrival here with the anaemia or bloodless appearance of children and adults throughout the Island. This I believe has been attributed to the blood-sucking powers of the mosquito. I grant his powers are great in this direction, but it is quite impossible in my

mind to conceive such results. I would ask why these cases are met with both in the winter and the summer? The solution lies in this. The anaemia present here is what used to be called tropical anaemia and now known to be due to two small round worms known as *Ankylostoma duodenale*, and *Necator americanus*, the disease being known as Ankylostomiasis. These worms live and flourish in the soil, especially where it is of a sandy nature. They gain entrance to the body by two routes. (1) Through the skin of the hands and soles of the feet; (2) by the mouth. It is a common practice for young children to eat dirt and thus convey these worms direct to the intestine. The great numbers attacked will be appreciated by noting how many children and adults alike walk barefooted in these Islands. An effort is now being made and steps taken, on instructions from His Excellency the Governor of Jamaica, to combat this disease.

"Rheumatism is very prevalent, being more of a sub-acute and chronic infection. A few cases of the acute type have, however, presented themselves.

"Malarial fever has occurred to the extent of four cases—two of these in persons who have never been away from the island. The other two cases were in patients infected on the Nicaraguan Coast. The small number of cases are accounted for by the very few mosquitos of the family anophelinae being found. The mosquito commonly seen belongs to the genus Stegomyia. This latter genus is concerned in the spread of yellow fever. I would, therefore, strongly recommend, that if at all possible, inhabitants should make their houses mosquito-proof. During the year several vessels and Caymanians visit the Gulf ports, and it is quite probable that any day we may be face to face with yellow fever.

"I should also recommend that the Isolation Hospital be made mosquito-proof in case of emergency, for should a case arrive it will be rather late to net it then, and there is always the possibility of there being no netting to be had in Georgetown.

"Fish-poisoning requires mention.

"Eighteen cases have, to my knowledge, occurred in the past seven months. I have had the opportunity of being present at seven of these. The period of incubation varies from 12 to 48 hours, and the onset in each case was sudden. The symptoms and duration are what one meets with in a typical case of ptomaine poisoning, and the illness is treated by me as such with most satisfactory results. The opinion held locally is that all fish caught inside the reef are poisonous. This I do not agree with, as I have had reliable information to disprove this. Baracoota, goat-fish, and jack, are the fish most commonly believed to be poisonous. In all seven of my cases I obtained a definite history pointing to the baracoota being the source of infection. In conclusion, I may state that I am of opinion that it is probably due to a toxin developed in the liver of the fish and akin to that found in certain forms of shell-fish. This, as far as I can see, can only be avoided by careful discrimination, and those fish which experience has shown to be harmful be discarded.

"There is yet another type of fever found all over the island and known locally as five-day fever. This, in my opinion, is a mild form of relapsing fever transmitted by ticks.

"I visited Cayman Brac twice and Little Cayman once during the year and find the existing conditions to be similar to those of Grand Cayman.

"In conclusion, I may say that, on the whole, the health of the islands is good."

CLIMATE.

The Cayman Islands are among the healthiest places in the world. There are no cases of illness *attributable* to climatic conditions. The

weather is warm for the greater part of the year. The prevailing breeze is from the south-east from April until October, when the cool season begins with a change of wind to the north and north-west in the early part of November.

The following table shows the average temperature :—

	Morning.	Mid-day.	Evening.
Hot months	83°	89°	86°
Cool months (Nov. to March)	71°	80°	74°

COLONIAL REPORTS, &c.

TURKS AND CAICOS ISLANDS.

(For Report for 1914 see No. 844.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
1st June, 1916.

SIR,

I have the honour to transmit to you herewith a copy of the Blue Book of the Turks and Caicos Islands for the year 1915, together with a copy of the Commissioner's report thereon.

I have, &c.,
W. H. MANNING,
Governor.

The Right Honourable
A. Bonar Law, M.P.,
Secretary of State for the Colonies,

(C280) Wt.45316/1003. 1000 & 90. 8.16. B.&F. Ltd. Gp.11/2.

REPORT ON THE

BLUE BOOK OF THE TURKS AND CAICOS ISLANDS

FOR THE YEAR 1915.

FINANCIAL.

The revenue for the year amounted to £8,036 6*s.* 7*d.*, being £1,015 below that collected for 1914, which was £9,051.

The expenditure, including a further contribution of £500 to War Funds, was £9,133, as against £9,391 in 1914, a decrease of £258 during the year under review.

The surplus of assets on the 31st December was £7,737 13*s.* 10*d.*

There is no public debt.

The current coins are British gold, silver, and nickel. United States gold and silver coins are accepted at a discount of 1½ per cent. on the face value.

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports during the year ended 31st December, 1915, were valued at £27,620, as compared with £28,191 in 1914.

The exports were valued at £30,487, as against £28,347 in 1914.

Classified under their respective headings, a comparative statement of the exports for the years 1914 and 1915 reads as follows :—

Articles.	1914. £	1915. £
lt: coarse	15,902	15,418
Salt: fishery	5,948	7,249
Sisal	2,212	3,801
Sponges	2,410	1,129
Conches	566	1,217
Canned lobster	558	421
Sea shells	18	50
Miscellaneous	1,022	1,329

The direction of trade, both imports and exports, during the same years may be thus summarized :—

Countries.	Year.	Imports	Exports.
		£	£
United Kingdom ..	1914.	3,757	61
British Colonies ..	—	5,528	5,129
Foreign Countries ..	—	18,906	23,157
Totals		£28,191	£28,347
United Kingdom ..	1915.	2,880	*Nil.*
British Colonies ..	—	4,391	7,785
Foreign Countries ..	—	20,349	22,702
Totals		£27,620	£30,487

Salt.—Progress continues to be made in the development of a trade in fishery salt, the export returns of which show an increase of £1,300 in value as compared with the output for the year 1914. The efforts of Mr. C. H. Durham and others in the erection of crushing mills for the preparation of this grade of salt will probably be further extended as time goes on.

Sponge.—This industry shows a falling off to the extent of £1,280, due entirely to the disastrous War now being waged in Europe. On the other hand, it is gratifying to mention that artificial culture of sponges continues to make satisfactory progress. Mr. George Silly, the lessee of Chalk Sound (Blue Hills, Caicos Islands), was able to report that at the close of the year 1915 his work in this direction extended to upwards of 250,000 cuttings, chiefly of the "reef" variety. The take of "wool" sponges has almost reached vanishing point, a condition of affairs for which no one seems able to ascribe a reason; it would be both interesting and valuable, did funds permit, to have this matter investigated scientifically.

Sisal.—An advance of 3½ cents per pound in the American market stimulated reaping operations in connection with the sisal industry, and resulted in an increase of £1,580, in the exports under this head, as compared with 1914.

Conches.—Not the least interesting among the subsidiary marine products of the Caicos Islands is the export of conches to the neighbouring republic of Haiti. This trade, which for some years had wavered between £500 and £700 per annum in value, reached its maximum during the year under review, when over one million conches, valued at £1,217, were shipped from the Dependency.

The lobster-canning industry shows a slight falling off in the value of produce exported, but on the other hand "sea shells," hitherto a waste product of the conch industry, for the fourth time finds a place among exports from the Dependency.

Cotton.—Considerable interest was shown by peasant proprietors in the Caicos Islands in connection with the cotton industry. Samples of the cleaned staple, grown in these islands, were submitted to London brokers and were favourably reported on. Difficulties in the way of shipping, owing to the War, at present prevent immediate results in this respect, but it is reasonable to anticipate that with the cessation of hostilities a development of the cotton industry will undoubtedly follow.

Shipping.

The number of vessels that entered at the various ports in the Dependency during the year was 287 with a tonnage of 180,418, as compared with 254 vessels and a tonnage of 192,811 in the previous year.

The following statement shows a total tonnage of shipping outwards during the past two years:—

Year.	Vessels.	Tons.
1914	260	192,786
1915	286	180,983

VITAL STATISTICS AND PUBLIC HEALTH.

The estimated population on the 31st December, 1915, was 5,930, an increase of approximately, 315 since the last census—in 1911.

The number of births during 1915 was 194, and the number of deaths 81. The birth-rate was 35 per 1,000, and the death-rate 14 per 1,000, the latter being the lowest recorded for many years.

Forty-four marriages were registered during the year.

The health of the Dependency was good, and there were no serious cases of disease or epidemics of any kind. There were two inquests and one lunacy enquiry,

---

EDUCATION.

Primary Education.

At an annual expenditure of £600, the Government provided, through the medium of the Board of Education, for the needs of primary education throughout the Dependency. At the nine schools thus maintained by the Government, the average number of pupils on the registers during the year under review was 922, with an average attendance of 729, as compared with 898 and 679, respectively, for the previous year.

The number of children attending private schools in the three principal settlements of Grand Turk, Salt Cay, and Cockburn Harbour, amounted to 113, and the records of the aided schools at the Bight and Five Cays in the Caicos Islands disclose an average attendance of about forty pupils during the year.

The total expenditure of the Board for management, books, materials, new buildings, and other expenses during the year amounted to £811 2*s*. 5*d*. Of this sum, the completion of the new school houses at Sandy Point and Lorimers absorbed about £205.

In his very instructive and interesting report on the work of the Education Board for the past twenty years, the Inspector of Schools states:—"It would appear that the maximum of result is being attained with the present limitations as to expenditure. The number of schools has increased, and the attendances are being steadily augmented; one naturally looks for an increased grant to carry on the work efficiently and to extend its benefits."

There is still, unfortunately, no State provision for Secondary Education.

POSTAL, TELEPHONE, AND TELEGRAPH SERVICES.

Mails, to and from the United Kingdom, are transmitted and received twice a month by steamers of the Clyde Line, *viâ* New York. From the middle of the year the steamers of Messrs. Pickford & Black resumed, at an increased subsidy, the monthly service connecting the Dependency with Halifax (Nova Scotia), and Jamaica. To the great regret of everyone this service has again been interrupted owing to the scarcity of tonnage caused by the European War.

The total revenue of the Post Office was £330 12*s*. 4*d*., or £328 below that for 1914, and the total expenditure amounted to £166 5*s*. 9*d*. In consequence of the War, receipts from foreign stamp dealers have entirely ceased. Hitherto the sale of postage stamps to philatelists abroad has constituted a considerable portion of the revenue of the Postal Department.

The inauguration of a small but thoroughly up-to-date telephone system is among the notable events of the year under the head above referred to. This service connects all Government institutions, as well as a few business places and residences, with a central exchange, and has proved a great boon to everyone concerned. On the 31st December, 1915, there were 19 connections on the system.

The submarine line of the direct West India Cable Company touches at Grand Turk and thus connects the Dependency with other cable systems of the world. The Company is paid a yearly subsidy of £120, in return for which they furnish a daily news bulletin. The rate to England is 3*s*. per word, to Halifax 2*s*., to Bermuda 1*s*. 6*d*., to Jamaica 1*s*., and to other places the Company's rate to the nearest place plus the connecting Company's rate to destination.

SAVINGS BANK.

The number of depositors in the Savings Bank on the 31st December, 1915, was 474. The total amount standing to their credit on that date was £4,972, or £991 in excess of the amount shown on the 31st December, 1914.

Deposits in 1915 amounted to £1,861, and withdrawals to £957, thus indicating a credit on the working of the bank of £904 during the year under review.

There was invested of Savings Bank funds the sum of £4,778.

The following is a comparative statement of the operations of the Savings Bank during the past two years :—

Year.	Number of depositors.	Deposits during year.	Withdrawals during year.	Balance due to depositors.
		£	£	£
1914	440	1,485	1,152	3,981
1915	479	1,861	957	4,972

CRIMINAL STATISTICS.

Offences reported to the Police	145
Persons brought before the Magistrates	144
Summary Convictions	105
Convictions in the Supreme Court	5
Number of persons acquitted :—	
In the Inferior Courts	34
In the Superior Courts	1

Prisons.

The number of prisoners of all classes committed to the prison during 1915 was 41, or three in excess of the number shown for the year 1914. Of this number 35 were males and 6 females.

The daily average in gaol increased from 1·33 in 1914 to 3·33 during the year under review. The cost of the maintenance of all prisoners for the year was approximately £49.

Police Force.

The Police Force of the Dependency consists, as hitherto, of an Inspector, a Sub-Inspector, 1 Sergeant, 1 Corporal, 2 Lance Corporals, and 14 Police, District and Revenue Constables. No changes have been made in the number and constitution of the Force, which performed its duties satisfactorily during the year.

METEOROLOGY.

The readings and statistics taken at the United States Weather Bureau Station at Grand Turk, in latitude 21° 21′ N. and longitude 71° 07′ W. at a height of 11·3 feet above sea level, were as follows :—

Rainfall .. .. 35·38 inches.

Highest temperature recorded for the year 93°.

Lowest temperature recorded for the year 61·2°.

The prevailing winds during the year are thus recorded .—

N. 21 days.	N.E. 57 days.	E. 195 days.	S.E. 44 days.
S. 17 days.	S.W. 5 days.	W. 13 days.	N.W. 9 days.

GENERAL

The year under review opened under circumstances of national sadness common to the Empire. Locally the year 1915 may be classed among the worst in the annals of the Dependency as regards salt raking, its chief industry. The situation was in great measure saved by the large stocks of salt on hand overcarried from the year 1914, but, as small rakings occurred in 1915, the exports for the coming year must necessarily be affected thereby. Constant rains during the raking season resulted in one of the shortest crops of salt on record, and such a condition of affairs, in a small community almost entirely dependent on this industry, could not be otherwise than severely felt. Owing, however, to the action of the Assistant Commissioner, Mr. Hutchings, who shortly after the outbreak of the War influenced the peasantry of the Caicos Islands to plant increased areas in ground provisions, large supplies of cheap food were placed on the local market, thus greatly relieving a situation which, but for his foresight, might easily have become serious.

Although but a small unit of the British Empire, the full significance of the War now being waged in Europe is thoroughly appreciated by every class of the community, who manifest the keenest interest in every phase of the struggle.

Except sponging, local industries have not been affected to any extent by the War, although the question of how to obtain tonnage to convey the salt produce of the Dependency to northern markets during the coming year is causing grave concern. It is with the greatest difficulty that even an occasional vessel can now be obtained for the purpose at an advance of four hundred per cent. on the usual rate of freight.

The limited resources of this small Dependency debar the inhabitants from taking a more active part in the struggle, but by many acts of personal effort and generosity they have given ample proof that the same spirit of loyalty and devotion which characterises other and larger portions of His Majesty's Empire is not lacking among dwellers in the Turks and Caicos Islands.

G. WHITFIELD SMITH,

Commissioner.

Grand Turk,

15th April, 1916.

COLONIAL REPORTS, &c.

No. 909.

JAMAICA.

(For Report for 1914–15 see No. 860.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House, Jamaica,
25th August, 1916.

SIR,

I have the honour to report on the Blue Book Returns of this Government for the financial year ended 31st March, 1916.

I.—FINANCIAL.

2. The total revenue and expenditure for the last two years have been as shown below :—

	Revenue.	Expenditure.
	£	£
1914–15	980,174	1,054,969
1915–16	1,132,049	1,105,942

3. On the night of August 12th to 13th, the Island was visited by a severe hurricane, which passed along a line some fifty miles or so north of and parallel to the north coast of the Island. The full force of the wind was not felt in the Island, but it nevertheless succeeded in doing a considerable amount of damage to the growing crops and Government buildings and works, especially on the north side. The banana industry suffered a severe set back, practically all the cultivations being destroyed, so much so that it was not until after the close of the financial year under review, when the young plants which had survived the storm had grown up, that there were any ready for shipment. Coconuts were also damaged, but to a lesser degree, as also were the minor industries, *e.g.*, cocoa, coffee, and pimento. The sea rose to such a height along the north coast that the railway line between Hope Bay and Saint Margaret's Bay was washed away for some distance, rendering necessary a deviation of the line inland two and three quarter miles in length, and costing between £9,000 and £10,000. Considerable damage was also done to the coast roads on the north side.

(C313) Wt. 45316/1003. 1,000 & 90. 11.16. B.&F.Ltd. Gp.11/2. B

4. The Legislative Council was called together and met on the 21st September, and Supplementary Estimates of the cost of repairing the hurricane damage to Government buildings and works were presented and passed. The estimates called for a total expenditure of £57,652.

5. In addition, there was a further sum of £5,986 estimated to be required for the repair of damage to main roads, which, as it was not expected to be expended before the 31st March, was not included in the estimate. The repair of hurricane damage was estimated, therefore, to cost £63,638.

6. Between the months of August and December severe flood rains were experienced in practically all the parishes of the Island, doing more or less serious damage to main roads and bridges, the cost of repairing which was estimated at £23,380.

7. The estimates for 1915–16 as originally passed were expected to work out as under :—

Expenditure	£1,011,331
Revenue	974,364

leaving a deficit of £36,967, which it was decided should be met out of the loan of £62,250 which it had been arranged should be obtained through the Imperial Government to reimburse the local Government the amount advanced from its cash balance on the construction of the Chapelton Branch Railway.

8. In consequence of the hurricane a revised estimate of revenue and expenditure was prepared and submitted to the Legislative Council at its meeting in September, together with a forecast of the financial position to the 31st March, 1916. The revised estimate of revenue showed that the receipts were expected to fall short of the budget estimate by £63,218, while the expenditure, inclusive of the cost of repairing hurricane damage, showed an increase of £61,574. Towards meeting this falling off of revenue and increase of expenditure, amounting in the aggregate to £124,782, sums amounting to £63,205 were available, leaving a deficit on the 31st March, 1916, of £61,577.

9. In view of all the circumstances, I decided that it was inadvisable to levy extra taxation at the Session in September to meet this expected deficit, thinking it better to wait till the ordinary Session in March, 1916, to deal with it and the next year's requirements together.

The second revised estimate prepared in February, 1916, showed an expected deficit on the 31st March, 1916, of £61,923, practically the same as that of the forecast in September.

10. The actual results of the year 1915–16, as shown by the final accounts, show the following :—The ordinary heads of revenue, *i.e.*, those shown in the statement, exclusive of Customs Export Duties, Insurance Fund, Chapleton Branch Railway Loan, Loan for the Redemption of the Railway Second Mortgage Bonds, and the transfer

from the Constabulary Pension Fund, show, as compared with the budget estimate for the year, a net decrease of £9,471. The decreases are £16,285 under Railway, £2,610 under Port, Harbour, and Light Dues, £2,064 under Miscellaneous, £1,997 under Post Office, and £1,311 under Interest, making a total decrease of £24,267 ; while the increases are £11,792 under Customs Import Duties, £1,461 under Fees of Office Stamp Duties, etc., £930 under Licenses, Excise, and Internal Revenue, £362 under Land Sales, and £251 under Rents, making a total increase of £14,796. The new Customs Export Duties for a portion of the month of March, 1916, amounted to £6,653. Of the total revenue a sum of £19,975 represents amounts received either on account or in consequence of the extra taxation imposed at the meeting of the Legislative Council in March, 1916. Particulars of the extra amount so received will be given later on when a comparison is being made between the actual revenue received, and the revised estimate of revenue prepared in February, 1916. If, therefore, this extra revenue be omitted the revenue received in 1915–16 would have been less than that received in 1914–15 by £29,446.

11. The expenditure was more than the budget estimate by £94,912 but, as stated above, supplementary appropriations amounting to £57,675 were voted after the hurricane in August, 1915, and the excess over the amounts actually voted was therefore £37,237. But if there be excluded the special payment of £45,000 for purchase of Railway Second Mortgage Bonds referred to later, which was met by a loan, the expenditure was less than the budget estimate plus the hurricane appropriation by the sum of £7,763.

12. There were savings on almost every head of expenditure in consequence of the exercise of the most rigid economy. If the payments are considered against the actual votes (including Supplementary Votes) the following are the chief points of difference, £1,000 and over only being taken, viz. :—Decreases : Railway, £9,563 ; Military, £4,412 ; Medical, £2,325 ; Police and Prisons, £1,630 ; Pensions, 1,210 ; Public Works Department, £1,157. Apart from an excess of £44,316 under Charges of Debt, which was the result of the bringing to account of the £45,000 paid for the purchase of the Railway Second Mortgage Bonds which was specially met by the raising of a loan, the only excesses of any consequence were £3,403 under Public Works and Buildings, £14,141 under Miscellaneous, of which £12,381 represents an amount for the purchase of sugar as the Colony's war contribution to the Imperial Government, which, when the estimates for 1915–16 were being prepared, it was expected would have been expended in 1914–15 ; the remainder of this excess (£1,760) is more than accounted for by a sum of £2,035, which was expended on relief works in the Vere District of Clarendon during the previous year, but not brought to account until 1915–16 ; and £1,952 under Excise, Internal Revenue, and Customs.

If the payments are considered against those of the previous year, the following are the chief points of difference :—Increases of £53,428 under Charges of Debt, as to £45,000 of which see remarks above ; of

£13,737 under Railway (after including in the Railway expenditure for 1914–15, the amount of £6,290 for the Railway Pier No. 3 shown separately in the expenditure statement); £7,277 under Public Works and Buildings; and £4,845 under Military (Defence).

13. The chief decreases as compared with the preceding year were £12,503 under Miscellaneous. (In arriving at this figure there has been added to the total of Miscellaneous for 1914–15, the amount shown separately as expended for gift sugar to the Home Government in that year, for the reason that there is included under Miscellaneous in 1915–16 the amount of £22,948 expended in that year for gift sugar); £5,319 under Medical; £1,692 under Post Office and Telegraphs; £1,371 under Public Works Department; £1,281 under Education; £1,279 under Constabulary and Prisons; and £1,097 under Agricultural Services.

14. The total receipts during the year being £1,132,050 and the expenditure £1,105,942, there was a surplus on the year's transactions of £26,108. As, however, the balance in the Surplus and Deficit Account of the Colony on the 1st April, 1915, was a debit of £15,378, the year closed with a surplus balance of £10,730.

15. As already stated, it had been expected when the revised estimates for 1915–16 were prepared, prior to the passing of the estimates for 1916–17, that there would have been a deficit of £61,923 on the 31st March, 1916; but the revenue exceeded anticipations, £61,225 more than the revised estimate having been received, while the expenditure was less by £11,428.

16. In connection with the increase of revenue, it should be pointed out that the following items of additional taxation, which were approved at the March Session of the Legislative Council, came into force during the month of March and by the end of that month had yielded the amounts set opposite them, viz.:—

Transfers from Free List	£490
Export Duties	6,653
Surtax on Excise	322
	£7,465

17. Among the proposals for increased taxation originally submitted to the Legislative Council, was a 10 per cent. surtax on Import Duties, which was, however, withdrawn subsequently to the introduction into the Legislative Council of the necessary Bill to give effect to it. During the time it was in operation, however, a sum of £1,120 was collected.

18. The knowledge which prevailed from the time of the Special Session of the Legislative Council in September, 1915, that further taxation would be proposed at the ordinary meeting of the Legislative Council to meet the deficits, led to heavy clearances of goods from bond, and the additional duties thus brought to account by forestalling are estimated by the Collector General at £7,890 for Customs Duties, and about £3,500 for rum duties.

19. These amounts (£7,465, £1,120, £7,890 and £3,500) together come to £19,975, and if they be omitted from the calculation, the increase of revenue over that anticipated when the second revised estimates were made up in February, 1916, was (£61,225–£19,975) £41,250.

20. This amount is more than accounted for by increased collections under the following heads, viz. :—Customs duties (exclusive of the increases mentioned above), £17,292 ; Railway, £11,715 ; Licences, Excise and other Internal Revenue, £5,007 ; Fees of Office Stamp Duties, &c., £4,558 ; Post Office, £2,003 ; amount received from sale of Insurance Fund investments in excess of that estimated. £696.

21. The chief decreases of expenditure as compared with the second revised estimates were under the following heads, viz. :—Railway, £4,644 ; Charges of Debt, £2,609 ; Post Office and Telegraph, £1,235 ; Medical, £1,217 ; Public Works, Buildings, &c., £1,215 ; Constabulary, Prisons, and Reformatories, £1,052 ; with only one considerable increase of expenditure, viz., Excise, Internal Revenue, and Stamp Office, £3,640, other smaller increases and decreases bring the net result of the expenditure to a decrease of £11,428 as stated above. To summarise, therefore, while the position is nominally better at the close of the year by £72,653 (the expected deficit having been £61,923 and the actual surplus proving to be £10,730), which has been arrived at by an improvement of revenue of £61,225 and decrease of expenditure of £11,428, there must be remembered the forestalling of revenue which it is extremely difficult to say came only to the amount stated above, and some expenditure appears only to have been deferred. Undoubtedly the extra taxation imposed in the last month of the year, coupled with the improvement in trade, owing partly to the logwood boom in the last quarter of the year, produced a very real improvement in the position at the end of the year as compared with what had been expected.

22. The public debt of the Island (most of which is represented by productive investments) amounted to £3,783,941 on the 31st March, 1916. The accumulated sinking funds on the same date amounted to £963,771, leaving a net liability of £2,820,170. Included in the debt were guaranteed public loans for local purposes, secured on municipal rates and undertakings, amounting to £472,444, the sinking funds in respect of which amounted to £86,892.

23. The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together for the last two years, are shown in the following comparative statements :—

Kingston City Council.

	Receipts.	Expenditure.
	£	£
1914–15	38,420	37,777
1915–16	37,712	37,835

	Kingston General Commissioners.		*Other Parochial Boards (14 Parishes.)*	
	Receipts.	Expenditure.	Receipts.	Expenditure.
	£	£	£	£
1914–15 ..	49,919	52,074	136,116	129,194
1915–16 ..	45,293	44,700	130,681	125,045

The debts of the Parochial Boards to the Treasury for advances made for water-works and markets, &c., amounted at the close of the year to £15,865.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(a) *Imports and Exports.*

24. The total values of imports and exports for the last two years are as follows :—

	Imports.	Exports.
	£	£
1914	2,565,820	2,904,533
1915	2,327,458	2,228,664

The shortage of tonnage brought about by the European War was probably the most direct cause of the decrease in imports, but the hurricane of 1915 and its interference with the output of the banana-producing centres, undoubtedly restricted the spending power of the people in those areas. In the case of the exports, the relative importance of these factors is probably reversed. To the scarcity of fruit is to be attributed the greater portion of the decline in the value of the exports, comparison with 1914 showing a falling off on this item alone of £708,982. Against this falling off, however, there was an increase in the output of the products of the sugar cane of £220,362 ; in dye-wood and extract of £131,758 ; in cocoa of £77,058 ; lime

juice of £12,690; and annotto of £6,851. And, generally speaking, there was active demand for all agricultural products, and had tonnage been adequate and the banana crop normal there would have been little to complain of.

25. By way of gauging the growth of the Colony's business over a longer period than is comprised in the foregoing abstract, the imports and exports at ten years intervals since 1875 is here given:—

	Imports.	Exports.
	£	£
1875	1,700,253	1,410,484
1885	1,325,602	1,413,722
1895	2,228,945	1,921,421
1905	1,941,937	1,843,180
1915	2,327,458	2,228,664

26. In the forty years, the total trade to and from the United Kingdom has declined from 69·3 per cent. to 35·6 per cent.; the United States has increased from 19·6 per cent. to 50·4 per cent.; Canada has increased from 6·0 per cent. to 8·3 per cent.; and Other Countries has increased from 5·1 per cent. to 5·7 per cent.

The figures in the Collector-General's report also show that the trade, which had before the War gone to enemy countries, has gone as regards imports more to the United States than to the United Kingdom, while as regards exports to the United Kingdom, these make a more favourable showing because of the enhanced value of the products.

27. In his remarks on the year's trade returns, the Collector-General calls attention to the scarcity of tonnage measured by a fall of 36·5 per cent. on Light Dues collections, and one of 48·7 per cent. in Harbour Dues; to the striking, though not unexpected, increase in percentage of imports from the United States of manufactured goods, the proportion having reached 52·9 per cent., while Great Britain's share of a trade that was formerly essentially her own had fallen to 44·9 per cent.: the failure of fruit exports, the value of bananas sent away having decreased by £708,982, this being chiefly due to the hurricane of August, 1915, improvements in the values of products of the sugar cane to the extent of £220,362, and in dyewoods and extracts to the extent of £131,758, cocoa £77,058, lime juice £12,690, and annatto £6,851; and the improved demand for ginger, hides and skins, tanning material, and pimento, and finally to the birth of a new industry, so far as the Colony is concerned, in the preparation and export of copra, no less than 1,222,817 lbs. of a value of £11,174 having been exported. In the case of another new minor industry, orange oil, there was an export valued at £13,608.

28. The agricultural statistics collated by the Collecting Officers of Taxes during 1915–16, compared with an average of the preceding four years' returns, produce the following figures under the four main divisions into which the information is grouped :—

	1915–16.	Average 1911–15.
	Acres.	Acres.
Tilled Lands	278,262	271,332
Guinea Grass	174,122	155,675
Commons	535,295	525,643
Wood and ruinate	1,221,526	1,210,025

A wholesome rate of progress is apparent under each grouping.

29. Lands subject to tillage are further classified under the particular crops which they produce, and the following is an abstract of each classification, showing the figures for 1915–16 against a four year average :—

	1915–16.	Average 1911–15.
	Acres.	Acres.
Canes	33,830	32,351
Coffee	18,383	21,236
Coconuts	30,072	19,036
Banana	89,477	83,707
Cocoa	11,432	11,630
Ground Provisions	64,082	66,587
Mixed Cultivation	28,103	30,871
Minor Items	2,883	4,018

30. The Collector-General is careful to explain the conditions under which agricultural statistics are collected and the scope for error which consequently exists, but as the chief groupings preserve a relationship to the annual output, there is no reason for believing that such statistics are more faulty than those collected in other parts of the Empire. The figures given reflect the dependence placed on bananas and coconuts in the Island's economics, and they register the improved outlook for the products of the sugar-cane.

31. Taxation on real property yields but a small fraction of the revenue required for the upkeep of the Central Government, but this source is the main dependence of the several Parochial Administrations. The combined levy for general and parochial purposes must in the main be considered very moderate, but notwithstanding this, or perhaps because of this, there appears never to be any provision beforehand for meeting recurring claims, and every disturbance of market and every hurricane, drought, or flood is immediately reflected

in the response to the tax collector's demands. For this reason the figures relating to the numbers of properties on which taxes are collected, or those on which they remain unpaid, are always interesting.

32. Analysis of the properties in arrears shows that in the eastern half of the Island, which is more dependent on the banana, the arrearage increased considerably owing to evil times upon which the fruit trade had fallen, while in the western half the improved outlook for sugar and rum, and the very active demand for logwood, resulted in a very appreciable reduction in the arrearage rate at the end of the year. For the whole Island the number of properties in arrear decreased from 13,463 to 11,679, so that on a balance the good outweighed the bad.

Blue Mountain Forest Reserve.

The purchase of Trafalgar by the Government has added a much needed area to this proposed reserve. Arrangements have been made in another case for an exchange of land, but generally the lack of funds has prevented any progress towards the establishment of this reserve.

AGRICULTURE.

33. The year has been one of favourable seasons, and but for the hurricane and storms in August and September very large crops would have been obtained.

34. The banana industry suffered severely from the hurricane, while the scarcity of ships has occasioned anxiety as to the immediate prospects of the fruit trade.

35. The exports of cacao showed a gain of one-third in value over those of the previous year, which were the greatest on record. A good deal of cacao has been planted during the year, and the plant nurseries issued 127,000 cacao plants to the public.

36. The demand by the public for plants of all sorts was brisk, and the various nurseries, despite retrenchment in their upkeep, established a record in the issue of plants for the year.

37. The sugar industry has enjoyed a successful revival, and, owing to the high values now ruling for both sugar and rum, the planters have realised a large sum for their produce, and are hopeful as to the future.

A good deal of planting of sugar cane has been undertaken, and schemes for the extension of sugar enterprises are being actively pursued.

38. While the storms damaged the coconut trees somewhat the actual loss of palms was small, and the trade in coconuts has been both brisk and profitable.

Some 600 tons of copra were exported during the year, and this would appear to be a new industry that will figure more largely in the exports of the Colony in the near future.

39. Owing to the blockade of Germany, logwood has been in strong demand, and high prices have ruled for wood both for export and for use in the local dye factories. The circulation of money through the brisk demand for logwood has served very greatly to counteract the severe losses to the banana industry resulting from the hurricane.

40. The Government Stock Farm at Hope has had a successful year, the balance sheet showing a gain of £980 for the operations of the year. At the public sale of stock held in February, 38 head of cattle, of all ages, realised an average of £15 per head.

41. The attendance at the farm school has fallen off slightly, due to war conditions. Sixteen of the students of this recently established institution are now serving in the Imperial Forces.

42. It had been decided by the end of the year to convert the station at Lititz into a sisal hemp plantation, as the land proved to be unsuitable for stock rearing or general cultivation. Preparations for planting about 600 acres in sisal and henequen have been made at this station.

Shipping.

43. The shipping returns do not, of course, include Admiralty shipping, and the comparative figures for 1915 and 1914 come out thus :—

1915—	914	vessels reported with tonnage of			1,251,722	tons.
1914—	1,434	,,	reported	,, ,, ,,	2,164,185	,,
The decrease being 520 vessels and the tonnage					912,463	,,

1915—	931	vessels cleared with tonnage of			1,304,687	tons.
1914—	1,424	,,	cleared	,, ,, ,,	2,142,663	,,
The decrease being 493 vessels and the tonnage					837,976	,,

44. Dividing the numbers of vessels reported in the two years between steamers and sailing craft the following figures are disclosed :—

1915—	738	steamers with tonnage of			1,213,317	tons.
1914—	1,261	,,	,,	,, ,,	2,122,083	,,
1915—	176	sailing vessels with tonnage of			38,405	,,
1914—	173	,,	,,	,, ,,	42,102	,,

and a similar division of the vessels cleared produces the following :—

1915—	759	steamers with tonnage of			1,266,317	tons.
1914—	1,253	,,	,,	,, ,,	2,101,603	
1915—	172	sailing vessels with tonnage of			38,370	,,
1914—	171	,,	,,	,, ,,	41,060	,,

45. These figures will show how badly the Colony was starved during the year in the matter of tonnage, the tonnage visiting being less than half of what it was in the years immediately preceding the War, and the following abstracts indicate that, as might have been expected, owing to the national demands arising directly out of the War, British ships have contributed more largely to the general decrease than have foreign ships.

	Vessels.	Tons.	Vessels.	Tons.
British steamers in 1915 ..	141	338,454		
British sailing in 1915 ..	130	11,375		
			271	349,829
Foreign steamers in 1915 ..	597	874,863		
Foreign sailing in 1915 ..	46	27,030		
			643	901,893
British steamers in 1914 ..	445	1,115,934		
British sailing in 1914 ..	127	11,733		
			572	1,127,667
Foreign steamers in 1914 ..	816	1,006,149		
Foreign sailing in 1914 ..	46	30,369		
			862	1,036,518

III.—PUBLIC EDUCATION.

46. The Director of Education furnished the following statistics :—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books.	Average Attendance for Year ended 31st March.	Percentage on Average Attendance of Number on Books.	Total Payments to Elementary Schools and Teachers.
1915–16 ..	696*	97,290	54,928	66·85	£67,009
1914–15 ..	696	94,955	56,333	67·32	£67,440

(* These figures include five Industrial Schools which do not receive grants-in-aid under the code.)

47. The Director of Education makes the following remarks concerning open-air education which are very interesting and useful, especially at this juncture :—

" Open-air education has been receiving a great deal of attention in England and the subject occupies a place in the Annual Report of the Chief Medical Officer of the Board of Education.

"In England the scheme of open-air education was introduced for the benefit of weakly children, but it is found to have great advantages also for the robust and healthy. Classes are often held in Jamaica, with great advantage, under trees in the playgrounds, and, now that building grants from the Government cannot be looked for, it is suggested that at a school where the accommodation is insufficient to meet the requirement of Article 116 of the Code, a part of the playground should be chosen and an awning or temporary roof set up securely, the character of it being determined by the locality; a well-sloped thatched roof with wide eaves is sufficient; the ground may need to be levelled, hardened or concreted, allowing a very slight fall from the centre so that a heavy driving shower will leave no pools and a trench may be required to carry off the water; protection should be afforded on the weather side. The department is prepared, on the recommendation of the inspectors, to accept such additional simple accommodation under Articles 99. 1 and 116.

"The parents of the children in any neighbourhood will probably be able to give practical advice as to the best way of fashioning such an open-air class room and will, it is hoped, render gratuitous aid in putting it up."

48. The results of the annual examination of schools show that 267 were placed in the first class, 289 in the second, and 120 in the third. In the previous year the numbers were 250, 301 and 120, respectively. The failures are one less than last year. The number of first-class schools has increased by 43 per cent. during the last ten years, while third-class schools have decreased by 33 per cent.

49. On account of illness, Mr. J. R. Williams, the Director, was compelled, to my great regret, to retire on pension in January last after 32 years of service, during the last six of which he was head of the Education Department. To the great regret of the department, the Government, and the Island in general, Mr. Williams died on the 23rd April, 1916.

Industrial Schools.

50. The number of inmates of the Industrial Schools, male and female, was:—

Stony Hill	524
Alpha Cottage	245
Belmont	26
Happy Grove	11
Broughton	23
A total of ..	829

Secondary Education.

50a. The average total number of pupils in the endowed schools was 1,519, which include those receiving elementary education in the Titchfield Schools.

51. The Jamaica Scholarship for Boys for 1916 was won by a pupil from Potsdam, and that for girls by a pupil from Hampton (Munro and Dickenson). The £60 scholarship was awarded to a pupil from Wolmer's School.

196 boys and girls are reported to have passed the Cambridge examinations, 64 of whom did so with honours.

IV.—GOVERNMENT INSTITUTIONS.

(a) *Public Hospital, Kingston.*

52. Indoor patients treated, 3,264; outdoor patients, including paupers, 9,131; dressings done for outdoor patients, 28,882; prescriptions made up, 13,868; total surgical operations, 714; dental cases, 2,392; daily average number of inmates, 197; total cost of maintenance, £10,417; receipts, £862 9*s.* 6*d.*

53. During the year it was arranged that 20 beds should be kept for men training at Camp with the Jamaica War Contingent.

(b) *Victoria Jubilee Lying-in-Hospital.*

54. Number of patients admitted, 517; 9 pupil nurses were admitted for training, seven of whom passed and received certificates; average daily number of patients, 13; receipts, £465 2*s.* 6*d.*; expenditure, £1,199 12*s.* 10*d.*

(c) *Lunatic Asylum.*

55. Number of patients on 31st March, 1916, 1,441; an increase of 42 during the year. Total number of patients under treatment during the year, 1,731; daily average resident, 1,427; rate of recovery, 42 per cent.; admissions, 332; discharges, 144; deaths, 148; death-rate, 10·37 per cent.

Cost of maintenance, £22,946; receipts, £10,017.

(d) *Lepers' Home.*

Patients on 31st March, 1915..		118
Admitted during the year		30
		148
Discharged	6	
Absconded	5	
Died	16	
	—	27
On 31st March, 1916		121

The death-rate was 10·8 per cent.; cost of maintenance, £2,676 7*s.* 11*d.*; receipts nil.

56. The Acting Medical Superintendent reports that the drug "Antileprol" has been used during the year under review, and continues to realise very hopeful and excellent results.

(e) *Government Savings Bank.*

57. The liability of the bank to its depositors on current account was decreased during the year by £18,485, the decrease on ordinary accounts being £22,930, and the increase in Government accounts £4,445.

58. The ordinary deposits amounted during the year to £66,291, a decrease of £18,921, and the withdrawals to £89,221, a decrease of £22,978, as compared with the previous year. The balance-sheet on 31st March, 1916, shows a liability to depositors of £267,454.

59. The income and expenditure of the Bank for the year may be summarised as below.

Income.

Interest on investments..	£9,253	7	3
Allowance to meet loss on sale of investments	4,402	3	4
Miscellaneous receipts	12	19	8
	£13,668	10	3

Expenditure.

Interest on deposits	£6,304	4	5
Loss on sale of investments	7,364	5	10
	£13,668	10	3

The number of pass books examined was 3,894.

(f) *Registration of Titles.*

60. Work was steadily carried on; the number of titles registered during the year was 699. The Titles Assurance Fund amounted at the end of the year to £6,548 approximately.

(g) *Administrator General and Trustee in Bankruptcy.*

Administration.

61. Letters of administration to the estates of five persons, and probate to the estates of two were granted to the Administrator General in the Supreme Court, and letters of administration to the estates of fifteen persons in the Resident Magistrate's Court.

The Administrator General was also appointed by the Court as trustee and guardian in the matter of one estate and infant; guardian of two infants, interim receiver in one estate of a deceased person, and receiver in one suit. He was also otherwise appointed to act under a power of attorney in one matter and guardian of seven infants' estates.

During the year the effects of three persons who died in the public hospitals were handed over to the Administrator General to be dealt with by direction of the Governor.

The estates of 136 persons who died abroad were referred to the Administrator General to be dealt with under Law 21 of 1906.

62. The work of the Custodian of Enemy Property under the Trading with the Enemy Law (22 of 1915) has during the past year been attended to in the Department, and the moneys which have been received were invested with the approval of the Governor.

The cash transactions of the year were :—

Receipts	£81,540	5	5½
Disbursements	£55,768	19	1
Payments and balance carried forward to next account	£25,771	6	4½

At the close of the year there were 373 accounts open in the books, and the amount at credit of deceased persons, lunatics, Receiverships, Custodian of Enemy Property, etc., was £133,212 19*s.* 9½*d.*

£370 9*s.* 8*d.* was paid into the Treasury under the Casual Revenue Law for balances of Panama labourers, and other estates and commissions amounting to £2,512 3*s.* 11*d.* were earned.

Bankruptcy.

63. There were 18 provisional orders of bankruptcy made in the Supreme Court; 12 of these were made absolute, two were revoked and four were pending at the end of the year, and one was transferred from the lower courts.

The aggregate of the liabilities in these bankruptcies was £17,688 9*s.* 6*d.*

The cash transactions of the year were :—

Receipts	£19,719	1	1¼
Disbursements	£9,039	5	2½
Payments and balance carried forward to next account	£10,679	15	10¾

64. On 31st March, 1916, there were 179 accounts open in the books, and the amount at credit of bankrupt estates was £12,886 5*s.* 2¼*d.* Of this amount £12,422 was in the Government Savings Bank.

£464 12*s.* 10*d.* was earned for commission.

V.—COURTS, POLICE, AND PRISONS.

65. The judicial statistics show that the total number of convictions in Circuit Courts was 99, as compared with 98 in the previous year; of convictions in the Resident Magistrates' Courts, 9,305, as compared with 8,234; and of summary convictions 16,005, as compared with 15,973.

There were 3,177 cases of prædial larceny in which a charge was preferred, as against 2,801 in the previous year, and there were 2,300 convictions as against 2,009 in 1914–15. A committee is at present considering the subject of "Authorised Persons" and the provisions of Law 4 of 1909 relating to them.

There were 5 convictions for murder during the year, comparing with 7 in the year 1914–15, and the death sentence was carried out in 4 of the 5 cases.

Prisons.

66. The committals to the prisons during the year numbered 6,099, and to lock-ups for short terms 2,351, making a total of 8,450, as compared with 7,779 in the previous year, an increase of 671.

67. The re-convictions during the year amounted to 2,356, of which 721 were second convictions, 397 third, and 1,238 fourth and upwards. During 1914–15 the re-convictions numbered 2,470.

68. The daily average of prisoners in the Penitentiary and St. Catherine District Prison was 1,483 as compared with 1,314, in the previous year. There were 37 deaths in the prisons, as compared with 31 in 1914–1915. There were 4 executions for capital punishment, as against 3 last year.

Considering the institutions separately the daily average in the Penitentiary was 824, as against 779 during the previous year, and in the St. Catherine District Prison 659 as against 535. The deaths in Penitentiary were 17, representing a rate of 20·63 per 1,000, compared with 19, representing a rate of 24·39 per 1,000, in 1914–15; and in the St. Catherine District Prison 20, representing a rate of 30·35 per 1,000, as against 12, representing a rate of 22·64, per 1,000 last year. The Surgeon of St. Catherine District Prison reports that 15 of the 20 who died in that institution were received into the prison in a feeble state, and were unfit for hard labour, 3 were tubercular cases, 4 chronic Bright's disease, and the others chronic ailments, and that one prisoner was 80 years of age—senile decay.

69. The state and discipline of the prisons have been satisfactory; six corporal punishments were inflicted for breaches of discipline.

The reformatory branch at the District Prison contained 58 lads on 31st March.

70. During the year 1915–1916, 147 persons were under supervision as probationers under Law 27 of 1909. From these probationers 701 reports were received. Six probationers were brought before the Court for subsequent offences, showing slightly over 4 per cent. of lapses, as compared with 8 per cent. in 1914–15.

71. The gross expenditure for the General Penitentiary amounted to £15,773, and for the St. Catherine District Prison to £8,134, total £24,907, as compared with £15,729 and £7,452, or a total of £23,181 in 1914–15. The gross earnings in the case of the General Penitentiary were £2,803, as compared with £3,225 last year, and of the St. Catherine District Prison, £1,505 as against £1,452. The yield of the St. Catherine District Prison Farm was valued at £1,228 as against £1,138 last year, the amount of the articles grown and consumed by the prisoners being £774 compared with £611.

Police.

72. The establishment, including officers, was 25 below the authorised strength on the 31st March, 1916, but the monthly average deficiency during the year was 13. The number of days absent from duty on account of illness was 10,185 as compared with 11,431, in 1914–15, and 9,790 in 1913–1914; 737 men were treated in hospitals, and 693 in barracks and private quarters. In 1914–15 the figures were 847 and 619, respectively.

73. The number of cases reported to the Police and Magistrates was 39,075, those prosecuted 32,793, and those in which convictions were obtained 21,328, as against 36,823, 31,069, and 21,394, respectively, in the previous year. 55 cases were under remand for trial; in the year before the number was 131. The incidence of crime per 10,000 of the population was 442·44, as compared with 425·76 in 1914–15, 440·70 in 1913–14, and 417·04 in 1912–13.

74. There were 30 habitual criminals under police supervision, and 2,638 under police surveillance during the year. In the previous year the figures were 33 and 2,461, respectively.

75. The sub-officers and men travelled 664,987 miles in the execution of their duty, as compared with 632,876 miles in the previous year.

The conduct and discipline of the members of the Force were on the whole good.

VI.—VITAL STATISTICS AND PUBLIC HEALTH.

76. The estimated population of the Island on the 31st March, 1916, was 894,735. This figure is arrived at as follows :—

Estimated population on 31st March, 1915		883,158
Births registered, 1915–16	30,854	
Deaths registered, 1915–16..	19,277	11,577
		894,735

77. The mean Island population for the year, that is, the population on the 30th September, 1915, ascertained by adding to the census figures the excess of births over deaths registered since the census, was 890,424. On these figures the marriages, births, and deaths have been calculated.

78. The following is the number of marriages, births, and deaths registered during the year, with the rates per 1,000 for this and the preceding year :—

		Rate per 1,000.	
	1915–1916.	1915–1916.	1914–1915.
Marriages ..	2,677 ..	3·0 ..	3·0
Births ..	30,854 ..	34·6 ..	38·9
Deaths ..	19,277 ..	21·6 ..	21·4

79. 20,653, or 66·9 of every 100 births registered, were illegitimate. This is slightly higher than the rate, 66·8 per cent. in 1914–15, which was the highest island rate recorded since the compulsory registration of births commenced in 1878.

80. The death-rate was 21·6 per 1,000 of population, an increase of 0·2 over that of the previous year ; but the proportion due to deaths of infants under 5 years of age shows a decrease of 2 per cent. Of the total mortality the deaths of infants were :—

Under one year	5,424	or	28·1 per cent.
One year ..	1,665	or	8·7 per cent.
Two years ..	560	or	2·9 per cent.
Three years ..	384	or	2·0 per cent.
Four years ..	295	or	1·5 per cent.
	8,328	or	43·2 per cent.
1914–1915 ..	8,502	or	45·2 per cent.

81. Comparing the infant mortality with the births during the year, 30,854 infants were born, and 7,089 died at one year of age or under, equal to 22·9 per cent. The percentage under 5 years was 26·9.

The highest birth rates were in Hanover 39·2 and Clarendon 39·1, and the lowest in Kingston 30·2 and St. Andrew 30·9.

The death rates in St. Andrew, 28·6; Portland, 24·2; St. Ann, 18·0; St. James, 23·4; Hanover, 22·9; Westmoreland, 21·7; St. Elizabeth, 17·8; Manchester, 16·3; Clarendon, 20·6; and St. Catherine, 24·1, were higher than those recorded in 1914–1915, and in the other parishes of the Island they were lower.

82. The percentage of uncertified causes of death was 73·3, as compared with 71·6 in 1914–1915; 70·0 in 1913–1914; 73·3 in 1912–1913, and 75·2 in 1911–1912, for the whole Island. In Kingston the figures were 16·7, as compared with 14·1 in the previous year.

Public Health.

83. The expenditure of the Medical Department during the year amounted to £72,671, as against £77,183 in 1914-1915.

This does not include the cost of the maintenance of buildings, which was £1,908 in the past year, bringing up the total to £74,579. No new works of any importance on buildings were undertaken during the year.

84. Owing to the inability to obtain salvarsan for use in the treatment of yaws, the travelling dispensary and hospital which was established in the previous year, with a view specially to the treatment of this disease, was closed on the 12th June, 1915. During the time the dispensary was in operation, 1,498 patients were treated for yaws, 408 of whom received two injections and 60 three injections.

Of the 1,498 patients treated, 1,109 were cured, 385 were under treatment and 4 died at the time of the closing of the dispensary.

In consequence of the urgent need for economy and owing to the fact that the ordinary method of treatment of the disease was suspended during the year as being unsatisfactory and expensive, the treatment for yaws has been less than in the immediately previous year; the number of cases treated with salvarsan in the several public general hospitals and medical districts was 637.

85. From the reports of the District Medical Officers concerned, it would appear that the sanitary conditions on the estates employing East Indian indentured labour were generally satisfactory, but that there is still room for improvement.

On the majority of the estates quinine appears to have been regularly administered.

86. At the conclusion of the last Session of the Legislative Council in March, a sum of £2,500 was voted for the purpose of providing for the special treatment in Kingston of venereal diseases. From the reports of the District Medical Officers these diseases were very prevalent, and in some places, inclusive of Kingston, appear to be on the increase.

Hookworm.

87. There were 5,942 cases treated with thymol at the various country hospitals and 123 cases of East Indian immigrants on the estates.

There were also 142 prisoners so treated at the General Penitentiary, nearly 70 per cent. of whom were infected. During the year the treatment of the infection by oil of chenopodium was tried at this institution, and the surgeon reports that the results clearly demonrate that the oil is exceedingly powerful against both hookworm and the large ascaris, and that no ill effects after dosing were observed in any case.

88. The opportunity was taken during the year of studying, by examination of the fæces by the Government Bacteriologist, the effects of thymol, quassia, and oil of chenopodium on cases from other institutions, and establishing a comparison of the respective efficacies of these drugs, and the Bacteriologist states that conclusions to be drawn from these experiments are :—

"(1) That quassia is of very little, if of any, use against hookworm;

"(2) That thymol is not an ideal specific;

"(3) That oil of chenopodium appears to be a very powerful anthelmintic, though further observations are still necessary to establish this point;

"(4) That the best result is to be obtained by making use of both thymol and oil of chenopodium at a suitable interval;

"The problem of total eradication of ankylostomiasis is, however, not one to be solved by drugs only."

Vomiting Sickness.

89. 134 deaths were recorded as having been caused by this disease, 57, or 42·5 per cent. of which were medically certified. In the previous year 196 deaths occurred, 54 per cent. of which were certified. The largest number of deaths were in St. James, 23; St. Elizabeth and Manchester, 19 each; Clarendon, 18; and Trelawny, 16.

90. The investigations by Dr. H. H. Scott, Government Bacteriologist, in support of his theory that vomiting sickness was due to a poison contained in the fruit of unripe or unwholesome ackees (the fruit of *blighia sapida*), to which reference was made in my report of last year, were continued.

91. It so happened that while these investigations were being carried out there occurred a definite case of ackee poisoning, and Dr. Scott proceeded to the place where the case occurred and carried out a post mortem examination, which revealed changes practically identical with those observed in the animals experimented upon. This case, which was not described as one of vomiting sickness, showed typically the onset, course, and pathological changes of that disease.

A full account of the investigations and of the conclusions arrived at by Dr. Scott will be found in his report. As stated in that report all the characteristics of vomiting sickness find explanation in the view that the condition is an acute intoxication by unopened or unwholesome ackees.

Malaria.

92. As was the case last year, it was not found possible to continue the special vote of £2,000 for the abatement of malaria.

The number of cases admitted to the various hospitals other than in Kingston for malaria was 7,138.

As a result of the unusually heavy and prolonged rains, malarial fever was very prevalent throughout the island, and there was a great increase among the peasantry and labouring classes.

General.

93. In the several towns and villages the water supplies were on the whole satisfactory.

No special public works of improvement of sanitation were carried out during the year.

The system of the treatment of out-patients at hospitals which was instituted during 1910–11 continued to give satisfactory results.

During the year under review the number of persons so treated was as follows:—

At Kingston Hospital	9,131
At public general hospitals	16,767
In districts	41,067
Under the ticket system of reduced payment ..	917
	67,882

In 1914–15 the number was 75,561.

94. The total number of cases treated in public general hospitals during the year under review was 23,875. There were 516 deaths in hospitals. Adding the cases treated in the Kingston Public Hospital, 3,264, the Jubilee (Lying-in) Hospital, 517, the Lunatic Asylum, 1,733, the Lepers' Home, 148, the total number of patients treated in Government hospitals and asylums was 29,537.

95. Owing to the departure in November, 1915, of the bacteriologist, there has not been as much time for research work at the pathological laboratory as would have been desirable.

In addition to the investigations in connection with vomiting sickness, to which reference has already been made, special research work was carried out with respect to pellagra and peripheral neuritis.

Examinations of specimens for correct diagnosis of diseases, of rats for plague infection (in none of which, however, was any found), and for testing the purity of water supplies, were also conducted as in previous years.

The number of specimens examined was 12,720; during 1914–15 the number was 12,930.

96. 160 persons were detained at the Quarantine Station during the year; and 1,153 passengers were landed for inspection; 27 vessels were fumigated, and 1,971 packages of baggage were disinfected.

VII.—POSTAL AND TELEGRAPH SERVICES.

97. The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1915-1916 with those of the previous year:—1914–15, £49,742; 1915–16, £48,053.

98. These statistics show a decrease of £1,689 in gross revenue as compared with the previous year. The expenditure of the year by the department amounted to £49,991, as against £52,651 in 1914–1915.

The progress of the department is illustrated by the following figures:—

	Revenue.	*Expenditure.*
	£	£
1895–1896.	29,726	35,701
1905–1906.	37,576	32,115
1915–1916.	48,053	49,991

99. There is an increase of 6,905 in the number of telegrams sent during the year, but a decrease of £187 in telegraph revenue.

Two new District Post Offices were opened during the year; the total number in existence was 201.

100. 3,829 Money Orders for £13,539 12*s.* 2*d.* were issued in Jamaica, and 25,814 orders for £60,633 17*s.* 3*d.*, the issues of other countries, were paid here. As in previous years the principal item in the payments is that in respect of orders issued on behalf of the United States of America on account of remittances from the Canal Zone, which amounted to £53,394 14*s.* 0*d.*

307,678 British postal orders were sold for £70,182 14*s.* 6*d.*, as compared with £74,991 16*s.* 6*d.* in the year before, or a decrease of £4,809. Orders for £55,561 were cashed in the Colony.

48,614 parcels, of the declared value of £42,300 0*s.* 5*d.* were imported by parcel post, and 11,100, of the value of £13,075 17*s.* 0*d.*, were despatched.

VIII.—GOVERNMENT RAILWAY.

101. The total revenue was £154,721 as compared with £179,381 in 1914–1915, a decrease of £24,660, or 13·6 per cent. The expenditure exclusive of debt charges amounted to £127,287 against £107,265 for 1914–1915, an increase of £20,022, or 18·7 per cent. The net profit for the year is £27,434 as against £72,117 for the previous year, a decrease of £44,683, or 38·0 per cent, The capital charges stand at £2,668,213, on which a sum of £119,905 is due for interest and sinking fund, leaving a deficit of £92,471 to be met from General Revenue as against £45,972 in 1914–1915.

102. Extensive damage was done to the railway at various places on the north side, where the track was laid in close proximity to the sea, during the hurricane of the 12th and 13th August by the sea, which rose to unprecedented heights. Sea walls were destroyed and the track badly damaged, at some places being completely washed away. It was thought advisable to remove the track at these places so as to get away from the sea altogether and the line was accordingly deviated inland, on one section for a distance of 2 miles 66 chains.

Considerable damage to cuttings and banks was also caused by the very heavy rains at different periods of the year, especially those in the months of April and November, 1915, and January 1916.

The expenditure incurred in repairing the hurricane and flood damage amounted to £26,500.

103. The loss of revenue is attributable to the block on the Rio Minho Valley branch for a period of 59 days on account of landslides, etc., caused by the heavy rains, to the break in communication with Port Antonio for three months as a result of the hurricane, and to the great damage done to crops especially bananas, by the hurricane. The amount of bananas carried by the railway was 52,785 tons, or 51 per cent. less than in the previous year.

IX.—PUBLIC WORKS.

103a. The total expenditure of the Public Works Department for the year under review was £155,553.

This amount is £5,269 18*s*. 7*d*. less than the expenditure of the previous year, and the smallest since 1907–1908.

104. The total length of main roads at the end of the year was 2,219 miles, 20¼ chains.

The average cost per mile of maintenance proper for the whole Island was £30 14*s*. 4*d*., and including special works of improvement, £49 17*s*. 6*d*., of which £16 19*s*. 7*d*. per mile, which is the highest expenditure per mile as compared with the preceding five years, was for flood damage.

The highest average cost per mile was in St. Mary £51 6*s*. 2*d*., and the lowest in Manchester £19 19*s*. 3*d*.

105. The average rainfall for the whole Island was very nearly 103 inches, being about 35 per cent. above the average. As a result of this rainfall main roads with few exceptions suffered severe damage on several occasions from repeated spells of flood rains, especially during the months of May, June, August (on the 12th and 13th of which a hurricane was experienced), September and November, 1915, and February, 1916.

106. In addition to the damage from floods, the coast roads on the north side suffered severely from the encroachment by the sea during the hurricane of 12th and 13th August, 1915. The parishes of St. Thomas, Portland, and St. Mary were the heaviest sufferers from both flood and hurricane, and all the northern parishes suffered from the hurricane.

One bridge each in the parishes of St. Andrew and St. Thomas was destroyed, the approaches to one bridge in Portland demolished for a distance of three or four chains, and nearly the entire length of a partly-constructed retaining wall in St. Mary was carried away by the

flood rains; while from Rozelle in St. Thomas, round the east end of the Island to the Round Hill in Hanover on the west, nearly every retaining wall on roads bordering on the sea on the north side was damaged, if not destroyed, during the hurricane, the roads themselves being rendered impassable in some cases for weeks.

Of the total expenditure for roads maintenance, £37,686 is returned as having been incurred as a result of flood and hurricane.

107. Under these abnormal conditions the main roads were, it may be said, maintained in fair order, but extensive metalling and reconstruction is still necessary to restore many of them to their former condition.

108. The system of rolling the surfaces of the roads has been continued with good results; over 40 miles of surface were so treated.

109. A number of public buildings situated in the seaport towns on the north and north-east coast suffered damage during the hurricane of August, 1915, the damage in the towns of Port Maria and Port Antonio being particularly severe. The cost of repairs of hurricane damage to public buildings during the year is placed at £1,605, £468 of which was under Lighthouses and £1,137 for other Public Buildings.

110. The Folly Point lighthouse on the north side was badly hit by the hurricane, all the buildings except the tower itself being destroyed. or swept away, and the lamp partly destroyed. An acetylene gas lamp supplied by the American Gas Accumulating Company has been substituted and was put into operation on the 1st April, 1916. This light is of a flashing character, displaying light for two seconds with intervals of eight seconds, darkness between flashes, and it is expected to prove very economical both in maintenance and supervision charges.

The beacon at Galina Point, serving as a landmark for the entrance to Port Maria Harbour, together with the buildings appertaining thereto, was also completely swept away by the hurricane; a stronger and more permanent structure has been erected, and a temporary Wigham lamp installed pending the provision of a more powerful light.

The other lighthouses were maintained in good repair and services efficiently rendered.

111. No new works were undertaken during the year, due to enforced economy, and, as was the case last year, all works that could be postponed without loss to the Government were deferred.

112. The work undertaken for the Imperial Government, to which I referred in my Report on the Blue Book for 1914–15, was completed and maintained during the year.

X.—GENERAL OBSERVATIONS.

113. The Colony has passed through an exceptionally trying period during this year. The trade conditions of the Island have been abnormal since the outbreak of the Great War, but signs were not wanting that prospects were improving early in this year. Very seasonable weather had greatly advanced agricultural conditions; the sugar and rum industries had benefitted greatly by increased prices; the advance in the value of dyewoods had stimulated that industry; and better prices generally for most of the Island's products were being realised. The banana industry, however, had suffered from shortage of shipping and indifferent markets.

114. The hurricane of August, 1915, brought about a serious situation; the complete destruction of the banana crop, considerable damage to coconuts and to agriculture generally, very serious damage to the railways, roads, wharves, and buildings on the north side of the Island, and to roads generally throughout the Island. Torrential rains later in the year also did serious harm to bridges and roads throughout the Colony.

115. The results of the hurricane were practically to close down the export of bananas, with heavy losses to all engaged in that industry, and consequently to suspend that circulation of money for which this, the staple crop of the Island, is responsible, and to cause the natural restriction in trade which followed these conditions.

116. The necessity for heavy expenditure in restoring the damaged roads and railway, however, to an extent ameliorated the conditions of the labouring classes, and a great boom in logwood cutting also came to the assistance of those who were dependent upon the banana industry for a livelihood, with the result that the distress which must otherwise have followed the hurricane was considerably lightened, and in fact, owing mainly to the excellent wages earned by the cutting of logwood in most parts of the country, those who were employed in that industry were unusually prosperous.

117. An exceptionally good sugar-cane crop also gave ample employment to labourers, and on the whole the conditions following the hurricane were by no means so serious as had been anticipated for the labouring classes.

118. The larger proprietors, the smaller proprietors, and the settlers with small areas of bananas, had of necessity suffered heavy losses, but seasonable conditions with excellent rains which followed the hurricane it was hoped would ensue a resuscitation of the industry by May or June, 1916.

119. The financial statement for the year shows how an expected deficit of £61,923 has been turned into an actual surplus of £10,730, a very conclusive proof that the general conditions in the Island very materially improved during the latter part of the financial year.

120. The Colony's contribution in men to the forces of the Empire engaged in the Great War has been fixed, and a considerable number have already left for the seat of war, while further contingents are still in training to proceed to Europe.

121. In so far as the exigencies of the public service would permit, Government servants have been allowed to proceed to the United Kingdom in order to offer their services for the period of the War, and from every Government department volunteers have gone forward. Consequently, most departments are short of staff, but the extra work thus thrown upon those who have had perforce to remain has been cheerfully performed.

122. The loyalty of the people of the Colony has expressed itself in a number of ways, and most forcibly in the manner in which subscriptions for war funds, particularly for the Red Cross Fund, have been raised, and in addition, a stream of gifts of fruit, products, clothing, and comforts for the Navy and Army have been shipped to the United Kingdom.

123. The local defence forces of the Island have been maintained throughout the year; the members of these forces have very loyally given up their leisure to training for any eventualities, and a useful force is in existence.

I have, etc.,

W. H. MANNING,

Governor.

No. 927.

TURKS AND CAICOS ISLANDS.

(For Report for 1915 see No. 889.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
30th June, 1917.

SIR,

I have the honour to transmit to you herewith a copy of the Blue Book of the Turks and Caicos Islands for the year 1916, together with a copy of the Commissioner's report thereon.

I have, &c.,
W. H. MANNING,
Governor.

The Right Honourable
Walter H. Long, M.P.,
Secretary of State for the Colonies.

(C387) Wt.47019/1099 1000 & 90. 9.17. B.&F. Ltd. Gp.11/2

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1916.

FINANCIAL.

The revenue for 1916, which was estimated at £8,190, actually amounted to £8,632, an increase of £442 (entirely attributable to receipts under the head of Post Office), as compared with the estimate, or an increase of £596 in comparison with 1915, in which year the revenue collected amounted to £8,036.

The approved estimate of expenditure was £8,185, but actual expenditure, owing to the exercise of the closest economy in every direction, amounted to only £7,925—thus disclosing a saving on the year's transactions in this connection of £260. The expenditure in 1915 was £9,133 and included a contribution of £500 to the War Funds.

The balance of assets on the 31st December, 1916, was £8,091 11*s.* 11*d.*

There is no public debt.

TRADE, AGRICULTURE, AND INDUSTRIES.

The total imports during the year were valued at £29,009, as compared with an average of £27,744 for the five years 1910 to 1914, and as against £27,620 in the year 1915.

The exports were valued at £27,807, as against £30,487 during the year 1915 and an average of £26,053 for the quinquennium 1910 to 1915. The following table gives the values of the articles of local production exported during the past two years:—

	1915.	1916.
	£	£
Salt (coarse)	15,418	13,715
Salt (fishery)	7,249	6,388
Fish (salted and dried)	757	169
Fish (canned)	421	469
Conchs	1,217	1,715
Sisal	3,801	3,281
Shells	50	452
Sponges	1,129	1,012
Turtles	17	20

The direction of trade du the year under review may be gathered from the following table:—

	Imports.	Exports.
	£	£
United Kingdom	2,046	—
British Colonies	2,813	5,283
Foreign Countries..	24,150	22,524

Salt.—The year was a favourable one for the salt rakers and, notwithstanding a scarcity of shipping due to the European War, which for some time caused great uneasiness, a fair quantity of salt was shipped to northern markets. This, as usual, went to the United States and Nova Scotia—over three-fourths of it going to the former market—where it has to compete not only with importations from the Dutch islands of Bonaire and St. Martin's but with a far more serious competitor in the ever increasing production of domestic salt within the Republic itself. Whereas in 1881 imported salt (from all sources) formed 39 per cent. of the total consumption in the United States, it had dwindled down to 6 per cent. in 1901 and not quite 2 per cent. in 1914.

Sponges.—The sponge industry, in consequence of the War, continues in an unsatisfactory condition. It is encouraging, however, to mention the steady development which continues to take place at Chalk Sound in the direction of artificial sponge cultivation. With the cessation of hostilities and the reopening of the sponge markets it is hoped that the enterprising efforts of Mr. Silly will meet with the success they so richly deserve.

Sisal.—The present outlook for this industry is of a most hopeful character. Prices having risen to the phenomenal figure of 16 cts. per lb., even peasant growers in the Caicos Islands, who some years ago were induced by the now defunct West Caicos Fibre Company to plant this product extensively, have for the first time been able this year to dispose locally of hand-cleaned fibre and thus obtain a return for labour expended in past years.

Conchs.—Exports of this food commodity to the neighbouring republic of Haiti show an increase of £500, or about 40 per cent., on the figures given for 1915. Upwards of one and three-quarter millions of conchs were exported during the year.

Cotton.—After considerable delay in consequence of shipping difficulties owing to the War, the first recorded shipment of Upland cotton from the Dependency (3 bales) was made to Messrs. Wolstenholme & Holland, cotton brokers, of Liverpool, in December of this year. Reports received were most encouraging, the staple being described as of excellent quality and worth 1*s.* 3*d.* per lb.

At the time of writing upwards of 11,000 lb. of raw or seed cotton (equal to 10 bales) have been received at the Government ginnery from peasant growers in the Caicos Islands for the crop of 1917.

As there are thousands of acres of land in these islands suitable for cotton cultivation, it is hoped by the development of a cotton industry among the peasants—fostered and encouraged by the Government on the lines so successfully adopted at Carriacou and the St. Vincent Grenadines—greatly to ameliorate the lot of these islanders, whose impecunious condition has hitherto been the cause of much concern to the Executive.

SHIPPING.

The number of vessels that entered at the various ports in the Dependency during the year was 307 with a tonnage of 209,882, as compared with 287 and a tonnage of 180,418 during the year 1915.

The following statement shows the total tonnage of shipping outwards during the past two years:—

Year.	Vessels.	Tons.
1915	286	180,983
1916	307	209,882

VITAL STATISTICS AND PUBLIC HEALTH.

The estimated population on the 31st December was 5,730, an increase of approximately 115 since the census of 1911.

The number of births during the year was 223, and the number of deaths 108. The birth-rate was 40 per 1,000, and the death-rate 19 per 1,000.

Thirty-eight marriages were registered during the year.

The health of the Dependency was good, and there were no serious cases of disease or epidemics of any kind.

There was only one inquest.

No lunacy enquiries were recorded.

EDUCATION.

The annual grant of £600, provided by the Government and administered through the medium of the Education Board, provided as in past years for the needs of primary education throughout the Dependency.

For the nine schools as above described, the average number of pupils on the register during the year 1916 was 937, with an average attendance of 718, as compared with 922 and 679, respectively, for the previous year.

The number of children attending private schools in the three principal settlements of Grand Turk, Salt Cay, and Cockburn Harbour, during 1916, amounted to 76.

Preliminary arrangements were set on foot during the year for inaugurating a school of secondary education in the Dependency. Owing, however, to the War, it has not been found possible as yet to obtain the services of a competent teacher for the post of headmaster.

JUDICIAL.

Offences reported to the Police	200
Number of persons brought before the Magistrate	200
Summary convictions	140
Convictions in the Supreme Court..	2
Number of persons acquitted :—	
In the Supreme Court..	3
In the Inferior Court	32

POSTAL, TELEGRAPH, AND TELEPHONE.

Mails to and from the United Kingdom are transmitted and received twice a month, by steamers of the Clyde Line, *via* New York.

The monthly service of Messrs. Pickford & Black's steamers, connecting the Dependency with Halifax and Jamaica, which in

consequence of scarcity of tonnage caused by the European War, has not been resumed.

The cable of the Direct West India Cable Company, Ltd., between Halifax, Bermuda, and Jamaica, touches at Grand Turk and connects the Dependency with other cable systems of the world. The Company supplies a news bulletin daily in respect of which a yearly subsidy of £120 is paid.

The charges under the Cable Company's Ordinance, 1898, are as follows:—

	s.	d.	
To England	2	6	per word.
„ Halifax, N.S.	1	6	„ „
„ Bermuda	1	6	„ „
„ Jamaica	1	0	„ „
„ New York	1	9	„ „

and to other places the Company's rates to nearest place plus the connecting Company's rate to destination. Non-urgent plain-language messages are sent at half-rates.

The estimated number of letters and postal matter dealt with in 1916 was:—

Letters	30,000
Post cards	1,300
Newspapers	2,700
Books	17,700
Parcels	1,404

The extent of money-order transactions was:—

	£	s.	d.
Issued in the Dependency..	1,331	2	11
Paid in the Dependency	254	8	4

The revenue and expenditure of the Post Office for the year 1916 were £1,228 and £179, respectively.

SAVINGS BANK.

The number of depositors on the 31st December, 1916, was 507; deposits during the year amounted to £2,099, and withdrawals to £1,271 18*s.* 3*d.*

The rate of interest was increased this year from 2 per cent. to 2½ per cent.

METEOROLOGY.

The readings taken at the United States Weather Bureau Station at Grand Turk, in latitude 21° 21′ N. and longitude 71° 07′ W. at a height of 11·3 feet above sea level, were as follows:—

Rainfall	26·37 inches.
Highest temperature recorded for year..	91·5°
Lowest temperature recorded for year ..	63·2°

The prevailing winds during the year are thus recorded:—

N., 10 days; N.E., 72 days; E., 199 days; S.E., 51 days; S., 19 days; S.W., 2 days; N.W., 7 days; calm, 2 days.

GENERAL.

Except for the high cost of most of the necessaries of life, which presses heavily on the poorer inhabitants, the Dependency has not suffered to any appreciable extent by the disturbance of general trade caused by the European War.

Both the productivity of the salinas and the demand for salt in northern markets were well maintained, and, except for a shortage of tonnage—which for some time caused considerable anxiety amongst shippers—the outlook for the chief industry of the Dependency is better to-day than it has been for many years past.

Greatly to the satisfaction of the inhabitants, the Dependency was favoured during this year with a visit from his Excellency Sir Wm. Manning, K.C.M.G. His Excellency arrived from Jamaica on the 23rd November, and during his stay of four days in the islands was busily engaged inspecting the salinas and discussing with proprietors measures to be adopted for placing the salt industry on a sounder and more prosperous basis than has hitherto been the case.

G. WHITFIELD SMITH,
Commissioner.

CAYMAN ISLANDS (JAMAICA).

(For Report for 1914–15 see No. 879.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House,
Jamaica,
27th July, 1917.

SIR,

I have the honour to transmit to you herewith a copy of the Blue Book of the Cayman Islands for the year 1915–16 together with a copy of the Commissioner's report thereon.

I have, &c.,
W. H. MANNING,
Governor.

The Right Honourable
Walter H. Long, M.P.,
&c., &c., &c.

(C386) Wt. 47019/1099. 1000 & 90. 9.17. B. & F. Ltd. Gp. 11/2.

REPORT FOR 1915-16.

FINANCE.

The revenue of the Cayman Islands for the financial year ended the 30th September, 1916, amounted to a sum total of £2,891 and the expenditure to £3,558. The average revenue for the last five years is £3,694.

It will be observed that the revenue is somewhat below what it has hitherto been for the four preceding years; this is due in a great measure to the effects of the war and hurricanes which have during the year under review considerably curtailed the purchasing power of the people.

On Thursday, the 29th of June, His Excellency the Governor of Jamaica, visited the Dependency, landing in Georgetown at 10 a.m., amid every manifestation of a cordial welcome to the shores of Grand Cayman on the part of the inhabitants.

A meeting was convened in the Court House at 3.30 p.m., at which addresses were presented to His Excellency embodying expressions of loyalty to the Throne and person of His Majesty, and directing His Excellency's attention to matters of local concern and interest. The complete isolation of the Dependency from the outside world in respect of steamship and cable communication together with the precarious means of communication with the parent colony of Jamaica and the necessity of the establishment of a wireless telegraph station in Georgetown were forcibly brought forward. The need of a more satisfactory light for shipping and the more thorough repair of the roads was also mentioned. His Excellency promised to give these questions his favourable consideration and there is every reason to believe that in the not far distant future certain improvements will be effected which the Dependency, owing in the past to the increasing necessity for economy in expenditure, has not been able to afford.

On the 16th August the islands were once again visited by a hurricane, the second within a period of two years. The ground provisions were almost totally destroyed and many fruit trees. Several schooners were driven on shore, fortunately no lives were lost, and the roads sustained but slight damage.

Export Duty.—There is an export duty of 1*s.* per 1,000 on coconuts.

Assets and Liabilities.

On the 30th September, 1916, the assets of the Dependency amounted to £4,211.

The liabilities were £426 due to depositors in the Government Savings Bank, and £54 due to depositors in Treasury; Money Order Account, £720, making £1,200 in all.

TRADE AND INDUSTRIES.

Imports.

The value of the imports from all countries has been in :—

	£
1914–15	17,345
1915–16	28,414

Average for five years **£26,440.**

Exports.

The exports to all countries have amounted in value as follows :—

	£
1914–15	1,810
1915–16	11,566

Average for five years £8,739.

The increase in exports over that of the preceding year may be attributed chiefly to the export of 1,600 tons of logwood, for which there was a very considerable demand.

The average price received was £5 a ton, the total export realizing £5,900. The sale of turtle realized £3,438 and coconuts blown off the trees by the hurricane £1,052.

Trade has been comparatively dull during the year, the export of logwood having in a great measure practically saved the economic situation of the Dependency.

It is hoped that the cultivation of sisal hemp, for which the soil of the Cayman Islands is peculiarly adapted, will be established on a firm footing. In the past the staple commodities on which the welfare and prosperity of the islands depended have been coconuts and turtle.

The coconut industry is to all intents and purposes non-existent owing to hurricanes and disease, while the entire reliance on turtle, which is nothing less than a luxury depending on the taste of the epicure, renders the economic situation precarious in the extreme.

Sisal, for which the world's demand is increasing year by year and the market price of which is high, must therefore be made to take the place of coconuts to a very great extent—thus substituting one necessary commodity for another.

Shipping.

Georgetown, Grand Cayman, is a port of registry, having vessels with an aggregate tonnage of 223. The number of ships entered and cleared during the year 1915–16 is as follows :—

Entered	238
Cleared	241

SAVINGS BANK.

The Government Savings Bank, established in 1908, has proved of great use to those desirous of availing themselves of the opportunity

offered for safe investment. The transactions for the financial year ended the 30th September, 1916, were :—

Deposits, £150. Withdrawals, £150.

The balances due to depositors at the end of each year have been :—

	£	s.	d.
1915	418	7	8
1916	426	1	8

POST OFFICE.

The Post Office Department has since its establishment amply proved its usefulness and has contributed largely to the finances of the Dependency. For the last six years it has been the mainstay of these islands and has been responsible for nearly one half of the total revenue.

Year.	*Post Office Revenue.*	*Total Revenue.*
	£	£
1914–15	1,355	3,347
1915–16	747	2,891

The sale of postage stamps to collectors forms a very appreciable item in its revenue. The inland postal service shows a steady and favourable increase in the amount of business transacted, while the large receipts in respect of the foreign mail are due to the number of Caymanians who have been compelled to seek a livelihood in the Canal Zone, Cuba, Central American Republics, and the United States.

Post Office Orders.

All money order business is transacted through Jamaica, the issue of orders in the Cayman islands being at present confined to Georgetown, Grand Cayman, and Cayman Brac.

JUDICIAL.

There are two sittings of the Grand Court in each year, namely, in June and December. The Commissioner presides as Judge. Quarterly Petty Courts and Weekly Petty Sessions are held, in which two Justices sit. The former deal with smaller civil actions, and the latter take cognizance of minor offences. Cases of serious crime are few and isolated, while the minor offences are generally the result of drink. In all cases in the Grand Court there is a right of appeal to the Jamaica Supreme Court and in the Petty Court to the Grand Court.

LEGISLATIVE.

The Legislative Assembly is styled " The Justices and Vestry," and is composed of all the Justices of the Peace (15 in number) and 27

vestrymen. The Vestry meets by statute in September in each year to make provision for the next financial year, beginning on the 1st October, and otherwise when summoned for the despatch of business.

PUBLIC WORKS.

During the financial year most of the expenditure of £1,020 has been appropriated to the repair of damage wrought by the hurricane of August, 1915, which has amounted to about £1,000. Very little work beyond repairs was executed except that of an urgent and necessary nature.

AGRICULTURE.

A branch of the Jamaica Agricultural Society was established in Georgetown in 1908, but does not appear to be progressing as satisfactorily as such a movement deserves. There is always a lamentable scarcity of ground provisions, though Georgetown affords a ready market for their sale. £18 a year is voted for agricultural purposes and for the granting of prizes at the Annual Agricultural Show, by way of encouragement. During the past year no meetings have been held. The attendance at meetings in the past has been most unsatisfactory, and it would seem that the members have lost interest in the subject.

The provision grounds throughout the Cayman Islands were nearly all destroyed by the hurricane which occurred in August. This is the second occasion within a period of a year in which injury has been sustained by the people.

POPULATION.

In June, 1911, a census of the Cayman Islands was taken, showing a total population of 5,564. Of these 2,322 are white, 2,211 are coloured, and 1,031 black; 3,087 were returned as able to read and write, 749 as able to read only, and 1,728, including children, as illiterate. In religious denomination the people are mainly Presbyterian, 3,364 being returned as such. There were 981 Baptists, all in the lesser islands, and 357 are returned as of the "Church of God." During 1916 there were 190 births, 97 males and 93 females. Of these 166 were legitimate and 34 illegitimate. In the same period there were 54 deaths, 21 males and 33 females.

EDUCATION.

The state of education in the Dependency is far from satisfactory, especially in the country districts. £250 a year is devoted to education. The conditions obtaining at the present time do not offer any attractions to good and reliable teachers.

All children between the ages of six and fourteen years, residing within two miles of a school, are required to attend 75 per cent. of the sessions of the school every term. A Government School has been established at East End during the past year.

Owing to the increased price of foodstuffs and the probable effect on the revenue of the islands in consequence of the war and the hurricanes, it has not been considered advisable to bring forward the contemplated Bill in respect of increasing the present *ad valorem* duty of 5 per cent. by 2½ per cent. to provide for free and compulsory education. The probability of this measure being adopted within the near future appears very remote.

HOSPITAL.

There is a small building kept for the purpose of isolating infectious diseases, but it is not generally used. A Government Medical Officer is appointed for the lesser islands and Grand Cayman, whose duty it is to visit all the outlying districts.

PRISONS AND CRIME.

There are no prisons in the Dependency. Prisoners sentenced to more than six months' imprisonment are sent to Jamaica. There is very little crime, and offences are generally of a trivial nature, in most cases the result of excessive drinking.

POLICE.

The police force consists of an inspector, five policemen, and one district constable, the services of the police in the country districts being utilised in the carriage of inland mails.

GENERAL HEALTH.

The death rate for the year was 10 per 1,000.

The Government Dispenser, who has undertaken medical duties in respect of simple ailments and general health conditions during the absence of a Government Medical Officer, reports that the health of the islands continues to be quite satisfactory. There have been no epidemics of any form or diseases of a virulent nature.

CLIMATE.

The Cayman Islands are among the healthiest places in the world. There are no cases of illness attributable to climatic conditions. The weather is warm for the greater part of the year. The prevailing breeze is from the south-east from April until October, when the cool season begins with a change of wind to the north and north-west in the early part of November.

The following table shows the average temperature :—

	Morning.	Mid-day.	Evening.
Hot months	83°	89°	86°
Cool months (Nov. to March)	71°	80°	74°

A. C. ROBINSON,

Commissioner.

Grand Cayman,

No. 943.

JAMAICA.

(For Report for 1915-16 see No. 909.)

THE GOVERNOR TO THE SECRETARY OF STATE.

King's House, Jamaica,
25th August, 1917.

SIR,

1. I have the honour to report on the Blue Book Returns of this Government for the financial year ended 31st March, 1917.

1.—FINANCIAL.

2. The total revenue and expenditure for the last two years have been as shown below :—

	Revenue.	Expenditure.
	£	£
1915-16	1,132,049	1,105,942
1916-17	1,154,349	1,076,237

3. Again during August of the year under review the Island was visited by a hurricane, this time on the 15th. Very serious damage was done throughout the Island; a very promising banana crop was completely destroyed and much destruction was caused to the coconut crop, the cocoa crop, and to agriculture generally. This hurricane followed a similar disaster in the same month of the preceding year (on the night of the 12th). While the ravages of the one in 1916 as regards agricultural prospects were greater, the damage to roads and railways was fortunately less than on the occasion in August, 1915. The Legislative Council had again to be called together in September for the purpose of passing the Supplementary Estimates of Expenditure necessary and to review the financial position. It also so happened that, as in the previous year, severe flood rains were experienced in the later months of the year causing much damage to roads, to meet the expenditure necessary on which a sum of £10,000 had to be specially authorised. Fortunately it was found possible to meet this from savings on the vote for Relief Works subsequently referred to.

(C414) Wt. 47019/1099. 1,000 & 90. 12.17. B.&F.Ltd. Gp.11/2. B

4. The estimates for 1916–17 as originally passed were expected to work out as under:—

Expenditure	£1,059,103	
Expected deficit of preceding year	£61,923	
		£1,121,026
Revenue (including extra taxation amounting to £178,250 to meet expected deficit of 1915–16 and what was expected otherwise to be a deficit in 1916–17)		£1,121,973

leaving a small balance to the good of £947.

5. In consequence of the hurricane in August, 1916, revised estimates of certain revenue and expenditure items were prepared and submitted to the Legislative Council at its meeting in September, together with a revised forecast of the financial position to the 31st March, 1917. The revised estimate of revenue showed that the net receipts were expected to fall short of the Budget estimate by £19,600, while the revised expenditure, inclusive of the cost of repairing hurricane damage, showed an addition of £38,610. The second revised estimate prepared in February, 1917, showed an expected surplus on the 31st March, 1917, of £71,297.

6. The actual results of the year 1916–17 as shown by the final accounts just received show that the surplus at 31st March, 1917, was £88,842 or an improvement of £17,545 on the last mentioned estimate, being accounted for by saving in expenditure of £9,500 and an increase in revenue of £8,045. A comparison in detail of the actual figures for 1916–17 with the budget Estimates (as reinforced by the additional taxation) shows the following:—as regards Revenue the chief excesses were Customs Import Duties, £15,173; Customs Export Duties, £15,902; Stamp Duties, £8,365; Post Office and Telegraphs, £2,802; and Interest, £7,423, while the chief decrease was £19,454 under Railway. An allowance was made in September of £35,000 for falling off in Railway Revenue owing to the hurricane, but in the result as just stated the net falling off from the original estimate was only £19,454. Another estimated decrease on account of the hurricane was in Harbour Fees and Light Dues, £1,500; the actual decrease under this head was £1,624. The total revenue as estimated originally was £1,121,973, the total actual revenue was £1,154,348, showing an excess over the original estimate of £32,375.

7. As regards Expenditure the chief differences as compared with the Budget Estimate were the following:—The chief excesses were Excise, Internal Revenue, and Customs and Stamp Offices, £10,496 (being more than accounted for by excess under Refunds of Duties Overpaid); Education, £1,836; Harbours and Pilotage, £553; Printing Office, £1,259, chiefly due to enormously increased cost of supplies; Public Works and Buildings and Lighthouses, £11,847; Railway, £4,864; and Relief Works, £3,969. If compared with the Votes as supplemented in September the above figures would be altered as follows:—the excess in Education would be reduced to £336 and that in Harbours and Pilotage to £193.

8. As regards Public Works Expenditure there were additional hurricane Votes amounting to £8,750, so that the excess would be

reduced to £3,097 and, if the £10,000 for flood damages be also included in the authorised expenditure, the net result would appear as a saving of £6,903.

9. As regards Railway Expenditure the net excess shown above may be chiefly accounted for by excesses caused by flood damages, hurricane expenditure, cost of new locomotives, and extra repairs of rolling stock on account of exceptional logwood traffic, against which there were savings, the chief being due to the use of less coal and stores.

10. As regards Relief Works against the nominal excess of £3,969 (as of course the Budget Estimate had been nil) must be set the Vote of £21,000 which was taken in September, on the distinct understanding however that no money was to be spent except in cases where it was absolutely necessary. When the matter was gone into in detail, with this proviso borne in mind, it was expected that a sum of £6,000 might prove sufficient, of which amount only the £3,969 above referred to was spent in the year under review. The remainder of the £6,000 will be found in the expenditure of the present year. This saving rendered it possible to authorize the allotment of an additional sum of £10,000 for repairs of flood damages to roads, thus adding to the amount available for wages. In this way an extra sum of about £14,000 was available for the wage earning classes during the latter part of the year.

11. An examination of the column in the Finance Accounts showing the items of expenditure which were *less* than the Budget Estimates will make it evident that where possible the strict economy exercised in the two preceding years was continued.

12. The following are the chief decreases as compared with the previous year :—Charges of Debt, £49,920 ; Miscellaneous, £30,946 ; the former being due chiefly to the £45,000 raised by loan and expended in purchase of Jamaica Railway Second Mortgage Bonds and to the closing of the matter of the Jamaica Hotel Debentures in the previous year, and the latter being chiefly due to the absence of any expenditure under the items Losses on sale of Saving Bank Investments and Relief Works in Vere, and the closing up of the transactions relative to the purchase of sugar as a war gift to the Imperial Government. It may be mentioned here that the original Vote for this latter was £50,000 and that the total expenditure including all expenses was £49,970 3*s.* 5*d.* in the purchase of 2,499$\frac{3}{40}$ths tons, or at an average rate of about 1*d.* less than £20 per ton for the Sugar landed in the United Kingdom.

13. The total receipts during the year being £1,154,350 (with the help of the additional taxation elsewhere referred to), and the expenditure £1,076,238, there was a surplus on the year's transactions of £78.112. The balance in the Surplus Deficit Account of the Colony on the 1st April 1916 being £10,730 the year closed with a surplus of £88,842 as already stated above.

14. The public debt of the Island (most of which is represented by productive investments) amounted to £3,771,949 on the 31st March, 1917. The accumulated sinking funds on the same date amounted to £1,037,238, leaving a net liability of £2,734,611. Included in the debt were guaranteed public loans for local purposes, secured on

municipal rates and undertakings, amounting to £479,259, the sinking funds in respect of which amounted to £99,938.

15. The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together, for the last two years, are shown in the following comparative statements :—

Kingston City Council.

	Receipts.	Expenditure.
	£	£
1915–16	37,712	37,835
1916–17	38,092	40,390

Kingston General Commissioners.

	Receipts.	Expenditure.
	£	£
1915–16	45,293	44,700
1916–17	45,444	44,954

Other Parochial Boards (14 *Parishes*).

	Receipts.	Expenditure.
	£	£
1915–16	130,681	125,045
1916–17	132,111	135,713

The debts of the Parochial Boards to the Treasury for advances made for water-works and markets amounted at the close of the year to £8,166.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

16. The total values of imports and exports for the last two years are as follows :—

	Imports.	Exports.
	£	£
1916	3,107,004	2,821,234
1915	2,327,458	2,228,664

In the main, the increase in values is rather the result of greatly enhanced prices than increase in quantity, shortage of tonnage operating in this Colony, as elsewhere, to restrict exchange of commodities. The values of the total exports were maintained notwithstanding the very heavy loss in bananas occasioned by the destructive hurricane which occurred in the month of August, and practically brought the fruit trade to a standstill for the remainder of the year. But for this unlooked for disaster good crops of sugar and rum and a very strong demand at maximum prices for most of the exportable products of the Island would have created a record notwithstanding the difficulties in the way of obtaining freights. The items showing the principal improvements were sugar cane products, £606,603 ; dyewoods in bulk, £281,807 ; and dye extracts, £207,461 ; tobacco, £11,821 ; coconuts, £61,980 ; cocoa, £14,355 ; hides and skins, £28,854 ; and

honey, £9,963, the only two considerable items of the Island's agricultural produce showing any appreciable shrinkage in value being coffee, £37,028, and pimento, £22,643.

17. The imports and exports shown at ten-year intervals since 1876 produce the following results :—

	Imports. £	Exports. £
1876	1,552,339	1,517,015
1886	1,322,336	1,280,118
1896	1,856,377	1,873,105
1906	2,261,469	1,843,180
1916	3,107,004	2,821,234

18. At this juncture in the Empire's history the sources of supply of imports and destination of exports must possess particular interest and for this reason the figures in the foregoing table are thus further analysed viz :—

Sources of Supply of Imports.

	1876	1886	1896	1906	1916
United Kingdom	53·6	54·8	49·9	49·8	32·4
United States	29·2	33·6	39·4	38·2	57·4
Canada	12·4	8·4	8·2	8·1	7·5
Other Countries	4·8	3·2	2·5	3·9	2·7

Destination of Exports.

	1876	1886	1896	1906	1916
United Kingdom	80·9	39·9	27·7	19·4	43·4
United States	10·0	43·9	56·9	57·4	32·7
Canada	·2	3·5	1·6	6·1	13·7
Other Countries	8·9	12·7	13·8	17·1	10·2

Apart from the disturbing factor of the War and the restrictions arising therefrom, these figures express as clearly as words could do the supersession of the sugar industry by the banana, but the signs of the times indicate a revival of the former and of the dependence of the Colony being on two major industries operated side by side.

19. The Collector General in his report points out that measured in terms of quantity the imports have fallen off in many items, and in regard to foodstuffs he draws the conclusion that, if put to the test, the Island could be much more largely self-supporting than it is. Among what are called the Island's minor products he calls attention to the great activity in the demand for hides and skins ; annatto ; horses and mules ; limejuice ; cigars ; copra and essential oils ; leather and tanning materials ; nearly every item being capable of large expansion under favourable conditions.

20. The agricultural statistics collected by the collecting officers of taxes during the year compared with an average of the preceding four years' returns give the following results :

	1916–17.	Average 1912–16.
	Acres.	Acres.
Tilled Lands	274,824	270,826
Guinea Grass	168,318	163,308
Commons	536,603	351,508
Wood and ruinate	1,079,382	1,182,907

Classification of the tilled lands gives the dedication to crop as follows, the returns of the year last past being compared with a four year average, viz :—

	1916–17.	Average 1912–16.
	Acres.	Acres.
Canes	33,499	32,118
Coffee	20,427	19,714
Coconuts	30,189	24,464
Banana	78,890	85,468
Cocoa	12,131	11,149
Ground Provisions	70,336	63,927
Mixed Cultivation	27,189	30,356
Minor Items	2,162	3,809

In his separate report the Collector General gives a further acreage table embracing a more extended outlook and giving figures at ten-yearly intervals from 1876–77. The feature of this is that it emphasizes the transition from cane to banana already referred to, the cane acreage having fallen from 46,023 acres in 1876–77 to 33,499 in the year last past, and the banana acreage having grown from nothing to 78,890 acres. Among the more dependable of exportable crop-producing plants is to be noticed the healthy extension of the acreage returned as being in coconuts and cocoa respectively.

AGRICULTURE.

21. The chief feature of the year in relation to the agricultural interests of the Colony was the hurricane in August which practically swept the whole island from east to west so as to destroy the whole banana crop and to do a good deal of damage to coconuts, canes, and cocoa. For so serious a disaster to occur two years in succession has been a heavy blow to the banana industry. Owing to war conditions other staples such as sugar, rum, logwood, cacao, annatto, ginger, orange oil, and hides have sold for high prices, and it is now evident that but for the hurricane the exports of Jamaica for 1916 would probably have created a record in the history of the trade of the Colony.

22. The rainfall for the year was abnormally high and in the latter part of the year was so excessive as to be detrimental to both crops and stock.

23. The hopeful expectations as to the sugar industry were realised and 28,000 tons of sugar and 18,000 puncheons of rum, the largest crop since 1884, were exported. The revival of the sugar industry is now being prosecuted and, with an Imperial market for its produce, the Colony can be relied on to push this industry with enterprise and success whenever the conditions are favourable.

24. Remarkably good returns of sugar on the canes sent to the mills have been realised in Vere. The demand for cane tops by large and small planters has been brisk. The varieties "White Transparent" B. 208, J. 72, and B. 6450 have all done well and are in general demand.

25. Logwood experienced a period of unexampled prosperity owing to the lack of German synthetic dyes, and a sum of £800,000 was realised for logwood products during the year. Owing to the speculative operations abroad the market broke, and the prices and demand for logwood are now again on a moderate basis only.

26. The incidence of Panama disease of bananas during the year has shown a marked reduction, only 163 diseased plants having been reported on 40 separate spots, or an average of four plants per base. This disease is a very difficult one to control, but where the strict measures of quarantine provided under the Law have been successfullyenforced, the results have been quite satisfactory, and with care and watchfulness there is no reason for the planters of Jamaica to view this disease with serious apprehension. It has been demonstrated, however, that infected land appears to remain permanently unfit for the cultivation of the "Gros Michel" or "Jamaica Banana," although the "Chinese or "Canary" variety has been found to be immune to the disease.

A good deal of public alarm was engendered over the discovery of the banana borer as a somewhat widespread pest in three parishes of the Island. Special measures of quarantine and of barrier protection together with systematic field surveys have been carried out. Later experience supports the conclusion that this insect is not a serious pest where bananas are well cultivated and clean methods of management are adopted.

27. A few cases of Anthrax have been dealt with under the Law, but no serious epidemics have been reported. The Government Stock Farm at Hope had a successful year, showing a profit of over £800 on the year's work, with a surplus of assets amounting to £2,856. The Zebu-Jersey is proving a reliable breed of tropical cattle for dairy purposes and the productive capacity of the herd shows a progressive increase. The dipping tank was successfully operated at a cost of 4*d*. per head for the year. Ticks have now almost disappeared from the Farm.

28. The Farm School has had an average attendance of 29 students, as against 34 for the previous year. Two of the masters have received commissions in the Jamaica War contingent and the whole of the third year students enlisted *en bloc*. Owing to their knowledge of drill all seven of the Farm School recruits were appointed non-commissioned officers.

29. The Government Laboratory has operated as usual and has conducted special investigations with regard to the fat content of cacao from different parts of the Island and the composition of citrus

fruits in relation to the standard of maturation adopted for citrus fruits in the United States.

30. The plantation of sisal hemp at Lititz is most promising. At a small cost, 600 acres of fibre is being established on these derelict lands and the young plants are making such good growth that there is reason to anticipate the successful establishment of a fibre industry in this dry and distressful section of the Island.

III.—PUBLIC EDUCATION.

31. The Director of Education furnished the following statistics :—

Year.	Schools on Annual Grant List at end of Financial Year.	Average Number of Scholars on Books.	Average Attendance for Year ended 31st March.	Percentage on Average Attendance of Number on Books.	Total Payments to Elementary Schools and Teachers.
1916–17 ..	696	97,467	53,447	64·09	£65,987
1915–16 ..	696	97,290	54,028	66·85	£67,009

32. During the year vocational training classes in tailoring, carpentry and metal working for the benefit of the disabled men of the British West Indies Regiment were started at the Government Technical and Continuation School ; to the close of the year, 60 men were enrolled and 50 were in regular attendance, and the men are reported to have made quite satisfactory progress.

33. The results of the annual examination of schools is as follows ; 277 were placed in the first class, 285 in the second, and 108 in the third, as compared with 264, 289, and 120 respectively in 1915–16. The failures numbered five as against six last year.

Industrial Schools.

34. The number of inmates of the Industrial Schools, male and female, was :—

Stony Hill	509
Alpha Cottage	334
Belmont	32
Happy Grove	12
Broughton	25
A total of ..	912

Secondary Education.

35. The expenditure of the endowed schools during the year was as follows:—

	£
Jamaica College	3,251
Munro and Dickenson's	7,029
Wolmer's	3,243
Manning's	849
Rusea's	348
Titchfield	1,962
Beckford and Smith's	430
Manchester Schools	344
Vere Schools	1,249
Montego Bay School	962
Guthrie Davidson's	71
	£19,738

The total average number of pupils in attendance at the endowed schools during the year was 930.

The Rhodes, Jamaica (Boys), and £60 Scholarships for 1917 were awarded to pupils from the Jamaica College.

256 boys and girls are reported to have entered for the Cambridge Local Examinations, 202 of whom passed, 51 doing so with honours.

IV.—GOVERNMENT INSTITUTIONS.

(a) *Public Hospital, Kingston.*

36. Indoor patients treated, 4,184; outdoor patients, including paupers, 12,548; dressings done for outdoor patients, 30,583; prescriptions made up, 13,772; total surgical operations, 1,768; dental cases, 2,778; daily average number of inmates, 236; total cost of maintenance, £11,989; receipts, £1,327 13*s.* 1*d.*

37. During the year a ward equipped with 24 beds was provided for venereal disease cases and a system of evening clinics was introduced towards the end of the year at which 627 patients attended and 853 prescriptions were made up.

(b) *Victoria Jubilee Lying-in-Hospital.*

38. Number of patients admitted, 594; 10 pupil nurses were admitted for training, and passed their examinations and received certificates; average daily number of patients, 14; receipts, £577 15*s.* expenditure, £1,218 5*s.* 6*d.*

(c) *Lunatic Asylum.*

39. Number of patients on 31st March, 1917, 1,322, a decrease of 119 during the year. Total number of patients under treatment during the year, 1,730; daily average resident, 1,391; rate of recovery, 57·3 per cent.; admissions, 286; discharges, 174; deaths, 234; death-rate, 16·8 per cent.

Cost of maintenance, £23,787; receipts, £11,249.

The high death-rate is attributed to the cold weather with a sudden fall of temperature at night during the last six months of the year.

(d) *Lepers' Home.*

Patients on 31st March, 1916..		121
Admitted during the year		20
		141
Discharged	6	
Absconded	2	
Died	11	
		19
On 31st March, 1917		122

The death-rate was 7·8 per cent.; cost of maintenance, £2,598 4*s.* 8*d.*; receipts, nil.

(e) *Government Savings Bank.*

40. The liability of the bank to its depositors on current account was decreased during the year by £7,252, the decrease on ordinary accounts being £13,348, and the increase in Government accounts £6,096.

41. The ordinary deposits amounted during the year to £65,354, a decrease of £936, and the withdrawals to £74,648, a decrease of £10,518, as compared with the previous year. The balance sheet on 31st March, 1917, shows a liability to depositors of £260,201.

42. The income and expenditure of the Bank for the year may be summarised as below.

Income.

Interest on investments	£9,346	16	5
Miscellaneous receipts	13	15	11½
	£9,360	12	4½

Expenditure.

Interest on deposits	£6,088	19	8
Carried to General Revenue	3,271	12	8½
	£9,360	12	4½

During the year it was decided to reorganize the Bank so that it should become an institution of economic use to the Island, and a Bill was introduced into the Legislative Council during the financial year, but was not passed until after its close, which will place the management of the Bank in the hands of a Board to be appointed by the Governor.

It was also decided to increase the interest payable on deposits, from 2½ per cent. to 3 per cent. per annum as from 1st April, 1917.

(f) *Registration of Titles.*

43. Work was steadily carried on; the number of titles registered during the year was 677. The Titles Assurance Fund amounted at the end of the year to £7,203 16*s.* 7*d.*

(g) *Administrator General and Trustee in Bankruptcy.*

Administration.

44. As was the case in 1915–16 the work of the Custodian of Enemy Property under the Trading with the Enemy Law (22 of 1915) has been attended to in the Department, and the moneys which have been received were invested with the approval of the Governor.

The cash transactions of the year were :—

Receipts	£88,865	14	0½
Lodgments in Government Savings and other Banks	40,188	13	4
Payments and balance carried forward to next account	48,677	0	0½

At the close of the year there were 379 accounts open in the books, and the amount at credit of deceased persons, lunatics, Receiverships, Custodian of Enemy Property, etc., was £146,693 6*s.* 1*d.*

£213 5*s.* 6*d.* was paid into the Treasury under the Casual Revenue Law for balances of Panama labourers, and other estates and commissions amounting to £1,899 17*s.* 7*d.* were earned.

Bankruptcy.

45. There were nineteen provisional orders of bankruptcy made in the Supreme Court; three of these were made absolute; six were revoked; and ten were pending at the end of the year, and one was transferred from the lower courts.

An absolute order in respect of proceedings commenced in previous years was made in one case and in three cases the provisional Orders were revoked.

The aggregate of the liabilities in these bankruptcies was £11,778 17*s.*

The cash transactions of the year were :—

Receipts	£26,974	0	11
Lodgments in Government Savings Bank	11,052	16	0
Payments and balance carried forward to next account	15,921	4	11

46. On 31st March, 1917, there were 218 accounts open in the books, and the amount at credit of bankrupt estates was £9,915 1*s.* 3¾*d.* Of this amount, £9,641 13*s.* 2*d.* was in the Government Savings Bank; £535 6*s.* 2*d.* was earned for commission.

V.—COURTS, POLICE, AND PRISONS.

47. The judicial statistics show that the total number of convictions in Circuit Courts was 78, as compared with 99 in the previous year; of convictions in the Resident Magistrates' Courts, 9,750, as compared with 9,305; and of summary convictions, 15,819, as compared with 16,005.

The number of persons brought before the Magisterial Courts was 40,875, as against 39,882 for last year, and the number of persons tried before the Superior Courts 14,693, as against 14,120.

There were 3,999 cases of praedial larceny in which a charge was preferred, as against 3,177 in the previous year, and there were 2,902 convictions as against 2,300 in 1915–16.

The possibility of the scarcity of food has caused even more than the usual attention to be given to this class of case, and further legislation on the subject has since been introduced at a special session of the Legislative Council, in July, 1917.

There were four convictions for murder during the year, comparing with five in the year 1915–16, and the death sentence was carried out in three of the cases.

Prisons.

48. The committals to the prisons during the year numbered 6,551, and to lock-ups for short terms 2,473, making a total of 9,024, as compared with 8,450 in the previous year, an increase of 574.

49. The re-convictions during the year amounted to 2,847, of which 801 were second convictions, 486 third, and 1,560 fourth and upwards. During 1915–16 the re-convictions numbered 2,356.

50. The daily average of prisoners in the Penitentiary and St. Catherine District Prisons was 1,565, as compared with 1,483 in the previous year. There were 78 deaths in the prisons, as compared with 20 in 1915–16. There were 3 executions of capital sentences as against 4 last year.

Considering the institutions separately, the daily average in the Penitentiary was 930, as against 824 during the previous year, and in the St. Catherine District Prison 635, as against 659. The deaths in the Penitentiary were 33, representing a rate of 35·48 per 1,000, compared with 17, representing a rate of 20·63 per 1,000 in 1915–16; and in the St. Catherine District Prison 45, representing a rate of 70·86 per 1,000, as against 20, representing a rate of 30·35 per 1,000 last year.

51. The very high mortality in the prisons during the year is stated by the surgeons of the Institutions to be due in part to the fact that a considerable number of the persons admitted were in poor health, appeared to be underfed, and of very poor physique, thus offering little or no resistance to the attacks of an acute disease, in part to the unhealthiness of the winter months brought about no doubt by the unusual cold and the results of insufficient nutrition caused by the effect of two disastrous hurricanes in two successive years, and also to the prevalence in the Institutions, as was the case generally throughout parts of the Island, of a particularly virulent type of pneumonia. The causes of this disease are referred to in more detail in the section relating to Public Health. The number of prisoners in both Institutions was abnormally high and much above the average.

An analysis of the deaths in the Institutions gives the following results:—

Of the 33 in the Penitentiary, only 6 were from Pneumonia, 2 from Enteric Fever and 2 from Dysentery. The remaining 23 were from Bright's Disease 8, Colitis 4, Pellagra 3, Tuberculosis 2, Neuritis 3, Pernicious Anaemia 1, Paralysis 1, Meningitis 1.

In the St. Catherine District Prison, 10 of the 45 deaths were caused from Pneumonia, 3 from Diarrhoea and 3 from Malarial Remittent Fever. The remaining 29 were caused from diseases from which the inmates were suffering on admission, and except in the cases of Bright's

Disease, which caused 5, and Senile Decay 4, no other single disease accounted for more than 3 deaths

52. The state and discipline of the prisons have been satisfactory; eight corporal punishments were inflicted for breaches of discipline.

The reformatory branch at the District Prison contained 47 lads on 31st March.

Police.

53. The establishment, including officers, was 24 below the authorised strength on the 31st March, 1917.

54. The number of cases reported to the Police and Magistrates was 41,524, those prosecuted 33,958, and those in which convictions were obtained 22,001, as against 39,075, 32,793, and 21,328, respectively, in the previous year. The incidence of crime per 10,000 of the population was 462·22, as compared with 442·44 in 1915–16.

VI.—VITAL STATISTICS AND PUBLIC HEALTH.

55. It will be observed that the figures in respect of vital statistics have been furnished for the calendar year 1916 instead of the financial year 1916–17. The change has been adopted to admit of comparison with the reports of other countries most of which it is stated are compiled for the calendar year.

The estimated population of the Island on the 31st December, 1916, was 897,196. This figure is arrived at as follows:—

Estimated population on 31st March, 1916		892,406	
Births registered from 1st April to 31st December, 1916 ..	22,085		
Deaths registered from 1st April to 31st December, 1916 ..	14,748		
		7,337	
			899,743
Migration from April to December, 1916			
Arrivals—general	6,999		
Arrivals—East Indians	617		
		7,616	
Departures—general	10,019		
Departures—East Indians ..	144		
		10,163	
			2,547
			897,196

56. Of the general arrivals and departures, 4,303 and 4,378, respectively, were labourers, and show a net emigration of 75 persons of this class. The remainders, 3,313 arrivals and 5,785 departures, represent a net emigration of 2,472 persons, of whom 144 were East Indians.

Migration of labourers took place chiefly in respect of the following countries :—

	Departures.	Returned.	Excess Departures.	Excess Returns.
Central America	1,494	2,537	——	1,043
Cuba	2,571	1,054	1,517	——
Hayti	23	3	20	——
Other Countries (American and West Indian, etc.)	290	709	——	419
Total ..	4,378	4,303	1,537	1,462

57. The mean Island population for the year, that is, the population on the 30th June, 1916, ascertained by adding to the census figures the excess of births over deaths registered since the Census, was 898,341. On these figures, the marriages, births and deaths have been calculated.

58. The following is the number of marriages, births and deaths registered during the year, with the rates per 1,000 for this and the preceding year :—

		Rate per 1,000. Year ending 31st December, 1916.	Year ending 31st December, 1915.
Marriages ..	2,964	3·3	2·9
Births ..	29,923	33·3	35·7
Deaths ..	20,195	22·4	21·7

59. Of the births registered, 20,221, or 67·5 per 100 were illegitimate. This is higher than the 1915–16 rate of 66·9, which was the highest Island rate recorded since the introduction of compulsory registration in 1878, and is the third time in succession that the record of the highest rate of illegitimate births has been broken.

60. The general death-rate increased by ·7 per 1,000. Of the total mortality the deaths of infants were :—

Under one year	5,265 or 26·0 per cent.
One year	1,843 or 9·1 per cent.
Two Years	679 or 3·4 per cent.
Three Years	394 or 2·0 per cent.
Four Years	294 or 1·4 per cent.
	8,475 or 41·9 per cent.
1915–16	8,328 or 43·2 per cent.

61. Comparing the infant mortality with the births during the year, 29,923 infants were born, and 7,108 died at one year of age or under, equal to 23·7 per cent. The percentage under 5 years was 28·3.

The highest birth-rate was in Clarendon (37·0), and the lowest, exclusive of Port Royal, in Kingston (28·1).

The death-rates in Portland (22·2) and St. James (21·8) are less than those in 1915; in Hanover and St. Catherine they remain the same, viz.: 22·8 and 24·2 respectively, while in the remaining parishes they have increased, the largest increases being in Port Royal (4·5), Kingston (4·0) and St. Ann (3·6).

62. In 71·5 per cent. of the deaths registered during the year in the whole Island the causes of death were not medically certified. The percentage in 1915–16 was 73·3; in 1914–15, 71·6; in 1913–14, 63·0, and in 1912–13, 73·3. In Kingston the percentage was 15·8 and inclusive of Port Royal, 20·8, as compared with 16·7 for the two parishes in 1915–16.

Public Health.

63. The expenditure of the Medical Department during the year amounted to £78,523, as against £72,671 in 1915–16.

64. The number of students at the Dispensary School at the Public Hospital, Kingston has, as a result of the raising of the educational certificates required of them, been reduced by two-thirds.

Yaws.

65. This disease is reported to be still very prevalent throughout the Island. The treatment of it by salvarsan was systematically carried on at the Public General Hospitals and in the several medical districts with beneficial results. Hitherto cases of yaws had to be brought out by the District Constables, but in more than one district it is stated that the results of treatment by salvarsan are so marked that patients come of their own accord and apply for treatment.

2,911 cases were treated, in 2,677 of which it is reported that the symptoms of the disease were cured.

Hookworm.

66. 5,910 cases were treated at the various hospitals in the following manner:—

Thymol	2,807
Oil of Chenopodium	1,753
Quassia	1,326
Naphthol B.	8
Eucalypt	16

66 East Indians were also treated with thymol on the Estates.

58 cases were examined for hookworm at the General Penitentiary, 33 of which were positive, and 437 at the Spanish Town Prison, 378 of which were infected.

The Bacteriologist states that in 67·93 per cent. of the specimens examined, the ankylostome parasite was found, and that during the last 18 months, in spite of treatment, the figures show an upward tendency.

Malaria.

67. The total number of cases admitted to the Hospitals was 5,495.

The sale of quinine at a cheap rate through the Post Offices has been continued throughout the year. In spite of the very large increase in first cost owing to the War, the sale price was not increased.

The District Medical Officer for Kingston states that the incidence of cases of this disease was abnormally high.

Vomiting Sickness.

68. The number of cases recorded as having been caused by the so called "Vomiting Sickness" during the year 1916 was 68, of which 21 or 30·8 per cent. were medically certified. In the year 1915–16 the number of deaths was 134, 57 or 42·5 per cent. of which were medically certified.

The largest number of deaths were in Trelawny (15), St. Elizabeth (12), and Clarendon (11).

69. A special investigation into an outbreak in Trelawny was made by the Bacteriologist in the early part of the year 1917, the results of which only strengthen Dr. Scott's theory, which has been reported on at length in past years, that ackee poisoning is the cause of the residuum after elimination of those accounted for by well known diseases.

General.

70. In many of the smaller townships the water supply is derived from wells, ponds, and tanks, the quality of some of which, especially in the case of wells and ponds, is reported on as being questionable. In the towns and villages where water works are established, the supply is adequate and generally speaking satisfactory.

No sanitary improvements of a special nature were carried out during the year.

71. There was a very large increase particularly in Kingston in the numbers of cases of, and deaths from, pneumonia, the main factors in which are stated to be meteorological conditions and poverty, both of which combine to lower the vitality and restrict the resistive powers of the community. The possibility of a virulent strain of pneumococcus having been introduced from Halifax by home-coming convalescents of the Third Jamaica War Contingent has also been suggested as the reason for the prevalence of the disease.

72. The number of persons treated at the Out-patients' Departments at the several Hospitals was as under:—

At Kingston Hospital	12,548
At Public General Hospitals	18,088
In Districts	36,868
Under the ticket system of reduced payment	1,036
	68,540

73. The total number of cases admitted to Public General Hospitals during the year under review was 25,252. There were 620 deaths in Hospitals. Adding the cases treated in the Kingston Public Hospital, 4,184, the Jubilee (Lying-in) Hospital, 594, the Lunatic Asylum, 1,730, the Lepers' Home, 141, the total number of patients treated in Government Hospitals and Asylums was 31,901.

74. During the year under review, Dr. Catto, the Assistant Bacteriologist, resigned his appointment and Dr. H. H. Scott, who was serving in England with the Royal Army Medical Corps, had to be recalled.

12,572 specimens were examined as compared with 12,720 in the previous year.

The usual examinations for correct diagnoses of disease, for hookworm infection, of rats for signs of plague, and for testing the purity of water supplies were conducted as in previous years.

The Bacteriologist states that contrary to belief it has been found that amoebic dysentery does exist in Jamaica to such an extent as now to be a menace.

75. The investigation into peripheral neuritis which was commenced by Dr. Catto towards the end of last year was continued.

76. Towards the end of the year a special investigation was conducted by Dr. Scott into an epidemic of a peculiar nature in Spanish Town, in St. Catherine, but he stated that it would be premature even to hazard a conjecture as to the nature of the affection at the present time, though, arguing from the symptomatic basis merely, it would appear to be an acute infective condition analogous possibly to anterior poliomyelitis on the anterior corvual cells. The matter was still receiving attention when the year under review closed.

No passengers were detained at the quarantine station during the year, but 1,478 packages of baggage were disinfected.

VII.—POSTAL AND TELEGRAPH SERVICES.

77. The Postmaster for Jamaica furnishes the following figures, comparing the postal revenues for 1916–17 with those of the two previous years :—1915–16, £48,053 10*s.* 0*d.* ; 1916–17, £58,411 12*s.* 7*d.*

78. These statistics show an increase of £10,358 in gross revenue, as compared with 1915–16, due to the imposition of a War Tax on letters and parcel post packets and an increase in the cost of telegrams.

79. The expenditure by the Department during the year was £48,728 and by the Public Works Department for maintenance and construction of Telegraph Lines, £2,488, a gross total of £51,216. In 1915–16 the expenditure was £47,640 and £2,351, respectively, or a gross total of £49,991.

80. The Revenue and Expenditure of the Department in each tenth year since 1896–97 is as follows :—

	Revenue.	*Expenditure.*
	£	£
1896–97	29,805	37,853
1906–07	39,891	32,194
1916–17	58,411	51,216

81. The number of telegrams sent was 48,662 less than last year, due to the cessation practically of the fruit (chiefly banana) export trade from hurricane and other causes. There is however an increase of £547 in telegraph revenue, the result of the minimum charge for a telegram having been raised from 6*d.* to 9*d.*

82. 4,113 Money Orders for £13,842 were issued in Jamaica and 33,162 Orders for £65,302, the issues of other countries, were paid.

279,915 British Postal Orders were sold for £64,609, as against £70,182, or £5,573 less than in 1915–16. Orders for £59,061 were cashed in the Colony as compared with £55,561 last year.

49,995 parcels of a declared value of £47,313 3*s.* 11*d.* were received and 13,369 of the declared value of £13,623 were dispatched through the Parcel Post.

83. The Telegraph Money Order Exchange between the United Kingdom and Jamaica, and the system of reply coupons, were adopted in the Colony during the year.

VIII.—GOVERNMENT RAILWAY.

84. The total revenue was £141,571 as compared with £154,721 in 1915–16, a decrease of £13,150 or 8·49 per cent. The expenditure exclusive of debt charges amounted to £132,454 against £127,287 for 1915–16, an increase of £5,168 or just over 4 per cent. The net profit for the year is £9,116 as against £27,434 for the previous year, a decrease of £18,318 or 33·2 per cent.

85. The capital charges stand at £2,668,213 on which the annual charge in the year under review was £121,967. This is £2,062 more than in the previous year and is due to the reconversion of the Imperial Loan of £62,250 for the Chapelton extension under Law 3 of 1912.

86. For the second year in succession the Railway had to face the results of a hurricane which damaged the banana crop to a very serious extent, causing a great loss in revenue from this commodity. The damage to Railway property by the hurricane was on this occasion slight, however, being confined chiefly to Telephone and Telegraph Lines. The works rendered necessary by the hurricane of the previous year were completed during the year under review.

IX.—PUBLIC WORKS.

87. The total expenditure of the Public Works Department for the year under review was £175,574.

Owing to the necessity for economy as a result of the War, expenditure was deferred on every work which could be postponed without positive risk or loss to the Government.

The amount is £20,021 more than the expenditure last year, is higher than during any of the previous three years, and has only three times, namely between the years 1910–13, been exceeded in the history of the Department.

88. The total length of Main Roads under maintenance was 2,218 miles 44½ chains, a slight decrease on the previous year, due to exchanges with Parochial Roads, deviations and errors in previous measurements.

89. The expenditure on maintenance is the largest ever spent in one year by the Department under this head, and was due to the completion of the repairs rendered necessary by the hurricane in 1915, to the further repairs following on the hurricane of the 14th and 15th August, 1916, and to the extremely heavy rains of the year under review.

90. The average cost of ordinary maintenance of roads per mile for the whole Island was £33 5*s.* 2*d.* and including special works of improvements, etc., £56 7*s.* 10*d.*, of which £17 5*s.* 9*d.* per mile was for flood damage.

As was the case last year, the highest average cost per mile was in St. Mary, £30 6*s.* 8*d.*, and the lowest in Manchester, £20 0*s.* 11*d.*

91. The average rainfall during the year was 104·09 inches as against an average of 102·98 in the year before and of 72·71 for all previous years; not only was the rainfall heavy but it was concentrated into the first eight months of the year. With certain few exceptions, all repairs to the roads were practically made good before the end of the financial year.

92. The rolling of road surfaces was continued as in previous years and 45½ miles of road surface were so dealt with.

93. The rebuilding of one bridge each in St. Thomas, St. Mary, and St. Catherine was undertaken.

The restoration of damage done to public buildings by the hurricane entailed an expenditure of £1,137.

94. No vote was taken for New Works under this head, but certain amounts were authorised to meet necessary and urgent requirements, the chief of which were the purchase of the Queen's Hotel and the reconstruction of the Out-patients' Department of the Public General Hospital, Kingston.

95. The Lighthouses were maintained in good order during the year.

The substitution of acetylene for oil at the Folly Point Lighthouse has been satisfactory.

96. Considerable damage was done to the Telegraph Lines by the hurricane of August, 1916, but repairs were promptly made.

The lines generally are reported as having been well maintained.

97. The Queen's Hotel was taken over by the Government and fitted out as a home for discharged men of the British West Indies Regiment who were receiving technical training.

98. A sum of £21,000 was voted for relief works consequent on the hurricane, to be spent, however, only when "absolutely necessary." Against this sum, expenditure of £5,363 was approved, and before the close of the year £3,619 was actually spent. This necessity provided the opportunity for the putting in hand of certain deferred works on main roads in the parishes of St. Thomas, Portland, and St. Mary.

X.—GENERAL OBSERVATIONS.

99. The agricultural outlook for the Island up to August, 1916, was in every respect most promising. The hurricane of that month, however, very seriously modified that prospect. The effects of this disaster are referred to generally in the preceding parts of this report, and the evidence accumulated goes to show that but for this misfortune the year under review would have been one of considerable prosperity.

100. The effects of the War as influencing the demand for sugar, rum, and logwood, have very materially assisted in averting the full weight of disasters following one another in two successive years.

101. Very strict economy in expenditure and increases in taxation, assisted by the high prices reached for produce less affected by storm, have resulted in a much stronger financial position being disclosed than could be anticipated when measures for meeting an unprecedented situation were under discussion.

102. It has been found possible to maintain fully all departments of the public services, and, by confining expenditure in Public Works to maintenance and repairs, the cost of which has been unprecedently heavy as a consequence of hurricane and floods, to provide for the efficiency of this department, and at the same time to meet all expenditure out of current revenue with a surplus balance to be carried forward, a circumstance which must be considered as very satisfactory in the face of the difficulties of the situation.

103. Conditions generally during the early months of 1917 point to good prospects for the forthcoming year, and, should the Island be spared any further visitation, it is likely that the misfortunes encountered during the past two years will have been successfully surmounted, and that their traces will rapidly be obliterated, such is the recuperative power of the Colony.

104. The high prices of imported foodstuffs, and the uncertainty as to their supply, in view of the shortage of shipping and the demands of the Allies in Europe, rendered it advisable to take steps to urge the planting of ample foodstuffs in the Island, to render the population independent of an imported supply, should there be any failure in that supply.

The measures taken have ensured that, if supplies from outside are obtainable in decreasing quantities, there should be ample food for all, and it is stated that never before have such quantities of provisions been planted out as during the year under review. It has furthermore been generally impressed that the present situation will not be confined to the period of the War alone, but that it appears to be increasingly probable that for some time after there will be a world-wide shortage of food for man and that surplus supplies may be in great demand.

105. The Colony has continued to provide contingents of men for duty in the various theatres of the War, and uniformly good reports of the value of their services have been received.

I have the honour to be, Sir,

Your most obedient, humble Servant,

W. H. MANNING,

Governor.

No. 959.

REPORT ON THE BLUE BOOK OF THE CAYMAN ISLANDS FOR 1916-17.*

FINANCE.

The revenue of the Cayman Islands for the financial year ended the 30th September, 1917, amounted to a sum total of £3,220 and the expenditure to £3,553. The average revenue for the last five years is £3,579.

The amount received from Import Duty and the sale of stamps, especially the War Stamps recently issued, has been most satisfactory. It was hoped that the financial year would come to a close without the occurrence of any unfortunate disaster, but hurricanes would appear to have become almost an annual event in the Cayman Islands. On Monday, the 24th of September, Grand Cayman was struck by a severe hurricane, the third visitation within four years in these Islands —the wind blowing with great force and intensity from 9 a.m. until 9 p.m.

The most serious feature of the storm has been the complete destruction of all provision grounds. Very few fruit and bread-fruit trees were left standing. Breadfruit has been the mainstay of the poorer classes owing to the high price of foodstuffs and it can well be realised how serious their position is. Unfortunately two lives were lost. All the available vessels in Grand Cayman—fourteen in number—were driven on shore, thus adding to the difficulty of communication with Jamaica. Fortunately but a few days elapsed before a schooner arrived from the turtle fishing grounds off Nicaragua, which proceeded to Montego Bay with mails. A supply of foodstuffs was sent down as quickly at possible by His Excellency the Acting Governor of Jamaica. In the meantime a Relief Committee was appointed to distribute supplies and everything possible was done to alleviate suffering and distress. Approximately one hundred houses were demolished beyond all hope of repair, and a grant of money will be given to those most deserving of help in order to enable them to rebuild. The east end district of the Island sustained the most damage, about sixty houses were blown down in this portion of the Dependency. Very little Government property was destroyed, and the roads, though strewn with debris, were left intact.

Relief work on the roads was immediately begun, thus rendering it possible for those willing to work to purchase food, while the steps taken by owners in salving schooners driven on shore, involving an expenditure of some hundreds of pounds, provided labour for a large number of the able-bodied men.

The Lesser Cayman Islands have recently shown unmistakeable signs of a gradual, but slow recovery from the hurricane of August, 1915, and very fortunately escaped the recent visitation.

Export Duty.—There is an export duty of 1/- per 1,000 on coconuts.

*NOTE.—A Sketch Map will be found in the Report for 1914-15, No. 879: [Cd. 8172-5].

(C471) Wt. 11/42. 1,000 & 90. 6.18. B. & F. Ltd. Gp. 11/2.

Assets and Liabilities.

On the 30th September, 1917, the assets of the Dependency amounted to £4,454.

The liabilities were £549, due to depositors in Government Savings Bank and £27 due to depositors in Treasury.

TRADE AND INDUSTRIES.

Imports.

The value of the Imports from all countries has been in

1915–16	£28,414
1916–17	29,108

The average for five years is £26,573.

Exports.

The value of the exports to all countries amounted in

1915–16	£11,566
1916–17	8,169

The average for five years is £7,909.

The turtle trade during the current year has been far from satisfactory, the total amount exported has been 833 turtles, value £1,666. Trade still continues very dull, while the high price of food-stuffs has necessitated a considerable reduction in the amount imported.

The customs revenue, however, has not fallen off, inasmuch as the import duty is 5 per cent. *ad valorem*, and the increased price of commodities has compensated for the decreased importation.

As was stated in the report last year, sisal is the only commodity that can resuscitate the economic life of these islands. The soil is peculiarly adapted to the cultivation of this plant, as it has been analysed and found to be of limestone formation. Strenuous efforts have been made during the year under review to encourage the establishment of the industry.

The Government obtained a pre-emption on all bulbils and suckers of the Henequen variety growing in Grand Cayman, and by this means the price was kept down and the plants distributed to the people at cost price varying from 1*s.* 6*d.* to 2*s.* 6*d.* per thousand for bulbils and 8*s.* to 10*s.* per thousand for suckers. Approximately one hundred thousand bulbils were distributed and ten thousand suckers.

Pamphlets were circulated containing all available information on planting, care, cutting, and manufacturing of sisal. A government nursery of fifty thousand bulbils was established.

It has been a very difficult matter to stimulate an interest in a commodity that takes four years to yield a return, there being a tendency among the people to require something from which they can quickly derive a profit. However, a very encouraging beginning was made, the enlightened portion of the population quickly perceived the advantages to be derived from a plant that would undoubtedly flourish in a limestone soil.

It is to be hoped that the recent hurricane will not tend to discourage the efforts already made, as the plants that have been growing for some years in Grand Cayman have sustained no appreciable

damage from the storm. The industry is so important to the islands and means so much to the future prosperity of the inhabitants that any relaxation of effort is to be deplored.

SHIPPING.

Georgetown, Grand Cayman, is a port of registry, having vessels with an aggregate tonnage of 2,324.

The number of ships entered and cleared during the year 1916–17 is as follows :—

Entered	108
Cleared	109

SAVINGS BANK.

The Government Savings Bank, established in 1908, has proved of great use to those desirous of availing themselves of the opportunity offered for safe investment. The transactions for the financial year ended the 30th September, 1917, were :—

Deposits, £407. Withdrawals, £283.

The balances to the credit of depositors at the end of the year amounted to £565.

POST OFFICE.

The Post Office Department has since its establishment amply proved its usefulness and has contributed largely to the finances of the Dependency. For the last six years it has been the mainstay of these islands and has been responsible for nearly one half of the total revenue. In 1916–17, the Post Office revenue amounted to £1,291 ; the total revenue to £3,220.

The sale of postage stamps to collectors forms a very appreciable item in its revenue. The inland postage service shows a steady increase in the amount of business transacted, while the large receipts in respect of the foreign mail are due to the number of Caymanians who have been compelled to seek a livelihood in the Canal Zone, Cuba, Central American Republics, and the United States.

During the current year an additional War Tax of one halfpenny has been imposed on all letters leaving Grand Cayman for various parts of the Empire.

POST OFFICE ORDERS.

All Money Order business is transacted through Jamaica, the issue of the orders in the Cayman Islands being at present confined to Georgetown, Grand Cayman, and Cayman Brac.

PUBLIC WORKS.

During the year under review the encouraging returns from revenue have permitted the execution of more urgent works of public utility than would otherwise have been possible.

The main road from Georgetown to Boddentown, a distance of twelve miles, has been completely repaired, with the exception of small portions which require filling up and sanding. Most of the

estimated vote has been appropriated to this urgent necessity, as a great amount of traffic passes over this road. The school houses at Prospect and West Bay have been enlarged to accommodate the increased number of children. At West Bay a long felt want has been supplied by the erection of a landing pier, which was completed just before the recent hurricane, and which sustained no damage. The bonded warehouse in Georgetown has been repaired and enlarged, and an upper floor added.

JUDICIAL.

There are two sittings of the Grand Court in each year, namely, in June and December. The Commissioner presides as Judge.

Quarterly Petty Courts and Weekly Petty Sessions are held, in which two Justices sit. In all cases in the Grand Court there is a right of appeal to the Jamaica Supreme Court and in the Petty Court to the Grand Court.

LEGISLATIVE.

The Legislative Assembly is styled "The Justices and Vestry," and is composed of all the Justices of the Peace (15 in number) and 27 Vestrymen. The Vestry meets by statute in September in each year to make provision for the next financial year, beginning on the 1st October, and otherwise when summoned for the despatch of business.

AGRICULTURE.

A branch of the Jamaica Agricultural Society was established in Georgetown in 1908, but so little interest has been taken of recent years in this movement, that the usual sum of £18 appropriated annually for the granting of prizes at the annual Agricultural Show by way of encouragement was not included in the Estimates of last year. As there appears to be an evident desire to revive the society, £18 has been voted for its resuscitation next year, and it is hoped that some effort will be made to stimulate interest in agricultural pursuits.

POPULATION.

In June, 1911, a census of the Cayman Islands was taken, showing a total population of 5,564. Of these 2,322 are white, 2,211 are coloured, and 1,031 black.

During 1917 there were 167 births, 91 males and 76 females. Of these 27 were illegitimate and 140 legitimate. In the same period there were 49 deaths, 24 males and 25 females.

EDUCATION.

The state of education in the Dependency is far from satisfactory, especially in the country districts. £250 a year is devoted to education. The conditions obtaining at the present time do not offer any attractions to good and reliable teachers.

HOSPITAL.

There is a small building kept for the purpose of isolating infectious diseases, but it is not generally used. A Government Medical Officer is appointed for the Lesser Islands and Grand Cayman, whose duty it is to visit all the outlying districts.

PRISONS AND CRIME.

There are no prisons in the Dependency. Prisoners sentenced to more than six months' imprisonment are sent to Jamaica. There is very little crime, and offences are generally of a trivial nature, in most cases the result of excessive drinking.

POLICE.

The police force consists of an inspector, five policemen, and one district constable. The services of the police in the country districts are utilised in the carriage of inland mails.

GENERAL HEALTH.

The death-rate for the year was 7 per 1,000, while the birth-rate was 26 per 1,000. The general health of the Island is good.

A. C. Robinson,
Commissioner.

Grand Cayman,
6th December, 1917.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:—

ANNUAL.

TURKS AND CAICOS ISLANDS.

(For Report for 1916 see No. 927.)

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1917.*

TAXES, DUTIES, ETC.

There is no direct taxation in the Dependency. The sources of revenue are import duties (collected under the most liberal tariff of any West Indian Colony), a royalty of one-third of a penny per bushel on all salt exported, port dues paid by vessels entering at the rate of 4*d.* per ton, and the usual internal and miscellaneous receipts.

REVENUE AND EXPENDITURE.

The revenue of 1917 is, with the exception of the years 1896 and 1913, the highest that has ever been recorded in the annals of the Dependency and under most heads shows satisfactory results. The total amount collected was £9,626 as against £8,684 in 1916, and exceeded the estimate by £1,336. This result is largely due to increase in receipts under the head of Post Office, but other sources of revenue also shew an upward tendency.

The expenditure amounted to £8,722 and exceeded the estimate by £505. It, however, included a contribution of £200 towards the Halifax Sufferers Relief Fund and the payment of a War bonus to all officers in receipt of salaries below £100 per annum, in order to enable them to meet the increased cost of living due to the great War.

After defraying outstanding liabilities there remained a credit balance—on the working transactions of the year—of £903. This, added to the credit balance at the end of the previous year, £8,091, discloses a total available sum to the credit of the Dependency of £8,995. In a small and comparatively barren group of islands, having no developed resources worth mentioning, such a result may well be viewed with satisfaction.

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports during the year ended 31st December, 1917, were valued at £34,930, as compared with £29,009 in 1916.

The exports were valued at £42,085, as against £27,807 in 1916.

* A sketch map will be found in the Report for 1914, No. 884: [Cd. 7622–35.]

(C501) Wt.11/42. 1000/90. 10.18. B.&F.,Ltd. Gp. 11/2.

Classified under their respective headings, a comparative statement of the principal exports for the years 1916 and 1917 reads as follows :—

	1916.	1917.
Salt, coarse	£13,715	£14,560
Salt, fishery*	6,388	17,178
Sisal	3,281	5,950
Sponges	1,912	872
Conchs	1,715	1,956

* Newfoundland purchases fishery salt only.

The direction of trade, both imports and exports, during the year under review may be summarized as follows :—

Countries.	Imports.	Exports.
United Kingdom	£1,604	nil
British Colonies	4,090	£13,021
Foreign Countries..	29,176	29,064
	£34,930	£42,085

Salt.—The year 1917 will ever be memorable in the annals of the salt industry as that in which the demand exceeded the supply, and when the selling price reached a figure unknown for very many years. Especially welcome, as the result of Government effort, was the reappearance of Newfoundland as a purchaser, after an absence of about 22 years. It is sincerely hoped that every effort will be made by salt producers to capture and retain this market within the Empire, a market, too, which alone is able to absorb more than one half of the entire salt output of the Dependency. As the result of correspondence between the Commissioner and the British Consul-General at Rio de Janeiro, it was found that the prospects of extending the salt trade of Turks Islands to the markets of the Brazilian Republic were of a most hopeful character. The magnitude of trade requirements in this direction, however, placed it beyond the capacity of our present salt producers to handle, and I am glad to say that arrangements have been concluded with Mr. F. W. Huestis, a capitalist of New York, to take the matter up. Mr. Huestis has leased from this Government (for a term of 21 years) the extensive but abandoned salinas at West Caicos (Caicos Islands) and arrangements are already on foot to commence work on them at an early date. As the output of the West Caicos salinas is estimated at not less than one million bushels of salt per annum, the addition to the revenue in the shape of royalty from this source at no very distant date, will be considerable.

Owing to the abnormal demand above referred to, the stock of salt on hand at the end of the year was almost nil and the prospects for 1918 are therefore entirely dependent on the coming season.

Sponges.—The sponge industry, in consequence of the War, shows a further falling off. Exports to the value of only £872 are recorded. These figures show a decline of £140 below those of the previous year, and are the lowest given for many years.

The industry also suffered a severe blow this year through the sudden death of Mr. George Silly, the enterprising and capable lessee of the artificial sponge beds at Chalk Sound in the Caicos Islands. This valuable industry, having, however, passed the experimental

stage, will doubtless be conducted on right lines by his succesor.s Nevertheless, pioneers of Mr. Silly's type are rare in the West Indies and cannot well be spared.

Bell Sound (Caicos Islands), another shallow water creek—about 8 miles in extent—belonging to the Government, was leased to Mr. Clement Mudge, of New York, in November of the year under review, for the purpose of artificial sponge-growing. It is expected that operations in this connection will be commenced during the coming summer months.

Sisal.—This industry continues to show most satisfactory progress, the natural result of the phenomenally high prices which are now obtained for cleaned fibre in the markets of the United States. Exports to the value of £5,950 are recorded, an increase of £2,669 over those for the previous year. In this connection it may be mentioned that Mr. Huestis has become interested in the lease of 5,000 acres of land in the Caicos Islands for the purpose of fibre-growing.

Conchs.—Exports of this food commodity to the neighbouring Republic of Haiti show an increase of £240 over the figures given for the previous year. Over three million conchs were exported during the year under review.

Lobster-Canning.—Owing to the difficulty of obtaining tin and other materials, this promising industry has had perforce to be suspended for the duration of the War.

Sea Shells.—This industry is likewise at a standstill owing to the great War. These shells are re-exported through New York to Italy where they are used for cameo work and in the manufacture of buttons.

Cotton.—The cultivation of cotton is steadily increasing among peasant landholders in the Caicos Islands. The crop of 1917, amounting to eight bales (an increase of five bales over the first effort), was shipped to Liverpool, via New York, and sold for 1*s.* 8*d.* per lb.—realizing the very handsome sum of £237. After deducting all expenses including freight charges (via New York) which for magnitude almost take one's breath away, there yet remained the sum of £165 for distribution among the growers.

This industry has also passed the experimental stage and will in future regularly appear among the recognised exports of the Dependency.

Shipping.

The number of vessels that entered at various ports in the Dependency during the year was 407, with a tonnage of 217,610 as compared with 307 and a tonnage of 209,882 during the year 1916.

The following statement shows the total of shipping outwards during the past two years :—

Year.	Vessels.	Tons.
1916	307	209,882
1917	405	216,307

VITAL STATISTICS AND PUBLIC HEALTH.

The estimated population on the 31st December was 5,600.

The number of births during the year was 194 and the number of deaths 124. The birth-rate was 35 per 1,000 and the death-rate 22 per 1,000. Fifty-one marriages were registered during the year.

The health of the Dependency was good and there were no epidemics of any kind.

HOSPITALS AND ASYLUMS.

There is no hospital or asylum. It is, however, hoped that this long-standing reproach will be removed during the coming year. It is proposed to convert the old "Poor House" at the north end of the Settlement at Grand Turk into a small but properly equipped hospital of eight beds. In addition, the Honourable B. C. Frith has generously contributed, at his own expense, a private ward of two beds for paying patients.

EDUCATION.

In consequence of an increase in the number of schools it was found necessary to augment the grant for educational purposes to £660 and this sum, administered through the Board of Education, provided for the needs of primary education throughout the Dependency. At the nine schools thus maintained by the Government, the average number of pupils on the register during the year was 923 with an average attendance of 666, as compared with 937 and 718 respectively for the previous year.

The number of children attending private schools in the three principal settlements of Grand Turk, Salt Cay, and Cockburn Harbour was 52, and the record of the aided schools at the Bight and at Five Cays (in the Caicos Islands) discloses an average attendance of about 40 pupils during the year.

The furniture of the school at Grand Turk was renewed, it being impossible any longer to use the dilapidated writing desks and benches which have done duty for so many years.

As one travels among the remote islands of the Caicos group the good work accomplished by these isolated schools and the powerful influence for good which their teachers (mostly females) have on the communities in which they reside cannot fail to impress even the most casual observer.

In scattered settlements whose very names never reach the outside world, where the only representative of law and order is frequently a single rural constable (selected from the people themselves), and where, except for the yearly visit of the Inspector of Schools and Medical Officer, the inhabitants are cut off from most civilizing influences, the presence of these teachers, who for a bare living wage are content to labour on in such places and, apart from their teaching duties, to radiate so wholesome an influence over their fellows, is truly remarkable and is an asset to the Government which should never be lost sight of. Mr. Hutchings, the Inspector of Schools, is to be congratulated on the happy results which have attended his unwearied efforts on behalf of education in these islands.

Owing to the War, it has not been possible to carry out the scheme of Secondary Education referred to in my last report.

JUDICIAL.

Offences reported to the Police	127
Number of persons brought before the Magistrate	127
Summary convictions	94
Convictions in the Supreme Court	3
Number of persons acquitted :—	
In the Supreme Court	1
In the Inferior Court	26

POSTAL, TELEGRAPH, AND TELEPHONES.

Mails to and from the United Kingdom still continue to be transmitted and received twice a month, via New York, by steamers of the Clyde Line. Such irregularities in this connection as have occurred from time to time during the great War are trifling as compared with other islands of the West Indies and are not worthy of mention. There is no direct steamer service between Halifax and Jamaica, owing to the scarcity of tonnage caused by the European War.

The local telephone service at Grand Turk, inaugurated in 1915, continues to give entire satisfaction. It is hoped shortly to link up the Government Offices at Salt Cay and Cockburn Harbour with Grand Turk by wireless telephone. The importance of so doing is sufficiently obvious when it is remembered that the only means of communication between these islands is by open boats and small sloops, and that frequently, for days together, the channel is impassable for craft of this description.

The estimated number of letters and postal matter dealt with in 1917 was : Letters, 30,000 ; postcards, 1,300 ; newspapers, 2,700 ; books, 1,700 ; parcels, 1,404.

The extent of money order transactions was :—

Issued in the Dependency	£950
Paid in the Dependency	747

The revenue of the Post Office for the year 1917 was £1,812 and the expenditure £148.

SAVINGS BANK.

The number of depositors on the 31st December, 1917, was 472. Deposits during the year amounted to £2,726 and withdrawals to £1,946.

METEOROLOGY.

The readings taken at the United States Weather Bureau Station at Grand Turk, in latitude 21° 21′ N. and longitude 71° 07′ W., at a height of 11·3 feet above sea level, were as follows :—

Rainfall	27·61 ins.
Highest temperature recorded for year ..	89°
Lowest temperature recorded for year ..	61°

The prevailing winds during the year were :—

N., 12 days ; N.E., 50 days ; E., 204 days ; S.E., 71 days ; S., 15 days ; S.W., 2 days ; N.W., 4 days ; W., 6 days ; Calm 1 day.

GENERAL.

The year 1917 was one of great financial prosperity, and the general condition and outlook of the Dependency at the close of it are brighter than has been the case for many years, owing to the great demand for salt and the high price that now obtains for it. This has been brought about by the European War in the course of which the activity of submarines off the coast of Europe has considerably interfered with shipments of salt from Spanish ports to markets along the North Atlantic sea-board of the United States and Canada.

The Commissioner was absent from the Dependency from the 15th September to the 15th November on an official visit to Newfoundland in connection with the salt industry. During this period his duties were performed by Mr. H. H. Hutchings, Assistant Commissioner.

In common with other islands of the West Indies the Dependency shares in the general anxiety with respect to obtaining food supplies from the United States. In our case the feeling is intensified by a knowledge of the fact that these islands are unsuitable for provision-growing to any extent and are therefore dependent on outside sources for even the barest necessaries of life. So far, thanks to the generosity of the United States War Trade Board, shipments of the common foodstuffs have been regularly maintained and at no time has there been any danger of a food crisis.

Except for the occurrences above mentioned the year was a quiet and uneventful one and there are no other matters calling for special remark.

G. WHITFIELD SMITH,

Commissioner.

JAMAICA.

REPORT ON THE BLUE BOOK FOR 1917-1918.

I have the honour to report on the Blue Book Returns of this Government for the financial year ended 31st March, 1918.

I.—FINANCIAL.

1. The total revenue and expenditure for the last two years have been as shown below :—

	Revenue.	Expenditure.
	£	£
1916–1917	1,154,349	1,076,237
1917–1918	1,052,485	1,098,409

2. Again during the year under review the Island was visited by a hurricane, this time on the 23rd September. This followed on the hurricanes of the 15th August, 1916, and 12th August, 1915. This third hurricane naturally affected the revenue and expenditure of the Island during the latter half of the Financial Year.

3. In the prefatory minute attached to the Estimates for the year 1917–1918 there was shown an anticipated deficit of £5,182 subject, however, to this being turned into a surplus if a certain proposal to obtain further revenue was adopted. In the course of the consideration of those Estimates the proposal for increased revenue was extended so as to cover an anticipated net yield of further revenue to the extent of £43,600. This figure was arrived at by extra taxation to the extent of £93,600, against which there had to be set an estimated falling off of ordinary revenue to the extent of £50,000, owing to conditions which had suddenly arisen out of matters connected with the War. The expected surplus at 31st March, 1917, being £71,297, and the revenue during 1917–1918 (modified as shown above—that is to say, £1,005,270 less £50,000 plus £93,600) being £1,048,870 and the expenditure as finally passed in Council being £1,083,018, the surplus at 31st March, 1918, was estimated at £37,149.

4. When the revised Estimates for 1917–1918 were made up in February, 1918, in order that the Estimates for 1918–1919 might be laid before the Legislative Council, the position as then estimated stood thus :—

(C519) Wt. 1/155. 1,000 & 90. 2.19. B.&F.Ltd. Gp.11/2.

Surplus on 1st April, 1917, was	£88,842
Revised estimate of Revenue for 1917-1918 was	1,051,228
	£1,140,070
Revised Estimate of Expenditure for 1917-1918, including special expenditure rendered necessary by the hurricane of September 23rd, 1917, came to	£1,110,291
Leaving an expected surplus on 31st March, 1918, of	£29,779

The Finance Accounts for the year 1917-1918 show the actual results to have been as follows :—

Surplus, 1st April, 1917 (as stated above)	£88,842
Revenue, 1917-1918	1,052,485
	1,141,327
Expenditure, 1917-1918	£1,098,410
Leaving a surplus on 31st March, 1918 ..	£42,917

This surplus is an improvement of £13,138 on that expected according to the revised Estimates, and of £5,768 on the original Estimates.

5. The improvement of £13,138 on the revised Estimates is made up as follows :—An increase of Revenue amounting to £1,257 plus a decrease in Expenditure of £11,881.

6. This net excess of Revenue is accounted for chiefly by increases of £1,356 under Sugar Excise Duty, and £1,978 under Property Tax. The chief decreases were £4,736 under Export Duties and £2,114 under Rum Duty (Excise).

7. With regard to the net decrease in Expenditure of £11,881, the chief increases are £1,585 under Judicial, £8,885 under Constabulary and Prisons, and £1,122 under Printing Office ; decreases, £1,007 under Public Works Department, £1,772 under Post Office and Telegraphs, and £15,028 under Public Works and Buildings and Lighthouses.

8. *Comparison with actual figures of preceding year.*—If the actual figures for 1917-1918 be now compared with those of the preceding year 1916-1917 the following important differences appear, viz., Revenue increases of £5,084 under Rum Duty, £2,324 under Tobacco Duty, and £2,113 under Sugar Duty; decreases, £53,509 under Import Duties, £51,288 under Export Duties, and £5,408 under Interest.

9. Under Expenditure the chief increases are £14,739 under Medical, £16,829 under Constabulary and Prisons, £2,267 under Printing Office, £3,612 under Miscellaneous, and £3,917 under Railway; decreases, £4,423 under Defence, £9,482 under Public Works, and £3,780 under Relief Works.

10. The expenditure rendered necessary by the hurricane of September 23rd was referred to in detail in the Acting Governor's despatch, dated the 10th November, 1917, and the enclosures to that despatch subsequently laid before the Legislative Council, at the Special Session on the 18th December.

This session of the Legislature dealt with the question of loans to Agricultural Loan Boards and to planters direct. At this meeting

the Council assigned the sum of £7,000 for loans to Agricultural Loan Societies to enable them to make loans of a special class and £2,000 to the same Societies to make loans under the provisions of Law 6 of 1912, and £10,000 for loans of a special class when such loans exceeded £200 in each case. The Council also on the same date passed the necessary special Law to enable the Societies to make the loans of a special class above referred to.

11. The public debt of the Island (most of which is represented by productive investments) amounted to £3,757,612 on the 31st March, 1918. The accumulated sinking funds on the same date amounted to £1,092,922, leaving a net liability of £2,664,690. Included in the debt guaranteed public loans for local purposes, secured on municipal rates and undertakings, amounting to £437,042, the sinking funds in respect of which amounted to £104,018.

12. The totals of the revenue and expenditure of the City Council of Kingston, of the Kingston General Commissioners, and of all the Parochial Boards taken together, for the last two years, are shown in the following comparative statements :—

Kingston City Council.

	Receipts.	Expenditure.
	£	£
1916–17	38,092	40,390
1917–18	37,897	43,319

Kingston General Commissioners.

1916–17	45,444	44,954
1917–18	46,783	41,986

Other Parochial Boards (14 *Parishes*).

1916–17	132,111	135,713
1917–18	132,587	139,543

The debts of the Parochial Boards to the Treasury for advances made for water works and markets amounted at the close of the year to £6,400.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

13. The imports and exports for the two last past years and for 1913, the last of the pre-War years, are as follows :—

	Imports.	Exports.
1917	£3,323,942	£2,479,107
1916	3,107,004	2,821,234
1913	2,837,446	2,430,207

14. The value of the Island's trade is maintained at its former level rather by increased prices than increase in the volume of the commodities imported and exported. Either compared with the imports of the four years next preceding, or with those anterior to the Great War, the volume of imports in 1917 showed a very great shrinkage, and especially in foodstuffs was there apparent a material response to the behest to the Colony to be self-supporting. In the

case of manufactured goods, where value is the only measure of increase or decrease, the diminution in volume is not so easily traced; but having regard to the great advance in prices and in freight and charges it may be safely said that in these items, too, has there been a very large falling-off in volume. Commodities for export promised well but were affected adversely by the hurricane of September, by the British embargo on the importation into the United Kingdom of certain main items of our produce, and by the general insufficiency of tonnage. To the first of these causes must be attributed a loss in the value of banana export on comparison with the figures of a four year average of no less than £597,728; and in the value of coconuts of £13,251. To the second a diminution of £129,495 in the value of rum exported, £32,757 in the value of coffee, and £42,004 in the value of cocoa; while high freightage contributed to diminution in the logwood exports by £55,873. However, these losses received compensation in increased values for the following:—Sugar increased by £452,154; dye extracts by £153,190; cigars by £23,086; honey by £28,122; ginger by £33,806, and fustic by £9,478.

15. The imports and exports given at ten-year intervals produce the following table. With regard to the latter, however, it should be remembered that the figures for 1917 are, of necessity, very much affected by "War prices":—

	Imports.	Exports.
1877–78	£1,492,722	£1,458,669
1887–88	1,695,605	1,509,010
1897–98	1,660,667	1,470,241
1907–08	2,914,013	1,992,007
1917	3,323,942	2,479,107

16. Another line of enquiry to which attention may usefully be directed at the present crisis in the Empire's history is the source and distribution of the Island's imports and exports respectively; accordingly the following calculations are presented:—

Sources of Supply of Imports.

	1877	1887	1897	1907	1917
United Kingdc	50·7	62·	46·7	47·4	19·5
United States	31·6	28·3	43·3	43·6	70·1
Canada	13·9	6·6	7·2	5·5	6·7
Other Countries	3·8	3·1	2·8	3·5	3·7

Destination of Exports.

	1877	1887	1897	1907	1917
United Kingdom	79·5	38·6	27·5	21·5	44·8
United States	15·1	44·0	56·6	57·2	28·1
Canada	—	1·3	1·2	7·6	15·1
Other Countries	5·4	16·1	14·7	13·7	12·0

17. Among the newer exports of the Island the Collector General calls attention to the large quantity of copra and orange oil which found a place in the export statistics of the year, the value of the former being £34,284 and of the latter £46,518—not an inconsiderable addition to the Island's trading account.

18. The agricultural statistics collected by the Collecting Officers of Taxes during the year compared, with the average of the preceding four years, give the following result :—

	1917–18.	Average 1913–17.
	Acres.	Acres.
Tilled Lands	285,757	272,713
Guinea Grass	145,249	167,255
Commons	590,969	539,951
Wood and ruinate	1,030,712	1,147,077

The tilled area is again sub-divided into the following heads of cultivation, viz :—

	1917–18.	Average 1913–17.
	Acres.	Acres.
Canes	37,951	32,554
Coffee	20,280	19,:52
Coconuts	35,923	25,534
Bananas	67,987	84,922
Cocoa	14,590	11,375
Ground Provisions	77,092	64,973
Mixed Cultivation	29,503	28,783
Minor Items	2,431	3,345

The propaganda for growing more home foods is reflected in an increase of area in native foods of nearly 13,000 acres. Possibly a census of cultivation taken up just at the sowing season might give more favourable returns, but the figures published are useful as showing the general trend of agriculture, and they have been helpful to those charged with the duty of stimulating food production.

19. Other statistical tables show the number of real property holdings upon which taxes were paid during the year to have been 159,867 ; the number in respect of which the occupiers were relieved 1,508 ; and the number in arrear at end of year as being 15,437 ; also that the maximum rate of taxation payable in respect of about 74 per cent. of the properties does not exceed 14*s.* 8*d.* per annum, a sum which may be paid in quarterly instalments.

20. In connection with the local food situation and under a Defence of the Island Regulation a census of cattle and live stock was taken shortly after the close of the financial year and has shown the position in that respect to have been better than was popularly estimated. The figures came out thus :—

Cattle, viz.: Bulls ..	3,457	
Cows	60,120	
Steers	41,492	
Heifers	25,943	
Calves	35,527	
		166,539
Sheep		11,910
Pigs		31,966
Goats		29,679

21. The Surveyor General observes that the progress of the sale of lands to small settlers has been checked on account of the lack of money due to conditions brought about by the Great War, and the hurricanes of August 1916 and September 1917.

The supplying of hardwood sleepers from the Crown lands to the Government railway has been taken up, and is being tried as an experiment.

On account of the shortage of roofing materials brought about by the lack of ships, it was found necessary, late in the year, to cut shingles on some of the Crown lands for the use of Public Departments. 12,000 cedar shingles and 14,650 Santa Maria shingles have accordingly been supplied to the Director of Public Works, and the Director of the railway, respectively. Lack of labour has, however, considerably handicapped the undertaking.

In the parishes of Portland and St. Thomas, which were devastated by the hurricane of September, 1917, offers have been made by the Department to supply shingles, scantlings, and boards from the Crown lands for the rebuilding of houses, &c.: The production of lumber and shingles for this purpose would have provided labour to some extent but the people showed a great lack of appreciation and in some districts refused to work altogether, although the prices offered were considerably higher than what they were accustomed to receive for similar work before the War. Even in the two or three districts where an attempt has been made the result is entirely negligible.

The Loan Boards which were formed during the past year, in the parishes of St. Elizabeth, St. James, Trelawny, St. Ann, St. Catherine, Portland, and St. Thomas, consisting of the member of the Legislative Council for the parish, the Chairman of the Parochial Board, the Collector of Taxes, and two other members appointed by the Governor, have more or less given their attention to matters affecting the sale of Crown lands in their respective parishes.

The duties of the Boards are to consider and advise the Government as to the best means of opening up Crown lands for settlement, and as to the methods of providing means for making and maintaining roads into such Crown lands.

AGRICULTURE.

22. For the third year in succession the Island was swept by an autumnal hurricane and again a general destruction of the banana fields resulted, while in the Eastern parishes cyclonic effects approaching in gravity those brought about by the great hurricane of 1903 took place.

The most serious damage was the destruction of many thousands of coconut trees, for besides those actually fractured by the storm

many trees subsequently became affected with "Bud-rot" and other parasitic diseases which gained an entry into the lacerated hearts of the palms.

23. The restrictions as to coffee and cacao rendered necessary in the United Kingdom in consequence of War conditions have reacted on these two staples so as to affect adversely a large number of small producers, while the extraordinary depression of the banana industry through three successive years of hurricane has made serious inroads on the capital and savings of a large section of the agricultural community.

24. The sugar industry has, however, stepped into the breach, and, stimulated by high prices and assisted by favourable conditions for crop production, has established a modern record for sugar in Jamaica with an export of 32,000 tons for 1917, estimated to have realised £672,000. This represents almost double the value of the sugar crop of Jamaica 40 years ago when sugar was the chief staple of the Colony and fruit was still an unimportant minor product.

25. Every effort was made by the planters to reduce the output of rum in favour of sugar. Most of the rum crop was sold at good prices in the Island, to large buyers in England who foresee a profitable market for Jamaica rum when acute war conditions have subsided.

26. Three new sugar factories have been provided for in St. Catherine and many projects for sugar developments are being actively considered by planters and capitalists so soon as machinery is again procurable.

27. Considerable interest is now being taken in the growing of improved canes and the Nurseries at Hope and Montpelier have had heavy calls for the supply of improved varieties of canes.

28. The copra industry was extended during the year and drying plants are being erected in ever increasing numbers in coconut districts. Allowing for nuts converted into copra, the exports of coconuts for 1917 amounted to 30 million nuts, and but for the hurricane a remarkable progress in the records of the coconut industry would have been established in 1917. Large numbers of young trees are now coming into bearing and with average good fortune the exports of coconuts from Jamaica should show a progressive increase during the next 10 years.

29. Very good prices were obtained for hides, orange oil, and honey during the year. Pimento made a good recovery from its previous depression during the War period, while the substantial sum of £540,000 was recorded as the value of the exports of logwood and its extracts.

30. The Government Stock Farm at Hope has continued to progress. During the year it was able, out of its current revenue, to finance the purchase of "Kintyre Pen," formerly a portion of Hope Estate, for addition to the Government estate at Hope, to import four pedigree dairy bulls from America at a cost of over £400, to initiate a motor service for the quick delivery of milk to the public institutions in Kingston, and to expend £500 in establishing 50 acres of common pasture in sweet potatoes for the reinforcement of local food supplies.

31. A considerable economy has resulted from the replacement of imported condensed milk at the Lunatic Asylum by fresh milk from the Farm.

32. The use of dipping tanks for the control of ticks has progressed during the year, and plans of a " Standard Dipping Tank " suitable for general use in Jamaica have been prepared for the use of pen-keepers who desire to erect dipping tanks on their properties.

The herd of cattle at the Government Farm was dipped every three weeks during the year at a cost of twopence per head.

33. The records of Panama Disease for the financial year show a total incidence of 125 diseased plants for the whole Island, the smallest annual record since this disease was taken in hand by the Government on systematic lines. Arrangements for monthly inspections of all cases under quarantine by the Director of Agriculture and the Microbiologist alternately, and for one Inspector of Plant Diseases to spend his whole time on this work, were made during the last half year and the results have been encouraging.

34. The banana borer is now generally recognised by planters who have had experience of this insect on their plantations not to be a serious pest and to be controllable by methods of clean management so as to be negligible in commercial banana cultivation.

The Order of 1916 enforcing compulsory measures of a drastic nature for this pest has therefore been withdrawn.

35. The attendance of the students at the Farm School declined from an average of 29 students for last year to 23 students for 1917–18. Many parents have found themselves unable to pay for their sons at the Farm School on account of adverse agricultural and commercial conditions.

36. The work of the Deputy Island Chemist shows a decided increase, 1,198 samples having been dealt with as against 988 in the previous year.

37. The Government Botanist discovered 15 species of plants new to science and 38 species new to the flora of the Island by his explorations during the year.

38. The sisal plantation at Lititz is progressing, about one million plants now being established at this site so as to supply the requirements of the whole area of 900 acres available for sisal on this land. The present prospects for sisal hemp are most encouraging and very high prices have recently been obtained for small parcels of this fibre which were produced in the parish of Clarendon.

39. The Microbiologist has discovered a Phytophora-like fungus to be the cause of the Bud-Rot disease of coconuts, which has been a good deal in evidence as a sequel to hurricane damage.

40. The " Black Fly of Citrus " which had recently been reported to be doing great damage to citrus plants all over the Island is now apparently under control by the " Dugald Campbell " ant and certain entomogenous fungi in combination.

Thousands of trees have been freed from this troublesome pest by these natural agencies and their distribution by artificial means is now being undertaken.

SHIPPING.

41. As was to be expected, the figures referring to commercial shipping show serious decline, and to this the hurricane of 1917 has

been contributory as well as the Great War. The number and tonnage of ships reported in 1917, compared with the figures of 1916, stand thus :

1917 ..	901 vessels with tonnage of		1,045,443
1916 ..	977	,,	,, 1,230,803

The corresponding figures in regard to vessels cleared were :—

1917 ..	874 vessels with tonnage of		1,019,490
1916 ..	948	,,	,, 1,208,775

The numbers of steam and sailing vessels reported are shown by the following figures :

Steam.	1917 ..	485 vessels with tonnage of		992,116
	1916 ..	577	,,	,, 1,162,865
Sail.	1917 ..	416	,,	,, 53,327
	1916 ..	400	,,	,, 67,938

The corresponding figures for vessels cleared were :—

Steam.	1917 ..	471 vessels with tonnage of		970,227
	1916 ..	566	,,	,, 1,142,267
Sail.	1917 ..	403	,,	,, 49,263
	1916 ..	382	,,	,, 66,508

III.—LEGISLATION.

42. Of the Laws passed during the calendar year 1917, the most noteworthy is :—

Law 5 *of* 1917.—A Law to provide for the payment to the Lords Commissioners of His Majesty's Treasury of the sum of £60,000 a year for forty years as a contribution from Jamaica in reduction of the War Debt of the United Kingdom.

This sum is intended to cover the cost of the Jamaica War Contingents, and should it prove more than sufficient for the purpose, the balance is to be regarded as an additional contribution from this Colony towards the expenditure incurred by the Mother Country on account of the Great War.

IV.—PUBLIC EDUCATION.

43. The Director of Education has furnished the following statistics :—

	1917–18.	1916–17.
Schools on annual grant list at end of financial year	696	696
Average number of scholars on books	99,910	97,467
Average attendance for year ended 31st March	50,730	53,447
Percentage on average attendance of number on books	63·22	64·09
Total payments to Elementary Schools and Teachers	£67,804	£65,987

The annual examination of Teachers and Training College Students shows the following results :—

The total number of candidates presented was 113, 20 of whom obtained Honours.

For the Pupil Teachers' Examination, 476 candidates were presented, 341, or 72 per cent. of whom passed; 2,514 volunteer candidates were presented, and 1,095, or 43 per cent. passed.

44. The total amount expended on Elementary Education through the Estimates of the Department was £87,217, as against £83,528 in 1916–1917, and by the Public Works Department in the building of Government Schools and Teachers' Houses, £3,701, as compared with £527 last year.

45. Very serious damage was done to school buildings, teachers' houses, and out-offices by the hurricane of 23rd September, 1917, especially in St. Thomas, Portland, and St. Mary.

A vote of £2,770 for the restoration of the damaged buildings was passed by the Legislative Council, and Grants amounting to £2,767 10*s.* have been paid.

46. The results of the Annual Examination of Schools are as follows: 295 were placed in the first-class, 286 in the second, and 100 in the third, as compared with 277,285 and 108, respectively, in 1916–17. The failures numbered five, as against a similar number last year.

Industrial Schools.

47. The number of inmates of the Industrial Schools, male and female, was:—

Stony Hill	563
Alpha Cottage	381
Belmont	33
Happy Grove	12
Broughton	23
A total of	1,012

Secondary Education.

48. The expenditure of the endowed Schools during the year was as follows:—

	£
Jamaica College	3,716
Munro and Dickenson's	8,212
Wolmer's	3,479
Manning's	798
Rusea's	374
Titchfield	1,801
Beckford and Smith's	454
Manchester Schools	351
Vere Schools	1,280
Montego Bay School	899
Guthrie Davidson's	69
	£21,433

The Jamaica (Boys) and £60 Scholarships for 1918 were awarded to pupils from the Jamaica College and the Girls' Scholarship to a pupil from Hampton School.

The winners of the Boys' Scholarships who are of military age are only allowed to take up the Scholarships if they are found to be medically unfit for Military Service; otherwise the Scholarships are kept in abeyance for them during the period of their military service.

224 boys and girls are reported to have entered for the Cambridge Local Examinations, 177 of whom passed, 46 doing so with Honours.

V.—GOVERNMENT INSTITUTIONS.

(a) *Public Hospital, Kingston.*

49. Indoor patients treated, 3,951; outdoor patients, including paupers, 15,035; dressings done for outdoor patients, 41,236; prescriptions made up, 14,507; total surgical operations, 1,842; dental cases, 3,283; daily average number of inmates, 262; total cost of maintenance, £13,542 10*s.* 10*d.*; receipts, £1,585 10*s.* 4*d.*

50. During the year the number of patients who attended the evening clinics in connection with the treatment of cases of Venereal Disease was 7,903. 10,920 prescriptions were made up and 500 doses of Diarsenol were administered.

(b) *Victoria Jubilee Lying-in-Hospital.*

51. Number of patients admitted, 593; 11 pupil nurses were admitted for training, of whom 10 passed their examinations and received certificates, and one left on account of ill-health; average daily number of patients, 14; receipts, £529 19*s.*; expenditure, £1,340 11*s.* 9*d.*

(c) *Lunatic Asylum.*

52. Number of patients on 31st March, 1918, 1,351, an increase of 29 during the year. Total number of patients under treatment during the year, 1,637; daily average resident, 1,330; rate of recovery, 50·64 per cent.; admissions, 310; discharges, 160; deaths, 120; death-rate, 9·1 per cent. Cost of maintenance, £28,416; receipts, £12,749.

(d) *Lepers' Home.*

53.

Patients on 31st March, 1917		122
Admitted during the year		19
		141
Discharged	1	
Absconded	7	
Died	20	
		28
On 31st March, 1918		113

The death-rate was 14·2 per cent.

(e) *Government Savings Bank.*

54. The liability of the Bank to its depositors on current account was increased during the year by £18,541, the decrease on ordinary accounts being £2,130, and the increase on Government accounts, £20,671.

55. The ordinary deposits amounted during the year to £67,814, an increase of £2,460, and the withdrawals to £69,944, a decrease of £8,758, as compared with the previous year.

The balance-sheet on 31st March, 1918, shows a liability to depositors of £278,742.

56. The income and expenditure of the Bank for the year may be summarised as below :—

Income.

Interest on investments	£9,640	11	0
Miscellaneous Receipts	10	13	3½
	£9,651	4	3½

Expenditure.

Interest on deposits	£7,217	14	9
Carried to General Revenue	2,433	9	6½
	£9,651	4	3½

The number of pass books examined was 3,806.

On the 1st April, 1917, the rate of interest payable on deposits was increased from 2½ per cent. to 3 per cent. per annum.

(f) *Registration of Titles.*

57. Work was steadily carried on ; the number of titles registered during the year was 520. The Title Assurance Fund amounted at the end of the year to £7,713 9*s*.

VI.—COURTS, POLICE, AND PRISONS.

58. The judicial statistics show that the total number of convictions in Circuit Courts was 116, as compared with 78 in the previous year ; of convictions in the Resident Magistrates Courts, 12,763, as compared with 9,750 ; and of summary convictions, 15,906, as compared with 15,819.

The number of persons brought before the Magisterial Courts was 45,931, as against 40,875 for last year, and the number of persons tried before the Superior Courts 19,280, as against 14,693.

There were 6,530 cases of praedial larceny in which a charge was preferred, as against 3,999 in the previous year, and there were 4,787 convictions, as against 2,902 in 1916–17.

There were two convictions for murder during the year, comparing with four in the year 1916–17; the death sentence was carried out in both of the cases.

Prisons.

59. The committals to the prisons during the year numbered 8,354, and to lock-ups for short terms, 2,666, making a total of 11,020, as compared with 9,024 in the previous year, an increase of 1,996.

60. The re-convictions during the year amounted to 4,448, of which 1,986 were second convictions, 851 third, and 1,611 fourth and upwards. During 1916–17 the re-convictions numbered 2,847.

61. The daily average of prisoners in the Penitentiary and St. Catherine District Prison was 2,192, as compared with 1,565 in the previous year. There were 271 deaths in the prisons, as compared with 78 in 1916–17. There were three executions for capital punishment, as against a similar number in the previous year.

Considering the institutions separately the daily average in the Penitentiary was 1,216, as against 930 during the previous year, and in the St. Catherine District Prison, 976, as against 635. The deaths in Penitentiary were 76, representing a rate of 62·45 per 1,000, compared with 33 representing a rate of 35·48 per 1,000 in 1916–17; and in the St. Catherine District Prison, 198, representing a rate of 199·79 per 1,000, as against 45, representing a rate of 70·86 per 1,000 last year.

62. As a result of the scrutiny of quarterly returns furnished by the Inspector-General of Police and Prisons of the deaths in these prisons, he was called on to furnish a special report on the large increase in the case of the St. Catherine District Prison. The Inspector General forwarded a report by the surgeon of that Institution in which he attributed the high rate of mortality to over-crowding and to the very poor physique of a large number of the persons committed to the prison.

The Inspector General also reported that efforts were being made to relieve the over-crowding by the erection of a large association ward within the prison walls, the expenditure in connection with which had been previously authorised, and the Director of Public Works was requested to give expedition to the work.

The high death-rate in the Prisons was still receiving close attention and investigation at the close of the financial year to which this Report relates and is being separately reported upon.

63. The state and discipline of the prisons have been satisfactory; eighteen corporal punishments were inflicted for breaches of discipline.

The reformatory branch at the District Prison contained 41 lads on 31st December.

64. During the year 1917–18, 248 persons were under supervision as probationers under Law 27 of 1909. From these probationers 1,032 reports were received. Nineteen probationers were brought before the Court for subsequent offences, showing about 8 per cent. of lapses, as compared with 5 per cent. in 1916–17.

Police.

65. The establishment, including officers, was 29 below the authorised strength on the 31st March, 1918, but the monthly average deficiency during the year was 19. The number of days of absence from duty on account of illness in hospital was 14,405, as compared

with 11,336 in 1916–17, and 10,185 in 1915–16; 892 men were treated in hospitals and 539 in barracks and private quarters. In 1916–17 the figures were 836 and 742, respectively.

66. The number of cases reported to the Police and Magistrates was 46,400, those prosecuted 38,854, and those in which convictions were obtained 25,043, as against 41,524, 33,958, and 22,001, respectively, in the previous year. 110 cases were under remand for trial; in the year before the number was 101. The incidence of crime per 10,000 of the population was 516·51, as compared with 462·22 in 1916–17, 442·44 in 1915–16, and 425·76 in 1914–15.

67. There were 34 habitual criminals under police supervision, and 2,602 under police surveillance during the year, as compared with 35 and 2,869, respectively, in 1916–17.

68. The sub-officers and men travelled 734,184 miles in the execution of their duty, as compared with 683,950 in the previous year.

The conduct and discipline of the members of the Force were on the whole good.

VII.—VITAL STATISTICS AND PUBLIC HEALTH.

69. The estimated population of the Island on the 31st December, 1917, was 893,884. This figure is arrived at as follows:—

Estimated population on 31st December, 1916			897,196
Births registered in 1917	30,557		
Deaths registered in 1917 ..	21,167		
			6,390
			903,586
Migrations in 1917:—			
Arrivals—General	10,194		
„ East Indians	—		
		10,194	
Departures—General	18,869		
„ —East Indians ..	—		
		18,869	
			8,675
			894,911
Less persons on board British Ships of War and the tourist ship "Avon," who were included in the Census of 1911 ..			1,027
			893,884

70. Of the general arrivals and departures, 6,771 and 7,140, respectively, were labourers, and shew a net emigration of 369 persons of this class. The remainders, 3,423 arrivals and 11,729 departures, represent a net emigration of 8,306 persons. It is to be remembered that this period includes the departure of certain Jamaica War Contingents.

Migration of labourers took place chiefly in respect of the following countries :—

	Departures.	Returned.	Excess Departures.	Excess Returns.
Central America	2,181	3,582	—	1,401
Cuba	4,532	2,750	1,782	—
Hayti	38	14	24	—
Other Countries (American and West Indian, etc.)	389	425	—	36
Total ..	7,140	6,771	1,806	1,437

71. The mean Island population for the year, that is, the population on the 30th June, 1917, ascertained by adding to the Census figures the excess of births over deaths registered since the Census, and by deducting the excess of emigration over immigration from the Census in 1911, was 895,692. On these figures the marriages, births, and deaths registered during the year, with the rates per 1,000 for this and the preceding year were :—

		Rate per 1,000. Year ended 31st December, 1917.	Year ended 31st December, 1916.
Marriages	2,966	3·3	3·3
Births ..	30,557	34·1	33·3
Deaths ..	24,167	26·9	22·4

72. Of the births registered, 20,708, or 67·7 per 100 were illegitimate. This is slightly higher than the 1916 rate of 67·5, which was the highest Island rate recorded since the introduction of compulsory registration in 1878, and is the fourth time in succession that the record of the highest rate of illegitimate births has been broken.

73. The general death-rate of 26·9 per 1,000 is 4·5 higher than the 1916 rate of 22·4, and has only been exceeded three times since the present system of registration commenced in 1878. Of the total mortality the deaths of infants were :—

Under one year	5,644	or 23·3 per cent.
One year	2,074	or 8·6 per cent.
Two years	914	or 3·8 per cent.
Three years	589	or 2·4 per cent.
Four years	450	or 1·9 per cent.
	9,671	or 40·0 per cent.
1916	8,475	or 41·9 per cent.

74. Comparing the infant mortality with the births during the year, 30,557 infants were born, and 7,718 died at one year of age or under, equal to 25·2 per cent. The percentage under 5 years was 31·6.

The highest birth-rate was in Clarendon (37·3) and the lowest, exclusive of Port Royal, in Kingston (27·5).

St. Ann is the only parish in which the death-rate was lower than in 1916. In all the other parishes the rate has increased, ranging from 1·7 in the case of St. Elizabeth to 9·1 in the case of St. Catherine.

Public Health.

75. The expenditure of the Medical Department during the year amounted to £94,843, as against £78,523 in 1916–17.

The expenditure of this Department in the course of the last two years is as follows :—

1916–17	£78,523
1917–18	94,843

This does not include the sum of £2,158 spent by the Public Works Department for maintenance, &c.

There were nine students—5 men and 4 women—at the Dispensary School at the Public Hospital, Kingston, during last year.

Yaws.

76. This disease is reported to be still very prevalent throughout the Island. 8,227 cases were treated, various drugs being used.

Venereal Diseases.

77. These diseases still continue prevalent throughout the Island. During the year an order was issued to District Medical Officers in charge of Public Hospitals, allowing the free treatment in such Institutions of all cases of venereal disease in an infective condition, and the Medical Officers were also informed that any specimens of blood, discharge, &c., would be examined and reported on free of charge. In addition to the male Venereal Ward opened in 1916, two other wards were being built on land adjoining the Kingston Public Hospital.

Hookworm.

78. 4,361 cases were treated at the various hospitals in the following manner :—

Thymol	3,294
Oil of Chenopodium	1,046
Quassia	15
Napthol B.	6

44 East Indians also were treated with thymol on the Estates. 19 severe cases were treated for hookworm at the General Penitentiary, and 48 examined at the Spanish Town Prison, all of which were infected.

Malaria.

79. The total number of cases admitted to the Hospitals was 4,288. The sale of quinine at a cheap rate through the Post Offices has been continued throughout the year. In spite of the very large increase in first cost owing to the War, the sale price has not been increased.

The District Medical Officer for Kingston states that this disease showed a decrease both in incidence and fatality.

Vomiting Sickness.

80. The number of cases reported during the year 1917 as Vomiting Sickness was 172, of which 158, or 91·86 per cent,, were instances of ackee poisoning. The Bacteriologist has fully investigated the so-called "Vomiting Sickness," and the majority of cases so reported have proved to be caused from ackee poisoning. Dr. Scott states that the outbreak during the past year has been exceptionally severe, but the mortality is estimated to be about 30 per cent. compared with between 80 per cent. and 90 per cent. in former years. The reduced mortality is attributed to the propaganda issued in the form of pamphlets and notices.

General.

81. Dr. H. H. Howard, Director of the Rockefeller International Health Board in the West Indies, paid a visit to Jamaica in February, in connection with the campaign to be undertaken by that Institution for the eradication of hookworm in the Colony. The Rockefeller International Health Board will carry out the treatment and provide its own staff and the Legislative Council has voted the funds for purchasing the necessary medicines, &c., and for otherwise taking part in the campaign.

82. The number of persons treated at the Out-Patients' Departments at the several hospitals was as under :—

At Kingston Hospital	15,035
At Public General Hospitals	23,609
In Districts	35,145
Under the Ticket System of reduced payment	789
	74,578

83. The total number of cases admitted to Public General Hospitals during the year under review was 20,109. There were 532 deaths in Hospitals. Adding the cases treated in the Kingston Public Hospital, 3,951 ; the Jubilee (Lying-in) Hospital, 593 ; the Lunatic Asylum, 1,637 ; the Lepers' Home, 141 ; the total number of patients treated in Government Hospitals and Asylums was 26,431.

84. The principal diseases for which patients were admitted into the Public General Hospitals were as follows :—

Diseases.	1917–18. Cases.	1917–18. Deaths.	1916–17. Cases.	1916–17. Deaths.
Malarial Fever—				
Intermittent	3,909	26	5,714	45
Remittent	174	8	114	12
Pernicious	9	6	12	12
Skin Diseases	1,777	6	3,089	5
Diseases of the Digestive System	1,452	—	1,752	87
Local Injuries	1,574	28	1,754	37

85. The Bacteriologist reports that the investigation into the epidemic of a peculiar nature in St. Catherine which he conducted and which is referred to in the last Report—has proved it to be an

acute outbreak of "Central Neuritis," which when it has become chronic, has for a long time been designated in Jamaica as Peripheral Neuritis.

VIII.—POSTAL AND TELEGRAPH SERVICES.

86. The Postmaster for Jamaica furnished the following figures, comparing the postal revenues for 1917-18 with those of the previous year :—

	1916-17.			1917-18.		
	£	s.	d.	£	s.	d.
Postage	47,127	12	9¾	44,517	17	5¼
Commission on Money Orders	331	17	10½	288	15	11
Local Commission on British Postal Orders ..	863	13	5½	789	2	6½
Miscellaneous	1,473	0	2	2,870	5	1½
Telegraph	8,615	8	4	8,811	8	7
	£58,411	12	7¼	£57,277	9	7¼

87. The expenditure by the Department during the year was £48,725, and by the Public Works Department for maintenance and construction of Telegraph Lines, £2,371, a gross total of £50,646. In 1916-17, the expenditure was £48,728 and £2,488, respectively, or a gross total of £51,216.

88. The Revenue and Expenditure of the Department in each tenth year since 1897-98 is as follows :—

	Revenue.	Expenditure.
	£	£
1897-1898	27,969	36,961
1907-1908	41,162	33,471
1917-1918	57,277	50,646

89. As compared with the two previous years the numbers of letters and postcards were :—

	At General Post Office.		
	1915-16.	1916-17.	1917-18.
Outwards	4,151,708	4,119,592	3,890,084
Inwards	5,376,988	5,195,402	5,097,452
Total ..	9,528,696	9,314,994	8,987,536

	At District Post Offices.		
	1915-16.	1916-17.	1917-18.
Total	1,697,412	2,134,620	2,662,234
Grand Total ..	11,226,108	11,449,614	11,649,770
Telegrams sent and received	235,077	186,415	189,739

90. 3,624 Money Orders for £10,234 were issued in Jamaica and 35,501 Orders for £76,111, the issues of other countries, were paid.

There is a decrease of £3,062 in respect of Orders payable in the United Kingdom, which is attributed to the check on trade between

the two countries, due to the War, but there is an increase of £9,060 in the Orders issued in the United States of America and the Canal Zone, mainly due, it is considered, to the larger number of remittances received from persons who have emigrated to these countries.

267,071 British Postal Orders were sold for £59,480, as against £64,609, or £5,129 less than in 1916–17. Orders for £60,212 were cashed in the Colony, as compared with £59,061 last year.

44,698 parcels of a declared value of £52,592 8*s.* 4*d.* were received, and 13,002 of the declared value of £13,062 10*s.* were despatched through the Parcel Post.

IX.—GOVERNMENT RAILWAY.

91. The total revenue was £142,899, as compared with £141,571 in 1916–17, an increase of £1,328. The expenditure, exclusive of debt charges, amounted to £136,388, against £132,455 for 1916–17, an increase of £3,933 or 2·96 per cent. The net profit for the year was £6,511, as against £9,116 for the previous year, a decrease of £2,605.

92. The capital charges stand at £2,669,371, on which the annual charge in the year under review was £121,955. This is £12 less than in the previous year.

93. For the third year in succession the Railway had to face the results of a hurricane which damaged the banana crop very considerably, causing a great loss in Revenue from this commodity. The damage to Railway property by the hurricane was estimated to be about £2,400, and the work rendered necessary thereby was completed during the year under review.

X.—PUBLIC WORKS.

94. The total expenditure of the Public Works Department for the year under review was £162,202, summarised as follows :—

	£	*s.*	*d.*
Salaries and other Departmental charges	17,203	15	6½
Main Roads and Bridges—Maintenance	98,183	8	3
Main Roads and Bridges—New Works	11,685	1	2
Public Buildings—Maintenance ..	9,287	6	11
Public Buildings—New Works ..	5,496	11	10
Lighthouses	1,383	5	3
Rio Cobre Irrigation Works	2,749	4	0
Spanish Town Water Works	837	0	9
Government Schools	2,701	18	2
Telegraph and Telephones	2,370	13	11
	£152,898	5	9½
Adding the work done for other Departments and Parochial Boards and paid for from other Votes and for Relief Works	9,304	4	11
	£162,202	10	8½

95. The total length of main roads under maintenance was 2,229 miles, 06¼ chains, an increase of 10 miles, 41¾ chains on the previous year, due to deviations and exchanges with Parochial Boards.

96. The expenditure on maintenance shows a considerable reduction on the two previous years owing to the exercise of strict economy, and to the absence of any widespread flood or hurricane damage.

97. The average cost of ordinary maintenance of roads per mile for the whole Island was £35 0*s.* 3*d.*, and including special works of improvement, &c., £44 0*s.* 6*d.*, of which £4 3*s.* 6*d.* per mile was for flood damage and £4 16*s.* 9*d.* per mile was for special works. Many of these special works under Maintenance were undertaken for the purpose of providing relief after the hurricane in September, 1917. They will be of great value in the near future, and consist chiefly of improvements to the road between Kingston and Port Antonio, via Morant Bay, with the bridging of numerous small streams.

98. The average rainfall during the year was 82·16 inches, as against an average of 104·09 in the year before, and 76·25 for all previous years. The rainfall was in every way normal, except in the month of September, when it was about double the average.

99. The rolling of road surfaces was continued as in previous years, and 35¾ miles of road surface were so dealt with.

100. The restoration of damage done to Public Buildings by the hurricane in September, 1917, entailed an expenditure of £1,965.

101. The total expenditure authorised under New Works on Public Buildings was £11,368, while £5,496 was spent, leaving £5,872 unexpended. The principal works carried out were the erection of temporary barracks at the St. Catherine District Prison, and the continuation of the construction of the new Ward at the Kingston Public Hospital for the treatment of venereal diseases.

102. The hurricane in September caused considerable damage to the telegraph lines in the parishes of St. Thomas, Portland, and St. Mary, but repairs were promptly effected, and the lines have been maintained in good order.

103. The Rio Cobre Hotel has been converted into a Home for children of men of the British West Indies Regiment.

XI.—GENERAL OBSERVATIONS.

104. Most of the remarks made by Sir W. H. Manning under this head in respect of the year 1916–17, apply with greater or less force to the year 1917–18. Again a hurricane swept over the greater portion of the Island (on this occasion in September), affecting most severely the eastern half, wherein is to be found the greater portion of the banana cultivations. The effects of the hurricane have been alluded to in other portions of this Report, as well as the action taken in consequence. The banana cultivation had been promising very well, but the hopes of the banana planters were again dashed to the ground in the early hours of the 23rd September. To have a hurricane for the third year in succession was an almost unprecedented event in Jamaica history, and entirely so since the banana industry had become one of permanent importance to the Island.

105. Last year it was stated that the effects of the War in influencing the demand for sugar, rum, and logwood, had very materially assisted in averting the full weight of disasters following one another in two successive years. This is true in respect of the year under review, with the qualification that disasters have occurred now in three successive years, that the price of logwood had been lower than in the earlier days of the War, and that there has been an embargo against the entry of rum into the United Kingdom, the effect of which has been not to prevent the sale of Jamaica rum, but to retain in the Island rum after it had been sold to merchants in the United Kingdom.

106. The Colony continued during part of the year to provide contingents of men for duty in the various theatres of the War, and uniformly good reports of the value of their services have been received. Sir W. H. Manning reported to the Legislative Council, after his return from leave of absence in December, and after a visit he had paid to the battle areas in France, that it would be a source of pride to Jamaica to learn that he heard nothing but praise of their soldierly qualities and the value of their services.

ROBT. JOHNSTONE,
Acting Colonial Secretary.

Colonial Secretary's Office,
11th October, 1918.

COLONIAL REPORTS, &c.

No. 1003.

REPORT ON THE CAYMAN ISLANDS, 1917-18.*

FINANCE.

The revenue of the Cayman Islands for the financial year ended the 30th September, 1918, amounted to £4,423, and the expenditure to £5,162. The average revenue for the last five years is £3,784.

In Grand Cayman the year has been spent in recuperating from the effects of the hurricane of 24th September, 1917. The first five months of 1918 were dry, and home-grown food was very scarce, so that at the north and east ends of the Island relief work on roads had to be provided. Since April, 1918, seasons have been most favourable, and the only sources of distress the cultivators now have are the rats and agoutis. Breadfruit-trees have recovered well, but other fruit-trees will take years to recuperate. It is to be regretted, however, that the necessity of providing food has fully occupied the energies of the few men who remain at home to till the soil, and they have been quite unable to spare any energy for cultivation of sisal or other industries. Of the fourteen vessels driven ashore in the storm all but one, a very old schooner, were refloated.

Hurricane relief and drought relief have caused a heavy increase of expenditure, and the high price of foodstuffs has caused an increased revenue from import duties.

The Revenue has been further helped by the issue of War Stamps, which have found a ready sale to collectors.

Wages of mariners, which form the principal source of income of the Cayman Islanders, have been high, and the Islands do not appear to have lacked some measure of prosperity.

The smaller Cayman Islands have been very diligent in shipbuilding, notwithstanding the high prices of materials. At the end of the year under review they had five vessels approaching completion.

As in Grand Cayman, however, recent hurricanes have much discouraged other than hand-to-mouth-cultivation.

Assets and Liabilities.

On the 30th September, 1918, the assets of the Dependency amounted to £5,363.

The liabilites were £2,159 due to Government Savings Bank and £91 due to depositors in Treasury.

---

* A sketch map will be found in the Report for 1914-15, No. 879: [Cd. 8172-5].

TRADE AND INDUSTRIES.

Imports.

The value of the Imports from all countries has been in

1916–17	£29,108
1917–18	37,949

The average for five years is £29,163.

Exports.

The value of the Exports to all countries amounted in

1916–17 to	£8,169
1917–18	5,229

The average for five years is £6,954.

Trade in thatch rope has afforded remunerative employment to the women in those districts which most needed help, there being considerable demand in Jamaica for such ropes owing to the high price of hemp and other fibres.

The trades in turtle and hawksbill-shell have necessarily continued dull, as freights have been high and ship-owners have not cared for the uncertainty of this industry when they have certain profit in the carrying trade.

Shipping.

Georgetown, Grand Cayman, is a port of registry, having on its register 47 vessels with an aggregate tonnage of 2,242.

During the year under review only one new ship has been registered, but there have been nine in process of building, most if not all of which will be registered in the year 1918–19.

SAVINGS BANK.

People still neglect to make themselves familiar with the Savings Bank. It has been found difficult with the smallness of our staff to provide those conveniences of deposit and withdrawal which have made Savings Banks so popular in other communities. The balance on hand has trebled, but the deposits are chiefly of larger sums, and not of small savings.

The transactions for the financial year ended the 30th September, 1918, were :–

Deposits, £1,952. Withdrawals, £698.

The balances to the credit of depositors at the end of the year amounted to £1,851.

POST OFFICE.

The War tax of an additional halfpenny on letters within the Empire has been continued, and the sum of £1,906 has been collected for stamps.

(C589). Wt.1/155. 1000 & 90. 10.19. B.&F.Ltd. Gp.11.

Money Orders.

The money order service, which is transacted through Jamaica, continues to be a necessity in the absence of a local bank, and is very largely used by merchants, and by sailors remitting money home.

PUBLIC WORKS.

The execution of public works has been confined to maintenance and to relief work rendered necessary by hurricane and drought. Considerable progress has been made in widening the road from West Bay to Batabano. The improvement of the road to the Hut Village at Northside is nearly completed. In the East End District a piece of road at Whitesand has been deviated from the seaside, and repairs have been done in East End Village and over Gun Bluff.

JUDICIAL.

There are two sittings of the Grand Court in each year, namely in June and December. The Commissioner presides as Judge.

The Court was during the current year adjourned from time to time as there was some complaint of praedial larceny, but the fact that there have been only six cases of stealing before the Grand Cayman Courts, and only four in the smaller Islands in twelve months would indicate that the people are very law-abiding.

A law has been passed to regulate the hearing of appeals from the Petty Courts to the Grand Court.

LEGISLATIVE.

The Vestry meeting was held in September as usual, and lasted a day and a half.

AGRICULTURE.

Agriculture here appears to be carried on under a perpetual protest, for the Caymanians' home is amongst the ships, and he does not take kindly to the curse pronounced on Adam.

The Agricultural Society is feeling its way, and it is hoped will make great progress as soon as enough material can be found for a show to bring members together.

POPULATION.

In June 1911, a census of the Cayman Islands was taken, showing a total population of 5,564. Of these 2,322 were white, 2,211 coloured, and 1,031 black.

During 1918 there were 138 births, 73 males and 65 females. Of these 30 were illegitimate and 108 legitimate. In the same period there were 61 deaths, 34 males, and 27 females.

EDUCATION.

Education has not improved. Two teachers left after the hurricane, greater inducements being offered them in foreign parts. The Dependency is, however, legislating for the necessary inducements to teachers, coupled with a system of free education.

HOSPITAL.

The hospital or lazaretto has been kept in repair.

PRISONS AND CRIME.

The Lockups at Georgetown in Grand Cayman and Stakes Bay in Cayman Brac are the only Prisons, to which short term prisoners are committed.

Prisoners for terms longer than six months would be sent to Jamaica, but there have been none such for several years. Serious crimes amongst Caymanians, whether against persons or property, are generally the result of drinking, of which, however, but little is done in the Dependency.

POLICE.

The police force consists of an inspector, five policemen, and one district constable. There is but little police work, so that other uses are found for the policemen, chiefly in connection with the Post Office and Customs Departments. The Justices have authority to appoint special constables.

LIGHTHOUSES.

A triple wick Wigham lamp with a fixed white light has been erected at Gorling Bluff, at the east end of Grand Cayman, on an iron tower, at an elevation of seventy-two feet above sea-level. This is in substitution for the lamp on the mast at Gun Bluff. The work was carried out by Mr. T. E. Terrier, under direction of the Public Works Department of Jamaica.

---

shing company, inc.

GENERAL HEALTH.

The death-rate for the year was 12 per 1,000, while the birth-rate was 27 per 1,000.

The report of Dr. J. L. Hydrick on his hookworm-survey of the Cayman Islands conducted during the previous year under the auspices of the International Health Board, Rockefeller Foundation, has been received. It is found that the hookworm infection is not great and not likely to be serious except in one or two districts.

The difficulty of obtaining lumber has hindered the most effective remedy of compelling the building of closets.

Dr. G. N. D. Overton has been confirmed in his appointment as Government Medical Officer for the Cayman Islands, and presented his annual report to the Vestry, from which it would appear that typhoid fever, represented by 22 cases with 4 deaths, has been during this year the most serious enemy to the people's health.

There has not been found to be any indigenous malaria or other insect-borne disease in the Islands.

CLIMATE.

The Cayman Islands are among the healthiest places in the world. There are no cases of illness attributable to climatic conditions. The prevailing breeze is from the south-east from April until October, when the cool season begins with a change of wind to the north and north-west in the early part of November.

The following table shows the average temperature :—

	Morning.	Mid-day.	Evening.
Hot months	83°	89°	86°
Cool months (Nov. to Mar.)	71°	80°	74°

C. E. MELLISH,
Acting Commissioner.

Grand Cayman,
4th March, 1919.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:—

No. 1009.

TURKS AND CAICOS ISLANDS.

(For Report for 1917 see No. 969.)

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1918.*

FINANCIAL.

The Revenue for the year 1918 exceeded the Estimates by £246, and amounted to £8,671. Expenditure fell short of the Estimates by £333 and amounted to £8,323.

Year.	Revenue.	Expenditure.
1917	£9,626	£8,722
1918	8,671	8,323

Expenditure under Head Miscellaneous includes contributions to Imperial Funds towards the cost of the Great War of £1,000 in 1914, £500 in 1915, and £200 to the Halifax Sufferers Relief Fund in 1917.

Assets stood at £20,120 and Liabilities at £10,776 17*s*. 1*d*., thus disclosing a balance of Assets amounting to £9,343 2*s*. 11*d*.

There is no Public Debt.

VITAL STATISTICS.

There were 257 births or 46 per thousand, and 161 deaths or 29 per thousand.

According to the Census of 1911, which may still be taken as a fairly accurate estimate of the population of the Dependency, there were 2,505 males and 3,110 females of a total population of 5,615 souls.

In common with the rest of the world the Dependency was visited with an outbreak of Spanish influenza during the year under review. Happily, however, it proved to be of a mild type and except at the settlement of Bottle Creek, North Caicos, gave little cause for anxiety.

EDUCATION.

The control of Primary Education continues to be administered by a Board to which the Government makes an Annual Grant of £700 for that purpose.

There is still no provision for Secondary Education. The scheme for the inauguration of such a school, sanctioned by Sir William Manning, in 1916, has not yet materialized owing to the difficulty experienced in obtaining a Head Master from England consequent on the Great War.

* Sketch Maps will be found in the Report for 1914, No. 846: [Cd. 7622-37].

HOSPITALS AND ASYLUMS.

The Manning Hospital—affording accommodation for six patients (3 males, 3 females) in the public wards and two patients in the Frith private ward—was opened on the 8th October of the year under review.

The Institution has already been instrumental in saving many lives, to say nothing of temporary relief afforded to human suffering, and one is led to wonder however it was possible to have existed without it in past years.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports to the value of £39,276 10*s*. 11*d*. and £25,594 1*s*. 8*d*. respectively, are recorded for the year.

The following table gives particulars in this connection for the past two years :—

Year.	Imports.	Exports.
1917	£34,930	£42,085
1918	£39,276	£25,594

The direction of trade during the same period may be gathered from the following table :—

IMPORTS.

Year.	United Kingdom.	Br. Colonies.	Foreign Countries.
1917	£1,664	£4,090	£29,176
1918	1,347	8,368	29,560

EXPORTS.

Year.	United Kingdom.	Br. Colonies.	Foreign Countries.
1917	——	13,021	29,864
1918	360	12,243	13,041

Salt.—334,184 bushels of coarse salt, value £6,888, and 526,185 bushels of fishery salt, value £13,346, were exported during the year.

Compared with past records these figures indicate that, with regard to exports of its chief product, the year 1918 was the worst in the annals of the Dependency since 1879. On the other hand, the year was again an ideal one for the salt raker and but for the scarcity of tonnage, owing to the Great War, exports of this commodity would have been up to the average. The stock of salt on hand at the close of 1918 was estimated at one and three quarter million bushels, (value £17,500) and was probably one of the largest on record.

Sisal.—The maintenance of high selling prices continued to stimulate the dying embers of this industry, and with the contemplated shutting down of the East Caicos Fibre Company next year, it is practically certain that sisal cultivation in the Caicos Islands will receive its death blow, at any rate for some years, since no effort is being made to replant or to open up fresh areas for planting. Difficulties of a purely private nature are, it is said, responsible for this action on the part of the East Caicos Company, but it is none the less regrettable that an industry, at present full of promise and so especially suitable to climatic conditions in the Caicos Islands, should pass out of existence. The abandonment of sisal cultivation will be a severe blow to the island

(602) Wt.1/155. 1000 & 90. 11.19. B.&F.,Ltd. G/11.

of East Caicos, whose inhabitants mainly depended on the Fibre Factory for a livelihood. Sisal to the value of £942 was exported as against a value of £5,950 in the year 1917.

Canned Lobster.—Owing to the difficulty of obtaining cans, in consequence of the Great War, the industry, which had been languishing since 1916, received its finishing stroke through the death of Mr. George Silly, its originator, in September of the year 1917. It is doubtful whether it will ever be revived, unless outside capitalists can be induced to turn their attention to these islands. Pioneers of the Silly stamp are not easily obtainable for such lonely and out-of the-way spots as the Caicos Islands. Canned lobsters do not appear among exports for the year 1918.

Cotton.—The appearance of cotton for the first time on record, among the exports of the Dependency, seems to call for more than a passing remark—for this reason—quite two thirds of the population of the Turks and Caicos Islands reside in the Caicos Islands where, under conditions of almost unbelievable hardships owing to the absence of any agricultural industries, the inhabitants are compelled to eke out a precarious existence by conch and sponge fishing, and for many years have constituted a continual source of anxiety to the Government. Especially do they become so during years of drought when, their scanty store of ground provisions having become exhausted, a period of utter destitution and starvation ensues, which only prompt Government aid in the shape of "emergency labour schemes" can avert.

It would seem that at the time of the settlement of the Caicos Islands, soon after the Revolutionary war between the United States and Great Britain (1784–1785), a number of gentlemen residing in the British Provinces of America obtained grants of land from the British Government in the Caicos Islands, which at that time formed part of the Bahamas. The white settlers have long passed away. The descendants of their slaves constitute the bulk of the inhabitants of the Caicos Islands to-day. These settlers brought with them seeds of the Sea Island and Upland Cottons, but for various reasons the cultivation of the plant never assumed the proportions of an industry. Cotton plants were, however, allowed to grow up untended in waste places near to the settlements where, amid the cactus scrub, they for over a century pursued a struggle for existence, evolving eventually a type of cotton plant that for hardiness, freedom of disease, and heavy cropping qualities, under almost unbelievable conditions of sterility and neglect, cannot be surpassed anywhere.

In the year 1915, during a visit of inspection to these islands, the Commissioner's attention was attracted to this unusual type of cotton, and a sample of the lint was procured and forwarded to Messrs. Wolstenholme and Holland, of Liverpool, for report. This proved so satisfactory that efforts were made in 1916 to induce peasants to take up cotton cultivation on systematic lines.

It was an arduous task at first, owing to the ignorance of the people of even the simplest agricultural methods. By degrees, however, they began to make headway and the first shipment of three bales of cotton in 1916 proving satisfactory, they were led to realize that after all there was a value attached to land and were stimulated to further effort in this direction. An output of eight bales in 1917, twelve bales in 1918, and fourteen bales in 1919 mark the progress, which although

slow, is being steadily achieved in this connection. The "deadpoint" or "experimental stage" of the industry having now been passed it would seem that if carefully fostered and encouraged, the cotton industry will before long completely change the fortunes of these islanders, since there are thousands of acres of land in the Caicos Islands suitable for its cultivation. It was, however, recognised at an early stage that the only hope of establishing a cotton cultivation among the peasants of the Caicos Islands lay in the Government becoming sponsor for the industry, on the lines so successfully adopted in the Grenadines, and that every precaution should be taken to prevent the introduction of cotton seed from outside with its attendant dangers. The native type, although possibly not the highest grade of "Upland cotton"* is especially suitable to the habits of a people who would not look at the industry if the plants required any care whatever beyond sowing and reaping. In these days when experimental work plays so large a part in the prosecution of all agricultural industries, it might be interesting to ascertain what the Caicos Islands type of cotton would do under more favoured conditions of growth and treatment. Cotton to the value of £617 (which sum includes an amount of £257 for the year 1917) are recorded among the exports of 1918.

Conchs.—Over three million dried conchs of an estimated value of £3,371, were exported to the neighbouring Republic of Haiti during the year.

Sponges.—Sponge culture and the operations at Chalk Sound Farm received a severe set-back through the death of Mr. George Silly, in 1917. Although the plantation is still in existence, yet, lacking proper management, it cannot be any longer considered a valuable asset among the minor industries of the Dependency. Such a condition of affairs is the more regrettable as there is no doubt whatever that sponge culture under skilful management, can be carried on successfully and developed to a large extent in the shallow-water creeks of the Caicos Islands.

Exports of sponge for the year 1918 were valued at £503, as against £872 for the year 1917—a falling off of £369.

Sea-Shells also show a decline in value amounting to £211, as compared with the year 1917, when exports to the value of £351 were recorded.

A review of the export trade of the Dependency discloses the unpleasant fact that, except in the direction of cotton, there has been a steady decline in all the minor industries as compared with the previous years. Even the salt industry shows unmistakable signs of weakness, particularly in the direction of cheapening the cost of production (which still remains about the same as it was 50 years ago) and the employment of improved and up-to-date methods of manufacture. It would therefore seem to be a matter for serious consideration by all who have the real interests of the Dependency at heart, how best to meet the situation when peace is restored and the conditions of trade again become normal.

---

* It may be interesting however to mention that the shipment of Caicos Cotton in 1918 sold for 1*s.* 8*d.* per lb. and was reported by the brokers as being of good quality and strength, with the remark that there was always a fine market for this quality of cotton.

It is a fact beyond dispute that the sisal, sponge, and lobster canning industries are all severely handicapped owing to lack of enterprise and capital, and that in this respect also the salt industry is likewise a great sufferer. Salt manufactured on such expensive and antiquated lines as obtain in the Turks Islands must always be at a great disadvantage when brought into competition with that from more progressive salt-exporting countries. As salt producers admit their inability to do anything owing to lack of funds, it would seem that only the introduction of fresh capital and the adoption of better and more up-to-date methods of manufacture can restore prosperity to these islands, and check the stream of emigration which has been steadily going on since the early days of January of the year under review.

Agricultural Society.—It is pleasant to turn from this somewhat gloomy picture and to allude to the work of the Agricultural and Industrial Society of these islands. Starting in November, 1916, with 110 members, it now has 263 names on its register. Already two very successful Exhibitions have been held in the island of Grand Turk, and under the capable guidance of Mr. H. H. Hutchings (the Assistant Commissioner), its Secretary and Treasurer, the Society has done much to foster and encourage a taste for agriculture among peasant growers throughout the Dependency.

SHIPPING.

The number of vessels that entered at the various ports in the Dependency during the year was 276, with a tonnage of 186,798, as compared with 407 vessels and a tonnage of 217,610 during the year 1917.

JUDICIAL.

Offences reported to the Police	171
Number of persons brought before the Magistrate	170
Summary convictions	116
Convictions in the Supreme Court	2
Number of persons acquitted :	
In the Supreme Court	1
In the Inferior Court	51

GOVERNMENT INSTITUTIONS.

SAVINGS BANK.

Deposits during the year	£2,736 10*s.* 3*d.*
Withdrawals during the year	2,023 6*s.* 1*d.*
Total amount at credit of Depositors on 31st Dec., 1918	7,571 14*s.* 6*d.*
Number of Depositors	637
Rate of Interest paid to Depositors ..	2½ per cent.

PUBLIC LIBRARY.

This Institution continues its good work and, in a community where there are practically no amusements, is regarded with the warmest approval by every section of the inhabitants.

The annual Government grant in aid is £50.

POSTAL, TELEPHONE, AND TELEGRAPH SERVICES.

Mails to and from the United Kingdom are transmitted twice a month by steamers of the Clyde Line, via New York, as heretofore.

The monthly service of Messrs. Pickford and Black's steamers connecting the Dependency with Halifax and Jamaica has not yet been resumed. Great inconvenience has been caused by the cessation of this steamship service.

The cable of the Direct West India Cable Company, Ltd., between Halifax, Bermuda, and Jamaica touches at Grand Turk and connects the Dependency with other systems of the world. The Company supplies a news bulletin daily in respect of which a yearly subsidy of £120 is paid.

The local telephone service, inaugurated in 1915, continues to give satisfactory service and has proved a great boon to the community at large.

The Revenue of the Post Office for the year 1918 was £2,193 7*s.* 9*d.*, while Expenditure for the same period amounted to £181 0*s.* 4*d.*

METEOROLOGICAL.

The readings taken at the United States Weather Bureau Station at Grand Turk in Lat. 21° 21′ N. and Long. 71° 07′ at a height of 11·3 feet above sea level, were as follows :—

Rainfall	25·35 ins.
Highest temperature recorded for year ..	90·2°
Lowest temperature recorded for year ..	60·5°

The prevailing winds during the year are thus recorded :—

N., 14 days ; N.E., 38 days ; E., 209 days ; S.E., 80 days ; S., 6 days ; S.W., 4 days ; W., 7 days ; N.W., 3 days ; Calm, 4 days.

GENERAL.

Except for an outbreak of influenza of a mild type and the scarcity of tonnage, already alluded to, no events of importance mark the year 1918. In common with every part of the British Empire a deep feeling of relief and thankfulness prevailed among all classes over the signing of the Armistice in November, and great is the hope that the coming year may bring with it the blessings of a restored peace.

G. WHITFIELD SMITH,
Commissioner.

Grand Turk, 11th June, 1919.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonia Possessions have been issued, and may be obtained from the sources indicated on the title page:—

No. 1024.

JAMAICA.

REPORT ON THE BLUE BOOK OF JAMAICA, 1918–1919.

I have the honour to report on the Blue Book Returns of this Government for the financial year ended 31st March, 1919.

I.—FINANCIAL.

1. The total revenue and expenditure for the last two years have been as shown below :—

	Revenue.	Expenditure.
	£	£
1917–1918	1,052,486	1,098,410
1918–1919	1,157,304	1,228,608

If the figures for 1918–1919 be compared with those of the preceding year 1917–1918, the following important differences appear, viz. :—

Revenue.—Increases—Spirit Licenses £1,601 ; Agricultural Produce Dealers' Licences £1,248; Rum Duty £27,225; Sugar Duty £8,519; Stamp Duty £16,737; Lunatic Asylum Fees £2,766; Prison Sales £5,432 ; Reimbursement of Debt Charges (Balance Debt, Myrtle Bank Hotel) £2,881 ; Post Office and Telegraphs £3,272 ; Railway £31,146 ; Interest £3,042 ; Miscellaneous Receipts £3,409 ; Nickel Coin £1,515. Decreases—Import Duties £4,692 ; Export Duties £5,190 ; Reimbursement for Debt Charges (Railway Debt Amortization Annuities) £1,377.

Expenditure.—The chief increases were Pensions £1,138 ; Excise, Internal Revenue, and Customs £1,600 ; Post Office and Telegraphs £1,978 ; Judicial Department £1,025 ; Medical Department £16,641 ; Constabulary and Prisons £15,363 ; Industrial Schools £2,152 ; Agricultural Services £5,186 ; Miscellaneous (including War Bonus £33,238) £55,244 ; Defence £1,088; Railway £37,018 ; Manufacture of Nickel Coin £1,270 : decrease—Public Works and Buildings £11,575.

2. The public debt of the Island (most of which is represented by productive investments) amounted to £3,732,500 on the 31st March, 1919. The accumulated sinking funds on the same date amounted to £1,165,587, leaving a nett liability of £2,566,912. Included in the debt are guaranteed public loans for local purposes, secured on municipal rates and undertakings amounting to £432,788, the sinking funds in respect of which amounted to £112,986.

II.—TRADE, AGRICULTURE, AND SHIPPING.

IMPORTS AND EXPORTS.

3. The total value of imports and exports for the last two years are as follows :—

	Imports.	Exports.
	£	£
1918	3,375,798	2,684,897
1917	3,297,665	2,478,916

The slight increase must be attributed to continued enhancement of prices rather than increase in quantity, as tonnage remained restricted throughout the year, the Shipping Returns disclosing that during last year only 772 ships entered the ports of this Island against 901 in 1917. The value of the exports was maintained principally by the continued high prices obtained for our cocoa and coffee.

4. The sources of supply of imports and the destination of exports may be analysed as under :—

Source of supply of Imports.

United Kingdom	16·1
United States	67·6
Canada	9·6
Other Countries	6·7

Destination of Exports.

United Kingdom	50·2
United States	23·3
Canada	14·4
Other Countries	12·1

5. The agricultural statistics collected during the year compared with an average of the preceding four years' returns give the following result :—

	1918–19.	Average 1914–18.
	Acres.	Acres.
Tilled Lands	298,411	296,069
Guinea Grass .. .. .. } Commons .. .. .. }	749,813	603,181
Wood and ruinate	978,667	1,127,641

The tilled lands may be further classified as under :—

	1918–19.	Average 1914–18.
	Acres.	Acres.
Canes	41,067	34,252
Coffee	19,654	19,316
Coconuts	39,783	29,526
Bananas	60,585	80,552
Cocoa	16,978	12,310
Ground Provisions	83,549	68,787
Mixed Cultivation	33,450	28,349
Minor Items	3,445	2,977

(625) Wt.32796/354. 1,250 & 90. 2.20. B.&F.,Ltd. G.11.

The increase in coconuts and decrease in bananas arise principally from the fact that these two products are planted simultaneously in the same land, and when the former come to maturity the banana cultivation can no longer be maintained.

6. The Surveyor General makes the following observations with regard to the sale of Crown Lands, &c., during the year :—

Sale of Land.

During the year 26 instalment purchasers who bought 220 acres under the rules for the sale of Crown Lands to small settlers, have been given registered titles to their lands on completion of payment of their instalments of purchase money. There were also 37 cash purchasers who bought 169 acres, and to 16 of these Common Law titles have been issued. To 31st March last of the total of 40,452 acres that have been sold partly on credit since 1897, about 29,089 acres have been paid for in full, about 1,573 acres have been taken back for failure to pay, and about 9,880 acres still remain in possession of the purchasers to be paid for.

Agriculture.

7. The Island has made good progress in retrieving the successive disasters of the past three years, and, on the whole, the agricultural history of the year 1918 has been a satisfactory one.

The rainfall was generally below the average, and conditions of drought served to restrict the general output of the major crops of the Island.

8. The exports of sugar fell to 26,000 tons, or about 6,000 tons less than in the previous year. The demand for rum has steadily increased so as to raise the price of this product to a lucrative standard.

The large Central Factory in St. Catherine is expected to start grinding in December next with an output of 15,000 tons of sugar for the first crop.

A Government Co-operative Central Sugar Factory for St. Thomas in the East has now reached the stage of approval by the Legislature and a 10,000 ton factory is now in prospect for this productive area, where hurricanes and storms render banana cultivation so hazardous an enterprise.

There are also demands for a similar enterprise in Portland to be served by the Government Railway.

It is therefore clear that the Colony is exerting itself to increase the output of sugar to a marked extent, so as to justify the granting of the Imperial preference. The work of producing and testing new seedling canes which has been in abeyance during the War is now being taken up again by the Agricultural Department and the sugar industry will now receive the attention which its recent developments should justify.

The station at Hope made a special effort to supply new canes to the public and a record output of 158,000 cane tops was issued during the year. The "UBA" cane from Africa was found to be a meritorious variety of remarkably quick growth and is receiving the attention of planters. Six new cane seedlings of promise were received from the Barbados Department for trial.

9. The banana industry is now recovering and the prospects for the future are encouraging. The trade in "Evaporated Bananas" has been revived and with care in manufacture and packing a useful outlet for the smaller bunches of fruit should thus be afforded.

10. The coconut industry shows the effect of the hurricane of 1917 by an export equivalent to 22 million nuts as against 30 million in the previous year. The storm-damaged trees at the Eastern end of the Island became so seriously affected with *phyhophthora* fungus, causing one form of bud-rot disease, that the Department carried out a wholesale campaign in the cutting down and burning of all diseased and damaged trees. Some 80,000 coconut palms were dealt with in this campaign and the eastern end of the island is now almost free from coconut diseases.

To assist the small growers in restoring their coconuts 15,000 selected seed nuts obtained from a healthy area in St. Mary were distributed at the nominal price of one penny each. The peasantry responded well to this effort and no case of misuse of the seed nuts was brought to notice.

11. Logwood and its extracts experienced a further shrinkage in values from £540,000 to £400,000.

12. The citrus trade had a moderate success, orange oil still being in good demand.

13. Honey achieved a remarkable record during the year owing to the demand for it in the United Kingdom.

The records show that 1,175 tons of honey were exported at a value of £154,700.

Owing to the transhipment of infected honey from Cuba in the Port of Kingston, the disease known as "American Foul Brood" unfortunately gained an entrance into the Colony through the access of local bees to the Cuban honey in the port. Fortunately, this contingency had been foreseen and an area of approximately 3 miles in diameter from the Parish Church, Kingston, having been declared under Law 9 of 1918 and kept under systematic inspection the first cases of the disease were speedily detected. As the disease was spreading rapidly it was decided to destroy all hives of bees in the declared area and this was done on the 16th and 17th January 1919. The sum of £3,800 was provided for compensation and costs of this treatment.

To date the reports received indicate the complete success of these operations.

14. Interest has again been aroused in the cacao industry and demands for cacao seedlings are again brisk.

The Imperial preference and the good prices now obtainable for cacao will doubtless lead to a considerable development of this industry which, in Jamaica, can be so cheaply established in connection with the cultivation of bananas.

15. Coffee has risen again to a position of importance and this valuable staple now merits greater care and effort on the part of the smaller growers to produce a high-class product.

16. Pimento has been in firm demand at improved prices. The manufacture of "oil of pimento" for use in England as a substitute for "oil of cloves" for the manufacture of artificial vanilla has been one of the minor industries of the War.

The new species of "wild pimento" discovered by the Government Botanist and now named *Anomis Jamaicensis* has been found to yield an essential oil quite distinct from either the oil of pimento or the oil of "bay rum." The commercial possibilities of this species of *Anomis* are still being investigated.

17. Ginger and annatto sold well during the year and thus benefited the small growers who produce these products.

18. Sisal hemp is now attracting a good deal of attention. Plantations are being established both by private landowners and the Government. This industry should enable large areas of land on the limestone formation, at present of small productive value, to grow a valuable product resistant to drought and peculiarly suitable for the more populous areas of the Colony where there are large numbers of women and children who should find a congenial and remunerative occupation in the sisal industry.

Samples of fibre from the Government Plantation at Lititz were sent to New York and valued at £75 per ton, being classed as "of unusually good type."

This land had hitherto been so unproductive that no one could be found willing to pay taxes for its ownership.

19. The Government Stock Farm at Hope continues to progress and has recently imported five valuable dairy bulls and four first-class foundation cows of the Jersey, Guernsey, Holstein-Friesian, and Red Poll breeds.

Through the substitution of cows' milk from the Hope Farm for condensed milk, at the Lunatic Asylum, a saving of £1,200 a year has been effected in the cost of maintaining the inmates.

The farm motor service has continued to be operated with success, a standard of over 30 miles per gallon of gasolene having been maintained during the year.

A large number of blue prints of a standard dipping tank were issued to the public and a number of tanks are now in process of erection.

The Entomologist has taken an active part in assisting pen-keepers with advice on this matter.

20. The incidence of Panama disease of bananas for the year has shown a regrettable increase to a total of 273 diseased plants as against 125 for the previous year. The parish of Portland has been the chief site of this disease. By the increase of the staff of inspection and a more continuous control of suspected areas it is hoped to strengthen the measures of quarantine against the further spread of the disease.

21. The work of the Government Laboratory shows a further increase in official analyses, the samples dealt with during the year having risen to 1,234 as against 921 in 1916–17.

The Microbiologist has made frequent visits of inspection to banana and coconut estates during the year and has been in constant touch with the field work of the inspectors of plant diseases. The Entomologist has reported the results of the investigation of insects affecting sugar cane, citrus, mangoes, leguminous crops, yams, Irish potatoes, corn, and stored flour.

SHIPPING.

22. The returns under this heading do not include shipping controlled by the Admiralty, and most of those conveying our products to the United Kingdom during the War would come under this exception.

The figures for the past two years show :—

Vessels reported.

1918 ..	772 vessels with tonnage of	593,328	tons.
1917 ..	901 „ „	1,045,443	„

Vessels cleared.

1918 ..	746 vessels with tonnage of	583,697	tons.
1917 ..	874 „ „	1,019,490	„

Classified between British and Foreign Steamers and Sailing Vessels, gives the following :—

	No.	Tonnage.	TOTAL. No.	TOTAL. Tonnage.
British Steam, in 1918 ..	51	134,823		
British Sailing, in 1918 ..	373	26,905		
	—	———	424	161,728
Foreign Steam, in 1918 ..	286	416,979		
Foreign Sailing, in 1918 ..	62	14,621		
	—	———	348	431,600
British Steam, in 1917 ..	141	408,780		
British Sailing, in 1917 ..	350	25,804		
	—	———	491	434,584
Foreign Steam, in 1917 ..	344	583,336		
Foreign Sailing, in 1917 ..	66	27,523		
	—	———	414	610,859

British steamers show a falling-off for the reason given above, whilst the increase in sailers is due to the large migration of the labouring classes to Cuba.

III.—LEGISLATION.

23. Of the Laws passed during the calendar year 1918, the most important were :—

Law 6 *of* 1918.—"A Law relating to Venereal Diseases."—This Law provides for the compulsory treatment of venereal disease. It is drastic in its provisions, and is an attempt to treat the venereal disease problem according to the approved methods of scientific medicine. It is a bold attempt to mitigate an evil which is largely responsible for the deplorable health conditions in the Colony. It has not yet been actually brought into operation, pending the obtaining of a sufficient supply of the necessary drugs to ensure the possibility of its enforcement.

Law 16 *of* 1918—"A Law to provide for the Registration of Firms and Persons carrying on Business under Business Names and for purposes connected therewith." This law follows, *mutatis mutandis*, the provisions of the Imperial Act, 6 & 7 Geo. V, chap. 58, the

registration of Business Names Act, 1916. This Law contains provisions for the registration of information which will be very useful in times of war and peace to the Government and community at large.

Law 17 *of* 1918—"A Law to amend Law 27 of 1904 entitled 'The Currency Note Law, 1904.'" The proposal to issue currency notes in the Colony, to provide for which Law 27 of 1904 had been passed, had lain in abeyance but on representations from the Treasurer the matter was again taken up with the result that it appeared desirable to make some amendments to the old Law and then to proceed to the issue of currency notes.

The new Law provides, inter alia, for the issue of notes of any denomination approved by the Secretary of State for the Colonies, and it is now calculated that the demand for small notes of the denominations of 10*s*. and 5*s*. is such that the issue of these notes will not only fill a long felt want but will result in profit to the Colony. In dealing with this matter the Colony has had the benefit of the experience of the Governments of Trinidad and British Guiana in the issue of similar notes. The notes have not yet been issued in Jamaica but have been ordered from the Crown Agents and are expected shortly.

IV.—PUBLIC EDUCATION.

24. At the end of the financial year there were 693 schools on the annual grant list with a total average attendance of 45,941 pupils. The total payments to Elementary Schools and teachers during the year amounted to £66,793.

25. The annual examination of Teachers and Training College Students shows the following results :—

The total number of candidates presented was 134, 21 of whom obtained honours.

For the Pupil Teachers' Examination 436 candidates were presented, 244, or 56 per cent., of whom passed ; 2,538 volunteer candidates were presented and 1,062, or 42 per cent., passed.

26. The total amount expended on elementary education through the Estimates of the Department was £83,560, as against £87,217 in 1917–1918, and by the Public Works Department in the building of Government Schools and Teachers' Houses, £1,056, as compared with £3,708 last year.

27. The number of inmates of the Industrial Schools, male and female, on 31st March, 1919, was 964.

28. The expenditure of the endowed schools (secondary education) during the year was £22,009.

During the year it was decided that in future the examination for the Jamaica (Boys) and £60 Scholarships should be the Cambridge Higher School Certificate Examination instead of the Cambridge Senior Local Examination. The new examination is only held in July each year and it was further decided that the first award under the new arrangement should be made on the results of the July 1919 Examination. No award of these Scholarships was therefore made during the year under review. Hitherto the examination for these Scholarships had been held in December.

216 boys and girls are reported to have entered for the Cambridge Local Examinations, 160 of whom passed, 33 doing so with honours.

V.—GOVERNMENT INSTITUTIONS.

(a) *Public Hospital, Kingston.*

29. During the year 3,800 indoor and 16,106 outdoor patients were treated. The daily average number of inmates was 277 and the total cost of maintenance was £15,499. Receipts amounted to £925.

The number of patients who attended the evening clinics in connection with the treatment of cases of venereal disease was 2,731 and the number of attendances was 9,909. 17,153 prescriptions were made up and 1,598 intravenous injections were administered.

(b) *Victoria Jubilee Lying-in Hospital.*

30. 680 patients were admitted during the year; 11 pupil nurses were admitted for training, of whom 10 passed their examinations and received certificates and one left at her own request; the average daily number of patients was 16; expenditure amounted to £1,572, and receipts to £549.

(c) *Lunatic Asylum.*

31. The total number of patients under treatment during the year was 1,727; the daily average number resident was 1,392; 372 patients were admitted; 154 were discharged; there were 159 deaths. The cost of maintenance amounted to £33,045, and receipts to £15,480.

(d) *Lepers' Home.*

32. There were 113 patients on the 31st of March, 1918, and 20 were admitted during the year. During the year one patient absconded and 16 died.

(e) *Government Savings Bank.*

33. During the year under review steps for the reorganization of the bank were taken under Law 7 of 1917, the Government Savings Bank Law, 1917. A board of managers, known as the Savings Bank Board, was appointed, of which the manager of the bank was made the chairman, and rules for the governance and carriage of the bank were drawn up and approved. Steps were taken to advertise the bank and to bring it more into line with the other banks operating in the Colony and arrangements were made for branches to be opened at several of the more important Post Offices. The calender year was also adopted as the financial year of the bank.

The ordinary deposits amounted during the 9 months ended 31st December, 1918, to £53,257, and the withdrawals to £50,636, as compared with £67,814 and £69,944 respectively, during the whole year 1917–1918.

The balance sheet on 31st December, 1918, shows a liability to depositors of £286,627.

VI.—COURTS, POLICE, AND PRISONS.

34. The judicial statistics show that the total number of convictions in Circuit Courts was 134, as compared with 116 in the previous year; of convictions in the Resident Magistrates' Courts 12,950, as compared with 12,763; and of summary convictions 15,089, as compared with 15,906.

There were 6,051 cases of praedial larceny in which a charge was preferred, as against 6,530 in the previous year, and there were 4,574 convictions, as against 4,787 in 1917–1918.

There were two convictions for murder during the year, the same number as in the year 1917–1918; the death sentence was not, however, carried out in either case, but was commuted to imprisonment for life.

Prisons.

35. The committals to the prisons during the year numbered 7,018, and to lock-ups for short terms 3,308, making a total of 10,326, as compared with 11,020 in the previous year, a decrease of 694. The daily average of prisoners in the Penitentiary and St. Catherine District Prison was 2,282, as compared with 2,192 in the previous year. There were 336 deaths in the prisons, as compared with 271 in 1917–1918. There were no executions for capital punishment during the year. In the previous year there were three.

36. The death-rate at the St. Catherine District Prison continued high during the first two quarters of the year, the number of deaths being 81 and 95 respectively. Results of steps taken in connection with the matter commenced to be seen, however, in the December quarter when, despite the epidemic of influenza which visited the Island during that quarter, the number of deaths was reduced to 55. In the last (March) quarter of the year the number of deaths had fallen to 11, which was less than during any quarter of the previous year, and in fact during the 3 months ending 28th February there were no deaths at all.

In a report written during the month of March the acting surgeon of the institution attributes the improvement in the death-rate to the steps taken for the reduction of the excess of the population of the prison—namely, the extension of the period for which prisoners may be confined in lock-ups and to improvement in the general physical condition of the prisoners on admission. This latter was probably due to improvement in the food situation throughout the Island.

37. The state and discipline of the prisons have been satisfactory; three corporal punishments were inflicted for breaches of discipline. The Reformatory Branch at the District Prison contained 42 boys on 31st December, 1918.

Police.

38. The number of cases reported to the Police and Magistrates was 46,276, those prosecuted 37,297, and those in which convictions were obtained 24,633, as against 46,400, 38,854 and 25,043 respectively, in the previous year. 120 cases were under remand for trial; in the year before the number was 110. The incidence of crime per 10,000 of the population was 510·35 as compared with 516·51 in 1917–1918, 462·22 in 1916–1917, and 442·44 in 1915–1916.

The conduct and discipline of the members of the force were on the whole good.

During the earlier portion of the year there was a certain amount of labour unrest in the Colony, resulting in strikes amongst labourers in several districts. One such strike occurred on sugar estates in the district of Vere in the Parish of Clarendon and terminated in open

riot in the month of July, and the police, after exercising the utmost patience for over 24 hours in trying to maintain order, were eventually compelled to fire on the rioters, 3 of whom were killed and several wounded. The aid of the military had also to be invoked so that an overwhelming force might be present in the disturbed district.

There was also about the same time an outbreak against the Chinese in certain districts, chiefly in the parish of St. Catherine, as a result, primarily, of a rumour (which proved to be untrue) that a constable in the village of Ewarton had been murdered by a Chinaman. This rumour was made the excuse by the villagers for looting all the Chinese shops in the district, and this example was quickly followed by the peasantry in other districts. The police, however, assisted by the military, shortly got the situation in hand and stopped all further looting.

In both of these cases the police officers and men behaved most admirably. They received the special commendation of His Excellency the Governor, and as a result the King's Police Medal was subsequently awarded to 7 members of the Force, viz., 3 officers and 3 sub-officers and 1 man.

VII.—VITAL STATISTICS AND PUBLIC HEALTH.

39. The estimated population of the Island on the 31st December, 1918, was 891,040. This figure is arrived at as follows :—

Estimated population on 31st December, 1917			893,884
Births registered in 1918.. ..	30,598		
Deaths registered in 1918 ..	29,580		
			1,018
			894,902
Migrations in 1918—			
Arrivals—General	6,586		
Arrivals—Military	309		
		6,895	
Departures—General	10,720		
Departures—Military	37		
		10,757	
			3,862
			891,040

The high proportion of deaths to births during the year is due largely to an epidemic of influenza, as to which see paragraph 41 of this Report.

40. Of the general arrivals and departures, 5,102 and 8,773, respectively, were labourers and show a nett emigration of 3,671 persons of this class. The remainders, 1,484 arrivals and 1,947 departures, represent a nett emigration (exclusive of military) of 463 persons.

Migration of labourers took place chiefly in respect of the following countries :—

	Departures.	Returned.	Excess Departures.	Excess Returns.
Central America	1,160	1,061	99	—
Cuba	7,351	3,599	3,752	—
Hayti	57	15	42	—
Other Countries (American and West Indian, etc.)	205	427	—	222
Total ..	8,773	5,102	3,893	222

The mean Island population for the year, that is, the population on the 30th June, 1918, ascertained by adding to the census figures the excess of births over deaths registered since the census and by deducting the excess of emigration over immigration from the census in 1911 was 895,578. On these figures the marriages, births, and deaths registered during the year, with the rates per 1,000 for this and the preceding year were :—

		Rate per 1,000. Year ended 31st December, 1918.	Year ended 31st December, 1917.
Marriages..	2,776	3·1	3·3
Births ..	30,598	34·1	34·1
Deaths ..	29,580	33·0	26·9

Of the births registered, 20,990 or 68·6 per 100 were illegitimate. This is still higher than the 1917 rate of 67·7 which was the highest Island rate recorded since the introduction of compulsory registration in 1878, and is the fifth time in succession that the record of the highest rate of illegitimate births has been broken.

The general death-rate of 33·0 per 1,000 is 3·1 higher than the 1917 rate of 26·9.

41. During the December quarter influenza and pneumonia visited Jamaica and spread swiftly through the Island. With the exception of Port Royal, in which there was one death from influenza and one from pneumonia, the epidemic claimed a heavy toll in every Parish. It reached the greatest intensity about the middle of the quarter and then began gradually to subside, until at the end of the quarter it had all but disappeared in a virulent form.

Five thousand and twenty-two (5,022) deaths were registered during the quarter as having been caused from influenza, and 547 from pneumonia, but it is probable that a larger number of deaths actually occurred from these causes as a considerable proportion of the deaths registered in this Island are not medically certified, and a large number of deaths that occurred during the prevalence of the influenza epidemic were registered as having been caused merely by "fever and cold."

As among the poorer and less educated people the "fever and cold" stage of influenza would appear as the outstanding feature of the disease it may safely be assumed that a large proportion of these deaths were due to influenza. In addition to the deaths from this cause registered during the December quarter, 150 deaths which actually occurred during that quarter were registered during the months of January and February.

Of the deaths caused by the epidemic 2,702 were of persons of the ages of 20 to 45 years, and 1,150 of children under 5 years of age.

42. Comparing the infant mortality with the births during the year, 30,598 infants were born, and 7,546 died at one year of age or under, equal to 24·6 per cent. The percentage under 5 years was 32·2.

Public Health.

43. The expenditure of the Medical Department during the year amounted to £109,902, as against £94,843 in 1917-1918.

This does not include the sum of £2,118 spent by the Public Works Department for maintenance, etc., bringing up the total to £112,020.

Yaws.

44. This disease is still very prevalent throughout the Island; £5,142 was spent on its treatment during the year.

Venereal Diseases.

45. These diseases still continue prevalent throughout the Island. During the year a Law was passed (see paragraph 23) providing for the compulsory treatment of these diseases, but for various reasons this could not be brought into operation before the year expired. Free treatment was, however, continued at the public hospitals.

Hookworm.

46. A preliminary survey as to the extent of hookworm infection in the Island was made during the year under the auspices of the International Health Board (Rockefeller Foundation). It was intended to have followed this up very shortly afterwards by a demonstration campaign against the disease in the parish of Clarendon, but owing to war conditions and other unavoidable delays it was not possible for a start to be made before the close of the year under review. Preliminary steps were being taken when the year closed, however, and it was expected that the actual campaign would be commenced early in the present year.

Malaria.

47. The total number of cases admitted to the hospitals was 2,797. The sale of quinine at a cheap rate through the Post Offices has been continued throughout the year except for a short time during 1918 when the supply ran short. In spite of the very large increase in first cost owing to the War, the sale price has not been increased.

Vomiting Sickness.

48. The number of cases reported during the year as the so-called "Vomiting Sickness" was 257, of which 242 or 94·16 were found to be instances of ackee poisoning.

In the other cases the true causes of death were found by the Government Bacteriologist to be as follows:—

Cerebral malaria	8
Gastritis	2
Malaria and ackee	1
Ptomaine poisoning..	1
Fish poisoning	1
Nephritis	1
Convulsions	1
	15

General.

49. The total number of cases admitted to Public General Hospitals during the year under review was 21,100. There were 1,165 deaths in hospitals. Adding the cases treated in the Kingston Public Hospital, 3,800; the Jubilee (Lying-in) Hospital, 680; the Lunatic Asylum, 1,727; the Lepers' Home, 133; the total number of patients treated in Government hospitals and asylums was 27,440.

The principal diseases for which patients were admitted into the Public General Hospitals were as follows:—

Diseases.	1917–18. Cases.	1917–18. Deaths.	1918–19. Cases.	1918–19. Deaths.
Malarial Fever—				
Intermittent ..	3,909	26	2,367	20
Remittent ..	174	8	298	20
Pernicious ..	9	6	18	15
Blackwater Fever	2	—	1	—
Skin Diseases ..	1,777	6	590	4
Diseases of the Digestive System ..	1,452	—	1,034	80
Local Injuries ..	1,574	28	1,532	29

VIII.—POSTAL AND TELEGRAPH SERVICE.

50. The expenditure by the Department during the year was £50,527, and by the Public Works Department for maintenance and construction of telegraph lines £1,865, a gross total of £52,392. In 1917–1918 the expenditure was £48,275 and £2,371 respectively, or a gross total of £50,646.

The total number of letters and postcards (outwards and inwards) dealt with during the year was 10,307,734, as compared with a total of 11,649,770 in the year 1917–18.

51. 2,655 money orders for £9,503 were issued in Jamaica and 37,018 orders for £87,483, the issues of other countries, were paid.

There is a further decrease of £654 in respect of orders payable in the United Kingdom which is attributed to the check on trade between the two countries, due to the War, but there is an increase of £9,019 in the orders issued in the United States of America and the

Canal Zone, mainly due, it is considered, to the larger number of remittances received from persons who have emigrated to these countries.

270,956 British postal orders were sold for £61,189, as against £59,480, or £1,709 more than in 1917–1918.

48,243 parcels of a declared value of £57,184 were received, and 22,641 of the declared value of £55,061 were despatched through the parcel post.

IX.—GOVERNMENT RAILWAY.

52. The total revenue was £174,004, as compared with £142,899 in 1917–1918, an increase of £31,145. The expenditure, exclusive of debt charges, amounted to £173,399, against £136,388 for 1917–1918, an increase of £37,011. The net profit for the year was £645, as against £6,511 for the previous year, a decrease of £5,866.

The capital charges stand at £2,669,371, on which the annual charge in the year under review was £122,366. This is £411 more than in the previous year.

The large increase in expenditure was due to the very great increase in the cost of materials, especially of coal, and to the grant of a War bonus to employees drawing up to £200 per annum. To help to meet this heavy increase of expenditure the freight and passenger rates were increased in the latter part of the year.

X.—PUBLIC WORKS.

53. The total expenditure of the Public Works Department for the year under review was £158,197.

The total length of main roads under maintenance was 2,225 miles, a decrease of 4 miles on the previous year, due to deviations and exchanges with Parochial Boards.

The expenditure on maintenance in the previous year had shown a considerable reduction on the two previous years owing to the exercise of strict economy and to the absence of any widespread flood or hurricane damage, and in the year under revision a further small reduction was made.

The average rainfall during the year was 69·55 inches, as against an average of 82·16 in the year before and 76·29 for all previous years. This average was the lowest since 1914–1915 when it was 62 inches.

The rolling of road surfaces was continued as in previous years and 33 miles of road surface were so dealt with.

The total expenditure authorised under New Works on Public Buildings was £12,958, while £11,268 was spent, leaving £1,690 unexpended. The principal work carried out was the completion of the construction of the new ward at the Kingston Public Hospital for the treatment of venereal diseases.

54. In connection with the efforts made in the Colony to augment the supply of home-grown foodstuffs, granaries and dehydrating plants were erected in Spanish Town and Montego Bay, the plant in each case consisting of an engine and boiler with a Hess drier for corn and a Bowsher grinder for the manufacture of cornmeal.

XI.—GENERAL OBSERVATIONS.

55. The Island can be congratulated that no hurricane visited it during the year under review. For the past three years reference has had to be made in this section of the Report to the devastating effects which have been caused by such visitors, but this year it is possible for brighter conditions to be spoken of. As a result of the more favourable conditions, the banana industry again brightened up, and altogether the agricultural history of the Island for the year may be regarded as satisfactory. There was healthy activity shown in connection with the sugar industry, preliminary steps being taken for the erection of a large privately-owned Central Factory in St. Catherine with an output of 15,000 tons, while the subject of a Government-aided Factory in St. Thomas with an output of 5,000 or possibly 10,000 tons was under the consideration of the Legislative Council.

During the year conditions in regard to the food supply grew, if anything, worse, prices continuing to rise steadily, and in January, 1919, the Food Control Law, No. 1 of 1919, was passed and assented to. Under this law the Honourable J. H. W. Park, O.B.E., Director of Public Works, was appointed to be Food Controller.

As a result of the continued rise in prices it became necessary during the year for some financial assistance to be rendered to Public Officers and Government employees, and this was done by the grant of a War bonus to all Officers and employees in receipt of emoluments of £200 and under. The Government had suggested a limit of £400, but in Legislative Council the amount was reduced to £200 and a bonus to elementary school teachers was also granted.

56. The chief local events of the year, most of which are referred to in more detail in the foregoing chapters, may be summed up as follows, the good progress made in retrieving the successive disasters of the past three years, the reorganization of the Government Savings Bank, the campaign on behalf of increased production of home-grown foodstuffs, the occurrence of certain short-lived riots and the epidemic of Spanish influenza. The most outstanding event of the whole year was, of course, the Armistice of the 11th November, bringing to a practical close the greatest war known in history, and there has also to be recorded as one of the events arising out of the War, the approval by the Imperial Government of the principle of Imperial preference, which included several of the chief articles of produce in the Island, and which actually was put into operation after the close of the year under review.

ROBT. JOHNSTONE,
Acting Colonial Secretary.

5th November, 1919.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :

No. 1042.

TURKS AND CAICOS ISLANDS.

REPORT ON THE BLUE BOOK OF THE TURKS AND CAICOS ISLANDS FOR THE YEAR 1919.*

FINANCIAL.

The revenue for the year amounted to £11,164 0*s.* 0*d.*, being £2,493 in excess of that for the year 1918, and exceeded the Estimates by £2,999.

The expenditure, including a further contribution of £500 to Imperial Funds towards the expenses of the Great War, disbursements of over £300 in connection with the Peace Celebrations, and the relief of the relatives of those who perished in the "YUNA" disaster, and the payment of over £400 as War Bonus to subordinate public officers, was £9,263 as against £8,323 in 1918 and exceeded the Estimate by £1,340.

The surplus of assets on the 31st December was £11,244 14*s.* 9*d.*, the highest on record in the annals of the Dependency.

There is no public debt.

The current coins are British gold and silver. United States gold and silver are accepted at a discount of 1½ per cent. on their face value.

TRADE, AGRICULTURE, AND INDUSTRIES.

The imports during the year ended 31st December, 1919, were valued at £38,343, as compared with £39,276 in 1918.

The exports were valued at £33,554, as against £25,594 in 1918.

Classified under their respective headings, a comparative statement of the exports for the years 1918 and 1919 reads as follows :—

Articles.	1918.	1919.
Salt (coarse)	£6,888	£10,827
Salt (fishery)	13,346	13,290
Sisal	942	1,233
Sponges	503	1,015
Conchs	3,371	3,005
Conch Shells	211	1,256
Cotton and Cotton Seed	617(a)	580
Tortoiseshell	——	1,079
Dried Fish	——	47
Dye Woods	——	89
Miscellaneous	460(b)	1,073
Totals	£26,338	£33,554

* Sketch Maps will be found in the Report for 1914, No. 846: [Cd. 7622-37].

(a) Represents shipments for 1917 and 1918.

(b) British, foreign and other Colonial produce.

The direction of trade, both imports and exports, during the year may be thus summarised :—

Countries.	Year.	Imports.	Exports.
United Kingdom	1919	£2,140	£580
British Colonies	,,	8,748	14,802
Foreign Countries	,,	27,455	18,172
	Totals	£38,343	£33,554
United Kingdom	1918	£1,347	£360
British Colonies	,,	8,368	12,937
Foreign Countries	,,	29,561	13,041
	Totals	£39,276	£26,338

Salt.—This industry, although exports are slightly in excess of those given for the year 1918, show a decided falling-off as compared with the average of past years, a condition of affairs chiefly due to the flooding of North American markets with salt from Mediterranean ports which had been tied up there during the Great War, and also to the world-wide shortage of vessels which has hampered trade in every direction for the past five years.

It is, however, satisfactory to mention that the early months of the year 1920 already show a rapid return to normal conditions.

The year 1919 was again an ideal one from the salt producers' point of view, and the stock on hand at its close (over two million bushels) was one of the largest on record.

Sponges.—Exports to the value of £1,015, as against £503 in 1916, are recorded.

Conchs.—Again do the records disclose that over three million of these edible molluscs—value £3,005—were exported to the neighbouring Republic of Haiti during the year 1919.

Conch Shells.—From the United States there came a greatly increased demand for conch shells during the year 1919. The highly polished inner surface of these shells is greatly prized by cameo cutters, and exports to the value of £1,256, as compared with £211 in 1918, testify to the extent and development of this interesting marine industry.

Cotton.—Exports for the year amounted to 15 bales of lint and 94 bags of cotton seed, value £580. Of this quantity 14 bales were consigned to Liverpool, and one bale to the United States. In both markets practically the same figure (2*s.* 10*d.* per lb.) was realized. Cotton brokers on both sides of the Atlantic were, moreover, unanimous in recording their testimony as to the high quality of the staple grown in these islands, and the following letter received from Mr. C. C. Cowan, a New York cotton broker, to whom the " lone " bale above referred to was shipped, is full of interest and significance in this connection :—

" March 5, 1920.

Mr. G. Whitfield Smith,
Turks Island, B.W.I.

Sir,

It may interest you to know that we have had scientific tests made at the New Bedford State Textile School, where 50 lbs. of the bale you

(708). Wt.32596/354. 1,250 & 90. 10.20. B.&F.,Ltd. G.11/14.

shipped us went through the pickers, carders, and combs, and was spun into yarn. They found that it had a breaking strength higher than that of American Poolers with which it was compared. In fact, it shows the highest breaking strength of any cotton known, with the exception of one grade of Peruvian. Considering that this bale was made up of cotton of all ages I think this rather remarkable, and I am sure that with proper ginning on the rollers the new cotton from new lands will show up even better.

I am, etc.,
(Signed) Chas. C. Cowan,
President W.I. Development Co."

The lease of Haulover Estate, Middle Caicos (8,000 acres) by a body of American capitalists for the purpose of cotton-growing quickly followed the appearance of Turks Islands cotton on the United States markets and augurs well for the future development of this industry in the Caicos Islands.

Shipping.

The number of vessels entered at the various ports in the Dependency during the year was 336, with a tonnage of 188,195, as compared with 276 vessels, and a tonnage of 186,798 during the year 1918.

JUDICIAL.

	1918.	1919.
Offences reported to the Police	171	150
Number of persons brought before the Magistrate	170	148
Summary convictions	116	116
Convictions in the Supreme Court	2	10
Number of persons acquitted :		
In the Supreme Court	1	2
In the Inferior Court	51	19

VITAL STATISTICS.

There is nothing calling for notice during the year as no serious epidemic or outbreak of sickness was reported. The number of births and deaths was 173 and 169, representing 30·8 and 30 per thousand of the population respectively, while 45 marriages are recorded. On January 9th, sixty-four natives of the Dependency perished at the stranding of the s.s. "Yuna" on Mouchoir Bank, which accounts for the abnormally high deathrate.

EDUCATION.

The sum of £700 is placed annually at the disposal of the Education Board for the provisions of the Ordinance, but the details of expenditure are left entirely to the Board. Hard times and the high cost of food and clothing are responsible for the resignation of several members of the Teaching Staff who elected to try their lot in the larger fields of labour offered in the United States, and caused a slight falling-off in the average attendance at all the Government schools. The average number on the rolls in the Dependency was 884.

LEGISLATION.

The only legal enactment during the year was the usual Supplementary Appropriation Ordinance.

CIVIL ESTABLISHMENT.

Mr. H. H. Hutchings, Assistant Commissioner, was appointed Commissioner of the Cayman Islands, and left the Dependency to take up his new duties in May of the year under review.

PENSIONS.

The pension list was reduced during the year by the sum of £81 11*s.* 1*d.* in consequence of the death of Sir Robert Llewelyn, a former Commissioner of these islands.

GOVERNMENT INSTITUTIONS.

Savings Bank.

	£
Deposits during the year	5,318
Withdrawals during the year	3,472
Total amount at credit of Depositors on 31st Dec. 1919	9,627
Number of Depositors	749
Rate of interest paid to Depositors..	2½ per cent.

Manning Hospital.

This Institution continues to minister to the needs of suffering humanity in a most satisfactory manner. Fifty-five cases are stated by Dr. H. H. Purinton to have received treatment at this Hospital during the Quarter ending 30th September, 1919, and the acting Government Medical Officer concludes his report by saying: "There are few, if any, public expenditures in the Island of Grand Turk, and in fact, in the whole Colony, which have been of greater benefit to the population than the money spent for the support of the Manning Hospital."

Postal, Telephone, and Telegraph Services.

Mails to and from the United Kingdom, via New York, and parcels from Great Britain (only) are transmitted regularly twice a month by steamers of the Clyde Line. Except, however, by an occasional sailing vessel to Jamaica, by which Post Office parcels from Turks Islands for Canada are transmitted, the Dependency is still in the unique position of being without a Parcel Post Service to anywhere save the places mentioned above. Great inconvenience is obviously occasioned

thereby. The Revenue of the Post Office for the year 1919 was £4,205, and Expenditure for the same period £172. The abnormal Revenue was caused by the demand from foreign collectors for Postage Stamps of the War Tax issue.

The telephone service (approximately 25 miles of lines) continues to give useful and satisfactory service.

The cable of the Direct West India Cable Company, Limited, between Halifax, Bermuda, and Jamaica touches at Grand Turk and connects the Dependency with other telegraph systems of the world. The Company supplies a News Bulletin daily, in respect of which a yearly subsidy of £120 is paid.

METEOROLOGICAL.

The readings and statistics taken at the United States Weather Bureau Station at Grand Turk in latitude 21° 21′N. and longitude 71° 97′W. at a height of 11·3 feet above sea level, were as follows:

Rainfall.	24·88 ins.
The highest temperature recorded for the year ..	91°
Lowest temperature recorded for the year ..	61·5°

The prevailing winds during the year were:

N., 17 days; N.E., 49 days; E., 162 days; S.E., 71 days; S., 8 days; S.W., 2 days; W., 12 days; N.W., 9 days; Calm, 1 day, Variable, 34 days.

GENERAL.

The year under review opened under circumstances of much local sadness, and will long be remembered by the people of these islands. On the 9th January, the Clyde steamship "Yuna" on a voyage from Santo Domingo to Grand Turk with upwards of 100 stevedore labourers and tally clerks—natives of the Dependency—on board, struck on Mouchoir Reef, about 45 miles to the southwest of Grand Turk, and foundered shortly afterwards. On improvised rafts these unfortunate people made a bold fight for life, but when discovered by the American steamship "Anna" 48 hours after the disaster, it was found that 64 of them had perished. The loss of so many breadwinners, many of them fathers of large families, was keenly felt in this small community and caused a feeling of intense gloom, which the disbursement of $13,000 by the Company to the stricken relatives can only faintly remove.

The outstanding event of the year 1919 was the official celebration of the restoration of Peace which, in common with other parts of the Empire, took place on the 19th and 21st of July, and was enthusiastically entered into by every section of the community.

The return to the island on demobilization of Captain G. H. Frith and Private Henry (B.W.I.R.) and Able Seaman Jeremiah Williams of the Motor Boat Patrol Service was another of the notable events of the year 1919. It is true that in this remote Colony the echoes of war were heard but faintly, nevertheless the call of the Motherland in her hour of need was answered in the early days of the War by no less than

21 of the sons from the Turks Islands, mostly humble fisherfolk from the Caicos Islands, and the Dependency has therefore no need to feel ashamed of the small but steadfast part which she played in the Great War.

It may not be out of place in conclusion to allude briefly to the present high cost of living, which presses heavily on every section of the community. Especially severe is the strain in a Colony where every article of food supply has to be imported, and where the prices of even the commonest necessaries of life have reached almost impossible figures.

G. WHITFIELD SMITH,
Commissioner.

Grand Turk, 19th April, 1920.

No. 1067.

JAMAICA.

ANNUAL GENERAL REPORT FOR THE FINANCIAL YEAR ENDED 31ST MARCH, 1920.

GEOGRAPHICAL.

1. Jamaica is an island in the Caribbean Sea, to the southward of the eastern extremity of the Island of Cuba, within N. lat. 17° 42′ 20″ and 18° 32′ 30″ and W. long. 76° 11′ 55″ and 78° 23′ 35″. It is the largest island of the British West Indies, the extreme length being 144 miles and the greatest width 49 miles.

2. The island is divided into three counties and fourteen parishes, namely :—

Surrey.	Sq. Mls.	*Middlesex.*	Sq. Mls.	*Cornwall.*	Sq. Mls.
Kingston	7	St. Catherine	470	St. Elizabeth	462
St. Andrew	166	St. Mary	249	Trelawny	333
St. Thomas	274	Clarendon	474	St. James	234
Portland	285	St. Ann	476	Hanover	167
		Manchester	302	Westmoreland	308
Total	732		1,971		1,504

giving a total of 4,207 square miles, equal to 2,692,587 acres, of which, approximately, 646 square miles, or 413,440 acres, are flat, consisting of alluvium, marl, and swamps.

3. A great diversity of climate is obtainable. From a tropical temperature of 80° to 86° at the sea coast the thermometer falls to 45° and 50° on the tops of the highest mountains, and with a dryness of atmosphere that renders the climate of the mountains of Jamaica particularly delightful and suitable to the most delicate constitution.

The midland parts of the island are the highest. Through the county of Surrey, and partly through Middlesex, there runs the great central chain which trends generally in an east and west direction, the highest part of which is the Blue Mountain Peak, attaining an elevation of 7,360 feet.

From this range subordinate ridges or spurs run northerly to the north side of the island and southerly to the south side; these ridges in their turn are the parents of other smaller ridges, which branch off in every direction with considerable regularity and method; and they again throw off other ridges, until the whole surface of the country is cut up into a series of ridges, with intervening gullies.

4. There are numerous rivers and streams, from which Jamaica derived its aboriginal Arawak name of Xaymaca, which is supposed to imply an overflowing abundance of rivers. The majority have a rapid fall and are not, to any extent, navigable.

5. There are many mineral springs in Jamaica, some of them possessing valuable qualities for the cure of various diseases and infirmities of the body.

The two principal are, the spring at Bath, in St. Thomas in the East, and the spring at Milk River in Clarendon.

6. Jamaica possesses several good harbours in the Island, the largest and most important being that of Kingston, the capital, which is considered one of the finest natural harbours in the world.

7. The following are dependencies of Jamaica, viz.,—The Turks and Caicos Islands and the Cayman Islands, also the Guano Islands, Pedro and Morant Cays.

HISTORICAL.

8. Jamaica was discovered by Columbus on the 3rd May, 1494. He called it St. Jago, after the Patron Saint of Spain, but the new name was soon dropped in favour of the native one of Jamaica (Xaymaca—well watered). The first settlement on it was effected on the shores of St. Ann's Bay, by Esquivel in 1509, under the direction of Diego, the son of Columbus, while Governor of Hispaniola. Although invaded by Sir Anthony Shirley in 1596, and by Colonel Jackson in 1643, it remained in the possession of the Spaniards for 161 years, when it was again attacked by a force sent by Cromwell, under Admiral Penn and General Venables, against Hispaniola, and capitulated, after a trifling resistance, on the 11th May, 1655. Until the Restoration, Jamaica remained under military jurisdiction, but in 1660 a regular civil government was established by Charles II., who appointed General Edward Doyley Governor-in-Chief, with an Elective Council. In 1670 peace was made with Spain, and the title of England to Jamaica was recognised by the Treaty of Madrid. The colony grew fast, stimulated by the wealth brought into it by the buccaneers, who made Port Royal their headquarters and storehouse. This town was engulfed in the great earthquake of 1692. Kingston then consisted of a few sheds, and St. Jago de la Vega (Spanish Town) became practically the capital. During the 18th century the

(1798) Wt. 29921/587 1250 & 90 2/21 Harrow. G 75. A 2

island suffered from hurricanes, earthquakes, numerous slave insurrections, as well as wars with the maroons, or mountaineers, the descendants of African slaves left by the Spaniards, who inhabited mainly the east of the island, among the Blue Mountains. When the slave trade was abolished, in 1807, there were 323,827 slaves in Jamaica. During the last eight years of the trade, 86,821 slaves were imported. On the abolition of slavery in 1833, Jamaica received 6,161,927*l.* of the 20,000,000*l.* granted by the Imperial Government as compensation to the slave-owners. A serious rebellion among the black population in 1865 was suppressed by Governor Eyre with unnecessary violence, and he was recalled. In January, 1907, Kingston was devastated by a terrible earthquake, which caused great loss of life and immense destruction of property. A Mansion House Fund was opened, and contributions poured in from all parts of the Empire for the relief of distress. A free grant of 150,000*l.* was voted by Parliament, and a loan of 800,000*l.* chiefly in aid of rebuilding, was authorised from the Home Exchequer. Two buildings, the General Post Office and Treasury, and the King's House, the official residence of the Governor, were completed in 1910, and the Law Courts in 1913.

Constitution.

9. The original Constitution granted by Charles II., in 1662, which after existing for nearly 200 years, was surrendered in 1866, was a representative one, consisting of a Governor, a Privy Council, a Legislative Council, and an Assembly of 47 elected members. The depression caused by the abolition of slavery led to a grave constitutional crisis, the Assembly refusing to vote supplies, and endeavouring to enforce sweeping reductions in establishments, without compensation to the displaced officers. Lord Melbourne's Government, in 1839, actually introduced a Bill into Parliament for the suspension of the constitution, but was defeated, and it was not till 1854 that, by a change in the constitution of the Council, harmony was temporarily restored.

After the suppression of the rebellion in 1865, Governor Eyre, at the meeting of the Legislature, urged the unsuitability of the then existing form of Government to meet the circumstances of the community, and the necessity of making some sweeping change by which a strong Government might be created. The Legislature willingly responded, abrogated all the existing machinery of legislation, and left it to Her Majesty's Government to substitute any other form of Government which might be better suited to the altered circumstances of the Colony.

A Legislative Council was, by Orders in Council of the 11th June, 1866, and 11th November, 1869, established, consisting of such numbers of official and unofficial members as Her Majesty might think fit. The numbers of each were six until 1878, when they were enlarged to eight, and a ninth was added in 1881.

By Order in Council dated 19th May, 1884, and Amending Order of 3rd October, 1895, the constitution was fixed in the following manner :—

The Council to consist of the Governor (with only a casting vote) and five *ex officio* members, viz., the Senior Military Officer, the Colonial Secretary, Attorney-General, Director of Public Works, and Collector-General, and such other persons, not exceeding ten in number, as Her Majesty may from time to time appoint, or as the Governor may from time to time provisionally appoint, and fourteen persons to be elected as therein provided. The Council shall be dissolved at the end of five years from the last preceding general election, if it shall not have been previously dissolved.

There is also a Privy Council, with the usual powers and functions of an Executive Council. It consists of the Lieutenant-Governor, if any, the Senior Military Officer in command, the Colonial Secretary, and Attorney-General and such other persons as may be named by the King, or provisionally appointed by the Governor subject to the approval of His Majesty, but the number of members is not to exceed eight. The Governor is to preside at each meeting, and the Governor and two members form a quorum.

10. The first registration under Law 22 of 1886 was in August, 1887. The revised lists showed that there was one elector to every 25 persons in the island.

Local Administration.

11. There are elective Parochial Boards in the town of Kingston and 14 other parishes, under Laws 13 of 1900 and 17 of 1901, with jurisdiction over roads, markets, sanitation, poor relief, waterworks, and pounds. The chief towns are Kingston (population in 1911, 57,379), Port Royal (population 1,268), Spanish Town (population 7,119), Port Antonio (population 7,074), Montego Bay (population 6,616), Falmouth (population 2,288), Port Maria (population 2,833), and Savanna-la-Mar (population 3,400).

12. The Parish is the unit of local government, and each parish has its own parochial Institutions, viz., poor-houses, etc., managed by the Parochial Board of the parish, the members of which are elected by the persons entitled to vote for the election of members of the Legislative Council. The administration of poor relief by the Parochial Boards is controlled by a Board of Supervision. The several direct taxes received on property, horses, carriages, etc., are devoted mainly to the parish in which they are collected, with the exception of a few items which go to the credit of the general revenue of the colony.

13. There is a Supreme Court of Judicature, together with Resident Magistrate Courts and Petty Sessions of Justices of

the Peace throughout the Island. The Resident Magistrates, besides holding courts of their own, preside in the Courts of Petty Sessions.

I.—GENERAL OBSERVATIONS.

14. During the year under review the people of Jamaica probably enjoyed greater material prosperity than has hitherto fallen to their lot in the history of this Colony. This is due, chiefly, to the great demand for bananas, cane-sugar, cocoa, coffee, logwood dyes, and other economic products, and to the good prices obtained for these commodities in the world's markets.

15. The good prices obtained for exported produce and the consequent increases of salaries and wages have, however, been counter-balanced by the enhanced cost of commodities, especially of imported articles; *e.g.*, the pre-war retail price of salted cod-fish, which was one of the staple foods of the poorer classes, has been increased from 4½d. per lb. to, approximately, 1/- per lb.

16. Unfortunately, a prolonged drought, embracing the greater part of the Island, acted as a setback to increased production of native-grown foodstuffs. In spite of this setback, however, the total area under cultivation has considerably increased. It is a cause of thankfulness that no hurricane devastated the plantations during the past year.

17. There has been a marked decrease in Simple and Praedial Larceny, which is usually an indication of the increased prosperity of the masses.

18. The privately-owned Central Sugar Factory in St. Catherine referred to in the last Annual Report has now been completed, and it is intended to proceed with work on the Government (10,000 ton) Factory in St. Thomas. Other sugar factories are in the course of erection, but difficulty has been experienced in obtaining prompt delivery of the necessary machinery.

19. There has been a great demand for the extension of the Government Railway and for the construction of new roads to open up districts in which increased activity has been manifested in the production of sugar and other foodstuffs. Every effort, so far as the finances of the Colony permit, is being made to meet these demands. The Government has given, and continues to give in increasing measure, active practical help, financial and otherwise, in furthering the policy of acquiring plantation properties to be split up and sold to small settlers in lots not exceeding fifty acres. This land policy is being carried out with the co-operation of the Agricultural Loan Societies Board, the Agricultural Loan Banks, and the local "Citizens' Associations" which have been established with excellent results in most of the parishes.

Emigration and Immigration.

20. In spite of the better opportunities for employment and better wages paid during the past year, the tide of emigration of

the labouring population to neighbouring republics was, unfortunately, higher than in the preceding two years, the labour emigration figures being :—

In 1917—7,140. In 1918—8,773. In 1919—23,618.

The arrivals during the same years were as follow :—

In 1917—6,771. In 1918—5,102. In 1919—8,786.

The marked increase during the year under review of persons leaving the colony may, in part, be accounted for by the return to the Island of some 7,000 demobilised soldiers of the British West Indies Regiment, who, in many cases, were not satisfied to revert to conditions that existed before their departure to participate in the recent war. It is hoped that conditions here will so improve in the near future that there will be fewer inducements for the labouring population to leave the Island for the development of foreign countries.

Public Health and Sanitation.

21. Matters in connection with the health and sanitation of the Island have been receiving, for some time past, the earnest attention of the Government, and active steps were taken during the year under review for dealing with such matters.

22. The Rockefeller Foundation began extensive operations in Jamaica in connection with the treatment of hookworm (ankylostomiasis), and the United Fruit Company inaugurated a system for medical attendance on their employees. Both these organisations have materially contributed to improve general health conditions in the Island.

23. A step in furtherance of the movement for dealing effectively with hookworm, and one that is fraught with great potentialities in sanitary matters generally, has been the appointment of a Superintending Inspector under the provisions of "The Health Law," Law 35 of 1910.

Vital Statistics.

24. The estimated population of Jamaica at the close of the year 1919 was 893,580, which is arrived at as follows :—

Estimated population on 31st December, 1918 ..			891,040
Births registered in 1919		29,917	
Deaths registered in 1919		19,857	
			10,060
			901,100
Total Migrations in 1919—			
Total Arrivals—General	13,690		
Military	7,233		
		20,923	

Total Departures—General	28,070		
Military	373		
		28,443	7,520
			893,580

25. 3,305 marriages were registered during 1919, the rate being 3·7 per 1,000 of population, as compared with 3·1 for 1918. During the same period 29,917 births were registered, of which 15,323 were boys and 14,594 girls. The birth rate works out at 33·5 per 1,000, as against 34·1 during 1918.

26. 19,857 deaths were registered, of which 10,023 were males and 9,834 females, the death rate being 22·2 per 1,000, which is the normal rate for the Island. That for 1918 was 33·0, but the high rate in that year was due to a severe epidemic of Influenza and Pneumonia.

During 1919, 6,459, or 32·6 of the total deaths, were those of children under two years of age ; and of these 4,838, or 24·4, were those of children under one year of age.

The corresponding figures in 1918 were 25·5 and 18·2. The total infantile death rate under one year was 16·1, as compared with 17·5 in 1918.

The principal causes of death among the inhabitants of Kingston, the capital, were :—Phthisis, 11·3 ; Diarrhoea and Enteritis, 10·4 ; Heart Disease, 7·0 ; Atrophy, Itherus and Scleroma of the new born, 6·9 ; Pneumonia, 4·0 ; Influenza, 3·2.

Imports and Exports.

27. The amount collected for Import Duties during 1919-20, the largest collection in the history of the Island, was £691,023, as against £391,914 in 1918-19. The main factors which produced this large amount was the low rate of exchange which existed between Jamaica and the United States of America and the continued rise in value of all imported goods. However, after these factors have been discounted, the balance of the increase in collections is due to a real increase of trade.

28. The amount collected for Harbour and Light Dues in 1919-20 was £5,310, as against £2,979 in 1918-19. The increase of £2,331 is due, in part, to the revival of the banana industry and in part to the increased shipping facilities caused by the cessation of hostilities.

29. The special Customs Duties imposed as temporary measures due to conditions arising out of the War and a succession of hurricanes, *i.e.*, Export Duties and temporary additional Import Duties, amounted to £41,247 and £34,145 respectively, as against £42,674 and £16,004 in 1918-19.

30. The value of the exports in the year 1919 reached the phenomenal figure of £5,627,329, as against £2,684,897 in 1918, an increase of £2,942,431. The principal items conducing to the total of 1919 are: Sugar, £1,317,547; Bananas, £1,141,479; Rum, £924,170; Logwood Extract, £358,485; Coffee, £356,190; Cocoa, £286,784; Coconuts, £285,324. The usually remunerative prices received for the products of the Island are the main cause of the great increase of over 100 per cent. in the export trade; still, quantities also took a decided upward step. The re-establishment of the banana industry following the disastrous hurricanes which visited the Island in 1916, 1917 and 1918, played no inconsiderable part in producing this gratifying result, the average for the years 1915-18 being 4,313,101 stems, as against 9,673,557 in 1919.

31. The grant during the year by the Mother Country of preferential duties in the case of sugar and other chief products of the colony resulted in an increase of exports to the United Kingdom from 50·2 per cent. in 1918 to 63·4 per. cent. in 1919.

32. For the purpose of comparison there is set out below the value of the imports and exports of the Island during the last forty years and the amount collected as Import Duties:—

	1879.	1889.	1899.	1909.	1919.
	£	£	£	£	£
Value of Imports..	1,347,300	1,397,600	1,844,300	2,561,700	5,085,600
Value of Exports..	1,357,600	1,614,800	1,868,100	2,628,300	5,627,300
Import Duties ..	232,000	284,400	361,600	469,500	656,900

33. The Import Duties, are, however, not an exact gauge of the value of the Imports, for the reason that they include specific duties on rated articles and that in such cases, while the value of an article may have gone up three or four times, the duty received has not increased.

34. Although, as already stated, the financial conditions of the Island have greatly improved recently, and there are good prospects of even greater progress being made in the future, it might be as well to mention here that it is inadvisable for persons to emigrate to Jamaica unless they are in possession of a fair amount of capital and have had some training in tropical agriculture. The cost of living is at least as high as in England.

35. A General Election was held in the month of January, 1920, for the purpose of electing members to represent the fourteen parishes of the Island in the Legislative Council. The elections were contested in only five parishes, viz.: St. Mary, Westmoreland, St. Elizabeth, Manchester and St. Catherine.

The number of registered voters throughout the Island was as follows:—Males, 41,930; Females, 173; Ex-Soldiers, 164. It is interesting to note that the franchise on a limited scale was extended to the women of this Island by Law 22 of 1919, which is more fully referred to later on under the heading "Legislation."

The total number of votes polled in the parishes in which the elections were contested was:—for the successful candidates,

2,427, and for those who were unsuccessful, 1,238. There were, in all, 203 spoilt votes. The average percentage of the number of votes recorded in the parishes in which the elections were contested to the number of registered voters in those districts was 21%.

36. The Governor, Sir Leslie Probyn, K.C.M.G., proceeded on leave to the United Kingdom on the 21st June, 1919. During the absence of His Excellency the Government was administered by Mr. Robt. Johnstone, C.M.G., I.S.O., from the 22nd June to the 17th August, and by Colonel H. Bryan, C.M.G., D.S.O., from the 18th August to the 17th November, 1919.

II.—GOVERNMENT FINANCE.

37. The following statement shows totals of Revenue and Expenditure of the Colony during the past five years :—

	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	£	£	£	£	£
Revenue ..	1,132,049	1,154,349	1,052,485	1,157,304	1,802,778
Expenditure..	1,105,942	1,076,237	1,098,409	1,228,608	1,444,818

38. The amount of the Public Debt outstanding on the 31st March, 1920, was £3,912,574. The Assets and Liabilities on the same date were £1,228,708 and £899,133, respectively. The balance of the account at the close of the year under review is therefore, £329,574 ; which, together with the deficit of £28,386 on the 1st April, 1919, makes up the total surplus of Revenue over Expenditure of £357,960.

Taxation.

39. Law 9 of 1919 imposed a temporary tax for the year 1919-20 on packages.

40. Law 10 of 1919 increased the duty payable on every Bill of Sight under the Customs Consolidation Law 1877 (Law 18 of 1877), where the value of the goods exceeds £5 to 10/, except on Bills of Sight in respect of parcels transmitted to Jamaica through the Post Office.

41. Law 11 of 1919 amended the Tariff (Temporary Increase) Law 1916, so as to increase by 17½% the surtax on the Import Duties upon Spirits, Brandy, Whisky, Gin, Spirits of Wine, Alcohol and all other distilled spirits, Bitters, Cordials, Liqueurs, and sweetened or mixed spirituous beverages, and upon certain spirituous compounds and wines.

42. Law 14 of 1919 imposed a duty on Entertainments to which the public are admitted on payment.

43. Law 15 of 1919 increased the Excise Duties on Rum by raising the surtax to 60 per cent. until and including the 31st March, 1920.

44. Law 18 of 1919. The Law temporarily increased the duties on Trades and Business as follows :—

	£	s.	d.
Merchant, General Factor or, Wholesale Dealer	50	0	0
Auctioneer or Commission Agent ..	5	0	0
Wharfinger	10	0	0
Retailers—where the duty paid under Law 7 of 1908 is £7 10*s*. 0*d*.	20	0	0
Where the duty paid under Law 7 of 1908 is less than £5, but not less than £2 10*s*. 0*d*.	5	0	0
Where the duty paid under Law 7 of 1908 is less than £2 10*s*. 0*d*.	0	10	0

This Law remained in force until and including the thirty-first day of March, 1920.

Income Tax.

45. Law 24 of 1919.—During the year under review there was enacted for the first time in Jamaica history an Income Tax Law. It was assented to by the Governor on the 20th June, 1919, and under Section 2 of the Law by Proclamation came into force on the 1st January, 1920. The rates imposed by the Law are the following :—

(*a*)	On the first £100	Nil
	On every pound of the income beyond	
(*b*)	£100 and up to — £400	2½d.
(*c*)	£400 and up to — £500	3d.
(*d*)	£500 and up to — £750	4d.
(*e*)	£750 and up to — £1,000	6d.
(*f*)	£1,000 and up to — £1,500	9d.
(*g*)	£1,500 and up to — £2,000	1/
(*h*)	£2,000 and up to — £5,000	1/3
(*i*)	£5,000 and up to — £8,000	1/6
(*j*)	£8,000 and up to — £10,000	1/9
(*k*)	On every pound beyond £10,000	2/

The first collection of this tax is to be made in the year 1920 in repect of income derived or received during the year 1919.

46. Law 26 of 1919 increased temporarily the Tax payable under the Property Tax Law 1903 (Law 15 of 1903) to fourpence on every ten pounds or fractional part of ten pounds, of the value of such property.

This Law continued in force until and including the 31st day of March, 1920.

Currency.

47. Under Law 27 of 1904, local Currency Notes, which are made legal tender under Section 5, have been issued to the extent of £17,500 in denominations of 5/- and 10/-.

III.—ANNUAL PROGRESS OF TRADE, AGRICULTURE, AND INDUSTRY.

Trade.

48. In spite of the high cost of manufactured articles and materials abroad the trade of the Island, instead of having declined, has, on the contrary, shown a steady rise. A comparison of the values of the Imports for the last five years, which of course has been swelled, so far as imports from the United States of America are concerned, by the high rate of exchange, will fully support this.

	£
1915	2,327,458
1916	3,107,004
1917	3,323,865
1918	3,381,758
1919	5,085,615

49. The difference between the average value of the Imports for the years 1915-18 and 1919 of £2,050,594 would unquestionably not entirely be accounted for by increased cost, but would undoubtedly point to a greater volume of trade. There have been no marked changes with regard to sources of supply, or destination of our products. The trade of the Colony—in respect of Exports—with countries in the Continent of Europe for the period under review, has not yet been resumed to any extent, only France, Denmark, Holland, Norway, Switzerland and Spain taking any of our productions, and that only to the extent of £120,717.

50. There is an undoubted wave of prosperity (although not amongst all classes) throughout the Colony, which is not confined to any one particular class. The spending power of the peasantry has increased considerably, due, in part, to the very considerable sums remitted by the thousands of their relatives in Cuba who are earning very high wages, and also to the highly remunerative prices obtained by those who remain for all products grown in the Island.

Agriculture and Industry.

51. The period under review has marked the greatest revival in the industrial progress of Jamaica during the past century. This is indicated by the records of exports, which show an increase of over 100 per cent. in value over those of the previous year.

52. Agriculturally, the year was one of low rainfall. Large areas of land suffered from drought in the summer months and from inadequate autumnal rains. Despite these disadvantages of the seasons the *Sugar Industry* made marked progress with an export of 38,000 tons and a total value from Rum and Sugar of two and one quarter million pounds. The profitable aspect of sugar production, due to the world shortage, has reacted strongly on the industry in Jamaica and developments are now in hand

that should eventually result in an increased production in the neighbourhood of 100,000 tons of Sugar per annum.

53. The *Banana* industry has made a welcome recovery and in the absence of hurricane a crop of nearly 10 million bunches of bananas was exported. With the advent of trade competition in the buying of the fruit prices have been raised to a firmer standard and the growers have been encouraged to plant and cultivate their fruit. An export of 20,000 boxes of Evaporated Bananas, valued at £25,000, has been an interesting feature of the year's trade.

54. *Coconuts* show a progressive recovery from the effects of the Cyclone of 1917 by an export of 24 million nuts and 700 tons of Copra, indicating an increased output of 6 million nuts for the year, while the value shows a gain of 100 per cent. over that for coconuts in the previous year. Owing to the careful and systematic watch that has recently been organised for the control of coconut diseases the health of the trees is now reported to be excellent and it is considered that at no time in its history as a coconut-producing country has Jamaica been so free from coconut diseases as at the present time.

55. *Logwood* and its extracts have, contrary to expectations, enjoyed a revival of prosperity under post-war conditions and an improvement to the extent of £60,000 in the values for logwood products has been recorded for the year.

56. *Orange Oil* was in great demand and the crop realised about double that of the previous year. Latterly, orange oil has been selling at very high prices, owing to a shortage of supply, and many owners of wild orange trees have reaped a welcome harvest.

57. *Cacao* has had a good year with a record of values 90 per cent. greater than in 1919, which was again about 25 per cent. in excess of the previous year's record. A revival in the establishment of cacao has been started and the Department of Agriculture is seeking to supply the demand for plants by an extension of nursery operations in suitable centres.

58. *Coffee* has also shared in the general prosperity, with a gain of about two-thirds in gross value. The satisfactory prices now obtainable for Jamaica coffee in the English market should lead to a resuscitation of this old staple, which was, a century ago, one of the most valuable products of the Colony.

59. *Cotton* has again received some attention, due to the attractions of high prices. A small cultivation of Sea-Island cotton in Vere brought in a handsome profit to the grower, while the perennial "Cauto" cotton grown in St. Elizabeth was sold for 3/- a lb. Planters are again experimenting with cotton and if the prices are maintained a moderate output of cotton from Jamaica may be expected.

60. *Pimento* was in good demand abroad and the large sum of £184,000 was received for this product, which is practically a

monopoly for Jamaica in the markets of the world. Experiments in the production of Vanillin from Pimento leaves are now being carried out on a small industrial scale by the Agricultural Department. An industrial Chemist with special qualifications is in charge of this work. A bag of Pimento leaves, weighing 60 lbs., previously of no commercial value, will yield one pound of an oil containing 92 per cent. of "Eugenol," which can be transformed readily into the isomeric "Iso-Eugenol." The latter oil by oxidation yields "Vanillin," which is at present selling for 80/- per lb. The basis of a new industry, which should add to the value of Jamaica's groves of wild pimento trees, is therefore in evidence.

61. *Sisal Hemp* is rapidly being extended, an area of 2,285 acres being now ready for harvesting in the May Pen District. Plantations are also being established on the limestone soils of St. Ann. The Government has embarked on a fibre enterprise at Lititz on the derelict Savannah lands of St. Elizabeth and a factory, to produce 500 tons of fibre per annum, has been provided on the estimates. At the end of the year 500 acres of Sisal had been established over a period of 3 years, at a cost of £4 per acre. A test of 1,000 plants, grown under extremely hard conditions, was made during the year and a yield of 1,000 lbs. fibre per annum was obtained. The plants have since grown with greater vigour and an even larger yield should be obtained at the next cutting within 12 months of the first test. The Sisal industry should enable large areas of non-productive lands on the limestone to be turned to good account, while the industry affords employment to large numbers of women and children at present almost unemployable in these districts, where the ordinary staples of the Colony cannot be grown for commercial purposes.

62. *Hides* have been in good demand abroad, goatskins alone realising £44,000. A Law which has recently been passed making compulsory the dipping of stock should enable the tick-pest to be so reduced as greatly to add to the intrinsic value of the hides of cattle from Jamaica.

63. *Tobacco* has shared in the Imperial Preference, while the Jamaica cigar is gaining an increasing market in various parts of the world. The cigars exported during the year were valued at over £100,000. The tobacco naturally produced in the islands is of a light cigar type and the industry flourishes on light alluvial soils in districts with moderate rainfall. The prospects of the cigar trade in Jamaica are encouraging and the growing of tobacco is now being taken up with eagerness by many small growers.

64. *Brewery.*—There is a proposal to start a brewery in Kingston. The actual work has not yet been started, but it is expected that it will be an accomplished fact at no distant date.

65. *Biscuits.*—The Jamaica Biscuit Company continues to hold its own to an almost total exclusion of the imported article.

66. Departmentally, the year has been mainly one of the laying of plans for appreciable development in various lines of agricultural work for which the Legislature has provided appreciable sums of money.

67. A new era has dawned for the industries of this ancient British Colony which, after a century of stagnant industry and depressed finances, to-day faces the future with hope and confidence that real progress and success in all branches of social and economic effort will ensue.

IV.—PROGRESS IN THE INVESTIGATION AND DEVELOPMENT OF NATURAL RESOURCES.

68. With the exception of a small amount of triangulation survey work which has within recent years been carried out by the Military Authorities for their own information, the Island has never been properly surveyed, and therefore its area cannot be said to have been accurately determined. It is however estimated to contain 2,692,480 acres, of which 2,405,949 acres have been alienated, leaving 286,531 neither alienated nor in process of alienation, about 10,000 acres of which is morass land.

69. Alienation began immediately after the Spaniards were driven out of Jamaica in 1655, for in the month of October of that year, under the Cromwellian régime, the Protector issued a Proclamation with regard to the settlement of the Island in which it was provided, inter alia, that, " Those who shall transport themselves (*i.e.* to Jamaica) as aforesaid shall have land set forth unto them according to the proportion of 20 acres besides lakes and rivers for every male of 12 years and upwards and ten acres for every other male or female, etc."

The process of alienation, rather slow at first, was considerably accelerated during the earlier part of the eighteenth century, on account of the development of the sugar and rum industries, and the cultivation of coffee, with the result that, at the close of the century, the total acreage of estates had increased to an extent more than commensurate with their requirements.

70. The abolition of slavery in 1838 and the adverse fortunes of sugar, caused abandonment of large numbers of properties, and in process of time these were squatted on by persons having no equitable claim to them.

71. Between the years 1867 and 1887 the Government by successive legislative enactments became trustees of all lands in the possession of persons without any legal or equitable title, and in this way upwards of 27,000 acres were recovered from 1,600 squatters. The lands so recovered are scattered all over the Island. Some of it has been restored to its rightful owners, some has been sold, and some still remains in possession of the Government.

72. During the year 1899 the Jamaica Railway was sold to the West India Improvement Co., one of the conditions of the purchase being that the Government should give them one square mile of Government land for every mile of railroad constructed, and about the year 1894, 74,443 acres were conveyed to the Company, leaving 2,367 acres to be conveyed later on. In 1911, this large acreage passed back into the hands of the Government, who then purchased it for £18,500.

73. Within recent years, Government has granted to 296 time-expired East Indian immigrants 3,283 acres in lieu of return passage to India, each adult receiving 10 acres, with an additional care for each child born in the Island.

74. The scheme for the sale of Crown lands to small settlers, which was inaugurated in 1897, is still in operation, and up to the end of March, 1920, 42,433 acres have been sold, and put in possession of instalment and outright purchasers. The most notable grants which have been made during the past twelve months, have been 360 acres in Westmoreland to one purchaser, and 4,182 acres in Clarendon to another. In all cases in which the full amount of purchase money has been paid, the purchasers have received title from the Government.

75. There is a large number of praedial tenants on the Crown lands who pay rent at from 12/- to 16/- per nominal acre per annum.

76. While the value of private property has greatly increased during the past three years, Crown lands are still being sold at from £1 to £4 per acre, according to their situation. These prices were in existence long before the outbreak of War, the lands being for the most part in remote situations and difficult of access.

77. As regards progress in the investigation and development of the natural resources of the Island, little has been done by Government beyond the publication of a Report by James G. Sawkins, F.G.S. on "The Geology of Jamaica" in 1869; and a Report upon "The Forests of Jamaica" by E. D. M. Hooper of the Indian Forestry Department in 1886.

78. There is no Forestry Department in this Island, and the cultivation of timber trees is an unknown industry. Almost all the timber which clothed the plains, and much of that which clothed the hill slopes up to 2,500 feet above sea level, and in some places up to 4,500 feet has been destroyed. In a few places destruction has extended to a higher elevation than 5,000 feet.

79. The history of forest denudation may be described as the history of peasant cultivation and goes back to the days of slavery during which it was decided by an Act of the local Legislature that an acre of yams was to be grown for every ten slaves. We have it on the authority of Mr. Hooper that "It is an undoubted fact that the forests are becoming poorer and the area under hardwoods smaller, and this without the woods being utilized for their timber, or the area under cultivation or pasture, materially

increased by the clearing of the land." Mr. Hooper's remarks are of the same cogency to-day, as when they were written 34 years ago.

80. With reference to mining, it appears that attempts at exploiting this industry were made from the earliest times in the known history of the Island, and it might not be out of place here to state that in 1511, the King of Spain in a despatch to Diego Colon, the son of the discoverer of Jamaica, wrote as follows:—

" Juan de Esquivel (the first Governor of Jamaica) and the Christians in Xaymaca should endeavour to find gold." In 1519 the King ordered the " Controller " of Jamaica to " report every year as to the gold smelteries " and in 1521 the Spanish Sovereign announced that, " colonists should only pay one-tenth instead of one-fifth of the gold smelted for the next 8 years." In 1601 Melgarejo de Cordova, the then Governor, wrote that he was informed that " in the Bastidas Mountains " (eastern part of the Blue Mountains) there was " a large amount of gold."

81. At this time, it appears that the existence of copper in the Island was well known, because in 1597 Pedro de Acuna, the Governor of Cartagena, wrote to Melgarejo suggesting that he should send him some Jamaica copper ore to be tested, and in the following year the Governor of Jamaica in writing home referred to the copper which he was sending to Cartagena " for the founding of artillery." He refers to " mines situated at sea ports " and wanted the artillery forging done in Jamaica. The location of these mines appears to have been completely lost on account of the extermination of the native Indians through Spanish cruelty, an epidemic of smallpox, and wholesale suicides caused by drinking cassava water.

82. Individuals and Companies have, during the past 70 years, endeavoured to emulate the efforts of the Spanish miners of the 16th century, but none of those efforts were, so far as is known, directed towards prospecting on the Crown lands, but on properties long since alienated from the Crown.

83. Although not connected with the Crown lands, it might be of some interest here to state that gold was found in the Charing Cross copper mine in Clarendon 60 years ago, and having been mistaken for pyrites, was actually thrown away. In 1857, The Wheal Copper Co. extracted from the Charing Cross mine, 208 tons of copper ore which was shipped to the English and American markets and sold for £2,817, the highest price paid being £24 15s. 0d. per ton and the lowest £9 2s. 9d., the average figure being £13 1s. 3d. per ton.

84. Recent experiments have shown that, by means of a carbonizing process, half-formed coal called " lignite " may be used largely as a substitute for coal, and in this connection it is interesting to recall that about 35 years ago, certain deposits, declared

to be " lignite," were found at Lichfield in the parish of Trelawny The greater portion of Lichfield was in 1915 sold by Government in lots to small settlers, who had resided on the property for many years.

85. The geological formations of Jamaica being in many respects similar to those of Cuba, where iron and copper mines have long been successfully worked, there is some reason for entertaining the hope that scientific research may result in the discovery of valuable deposits in this Island.

Fishing.

86. Fishing, which was started in the Penitentiary in 1919, has had to be abandoned, as a popular and very justifiable objection was raised against the use of the seine within the harbour limits, on account of the unavoidable destruction of immature fish, and operations could not be carried out outside the harbour with prisoners. It was hoped that the high price of imported salted fish might induce local fishermen to operate on a large scale in outside waters, where the catches are generally good A few trials were made with satisfactory results, but the cured fish did not command a ready sale, the public for some reason preferring the imported article. It would appear that, with proper management, there should be a great possibility in deep-sea fishing in these waters, especially as there is always a demand for fish and the cost of imported salted fish even at pre-war prices, leaves a good margin of profit for the local article, provided it is properly cured.

87. The supply of fresh fish at present available is well up to the average. A start has been made along the Yallahs coast between Kingston and Morant Bay, to increase the supply, and the catches are being sent down to Kingston by motor van daily. It is understood that the person interested in the scheme, intends to extend the business to the curing of fish on a large scale. The chief drawback is the difficulty experienced in obtaining the services of capable fishermen who would be willing to fish continuously and thus ensure a constant supply. No properly organised attempt has yet been made to reap the rich harvest of the sea which is within our immediate reach and which is ever inviting gatherers.

88. Our fishing interests cannot be intelligently understood without a comparison between imports and the state of our local production. The value of the fish imported in 1918, (the latest figures available), including canned fish, was £249,014. It appears therefore, that this Island with a population of about nine hundred thousand, introduces cured " fish-stuffs " of different kinds of the value stated.

89. When it is borne in mind that we have a coast-line of nearly 400 miles, accessible at almost all points for fishing boats and

canoes—to say nothing of the possibilities of deep-sea fishing, already referred to—that every parish has a sea front ; that the out-lay required for boats and tackle is trifling ; that the fish is good and plentiful *all the year round*, it is evident that we are neglectful of our particular advantages in regard to local fisheries. Unfortunately, we have no estimate, even approximate, of the value of the fish caught locally, but keeping it within convincing limits it can hardly exceed £40,000 a year, if even so much. It is, therefore, evident that our fishing industry requires stimulation in some form or other and it is to be hoped that this matter will be taken up seriously in the near fututre.

MANUFACTURES.

90. The principal items of our manufactures are Sugar, Rum, Copra, Banana Figs, Orange Oil, Cigars and Cigarettes, Aerated Waters, Ice and Leather.

91. *Sugar.*—Previous to the war the bounty-fed sugar had crippled our industry so that we find in 1914 an output of only 20,820 hogsheads, while in 1919 there was an output of 38,449 hogshead, with a tendency to still further increase. The general trend is towards centralization, resulting in large Central Factories with the most modern machinery being established in many localities and many of the smaller estates dismantling their machinery and becoming Cane Farms, to feed the Centrals. The largest of these Centrals already established is the Bernard Lodge Central in St. Catherine.

92. *Rum.*—This valuable by-product of the Sugar Industry has also made rapid strides since the outbreak of war as the following figures show. Output in 1914, 13,788 puncheons. Output in 1919, 18,415 puncheons.

93. *Copra.*—This industry has only been developed in the past six years. It is one which is largely dependent on the market value of the coconut. If the price is high in the market of the United States of America, it pays better to ship the nuts than to make Copra, certainly the large nuts, and then the small nuts are made into Copra.

94. *Banana Figs.*—This is an industry in its infancy, but considerable improvement developed in 1919 and there are factories still being established.

95. *Orange Oil.*—This industry is proving of great value and is a means of getting Revenue from the oranges, which formerly went to waste.

96. *Cigars and Cigarettes.*—This is an important industry which has been greatly developed in recent years as the exports of these items indicate.

97. *Ice and Aerated Waters.*—May be regarded as manufactures for local consumption chiefly.

98. *Leather.*—There are tanneries at various centres in the Island and sole and harness leather forms an item of our exports.

Latterly the finer grades of leather have been manufactured to a small extent.

Water Power.

99. There has been little progress in the development of Water Power. The only plant of importance in the Island which is operated by water power, is that of the West India Electric Company, Ltd., for the pu pose of operating the tramways and electric lighting of Kingston : d lower St. Andrew.

There is, however, a scheme under consideration for utilizing the water power from two or more rivers with a view to operate the Government Railway by electrical energy in place of the present system of steam locomotion. A careful investigation of many of the water-courses in the Island has recently been carried out with this object in view, but no decision has yet been arrived at in the matter.

V. BANKS AND BANKING FACILITIES.

100. The commercial banks doing business in the island are the Colonial Bank, the Bank of Nova Scotia and the Royal Bank of Canada. The Canadian Bank of Commerce will shortly open also. The Jamaica Head Offices are all in Kingston.

101. The Colonial Bank has sub-branches at Annotto Bay, Brown's Town, Falmouth, Linstead, Lucea, May Pen, Montego Bay, Morant Bay, Port Antonio, Port Maria, Port Morant, St. Ann's Bay, and Sav.-la-Mar.

The average weekly note circulation rose from £53,261 in 1915 to £112,717 in 1919.

102. The number of branches of the Bank of Nova Scotia in Jamaica is 12; they are established at Kingston, Black River, Mandeville, Montego Bay, Morant Bay, Port Antonio, Port Maria, St. Ann's Bay, Sav.-la-Mar, Spanish Town, Brown's Town and Linstead. The amount of notes outstanding increased from £96,814 at the end of March quarter, 1914, to £211,706 at the end of December quarter 1919 following the increased demand for circulating media in the Colony. The notes outstanding at this date (July 26th) have been reduced to £146,268.

103. The Royal Bank of Canada is, comparatively, a newcomer to Jamaica. The average circulation at the end of March quarter, 1918, was £27,127, and at the end of December quarter, 1919, £62,548. There are sub-branches at Cross Roads and Spanish Town

104. The Government Savings Bank was started in 1870. On the commercial Banks entering the field, starting Savings Branches, and giving higher rates of interest and more facilities, the deposits in the Government Savings Bank declined. By Law 7 of 1917, the management was entrusted to a Board. New Regulations were drawn up and approved by the Governor in Privy

Council on the 4th February, 1919. The renewed activities of the Bank may be said to date from the beginning of 1919, in which year the deposits increased by 71%. The policy of the Board is that the savings of the people should be used to develop the Island. The telegraphic address "Our bank, Kingston," sufficiently indicates the lines followed to obtain the support of the public. The funds of the Bank may be invested (1) In British and Colonial securities, (2) in loans to Agricultural Loan Societies, (3) in real securities in Jamaica, (4) on deposit in Banks, (5) in any other manner authorised by the Governor in Privy Council. Funds for financing land settlement schemes, whereby Loan Banks are enabled to buy large properties, cut them up, and sell the lots to small settlers, have been provided by the Bank. Funds for making loans to Loan Banks, to be lent to members for developing their holdings, have also been provided.

105. There are 40 Branches and Postal Agencies throughout the Island, 19 of the latter having been opened during the current year. Stamp Savings Cards have induced many children and adults to open accounts. Savings Certificates are issued for 16/6, maturing to £1 in five years. Postage and registration to the Bank are free; and no revenue stamp is required on receipts. The same rate of interest as that given by the commercial banks, viz. 3% per annum, compounded half yearly, is allowed on deposits. There are 40 Co-operative Loan Banks on the Register under the Industrial and Provident Societies Law (33 of 1902). The greater number of these were started early in 1913, in order to handle loans made by the Government for the resuscitation of cultivations damaged by the drought and hurricane of the previous year. Loans were also made through Loan Banks in 1916-17 and 1918, in consequence of the hurricanes of 1916 and 1917. These loans were made through the Agricultural Loan Societies Board under the provisions of Statutes giving the Banks extraordinary powers of recovering loans. Loans have also been made to the Banks under Law 6 of 1912, "A Law for the encouragement of Agricultural Loan Societies," such moneys being used with their own funds for the purpose of making loans to their members for short periods on personal security, note of hand, mortgage, etc. for agricultural and industrial purposes; *e.g.*, for the purchase of stock, cane mills, tools, and the like. These Banks have supplied a longfelt want among the small settlers.

106. The following figures referring to the 30 banks which obtained loans from Government funds, will serve to show the extent of their operations :—

	£	s.	d.
Loans made and repaid prior to 31.12.19. ..	17,972	8	6
Loans made on which balances amounting to £26,094 7*s.* 2*d.* are outstanding	69,343	18	10
	£87,316	7	4

107. The Co-operative Loan Banks also collected to 31st December, 1919, a sum of nearly £24,000 share capital. It is evident, therefore, that they have come to stay; and it is expected that the more ambitious of them will extend their sphere of usefulness. Indeed, one Bank during the current year has obtained a loan of £30,000 for the purpose of purchasing two adjoining properties and selling them in lots to small settlers. This scheme has every promise of success.

VI. LEGISLATION.

108. Laws passed during the calendar year 1919, included besides those already mentioned under Heading II. :—

(1) Law 1 of 1919, "The Food Control Law, 1919," which was enacted in order to provide for the appointment of a Food Controller. The duty of this Officer is to regulate the supply and consumption of food in such manner as he thinks best for maintaining a proper supply and to take steps with a view to encourage the production of food in the Island.

(2) Law 22 "The Registration of Voters Law, 1908, Further Amendment Law, 1919," which entitles literate female persons who have attained the age of 25 years, and who are otherwise qualified, to be registered as voters and to enjoy all the rights and privileges of voting to which male persons registered as voters are entitled.

(3) Law 34, "The Former Enemy Aliens (Restriction of Admission) Law, 1919," which was enacted in order to prevent the landing in Jamaica and its Dependencies, without a permit in writing signed by the Colonial Secretary, of the subject of any State with which His Majesty was at war in 1918. This Law, however, does not apply to subjects of newly-created States.

(4) Law 35, "The Employer's Liability Law, 1919," which gives to a workman, in certain events, or in the case of his death, his personal representatives, the same right of compensation and remedies against the employer as if the workman had not been in the service or engaged in the work of the employer, when personal injury is caused to him in a factory where the machinery is operated by steam, gas, electricity, petroleum oil or other similar means, or by a combination of such.

(5) Law 36, "The Immigration Restriction Law, 1919," which was enacted to prohibit the entry into the island of certain classes of undesirable persons; *e.g.*, those who are unable to write from dictation not less than 50 words in a prescribed language (English, French, Spanish or such other language as the Governor may from time to time approve), persons suffering from serious disease or defect, idiots, &c.

(6) Law 37, "The Trade Union Law, 1919," which removes the taint of illegality from Trades Unions, provides for their

registration and arrangement and renders lawful an agreement or combination of two or more persons to do or procure to be done any act in contemplation or furtherance of a trade dispute, if the commission of such act by one person would not be a crime.

(7) Law 38, "The Naturalization Law, 1919," which provides the procedure for recalling or revoking local naturalization granted to an alien, no such provision having hitherto existed.

VII.—EDUCATION.

Elementary.

109. During the year under review little actual progress can be recorded on education—elementary, secondary, technical, or industrial. In the earlier months the elementary schools were still feeling the effect of the Spanish Influenza epidemic, whilst want of food and clothing affected the attendance of the children in some parts of the Island. Another disturbing element was dissatisfaction amongst a large section of the teachers owing to the old scale of remuneration which resulted in many of them leaving the profession. Two of the Manual Training Centres were in abeyance owing to lack of qualified instructors, and the staff of Inspectors has also been below its normal strength owing to the difficulty experienced in filling the vacancies, of which there were three at the time of the outbreak of war.

110. The weaknesses, however, of the system of elementary education have long been recognised and during the year the Board of Education gave much consideration to the introduction of changes (since adopted) with a view to bringing the system more into line with modern views and practice.

111. It was hoped that the improved system of classification and payments would have been introduced before the end of the financial year; but this proved impracticable, though, by means of a bonus, something was done to relieve the financial difficulties of the teachers.

112. The new curriculum for elementary schools came into full operation during the year, and when the teachers generally show a more adequate appreciation of the nature and use of a scheme of work, the results will indicate a considerable improvement throughtout the Island. So far, it cannot be said that the general body of teachers has shown any marked ability in dealing with new requirements.

113. The Training Colleges for Teachers were greatly handicapped during the year, the Mico College having lost both Principal and Vice-Principal, owing to ill-health, and the Principal of Shortwood College resigned and left the Colony. The newly appointed Principal of the Mico College remained only three months, and the appointment of the new Principal at Shortwood College caused a serious blank in the staff of the Bethlehem

(Moravian) College. The results of the annual examinations, however, show that very creditable work was done in the circumstances.

114. The Departmental Expenditure on Education was £93,935, as compared with £83,650 during the previous year.

Secondary.

115. The work of the Secondary Schools also has been adversely affected by straitened means and weakness in staffing, the inducements offered being insufficient to attract suitable men. The enhanced prosperity of the island, however, is reflected in the increasing number of pupils who apply for admittance, notwithstanding a considerable increase in fees ; and the proposed Government grant-in-aid should result in a more general spread of secondary education amongst classes which hitherto have not come under its influence.

116. The Jamaica Scholarships, boys and girls, have been increased in value during the year from £200 and £150 per annum, respectively, to £250 and £200.

Technical.

117. The Government Technical and Continuation School has been greatly handicapped by the absence on Army service of the Head of the Boys Technical Department, and the difficulty in filling the vacant position of the Head of the Girls Technical Department. Much useful work was however done with extemporised staff, and the school added greatly to its usefulness by providing classes in handicrafts for disabled men of the British West Indies Regiment, a large number of whom were trained in Bootmaking, Tailoring, &c.

Industrial.

118. Whilst much useful work is done in the few industrial schools, improved equipment and staffs are required before any great progress can be reported; for example, the woodwork at Stony Hill is excellent as far as it goes, but all turning work has to be given out owing to lack of a lathe. The instruction would obviously be much more complete and valuable to the boys if it included turning. The accommodation at the present institutions being now inadequate to meet the requirements it will probably be necessary to establish new ones in the country districts.

VIII. METEOROLOGICAL.

119. For the year, 1919, the total actual rainfall for the island was 69·45 inches, and the average is taken as 76·26 inches ; so that the deficiency was not more than 6.81 inches or about nine per cent. short, only. The total rainfall for Kingston for the year was 27·72 inches, the 50 year average being 33·57 inches.

Temperature.

120. The records for Kingston show that the mean temperature for the year was half a degree above the average. But on the 9th August the record showed 97·5 degrees, the highest maximum yet experienced, the previous highest being 96·7 degrees on the 20th August, 1891. The lowest minimum for the year was 62·6 degrees in February.

Weather Disturbances.

121. No hurricane passed over the island, but there were atmospheric depressions to the west of the island in May, also in the east Carribbean from about the 9th August. Then during the period from the 3rd to the 14th September, the severe hurricane which destroyed the Gulf cities and some towns in Florida, U.S.A., passed to the noth-east of Jamaica. This is described as the most terrific hurricane in the history of Key West. On the 9th August, at the time when disturbances were in the neighbourhood, a squall broke over Jamaica at about 3 p.m., doing considerable damage to the bananas in the parish of St. Mary and causing quite unnecessary alarm.

Solar Halo.

122. On the morning of the 24th May, a very fine solar halo was visible in Kingston and surrounding places, which attracted great attention. The halo was complete and showed up some of the prismatic colours. There was also a segment of a larger concentric halo which gave a radius of a little over the usual 46 degrees.

Earthquakes.

123. No earthquakes of any appreciable degree of intensity occurred at any part of the island during the year, 1919.

IX.—COMMUNICATIONS.

Railway.

124. The Jamaica Government Railway traverses the Island of Jamaica by two main branches :—

(*a*) Kingston to Montego Bay.
(*b*) Spanish Town to Port Antonio.

In both cases, from the south to the north side of the Island, the line runs across the high mountains which form the backbone of the Island. In addition, there are also two minor branches running into the interior of the Island, viz., from May Pen to Chapelton off the Montego Bay Branch ; and from Bog Walk to Ewarton off the other main branch, Spanish Town to Port Antonio.

The total length of the railway track at present is 197¼ miles. The gauge is standard, 4 feet 8½ inches. The ruling gradient is 1 in 30 combined with 5 chain curves.

125. The revenue for the year ending 31st March, 1920, was £308,244, and the expenditure £302,959; no provision is made for depreciation.

126. The total goods carried during the year were 253,863 tons, as compared with 167,669 for the year 1913-14; the number of passengers carried increased from 592,883 in 1913-14, to 651,216 in 1919-20.

127. A survey of the proposed extension of the Railway from Chapelton to Frankfield, a distance of about 9 miles, has been made; reconnaissances of the proposed extensions from Chapelton to Falmouth and Montego Bay, and from Highgate to Gayle, have also been made.

128. On account of the excessive rise in the price of coal, and the difficulties experienced in obtaining adequate supplies, an expert from the Westinghouse General Electric Company visited Jamaica during 1919, and he went very thoroughly into the question of electrification of the railway and submitted a favourable report. Since then, two English experts arrived towards the end of the year to advise on the same project, but their reports had not been received at the time of writing.

The question of utilizing oil fuel is also under consideration with the view of reducing the excessive coal bill.

129. It was found necessary during the year to augment materially the wages of employees, and to meet this increased expenditure, it was decided to increase the rates.

130. So as to meet the growing demands of the public it will be necessary in the near future to carry out a large programme of new works, chargeable to Capital Account, and it is hoped that provision will be made for this during the coming year by raising a loan.

131. The management of the railway is assisted by an advisory board of 10 members, consisting of the director and nine others, chiefly local business men, who advise the Government when necessary in matters of policy.

Shipping.

132. During the year 1919, 1,152 vessels, steam and sail, of 1,046,961 tons entered at ports in the Colony and 1,148 vessels, steam and sail, of 1,037,981 tons cleared at ports in the Colony. In 1918, 772 vessels, steam and sail, of 593,328 tons entered, and 746 of 583,697 tons cleared; 1919 shows therefore the following appreciable increases:

Vessels, Steam and Sail—entered 380, of 453,633 tons.
Vessels, Steam and Sail—cleared 402, of 454,284 tons.

133. The following are the figures for the past seven years :—

1913	entered	1,401	=	2,548,296 tons	cleared	1,400	=	2,569,827 tons
1914	,,	1,434	=	2,164,185 ,,	,,	1,424	=	2,142,663 ,,
1915	,,	914	=	1,251,722 ,,	,,	931	=	1,304,687 ,,
1916	,,	977	=	1,230,803 ,,	,,	948	=	1,208,775 ,,
1917	,,	901	=	1,045,443 ,,	,,	874	=	1,019,490 ,,
1918	,,	772	=	593,328 ,,	,,	746	=	583,697 ,,
1919	,,	1,152	=	1,046,961 ,,	,,	1,148	=	1,037,981 ,,

These figures point to the fact that shipping is on the high road to recovery.

134. The following well-established Steamship Lines are now serving the Colony, viz.:—The Royal Mail Steam Packet Co., Leyland Line, Elders and Fyffes, Harrison Line, New Zealand Shipping Co., Pickford and Black, Canadian Government Mercantile Marine and Pacific Steam Navigation Co. (British Companies).

United Fruit Co., Atlantic Fruit Co., Tropical Steamship Co., Caribbean Steamship Co., Jamaica Fruit and Shipping Co., Windward Island Line, United Steamship Co., Black Star Line (U.S.A. Companies).

The Royal Dutch West India Mail (a Dutch Company).

135. It will be interesting to observe that there were in 1913 the following nine Steamship Lines engaged in business with this Colony :—

The Royal Mail Steam Packet Co., The Leyland Line, Elders and Fyffes, Harrison Line, Pickford and Black (British Companies).

Hamburg-American Line, Atlas Service and Hamburg-American Line (European Service) (German Companies).

United Fruit Co., Atlantic Fruit Co. (U.S.A. Companies).

136. In 1919, there were, as enumerated above, eighteen steamship lines—an increase of nine lines, made up of four British and five foreign.

137. A word may be said on the subject of ship-building activities in a small way. The following are the figures :—

Ships built :—

1913	1 ..	21	tons
1914	1 ..	62	,,
1915	1 ..	33	,,
1916	3 ..	110	,,
1917	Nil ...	Nil	
1918	2 ..	64	,,
1919	2 ..	355	,,

A growing trade, requiring additional craft around the coast of the Island and the call for vessels to go to the neighbouring Islands, accounts for the increase noted above.

Roads.

138. The Island is intersected by system of good water-bound macadam roads. They are divided into two classes: (*a*) Main Roads, of a total length of 2,226 miles, which are maintained from the General Revenue of the Colony; and (*b*) Parochial Roads amounting to 3,300 miles, of which 1,230 miles are suitable for motor traffic, and 2,070 miles which may be described as cart or bridle roads. The latter class of roads is maintained by the Parochial Boards from funds derived from local rates.

139. During 1919-20, the main roads were maintained at an average cost of £42 per mile, but on account of the large increase in traffic generally, and more particularly to the large number of heavy mechanically-propelled vehicles now operating on the roads the cost of maintenance will in future be very much greater.

140. With few exceptions these roads were originally constructed without any proper foundation, and are therefore suitable only for light wheeled traffic, but this type of construction is totally inadequate to meet the increased traffic requirements of the present day. Many new roads are being constructed and existing roads improved, with a view to develop the industrial and natural resources of the Island. For this purpose a loan of £40,000 was raised, and the expenditure during the year under review amounted to £15,252.

Canals.

141. There are no navigable canals in the Island. There is, however, a system of canals which convey water from the Rio Cobre River to the plains of the Parish of St. Catherine for irrigation purposes. The main canal carries 18,000 cubic yards per hour, and is approximately 6 miles long; subsidiary channels, of which there is a total length of 42 miles, convey the water over an area of 50,000 acres, of which about 20,000 acres are now under irrigation.

142. In the Parish of Clarendon an irrigation scheme has recently been constructed. Water is pumped from the Cockpit River to a height of 70 feet and discharged into channels which convey the water by gravity to irrigate the various sugar estates. The main channel carries 5,000 cubic yards per hour, but is capable of being extended to carry 10,000 cubic yards per hour.

POSTAL, TELEGRAPH, TELEPHONE AND AERIAL SERVICES.

143. The Government Island Postal Telegraph System was inaugurated in 1879, there being 1,091½ miles of lines, with a complement of 47 offices Since then progress has been rapid

and the current year, 1920, finds the Island equipped with an efficient Government Telegraph and Telephone Service.

There are now 1,114¼ miles of telegraph and 904¾ miles of telephone lines, with 60 and 54 offices respectively.

144. The charge at the inception of the telegraph system was one shilling for the first 20 words and threepence for every additional five words, addresses of sender and receiver not being included.

In 1916, the popular sixpenny telegram was introduced and remained effective until 1918, when, due to war conditions, the rate was increased to ninepence for the first twelve words or under and a half-penny for each additional word including the address.

145. The Railway Telegraphs, in connection with which there are 38 offices, assist considerably towards placing communications within the reach of all. These offices work in collaboration with the Island Telegraph System, but are controlled by the management of the Jamaica Government Railway.

146. The progress and popularity of the Telegraph and Telephone system as a public utility may be readily seen from the following brief comparisons :—

During the year 1909-1910, with approximately 100 offices, 112,515 messages were signalled, and in 1919-20 the number of messages had increased to 299,879. The receipts in 1914-15 totalled £8,255 4s. 11d., while in 1919-20 they showed an increase of £6,765.

147. It is anticipated that at least twelve new telephone and phantophone offices will be opened during 1920-21, which will increase materially the facilities for inland communication.

148. There are two wireless stations in the Island, one of which is situated at Christiana and is owned and controlled by the Royal Navy. This Station does not communicate with merchant shipping and handles traffic for British Honduras, Nassau and British Guiana only.

149. The second Wireless Station is situated in Kingston and is owned and controlled by the Direct West India Cable Company, Limited, under Government licences. This station communicates with merchant shipping on a 600 metre wave. It is understood that the Company contemplates increasing the plant in order to communicate with shipping at a much greater distance than at present.

150. There is at present no Aerial Service in connection with this Colony.

X. PUBLIC WORKS.

151. No public works that might be considered of special interest to persons outside the Colony were carried out during the year under review.

XI. OFFICIAL PUBLICATIONS.

152. A list of Official publications relating to Jamaica, which are likely to be of general interest, is given below :—

CAYMAN ISLANDS.

ANNUAL GENERAL REPORT FOR THE FINANCIAL YEAR ENDED 30th SEPTEMBER, 1919.*

GEOGRAPHICAL.

The Cayman Islands consist of three small islands in the Caribbean Sea lying North West of Jamaica and approximately mid-way between that island and the South-west coast of Cuba. Sixty miles intervene between Grand Cayman and Little Cayman, and ten miles east of the latter is Cayman Brac. The islands lie between 79·83 and 81·30 west longitude and the 19th and 20th parallels of north latitude. Grand Cayman, the largest of the islands, is 17 miles in length from east to west, four miles in width at the east end and seven at the west. No part of the island is more than fifty feet above the surrounding ocean. Cayman Brac is 11 miles long by one and a quarter miles at its widest. Traversing its length from east to west is a central ridge of rock with precipitous sides, 150 feet high at the eastern end and sloping to the general level a few feet above the sea at the western end. Water-worn caverns are noticed along the entire length of this ridge, locally called the bluff, showing that the lowland surrounding the base, much the smaller part of the island's area, has been more recently elevated above the sea. Little Cayman, the smallest of the group, is flat and is largely a sand ridge above the surrounding ocean. There are no outlying cays or reefs. The 100 fathom ocean depth closely encircles the islands.

HISTORICAL.

The islands were discovered by Columbus on the 10th May, 1503, but were not occupied by the Spaniards. They were first called Las Tortugas, on account of the number of turtle in the surrounding waters. The present name is supposed to be derived from "caiman"—alligator—this animal being at one time numerous in the smaller islands. Settlement flowed from Jamaica in the first half of the 18th century; but many of the present inhabitants bear the surnames of British seamen wrecked either in the islands or on the neighbouring coasts of Cuba who remained domiciled in the islands.

* A sketch map will be found in the Report for 1914–15, No. 879; [Cd. 8172–5].

CONSTITUTION.

In the days of early settlement public affairs were managed by the Justices of the Peace appointed by the Governor of Jamaica acting with and under the direction of a locally elected "Governor." To this body elected vestrymen were subsequently added, and in 1833 a Custos was commissioned. In 1863 an Act was passed by the Imperial Parliament (26 and 27 Victoria, chapter 31) recognizing the existence of Acts and Resolutions passed by the local body and validating such as should be afterwards assented to by the Governor of Jamaica. Under this authority, the Justices and Vestry therein mentioned revised the local enactments, and twenty Acts, passed at various times between 2nd January, 1832 and 1st July, 1864, were submitted to Governor Eyre of Jamaica, and signed by him in assent on the 23rd March, 1865. Under the provisions of Jamaica Law 24 of 1898, as amended by Law 33 of 1920, the Governor of Jamaica has power to appoint a Commissioner to administer the affairs of the Dependency. The Commissioner performs the duties of Collector-General and Treasurer and presides in the Grand Court, where, when sitting alone, he has the power of three Justices of the Peace.

GENERAL OBSERVATIONS.

The commercial and social life of the islands appear to have been little disturbed by the world war, but in the period under review these remote communities became more and more affected by influences from the outside. United States gold and notes, which largely constituted the circulating medium, rapidly disappeared, and the rise in the price of food and other necessaries in America upset business arrangements.

Emigration and Immigration.

There is no immigration, but emigration to the southern ports of the United States, while not great, is steady. Labourers find employment in Cuba, but return to their homes about twice a year.

Public Health and Sanitation.

The health of the people is generally good. The culex mosquito is an intolerable pest and occasions a restriction of proper ventilation in dwellings, especially in the summer time and at night. There are no anopheles and consequently no malarial fevers other than the imported. By close observation of all arrivals from abroad and the isolation of all suspected cases, the influenza from which so many communities suffered was kept out of the Dependency.

(4335) Wt.17460/653 625 10/21 Harrow G.75

Vital Statistics.

The census of 1911 showed a total population of 5,564. Of these 2,322 were white, or nearly so, 2,211 were returned as coloured and 1,031 as black. There were 148 births (27 per 1,000), 63 deaths (11 per 1,000) and 30 marriages in the year under review.

Imports and Exports.

The value of the imports reached a figure substantially above that of the year before, itself well above the average for the previous five years.

The imports from all countries—

	£
In 1917–18 amounted to	37,949
In 1918–19 amounted to	44,828

If one excepts the building of small vessels, which are occasionally sold abroad, the making of thatch rope from the leaves of a palm indigenous to the islands is practically the only local industry with an export. A total of 1,196,000 fathoms, valued at £1,836, was exported, 95 per cent. to Jamaica. Over 5000 lbs. of hawk's-billturtle-shell were taken in the waters of the Caribbean Sea and on sale, mainly in Jamaica, realized £7,000. Very few green turtles were taken in the waters of the Dependency and only an occasional schooner returns to the islands with the catch of a voyage. The fishing grounds are off the Nicaraguan coasts and the turtles caught there are sent from the kraals on outlying cays to the United States. Approximately 1,000 were taken in 1918–19 and realized at Key West an average of £2 each.

GOVERNMENT FINANCE.

The Revenue and Expenditure in recent years have been :—

Year.	*Revenue.*	*Expenditure.*
	£	£
1913–14	5,047 ..	3,012
1914–15	3,347 ..	3,486
1915–16	2,891 ..	3,558
1916–17	3,219 ..	3,568
1917–18	4,423 ..	5,162
Average of 5 years ..	3,785 ..	3,757
1918–19	5,520 ..	4,837

The revenue is larger than in any previous year. Post Office (£2,650) contributed the larger part of the receipts, Customs (£2,310) and Licences and Internal Revenue (£495) coming next in order, and other sources show inconsiderable figures. The expenditure was much above the average and may be summarized in Departments, £2,013; Public Works, £1,779; and Other

Services, £1,645. In Public Works is included a sum of £1,000 transferred to a special fund for the erection in the near future of a new Court House and Town Hall as a Peace Memorial.

At the close of the year under review, the balance of assets stood at £3,796 2*s*. 7*d*. The assets included £3,524 in the Jamaica Treasury and £3,394 balance in Money Order Account, and amounted to £7,599 11*s*. 1*d*. The liabilities were made up of £29 deposits in the Local Treasury, £2,775 5*s*. 11*d*. due depositors in the Government Savings Bank, and £1,000 set apart in the Peace Memorial Fund, total £3,803 7*s*. 6*d*. There is no Public Debt.

ANNUAL PROGRESS OF TRADE, AGRICULTURE AND INDUSTRY.

The value of imports has more than doubled in the last five years as is shown in the following table :—.

Year.	*Imports.* £	*Exports.* £
1914–15	17,346	1,810
1915–16	28,414	11,566
1916–17	29,108	8,169
1917–18	37,949	5,229
1918–19	44,828	11,324

The value of the exports depends on the catch of hawk's-bill turtle and the price of the shell in the open markets.

Shipping.

Georgetown, Grand Cayman, is a port of Registry, having on its register 52 small vessels built locally with an aggregate tonnage of 2,620 tons. Nine vessels with a total tonnage of 689 were launched and registered during the year.

No steamships, other than ships of the Imperial Navy, visited the Dependency in the year. The following table shows the total number and tonnage of sailing ships entered and cleared.

Nationality.	*No. entered.*	*Tons.*	*No. cleared.*	*Tons.*
British	163	8,912	161	8,830
Cuban	1	10	1	10
Honduranean	3	74	4	103
Panamanian	2	92	1	46
American	25	6,160	27	6,628
Totals	194	15,248	194	15,617

Banking Facilities.

There are no commercial banks in the Dependency. The Post Office Money Order system is largely made use of both by residents in remittance for goods to be imported and by seamen, labourers and others abroad who forward their earnings for the maintenance of dependents in the islands. The orders issued in the Dependency amounted to £7,540, and the orders paid aggregated £10,067.

The depositors in the Government Savings Bank have increased to 46; the deposits for the year have been £2,330; and the withdrawals £1,461. The balance at the credit of the depositors at the end of the year amounted to £2,774. A sum of £1,500 has been invested in Imperial Loan Stock by the Crown Agents as trustees.

LEGISLATION.

There were eight enactments in the year, all but one being of purely local interest. Law 2 of 1919, The Cayman Islands Lighthouse Law 1919, provides for the erection and maintenance of a lighthouse on the eastern end of Grand Cayman. The light now established in consequence is visible in fair weather a distance of twelve miles and affords ample warning of approach to the off-shore reefs.

EDUCATION.

New legislation dealing with this important matter is now in train. A system of free and compulsory primary education is proposed at a cost not to exceed £1,500 per annum. While the majority of the schools are at present styled Government, only a small proportion of the maintenance is a public charge. Four buildings are, however, maintained, and grants amounting to £204 were distributed amongst five district teachers. The number of children returned as attending school is 635.

METEOROLOGICAL.

The rainfall for the twelve months amounted to 48·77 inches. May (9·96 in.) and September (8·10 in.) showing the heaviest precipitation. February (·67 in.) and March (·23 in.) were, as usual, the dry months. The temperature ranges from 80 to 90 degrees in the hot months, and from 70 to 80 degrees in the cooler, November to February inclusive. The islands enjoyed a freedom from hurricanes or severe gales which have in recent years done so much damage to growing crops. The climate is equable and generally good. The summer months, April to September, are rainy and hot, and the prevalence of mosquitoes (*culex fatigans*) makes screening or the closing of houses, or the use of smoke, obligatory. The indoor temperature is thus increased. In the months October to March there is little rain and cool N. and N.E. winds prevail.

COMMUNICATIONS.

There are neither railways nor canals within the Dependency. A carriage road extends the length of Cayman Brac and half the length of Grand Cayman. Horseback riding is the usual means of locomotion along bridle-paths which connect the several localities. Intercourse with the outside world is maintained by small trading schooners which voyage to Jamaica, Cuba, the Central American Republics and the Gulf ports of the United States.

POSTAL AND TELEPHONE SERVICES.

Regular foreign mails are received only through Jamaica, and average 24 per annum. In mid-year, however, during July, August and September, there is seldom more than one mail. A period of forty-three days of isolation occurred in the year. In addition to the outgoing mails sent through Jamaica, sailings of vessels to Cuba and the Gulf ports of the United States are made available for the sending of correspondence abroad. Tri-weekly mails are maintained throughout Grand Cayman and Cayman Brac, but communication between these two islands continues to be infrequent and irregular. A telephone line between the towns on Grand Cayman was destroyed by hurricane in 1917. Steps are now being taken to reconstruct.

H. H. HUTCHINGS,
Commissioner.

Grand Cayman,
8th July, 1921.

TURKS AND CAICOS ISLANDS.

ANNUAL GENERAL REPORT FOR THE YEAR 1920.*

GEOGRAPHICAL.

Owing to their geographical position—at the extreme south-east end of the Bahamas Archipelago, and to the absence of direct communication with the Mother Country, less is known about this Dependency than most other West Indian Colonies; while the absence of any literature dealing with its early history, except such as may be gleaned from official papers and records, renders it difficult for anyone in quest of information concerning these interesting, but little known, islands to ascertain exactly from what source to obtain it.

As nothing could supersede the value of the reports of Mr. F. H. Watkins, I.S.O. (Commissioner of the Dependency during the years 1906–14), concerning the Salt and Sisal Industries† of these islands (in which is included everything that is reliable concerning the early history of the Dependency), it is not considered necessary to repeat what has been so lucidly described by this gentleman; but, on the other hand, it is proposed to quote freely from the information supplied by Mr. Watkins whenever it is necessary to do so.

SITUATION AND AREA.

The Dependency of the Turks and Caicos Islands, according to Mr. Watkins, belongs geographically (and ecclesiastically) to the Bahamas; officially to Jamaica; and socially to Bermuda. They lie between 21° and 22° N. latitude, and 71° 50′ and 72° 50′ W. longitude, and are therefore just on the edge of the Tropics. They really consist of two distinct groups, the Turks Islands proper and the Caicos Islands. The two groups are separated by a channel, 21 miles in width—the Turks Island passage, or Le débouquement des Isles Turques, of the old French cartographists. The entire area is stated officially to be 166 square miles, but as no survey of the group has ever been made, these figures are probably below the mark. The islands are

* Sketch Maps will be found in the Report for 1914, No. 846; [Cd. 7622–37].

† Colonial Reports—Miscellaneous, No. 49 and 56.

LIBRARY OF CONGRESS
RECEIVED
JUN 27 1922
DOCUMENTS DIVISION

distant about 720 miles from Bermuda on the north, about 450 miles from Jamaica on the south-west, and about the same distance from Nassau, Bahamas, on the south-east.

As the Dependency of the Turks and Caicos Islands really consists of two distinct groups, it will be convenient to review the character of each group separately. The Turks Islands group proper consists of two inhabited cays, Grand Turk and Salt Cay, four uninhabited cays, and a large number of rocks. A three-pointed bank surrounds the group and offers serious dangers to navigation. This bank has been the scene of frequent shipwrecks for many years. The islands derive their name from the Turks Head Cactus (*Melocactus communis*), found abundantly on the rocky shores, the scarlet head of which is supposed to represent a Turkish fez.

On the western side of the Turks Island passage lie the Caicos Islands. These surround the Caicos Bank, a triangular expanse of shallow white water, 58 miles long on its northern side, and 56 miles long on its eastern and western sides respectively. The northern and eastern sides of the bank are bounded by a chain of islands, separated from each other by narrow channels, in most cases only a few feet deep, while the western edge is fringed by a series of reefs and rocks. There can be no doubt that the bank will, in course of time, become a large island, since its " interior is already represented by a low salty plain only a few feet below sea-level." (De Booy).

The principal islands of the Caicos group are South Caicos, East Caicos, Middle Caicos, North Caicos, Providenciales Island, and West Caicos. The group of islands forming the Dependency extends for a distance 75 miles from east to west, and 50 miles from north to south, and constitutes part of the long chain of low islands and banks, extending from off the Florida coast to the Navidad bank, lying north of the east end of Haiti. The banks and islands forming this archipelago rest on a vast submarine platform, those portions of it above sea-level representing the last that have risen above the surface. Beyond the Turks and Caicos Islands to the south-east lie three of these banks. Two of them, Mouchoir (the handkerchief) and Silver Bank, are in some places awash, while the third, the Navidad Bank, is entirely submerged. Although accurate data is not available to prove that these banks are being gradually uplifted, the fact that the Caicos Islands bank, and other banks in the Bahamas, are constantly building up, " warrants the conjecture that the same tidal and geological conditions govern them all, and that in course of time three additional island groups will come into being." (De Booy, *Geographical Review*, Vol. No. 1).

HISTORICAL.

The Turks and Caicos Islands, together with the Bahamas, were probably discovered by Columbus in the year 1492.

(5330) Wt. 26290/1046 625 - 2/22 Harrow G. 75 2

The archæological researches of De Booy demonstrate that the Turks Islands proper—that is, Grand Turk and Salt Cay, with their adjacent islets—were uninhabited, probably on account of the sterility of the soil, the scanty rainfall, and other difficulties in the way of agriculture which obtain in the easternmost group of islands.

The Turks and Caicos Islands would appear to owe their existence as a British Colony entirely to the Salt Ponds that are found at Grand Turk, Salt Cay, and South Caicos, as from the time of their discovery up to the year 1678 they remained unclaimed and uncolonised by any nation. In that year a party of Bermudians, attracted by the advantages to be derived by establishing a salt industry to supply the demands of the fisheries in the New England States, came to the Turks Islands, and inaugurated the first systematic attempt at salt raking. From that date onwards parties of Bermudians used to resort annually to Turks Islands to rake salt. "They returned to Bermuda about November, where they remained until February or March, because salt could not be raked at that time of the year; and other industries were out of the question on islands composed of little more than burning sands and barren rocks. The salt industry, in the absence of the present flourishing vegetable export trade of Bermuda with the United States, afforded the Bermudians with little capital the staple so necessary for maintaining their carrying trade, and allowed sufficient time in each year for the cultivation of vegetables (at Bermuda) for their own consumption." (Watkins).

The conditions of life under which the industry was pursued, and the circumstances of their existence, are graphically portrayed in the Annual Register of 1764, which, in alluding to the recent invasion of Grand Turk by the French, states, "These islands are many in number, most of them being low, sandy, and barren, with very little, if any, fresh water, without any vegetation except lizards, iguanas, and land-crabs, but the coast abounds with fish and turtle and the beach is covered with sea-fowl. . . ."

"The business of salt raking is chiefly carried on by Bermudians who come here in the month of March and continue during the dry season, leading a life that the idea of liberty only can render preferable to slavery itself. They live in little huts . . . they have a knife in their pockets and a kettle in their kitchens; their wardrobe consists of nothing but a straw hat, a check shirt, and a pair of oznaburg trousers; their food is salt pork, and now than then a iguana (a sort of large lizard), when they have time to catch them, and very often they are without bread; yet in this way of life they enjoy health, nor do they ever differ about property or religion, for they have neither priest, lawyer, or physician among them. The New Englanders come here with sloops and schooners in great numbers to load salt for their fisheries; they buy it from 4d. to 6d. sterling the bushel, and they pay the poor Bermudians a small part in money, the

rest in stinking rum, rotten pork, and musty biscuits, now and then throwing them a cask of sour water into the bargain."

Those wishing to follow in detail the varying fortunes of the salt industry in these islands are referred to the report by Mr. Watkins already mentioned.

It need only be stated here that, while the Turks Islands proper (Grand Turk and Salt Cay) were from the first used solely for the exploitation of salt, the Caicos Islands owed their settlement to the American War of Independence and to the agricultural establishment of loyalist refugees to whom lands were granted after the loss of their holdings in Georgia and the other Southern States. These refugees, together with their slaves, devoted their energies almost exclusively to the raising of cotton. The loyalist settlers have long since disappeared, but the remains of their substantial stone houses and the roads which they traced out remain to this day. Successive hurricanes, together with the havoc wrought among the cotton plants by destructive insects, put an end to the prosperity of the planters, and caused all systematic agriculture to be abolished during the early part of the nineteenth century.

Shortly after this, in the year 1838, we learn that the salt ponds at Cockburn Harbour (South Caicos) were brought under cultivation. These ponds, under careful management, have now developed to such an extent as completely to overshadow all other salt-producing settlements of the Dependency.

From the year 1799 to the year 1848 the Turks and Caicos Islands were incorporated with the Bahamas Government.

In 1848, at the earnest request of the inhabitants, they were separated from the Bahamas and placed under the supervision of the Government of Jamaica, where they still remain. The first President (since changed to that of Commissioner) of the Dependency under the new arrangement was Captain Forth, and under his capable administration, we are told by Mr. Watkins, vigorous efforts were made to develop and extend the salt industry of the Caicos Islands.

CONSTITUTION.

The Legislature consists of a Legislative Board, comprising the Commissioner as President, two official members, and three unofficial members appointed by the Governor of Jamaica. Taxation and expenditure and all local matters are regulated by this Board. Laws passed by the Legislative Council of Jamaica, which are in express terms made applicable to the Turks Islands, take effect there. The subjects of currency, bills of exchange, patents, and the custody of prisoners and lunatics have been so dealt with.

CLIMATE AND METEOROLOGY.

The climate is equable and healthy and rarely unpleasantly hot, owing to the strong and never-failing sea breezes which

sweep across the islands. The average temperatures taken from the records of five years, disclose a maximum of 90° and a minimum of 61·5°.

The maximum temperature recorded during the year under review was 85·4° and the minimum 61·5°.

July to October are the hottest months of the year and of nearly equal temperature.

January, February, and March are the coldest months and of nearly equal temperature.

As the Turks and Caicos Islands lie within the Tropics, atmospheric pressure acts upon the same principle as is observed in other places similarly situated ; that is to say, there is a regular rise and fall of about one-tenth of an inch every six hours, except in case of a hurricane, when a considerably increased falling of the mercury results.

Generally, however, it may be said that the mean height of the barometer, from daily readings taken from the Grand Turk Weather Bureau Station—11 ft. above sea-level—is almost exactly 30 inches. As a general rule, the barometer rises for northerly and falls for southerly winds.

Lying within the Tropics, the Turks and Caicos Islands are within the influence of the trade winds, but in the winter months, *i.e.*, from about the end of November to the end of March, the trade wind is frequently interrupted by north-east and north winds. Indeed, in December and January this change may be expected almost weekly.

Previous to the change, the wind will draw round to the south and south-east. About 24 hours after, or less, dark masses of cloud will be seen rising from the westward, and in a short time the wind will rush suddenly from that quarter with the force of a stiff breeze. It soon veers round to the north-east and north, with clear weather, and remains within these points sometimes two or three days. It will then veer gradually to the north-east and wear itself out east, in the course of a few days. (*West Indian Pilot*, Vol. II.)

The barometer is scarcely any guide at such times, but so regular and so certain is the action of the wind, that vessels can seek shelter with easy confidence in the change that will follow.

The rainfall for the year 1920 is recorded as being 26·04 inches. The Turks and Caicos Islands share in the delightful winter climate of the Bahama Islands and in the attractiveness of the sea water round their shores. Few people who visit these islands but are charmed by the wonderful sea bathing and express the desire to return, a wish, however, which will never materialize until hotels or hostelries of some kind, with an adequate and suitable food supply, are provided for their accommodation.

It goes without saying in such low-lying coral islands, with a scanty rainfall, constantly swept by sea breezes, and where no freshwater swamps are found, that malaria, that is, as it is known in other islands of the West Indies, does not exist. The few cases

which occur from time to time, chiefly in the island of North Caicos, and the origin of which can usually be traced to the neighbouring republic of Haiti, are of the mildest description.

This is conclusively proved by the small death-rate in these islands from diseases of this character.

There are no freshwater ponds in these islands, and the inhabitants in the Settlements at Grand Turk, Salt Cay, and Cockburn Harbour depend entirely on rainwater tanks with which most houses are provided. Scattered throughout the Caicos Islands are wells of more or less brackish water, in most cases potable to those accustomed for generations to water of this character.

Grand Turk.

Grand Turk, formerly known as Grand Cay, is situated on the eastern boundary edge of the Turks Island passage. In shape it is said to resemble the blade of a butter knife, and it contains an area of 10 square miles, with a population of 1,581 souls, of whom about three-fourths are of African descent. Grand Turk is the seat of government, and it is here that the Commissioner of the Dependency resides. The only settlement at Grand Turk is Cockburn Town, situated on the western side of the island, and it contains the entire population.

There is no harbour, and vessels are obliged to lie in an open roadstead at some distance from the shore. In stormy weather, with the wind from the north-west, such an exposed anchorage presents grave danger to shipping, and during a " norther " the loading and unloading of cargo become impossible. At such times vessels engaged in work of this character have no alternative but to seek safety in the open sea. The greatest elevation at Grand Turk is about 70 feet above sea-level, and the scanty vegetation is typical of the flora of the adjacent Bahama Islands. Here and there one finds stunted specimens of such hardy trees as corkwood (*Thespesia populuca*), tamarind, cordia (*Cordea sebestena*), and casuarinas ; but, for the most part, the island is covered with a low scrubby vegetation, in which plants of the cactus and euphorbia families largely predominate.

At Grand Turk there is a lighthouse, erected on a bluff at the north point of the island. It exhibits, at an elevation of 108 feet above sea-level, a white flash-light every half-minute. This light can be seen for a distance of 15 miles in clear weather.

The " Victoria Jubilee Library and Free Reading Room " ministers adequately to the literary tastes of the reading public, and, as its name implies, is an institution commemorative of the year 1887, the Jubilee year of Her late Majesty Queen Victoria.

Grand Turk is fairly well supplied with churches, for such a small population, there being two Anglican, one Wesleyan, and one Baptist places of worship. Baptists are in the majority among the lower classes, but the attendance at the churches of all the denominations is exceedingly poor.

At Grand Turk is located, beside the usual public offices, the Council Chamber, the Court House, the Hospital, and the Gaol.

A telephone system, inaugurated in 1915, gives connection between the various stores and residences of the island, and a wireless telephone installation, now in course of erection, will shortly connect the seat of government with the district Treasuries at Salt Cay and South Caicos, eight and twenty-one miles away respectively.

The "Manning Hospital," affording accommodation for six patients in the public wards and two in the private wards, was opened in October, 1918. This institution possesses a well-equipped operating theatre, and is up to date in other respects. The hospital, which ministered to the wants of no less than 65 patients in the year 1919, is fulfilling a most useful purpose in relieving the needs of suffering humanity.

The only industry at Grand Turk is the production and manufacture of salt, and although there are several localities on the island where cotton could successfully be grown no attempt at systematic cultivation has ever been attempted. Owing to a scarcity of labour, it is unlikely that agriculture of any kind will ever make much headway in Grand Turk.

The salt of the Turks Islands is of exceptional purity, and is therefore greatly in demand in the United States and Canada for meat-packing and fish-curing purposes. On account of its good name, a considerable quantity of the salt imported from other places is sold in the northern markets under the name of Turks Island salt.

The various stages in the process of salt manufacture have been so very carefully and fully described by Mr. Watkins in his report already referred to that it is unnecessary in a general report of this nature to do more than give a broad outline of the industry.

The salt ponds, or salinas, vary in size, and are anywhere from five to 25 acres in extent, but the "making pans"—that is, the pans where final evaporation takes place—are usually from one-half to one acre in size.

The method of making salt from sea-water by solar evaporation (the method pursued in the Turks Island) is simple in the extreme, and may be thus briefly described: sea-water, having a density of 10, is let in through sluices or canals into the common or storage reservoirs, situated at or slightly below sea-level. Here it remains until it reaches 30 by the salinometer. From the common reservoir it is run off into what may be described as the Number 1 pond, a shallow pan, which may be anywhere from five to 15 acres in extent. There it remains until the salinometer indicates 60. In the main pond a great many impurities of the sea-water, such as vegetable matter, magnesia, and lime, are precipitated, and the water now assumes a saffron hue. At this stage the "pickle," as it is now called, has been reduced in quantity by evaporation to about one-half of the original volume of sea-water.

From the main pond the "pickle" is next passed into pond Number 2, or "strong pond." Here it remains for about 20 days, until, by further evaporation, its strength has been reduced to 90. The water is now pink in colour, and only about one-sixth of the original volume of sea-water. Being by this time freed of the lime it contained, the pure brine is next passed into the "making pans," where, after about 10 to 15 days' further evaporation, the salt commences to granulate on the sides and bottoms of the pans. After two weeks more, according to the weather, the salt is ready to be gathered, or raked, as it is called. Wooden rakes are used for this purpose, and by means of these and scuffle hoes, the salt is raked up into small heaps on the level floor of the "making pans," from whence it is carted to the "depositing ground." These are usually situated in close proximity to the shipping place, and here the salt is piled up in huge mounds awaiting shipment.

The average quantity of salt raked annually from an acre of pans varies from 3,000 to 8,000 bushels. At Salt Cay and Cockburn Harbour, where the pans are carefully worked, an average of 5,000 bushels per acre is the usual crop under favourable weather conditions, but at Grand Turk, where through careless management the industry is steadily declining, it is doubtful if even an average of 2,000 bushels per acre can be counted on.

The annual output of salt from the entire Dependency varies between 1½ million bushels, in poor seasons, to 2½ million bushels in good years:

Salt Cay.

Salt Cay, situated about eight miles to the south-west of Grand Turk, is the only other inhabited island of the Turks Island group. In area it is about four square miles, with a population of about 300 souls. The output of salt from this island averages 450,000 bushels annually.

South Caicos.

This island is situated at the extreme south-east end of the Caicos Islands, and it is the only island of the group on which the salt industry is conducted. There are about 400 acres of salt ponds (including reservoirs), and the annual output varies between 700,000 and 800,000 bushels.

East Caicos.

This island, up to the year 1919, was the centre of the sisal industry of the Dependency. In this year the East Caicos Company, who had conducted the cultivation of sisal on a large scale since 1891, were compelled for various reasons to shut down their factory and abandon the plantation. It would seem that the rocky and barren soil of this island, together with the

cost of labour, proved an effective bar to the prosecution of the sisal industry on a remunerative scale. Thus an enterprise, which afforded employment to upwards of 200 hands, has been scrapped.

Middle Caicos.

Separated by a narrow passage from East Caicos lies Middle Caicos, or, as it is sometimes called, Grand Caicos. This island the largest of the Caicos group, is 25 miles long, with an extreme breadth of 12 miles. On it are situated the villages of Lorimers, Bombarra, and Conch Bar, with an aggregate population of 500 souls.

At or near Lorimers is the Haulover Estate, where there has been in operation since 1918 the very promising cotton cultivation of the Caicos Development Company of New York. This Company, composed mainly of Americans, has upwards of 500 acres under cultivation, and it would seem that only careful handling is necessary to ensure successful results. At Conch Bar there is situated the cotton plantations of Mrs. Robert O'Reilly (200 acres in extent), while round the settlements above mentioned there is quite a large area of this product in the hands of peasant cultivators.

North Caicos.

To the north-west of Middle Caicos lies North Caicos, an island about 12 miles east and west, and eight miles north by south. In comparison with the other islands of the Caicos group, North Caicos is fertile, and the remains of old sugar factories indicate that it evidently in the past was divided into large plantations.

" The inhabitants, 366 in number, probably owing to having more to do with the soil, preserve more than elsewhere in the group the traditions of ' Old Massa ' and the Southern States traditions. The principal settlements are Kew and Bottle Creek ; the former near the middle of the island, three miles from ' Belfield Landing,' on the southern shore, and the latter on the eastern side, on a broad and picturesque creek of that name. Near to Kew is ' Wades Green,' the former residence of the Magistrate of the Caicos Islands. In the neighbourhood of Kew is a considerable area of good soil, and the remains of the old sugar works are still to be seen." (Watkins.) Bottle Creek, a settlement of about 300 inhabitants, is approached from the north side in light-draught boats, by a narrow channel connecting the creek with the open sea. In the vicinity of this settlement are to be seen the ruins of the old estate mansions belonging to the Bellevue, Windsor, and Richmond estates. These plantations all date their origin from the time of the War of American Independence, and were granted by the British Government of that day to loyalist refugees from Georgia and other Southern States.

Parrot Cay, Dellis Cay, and Others.

Lying to the west of Middle Caicos are several small cays, the most deserving of mention being Parrot Cay and Dellis Cay. At Parrot Cay, in the hands of the "Parrot Cay Cotton Company" (another American concern), there are under cultivation upwards of 250 acres of cotton; while at Dellis Cay is situated the sponge-buying enterprise of Mr. George Dellis, a gentleman of Greek extraction.

Providenciales or Blue Hills.

Continuing the chain of islands, which in the form of a semi-circle encloses the eastern and western sides of the Caicos bank, and to the westward of the islands just mentioned, is the island of Providenciales or Blue Hills, one of the largest of the Caicos group. This island is 17 miles long by 12 miles in width, and contains a population of about 900 inhabitants.

The settlements are Blue Hills about the middle of the north shore, Five Cays to the south-east, and The Bight on the northern shore, about three miles to the east end of Blue Hills.

On the southern side of Providenciales is Chalk Sound, an immense shallow-water creek, extending over an area of about nine to ten square miles. Here is situated the promising sponge-rearing and lobster-canning enterprises of Mr. George Silly (deceased). The sudden death of Mr. Silly in 1917 has caused a temporary closing down of the lobster-canning factory, but the artificial rearing of sponges is still prosecuted by Mr. C. W. Kursteiner, Mr. Silly's partner. At the time of writing there are upwards of half a million sponges under cultivation.

West Caicos.

West Caicos, also known as Belle Isle, is situated about 12 miles to the south-west of Providenciales. In area it is about eight miles from north to south, with an average breadth of two miles. In the middle of the island is Lake Catherine, a large salt-water expanse nearly two miles long.

This island, as the name "Belle Isle" implies, is probably the most attractive of the Caicos group, and this fact probably accounts for the immense and wasteful expenditure of capital which has taken place on it during the past 60 years.

The West Caicos Company, the last of the many companies which from time to time have buried fortunes on this little island, passed out of existence in 1916. For some years prior to this, however, the island had been practically abandoned. Fine buildings, erected at great cost, had been demolished and spoliated by passing sloops; and to-day there is the pitiable spectacle of roofless buildings and valuable machinery, representing thousands of pounds, gone to ruin amid the scrub—striking testimony to incompetent management.

The island of West Caicos is free from malaria, contains probably the finest salinas in the Dependency, and possesses the best shipping facilities of any island in the group. On the western side of West Caicos vessels can load and discharge in deep water within a cable's length of the shore. There seems every reason to anticipate that, if ever this island falls into capable hands, the resources thereof can be most successfully developed.

Financial—Revenue and Expenditure.

The revenue of the year ended 31st December, 1920, was £11,294, as compared with £11,164 in the year 1919, and exceeded the estimates by £2,744. The expenditure was £10,780, as compared with £9,263 in the year 1919, and there was a surplus of revenue over expenditure, after providing for the cost of three wireless telephone installations, of £514.

The surplus of assets on the 31st December was £11,758, which is again the largest on record in the annals of the Dependency.

There is no public debt.

There is no direct taxation.

The current coins are British gold and silver. United States gold and silver are accepted at a discount of 1½ per cent. on their face value.

Trade, Agriculture, and Industries.

The imports during the year ended 31st December, 1920, were valued at £59,753, as compared with £38,343 in 1919.

The exports were valued at £46,865, as against £33,554 in 1919.

Classified under their respective headings, a comparative statement of the exports for the year 1919 and 1920 reads as follows :—

Articles.	1919	1920.
	£	£
Salt (coarse)	10,827	21,187
,, (fishery)	13,290	17,148
Sisal	1,293	3
Sponges	1,015	2,027
Conchs	3,006	2,385
Conch Shells	1,256	1,077
Cotton and Cotton Seed ..	580	382
Tortoise Shell	1,079	263
Dried Fish	47	18
Dye Woods	89	—
Miscellaneous	1,063	2,377
Totals	£33,544	£46,865

The direction of trade as regards imports and exports, during the years 1919 and 1920, may be thus summarized :—

Countries.		*Year.*	*Imports.*	*Exports.*
			£	£
United Kingdom	..	1919	2,140	580
British Colonies	..	,,	8,748	14,802
Foreign Countries	..	,,	27,455	18,172
Totals..	..		£38,343	£33,554

Countries.		*Year.*	*Imports.*	*Exports.*
			£	£
United Kingdom	..	1920	3,672	382
British Colonies	..	,,	6,961	20,994
Foreign Countries	..	,,	49,115	25,489
Totals..	..		£59,748	£46,865

SALT.

Exports nearly doubled those of last year, 1919, and amounted to 1,905,042 bushels.

The year closed with a firm demand for the staple product of the Dependency at remunerative prices.

In consequence of heavy shipments during the last quarter of the year, the stock of salt carried over on the deposits on the 31st December scarcely amounted to one million bushels, a lower figure than has obtained for some time.

Weather conditions during 1920 were again ideal for the production and manufacture of salt.

SPONGES.

Exports to the value of £2,383, as against £1,015 in 1919, indicate that the industry is making steady progress. At present there are three sponging establishments in the Caicos Islands. At Cockburn Harbour, Dellis Cay, and Five Cays sponges are purchased, cured, sorted, baled, and shipped. The gathering of the sponges from the Caicos banks is carried on by more than fifty local sloops, belonging mostly to Blue Hills, each of which employs three to nine men, according to the number of boats on board. The best months for sponging are April, May, September, November, and December. After being cured, the sponges, carefully graded, are pressed in bales, averaging 50 lb. in weight, and exported. They are bought at the three stations in two strands of 15 pieces each, the total weight being 1½ to 2 lb. Although inferior to those imported from the Mediterranean, these sponges find ready sale, at remunerative prices, in the United States.

Grade.	*Local Prices per double strand.*	*Prices in New York per double strand.*
	Cents.	Cents.
Sheep's Wool	50–125	70–250
Reef (local)	20–25	75–120
Yellow and Hard Head ..	11–15	30–40
Velvet	10–12	40
Grass	10–12	20–40

Conchs.

A slight falling-off is noticeable under this head, the value of conchs shipped in 1920 being £622 less than the figures given for the year 1919. Conchs are a favourite article of diet among all classes in the Dependency, and properly dressed and cooked can be made exceedingly palatable. When dried they are exported in large quantities to Haiti, where they find a ready sale. Occasionally those engaged in the trade find inside the conch shells pink pearls, for which high prices are obtained.

Cotton.

Exports for the year amounted to 13 bales of cotton, and bags of seed, value £382. A slight falling-off of two bales below the exports for the year 1919, in no way, however, indicates a decline of the industry, but is due entirely to lack of shipping facilities to the United Kingdom.

On the contrary, it is satisfactory to recall that the cotton industry continues to make steady and satisfactory progress. Exclusive of hundreds of peasant holdings, there were in the hands of three American capitalists upwards of 1,000 acres under cultivation on the 31st December. On the other hand, it is to be regretted that the produce of these large growers must inevitably find its way into the markets of the United States, because, until better arrangements can be made for getting into connection with the Mother Country, it seems hopeless to expect that trade within the Empire can ever be successfully developed in this Dependency. The only channel of communication at present with the United Kingdom is through New York, and everything sent that way is subject to freight rates that are extortionate and prohibitive.

Sisal.

An export of only £3, as against £1,293, indicates that this industry has ceased to exist. It is difficult to understand why the cultivation of sisal should have been abandoned after so much money has been expended on it. Various reasons are given, but it is to be feared that at the bottom lies the question of transport, and that until some means can be found to connect this

Dependency with the markets of the United Kingdom other than through New York neither sisal nor any other industry can be successfully developed. This is all the more to be regretted, because for both cotton and sisal, especially the former industry, there is an abundance of suitable soil now lying idle.

Sea Shells.

The export of conch shells during 1920 shows a falling-off of £179 in value, as compared with the year 1919.

Shipping.

The number of vessels entered at the various ports of the Dependency during the year was 399, with a tonnage of 279,067, as compared with 336 vessels and a tonnage of 183,195 during the year 1919.

Vital Statistics.

No serious epidemic or outbreak of sickness of any kind occurred during the year. The number of births and deaths were 219 and 116, representing 39 and 21 per thousand, respectively, of the population. Twenty-five marriages are recorded.

Education.

The sum of £700 is placed annually at the disposal of the Board of Education for the upkeep of primary schools throughout the Dependency. At the eight schools thus maintained by the Government the average number of pupils on the registers during the year under review was 889. It is, indeed, gratifying to be able to state that a school of secondary education under Government auspices has at last been inaugurated. In April of the year under review a commencement was made with this school under the care of the Reverend Stanley Cannon, "Wesleyan minister," as headmaster. At the close of the year there were 36 pupils in attendance.

Postal and Telegraph Services.

Mails to and from the United Kingdom and other parts of the world are transmitted and received on an average four times a month by steamers of the Clyde and Columbus lines, via New York.

The Dependency still suffers from the great disadvantage of being able to receive parcels from the United States and Great Britain only, and to send parcels to the United States only, except by a sailing vessel to Jamaica three or four times a year.

Revenue.

The revenue of the Post Office for the year 1920 was £918, and expenditure for the same period, £177.

The telephone service, inaugurated in 1915 (approximately 28 miles of lines), continues to give useful and satisfactory service. The demand for new installations now exceeds the capacity of the present switchboard, and arrangements are being made to greatly extend the existing system.

A complete outfit of wireless telephone installations for three stations was received during the year, and are now being erected.

The system can be used either for telephoning or telegraphing, having a sending range of 50 and 150 miles respectively.

The cable of the Direct West India Cable Company, Limited, between Halifax, Bermuda, and Jamaica, touches at Grand Turk, and connects the Dependency with other telegraphic systems of the world. The Company supplies a News Bulletin daily, in respect of which a yearly subsidy of £120 is paid.

Meteorological.

The readings and statistics taken at the U.S. Weather Bureau Station at Grand Turk, in latitude 21° 22′ N. and longitude 71° 97′ W., at a height of 11·3 feet above sea-level, were as follows :—

Rainfall	26·04 inches
The highest temperature recorded for the year	86·5°
Lowest temperature recorded for the year	61·5°

General.

No events of importance marked the year under review. The cost of living still continues high, and is keenly felt by the poorer classes, who are able to purchase only the barest necessaries of life.

G. WHITFIELD SMITH,

Commissioner.

COLONIAL REPORTS, ETC.

The following recent Reports, etc., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

JAMAICA.

ANNUAL GENERAL REPORT

FOR THE

YEAR ENDED 31st DECEMBER, 1920.

GEOGRAPHICAL.

1. Jamaica is an island in the Caribbean Sea, to the southward of the eastern extremity of the Island of Cuba, within N. lat. 17° 42′ 20″ and 18° 32′ 30″ and W. long. 76° 11′ 55″ and 78° 23′ 35″. It is the largest island of the British West Indies, the extreme length being 144 miles and the greatest width 49 miles.

2. The island is divided into three counties and fourteen parishes, namely:—

Surrey.

			Sq. Mls.
Kingston	..	..	7
St. Andrew	..	..	166
St. Thomas	..	..	274
Portland	..	..	285
Total	..	..	732

Middlesex.

			Sq. Mls.
St. Catherine	..	..	470
St. Mary	..	..	249
Clarendon	..	..	474
St. Ann	..	..	476
Manchester	..	..	302
Total	..	..	1,971

Cornwall.

			Sq. Mls.
St. Elizabeth	..	..	462
Trelawny	..	..	333
St. James	..	..	234
Hanover	..	..	157
Westmoreland	..	..	308
Total	..	..	1,504

giving a total of 4,207 square miles, equal to 2,692,587 acres, of which, approximately, 646 square miles, or 413,440 acres, are flat, consisting of alluvium, marl and swamps.

3. A great diversity of climate is obtainable. From a tropical temperature of 80° to 86° at the sea coast the thermometer falls to 45° and 50° on the tops of the highest mountains, and with a dryness of atmosphere that renders the climate of the mountains of Jamaica particularly delightful and suitable to the most delicate constitution.

The midland parts of the island are the highest. Through the county of Surrey, and partly through Middlesex, there runs the great central chain which trends generally in an east and west direction, the highest part of which is the Blue Mountain Peak, attaining an elevation of 7,360 feet.

From this range subordinate ridges or spurs run northerly to the northside of the island and southerly to the southside; these ridges in their turn are the parents of other smaller ridges, which branch off in every direction with considerable regularity and method; and they again throw off other ridges, until the whole surface of the country is cut up into a series of ridges, with intervening gullies.

4. There are numerous rivers and streams, from which Jamaica derived its aboriginal Arawak name of Xaymaca, which is supposed to imply an overflowing abundance of rivers. The majority have a rapid fall and are not, to any extent, navigable.

5. There are many mineral springs in Jamaica, some of them possessing valuable qualities for the cure of various diseases and infirmities of the body.

The two principal are, the spring at Bath, in St. Thomas in the East, and the spring at Milk River in Clarendon.

6. Jamaica posseses several good harbours in the Island, the largest and most important being that of Kingston, the capital, which is considered one of the finest natural harbours in the world.

7. The following are dependencies of Jamaica, viz.—The Turks and Caicos Islands and the Cayman Islands, also the Guano Islands, Pedro and Morant Cays.

HISTORICAL.

8. Jamaica was discovered by Columbus on the 3rd May, 1494. He called it St. Jago, after the Patron Saint of Spain, but the new name was soon dropped in favour of the native one of Jamaica (Xaymaca—well watered). The first settlement on it was effected on the shores of St. Ann's Bay, by Esquivel in 1509, under the direction of Diego, the son of Columbus, while Governor of Hispaniola. Although invaded by Sir Anthony Shirley in 1596, and by Colonel Jackson in 1643, it remained in the possession of the Spaniards for 161 years, when it was again attacked by a force sent by Cromwell, under Admiral Pen and General Venables, against Hispaniola, and capitulated, after a trifling resistance, on the 11th May, 1655. Until the Restoration, Jamaica remained under military jurisdiction, but in 1660 a regular civil government was established by Charles II, who appointed General Edward Doyley Governor-in-Chief, with an Elective Council. In 1670 peace was made with Spain, and the title of England to Jamaica was recognised by the Treaty of Madrid. The colony grew fast, stimulated by the wealth brought into it by the bucaneers, who made Port Royal their headquarters and storehouse. This town was engulfed in the great earthquake of 1692. Kingston then consisted of a few sheds, and St. Jago de la Vega (Spanish Town) became practically the capital. During the 18th century the island suffered from hurricanes, earthquakes, numerous slave insurrections, as well as wars with the maroons, or mountaineers, the descendants of African slaves left by the Spaniards, who inhabited mainly the east of the island,

among the Blue Mountains. When the Slave Trade was abolished, in 1807, there were 323,827 slaves in Jamaica. During the last eight years of the trade, 86,821 slaves were imported. On the abolition of slavery in 1833, Jamaica received 6,161,927*l.* of the 20,000,000*l.* granted by the Imperial Government as compensation to the slave-owners. A serious rebellion among the black population in 1865 was suppressed by Governor Eyre with unnecessary violence, and he was recalled. In January, 1907, Kingston was devastated by a terrible earthquake, which caused great loss of life and immense destruction of property. A Mansion House Fund was opened, and contributions poured in from all partes of the Empire for the relief of distress. A free grant of 150,000*l.* was voted by Parliament, and a loan of 800,000*l.* chiefly in aid of re-building, was authorised from the Home Exchequer. Two buildings, the General Post Office and Treasury, and the King's House, the official residence of the Governor, were completed in 1910, and the Law Courts in 1913.

Constitution.

9. The original Constitution granted by Charles II., in 1662, which after existing for nearly 200 years, was surrendered in 1866, was a representative one, consisting of a Governor, a Privy Council, a Legislative Council, and an Assembly of 47 elected members. The depression caused by the abolition of slavery led to a grave constitutional crisis, the Assembly refusing to vote supplies, and endeavouring to enforce sweeping reductions in establishments, without compensation to the displaced officers. Lord Melbourne's Government, in 1829, actually introduced a Bill into Parliament for the suspension of the constitution, but was defeated, and it was not till 1854 that, by a change in the constitution of the Council, harmony was temporarily restored.

After the suppression of the rebellion in 1865, Governor Eyre, at the meeting of the Legislature, urged the unsuitability of the then existing form of Government to meet the circumstances of the community, and the necessity of making some sweeping change, by which a strong Government might be created. The Legislature willingly responded, abrogated all the existing machinery of legislation, and left it to Her Majesty's Government to substitute any other form of Government which might be better suited to the altered circumstances of the Colony.

A Legislative Council was, by Orders in Council of the 11th June, 1866, and 11th November, 1869, established, consisting of such numbers of official and unofficial members as Her Majesty might think fit. The numbers of each were six until 1878, when they ware enlarged to eight and a ninth was added in 1881.

By Order in Council dated 19th May, 1884, and Amending Order of 3rd October, 1895, the constitution was fixed in the following manner:—

The Council to consist of the Governor (with only a casting vote) and five *ex-officio* members, viz. the Senior Military Officer, the Colonial Secretary, Attorney-General, Director of Public Works and Collector General, and such other persons, not exceeding ten in number, as Her Majesty may from time to time appoint, or as the Governor may from time to time provisionally appoint, and fourteen persons to be elected as therein provided. The Council shall be dissolved at the end of five years from the last preceding general election, if it shall not have been previously dissolved.

There is also a Privy Council, with the usual powers and functions of an executive council. It consists of the Lieutenant-Governor, if any, the Senior Military Officer in command, the Colonial Secre-

tary, and Attorney-General and such other persons as may be named by the King, or provisionally appointed by the Governor subject to the approval of His Majesty, but the number of members is not to exceed eight. The Governor is to preside at each meeting, and the Governor and two members form a quorum.

10. The first registration under Law 22 of 1886 was in August, 1887. The revised lists showed that there was one elector to every 25 persons in the island.

Local Administration.

11. There are elective Parochial Boards in the town of Kingston and 14 other parishes, under Laws 13 of 1900 and 17 of 1901, with jurisdiction over roads, markets, sanitation, poor relief, water works, and pounds. The chief towns are Kingston (population in 1921, 62,562), Port Royal (population 1,004), Spanish Town (population 8,694), Port Antonio (population 6,272), Montego Bay (population 6,580), Falmouth (population 2,136), Port Maria (population 2,758), and Savanna-la-Mar (population 3,442).

12. The Parish is the unit of local Government, and each parish has its own parochial Institutions viz: poor-houses, etc., etc., managed by the Parochial Board of the parish, the members of which are elected by the persons entitled to vote for the election of members of the Legislative Council. The administration of poor relief by the Parochial Boards is controlled by a Board of Supervision. The several direct taxes received on property, horses, carriages, etc., etc., are devoted mainly to the parish in which they are collected, with the exception of a few items which go to the credit of the general revenue of the Colony.

13. There is a Supreme Court of Judicature together with Resident Magistrate Courts and Petty Sessions of Justices of the Peace throughout the Island. The Resident Magistrates, besides holding courts of their own, preside in the Courts of Petty Sessions.

I.—GENERAL OBSERVATIONS.

14. During the year under review the prosperity of the Colony, as judged by the values of the Imports and Exports, exceeded even that of the previous year (which was a record one), the value of the Imports during 1920 being £10,313,300, as compared with £5,085,600 during 1919; while that of the Exports was £7,146,000 during 1920, as against £5,627,300 during 1919.

But this is consequent on the extraordinarily high prices that prevailed during the year, rather than to the vast increase in quantity which the figures might be taken to indicate.

The causes which led up to these increases are dealt with fully under the sub-head "Imports and Exports."

15. In April, 1920, the Legislative Council passed a Resolution agreeing to send a representative from this Colony, accompanied by two advisers, to a Conference proposed to be held at Ottowa to consider the question of trade relations and transport facilities between the Dominion of Canada and the British West Indies. The Hon. E. St. J. Branch, K.C., Attorney General, was selected as this Colony's representative, and the Hon. Robt. Johnstone, C.M.G., I.S.O., Collector General, and the Hon. J. H. Phillipps, Member of the Legislative Council for St. Thomas, were appointed advisers.

The result of the Conference was that a Trade Agreement was entered into between the representatives of the Dominion and all the British West Indian Colonies, subject to the approval of the Secretary of State for the Colonies, of the Parliament of Canada and of the Legis-

iatures of each of the Colonies concerned. The Legislative Council of Jamaica approved of the Agreement on the 14th October, 1920.

Emigration and Immigration.

16. The Departures in 1918 were 8,773; in 1919, 23,618; in 1920 21,343.

The arrivals in 1918 were 5,102; in 1919 8,786; in 1920 23,783.

The marked increase during 1920 in the number of emigrants who returned to the Island, as compared with the two previous years, is due in great measure, to the considerable drop in the prices paid abroad for Sugar and Rum; many of the persons who returned to the Island went to Cuba on account of the high wages offered in that Republic to those engaged in the Sugar industry before the slump took place.

Public Health and Sanitation.

17. Matters in connection with the health and sanitation of the Island have been receiving, for some time past, the earnest attention of the Government, and active steps were taken during the year under review for dealing with such matters.

18. The Rockefeller Foundation began extensive operations in Jamaica in connection with the treatment of Hookworm (ankylostomiasis), and the United Fruit Company inaugurated a system for medical attendance on their employees. Both these organisations have materially contributed to improve general health conditions in the Island. During the year under review the Government instituted a Sanitary Survey in one of the parishes, and the treatment of Hookworm is being actively carried out in this parish by the Foundation.

19. A step in furtherance of the movement for dealing effectively with hookworm, and one that is fraught with great potentialities in sanitary matters, generally, has been the appointment of a Superintending Inspector under the provisions of "The Health Laws," Law 35 of 1910, and Law 48 of 1920.

20. The outstanding Medical feature during the period under review was an epidemic of an eruptive fever known as Alastrim or Kaffir Milk Pox, which broke out in Kingston, in May, and from Kingston spread to the other parts of the Island. It is satisfactory to note that the death rate was exceptionally low.

A satisfactory feature in connection with this epidemic is that better protection now exists against small pox, (an ever present menace) than ever before in Jamaica, very large numbers of the inhabitants having been vaccinated and re-vaccinated.

Vital Statistics.

21. The estimated population of Jamaica at the close of the year 1920 was 862,543, which is arrived at by taking the actual Census count of 24th April, 1921, adding thereto the Births and Arrivals and deducting therefrom the Deaths and Departures in the intervening period, 1st January, 1921, to date of Census.

22. 4,124 marriages were registered during 1920, the rate being 4.8 per 1,000 of population, as compared with 3.7 for 1919. During the same period, 34,943 births were registered, of which 17,841 were boys and 17.102 were girls. The birth rate works out at 40.8 per 1,000, as against 33.5 during 1919.

23. 21,707 deaths were registered, of which 10,936 were males and 10,771 females, the death rate being 25.3 per thousand. That for 1919 was 22.2

24. During 1920, 7,630, or 35.2 of the total deaths, were those of children under two years of age; and of these 6,028, or 27.8, were those of children under one year of age.

The corresponding figures in 1919 were 32.6 and 24.4. The total infantile death rate under one year was 17.2, as compared with 16.1 in 1919.

The principal causes of death among the inhabitants of Kingston, the capital, were:—

Phthisis, 12.4; Diarrhoea and Enteritis, 10.9; Heart Disease, 6.8; Atrophy, Icterus and Scleroma of the new born, 8.6; Chronic Brights Disease, 4.6; Enteric Fever, 4.5; Pneumonia, 4.1; Dysentery, 4.1.

Imports and Exports.

25. The amount collected for Import Duties during 1920-21 completely eclipsed the record yield of the previous year, being £957,324, an increase of £266,301 over that of 1919-20. When compared with the yield in 1918-19 it will be seen that the yield in 1920-21 was nearly two and a half times as much, the figures being £957,324 and £391,914 respectively. The value of the Imports in 1920 was £10,313,300, as against £5,085,600 in the year 1919 and £2,837,043 in the year 1913, so that in the year 1920 the value was three and a half times that of the previous year 1913.

The chief factors which were responsible for the increase were practically the same as those of last year, only more accentuated by conditions arising out of the War. In addition to the low rate of exchange between Jamaica and the United States of America and the continued soaring upwards of the values of goods which pay ad valorem duties, a third factor was the arrival of large quantities of merchandise ordered from twelve to eighteen months previous to their shipment. However, after discounting these factors, there was on the whole a very fair increase of trade.

26. The amount collected for Harbour and Light Dues in 1920-21 was £6,938 as against £5,310 in 1919-20. The increase of £1,628 was due partly to several new vessels plying between the Colony and the Dominion of Canada as the result of the Trade Agreement with that Dominion referred to afterwards, to vessels trading between Australasia and Europe calling here and lastly to a succession of large Tourist Boats which included Jamaica in their itinerary.

27. The Special Customs Duties imposed as temporary measures due to conditions arising out of the War and a succession of hurricanes i.e., Export Duties and additional Import Duties amounted to £35,502 and £56,305, respectively, as against £41,247 and £34,145 in 1919-20. The decrease in the former was due to the falling off of the export of Logwood Extract and Hides during the latter half of the year. The Package Tax Law 9 of 1919, continued by Law 7 of 1920, realised a total of £61,718. Three-fourths of this is allocated by Law to General Revenue, viz: £46,288 and the remaining one fourth to Parochial Revenue, viz: £15,430.

28. As in the case of Imports the value of the Exports during the year 1920 quite eclipsed that of the previous year reaching the phenomenal figure of £7,146,010 as against £5,627,329 in 1919, being an increase of £1,518,681 or 26%. If a comparison is made with 1918 the year under review shews a value of over two and a half times as much. Paragraph 25 of this report shews that the yield of Import Duties in 1920 was nearly two and a half times that in 1918 and the value of the imports three and a half times that of the pre-war year 1913. The principal items conducing to this enormous total are:—Sugar £2,994,256,

Bananas £1,626,665, Logwood Extract £431,451, Coconuts £387,656, Rum £288,147, Logwood £268,662 and Cocoa £211,882. These seven items alone amount to £6,148,719, being fully 86% of the whole, leaving £997,921 to be divided amongst the minor products and re-Exports (£123,815).

The abnormally high prices obtained for our products during the first three-quarters of the Calendar year are largely responsible for the increase. Those of September Quarter, where they reached their zenith, are worthy of notice, viz:—

Sugar £75 per ton, Bananas £20 per 100 bunches, Logwood Extract £20 per package, Coconuts £14 per 1,000, Rum 8/ per gallon, Logwood £9 per ton and Cocoa 100/ per cwt. As to quantities, Bananas again reached the nine million mark as in the previous year; coconuts reached twenty eight millions; while sugar totalled 733,287 cwt. or 36,664 tons.

29. During the year 1920 the Legislature, acting on the report of a Select Committe, enacted Law 17 of 1920, thereby giving a preference of 40% to the United Kingdom in respect of Cotton piece-goods and a further preference of 10% if such goods were made entirely of cotton grown within the British Empire. This preference was subsequently extended to the rest of the British Empire. The concession (although only in force for the latter half of the year) together with the partial reversion of the trade back to the United Kingdom after the close of the war, succeeded in lifting the proportion of British Trade in this commodty from the very low figure of 16% in 1919 to 36% in 1920. In the year 1914 the figure had been 64%.

30. For the purpose of comparison there is set out below the value of the Imports and Exports of the Island during the last forty years and the amount collected as Import Duties:—

	1880.	1890.	1900.	1910.	1920.
	£	£	£	£	£
Value of Imports—	1,475,200	2.190,700	1,652,700	2,614,900	10,313,300
Value of Exports—	1,513,000	1,902,800	1,797,000	2,568,200	7,146,000
Import Duties—	253,900	366,700	337,500	4[illegible],8400	927,700

31. It will be seen that in respect of the years taken for comparison, except the last, the value of the Exports was from five to six times the Import Duties collected, the variation being from 5.3 to 5.9 times. During the year 1920 the exports were in value 7.7 times the amount collected in Import Duties. Taking the thirty years from 1880 to 1910 as more or less normal times, it is seen that on the average the Import Duties were 17% of the value of the Exports, while in the year 1920, although there was a considerable increase in Import Duties, yet the value of the Exports had reached such a high figure that the percentage was only about 12%. If the more usual proportion between Import Duties and the value of Exports above referred to had prevailed, the Import Duties in 1920-21 would have amounted to £1,286,300 instead of £927,700, or £358,600 more.

32. Particularly in the year 1920 it would not be correct to gauge the value of Imports from the Import Duties collected as they include specific duties on rated articles, the fluctuation of their values in no way affecting the duties collected.

33. On the whole the year 1920 was a very prosperous one and greatly improved the financial conditions of the Island. During the last quarter of the year, however, a slump occurred in the markets abroad and the prices of our products came down with a rush, thus forcing the planters either to sell at a loss or withhold shipments. But for this it would be safe to assume that the value of our exports would have been more on a par with the value of Imports. A remark made in last year's Report may be repeated here, viz: that it is inadvisable for persons to emigrate to Jamaica unless they are in possession of a fair amount of capital and have had some training in tropical agriculture. Notwithstanding a decline in wholesale prices the cost of living still remains nearly as high as the year before, as far as the consumer is concerned.

34. The balance of trade against Jamaica for the Calendar year 1920 was £3,167,300:—

Value of Exports	..	£ 7,146,000
Value of Imports	..	10,313,300
Balance . ..	..	£ 3,167,300

II. GOVERNMENT FINANCE.

35. The following statement shows totals of Revenue and Expenditure of the Colony during the past five years:—

REVENUE.

1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
£	£	£	£	£
1,154,349	1,052,485	1,157,304	1,802,778	2,347,362

EXPENDITURE.

1,076,237	1,098,409	1,228,608	1,444,818	2,332,635

The total surplus of Revenue over Expenditure during the year 1920-1921 was £14,727.

36. The Assets and Liabilities were £1,078,403 and £734,102, respectively. The credit balance at the close of the year was therefore £344,301.

37. The amount of Public Debt outstanding at 31st March, 1921, was £4,011,561.

TAXATION..

38. *Law* 13-1920. *A Law further to amend the Stamp Duty Law* 1903 (*Law* 40 *of* 1903).—The principal features of this Law are, that it reduces the rates on Foreign Marine Insurances very considerably and remits entirely the duty on Coastwise Policies.

The Fire, Life and Accident Policies, however remain the same as in Law 17 of 1910.

39. *Law No.* 15-1920. *A Law to amend and make permanent the duty on entertainments imposed by Law* 14 *of* 1919.—Certain minor alterations were made in the rates of Taxation in the 1919 Law and instead of being only of a temporary nature the law of 1920 has been made permanent.

40. *Law No.* 40-1920. *A Law to amend Law* 21 *of* 1916 *entitled a Law to provide for the payment of Estate Duty on property passing on the*

death of any person.—The principal feature of this amending Law is that it exempts Estates up to £500 value from taxation for Estate Duty.

41. *Law No.* 17-1920. *The Tariff Amendment Law,* 1920.—This Law was assented to on 10th June, 1920 and provides that Cotton piece-goods (as defined in Section 2 of the Law) manufactured in the United Kingdom when imported direct into this Island from the United Kingdom or when imported in accordance with regulations made by the Governor in Privy Council shall be subject to a duty of £10, on every £100 value, and any such Cotton piece-goods so manufactured and imported shall, if made entirely of cotton grown within the British Empire be subject to a duty of £8 6s. 8d. on every £100 value.

By a subsequent resolution of the Legislative Council on the 15th June, 1920, this preference, as provided for in the law, was extended to all other parts of the British Empire. The general rate at present is 16 and two thirds per cent. advalorem so that the preference above given is one of 40% and 50% respectively.

42. *Law No.* 43-1920. *A Law further to amend the Property Tax Laws and to make provision for the Imposition of a Super-Tax.*—The principal features are (1) that it exempts properties of less value than £200 from being further taxed by reason of the erection on such property of a dwelling house including domestic outbuildings or by improvements to a dwelling house including its domestic outbuildings unless the value of such property is thereby increased beyond the amount of £200 and (2) that it imposes a Super-tax on properties owned by any person the total values of which as shewn on the Valuation Roll amounts to or exceeds in the aggregate the sum of £15,000.

Income Tax.

43. As soon as the original Income Tax Law No. 24, 1919 reached the stage of practical working, it was found to require amendment in certain respects. The following Laws designed to effect the required purpose were accordingly enacted, viz:

Income Tax Amendment Law, No. 39 *of* 1920: In addition to strengthening existing provisions, and introducing new sections to cover liabilities not dealt with, or fully dealt with in the original Law, the amendment law extended exemption from duty to the incomes of Parochial Boards, the Kingston General Commissioners, and any Government Institutions, also to the pay and allowances of members of His Majesty's Regular Forces on the Active List, wounds and disability pensions and War gratuities.

No provision was made in the original law for repayment of duty, except (under Section 13) in the case of incomes "doubly assessed." This omission was remedied in the Amendment Law.

Income Tax Amendment Law 1920 (*No.* 2) *No.* 50-1920:—This consisted of only one section, introduced at the instance of the Insurance Companies doing business in this Island, in order to lay down the precise basis on which the returns of the assessable incomes of life and other Insurance Companies should be rendered.

Currency.

44. Under Law 27 of 1904, local Currency Notes, which are made legal tender under Section 5, have been issued to the extent of £206,212 15/ in denominations of 2/6, 5/ and 10/.

2/6 notes			5/ notes			10/ notes			Total.		
£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
29,787	15	0	101,950	0	0	74,475	0	0	206,212	15	0

III.—ANNUAL PROGRESS OF TRADE, AGRICULTURE, AND INDUSTRY.

Trade.

45. Although the year 1920 shews a balance of Trade against us to the extent of over three million pounds, yet it must be remembered that the high cost of manufactured articles and materials abroad, together with the low rate of exchange existing between the Colony and the United States of America, helped to force the value of Imports up to a phenomenal figure. A comparison of the Imports for the last five years will fully support this:—

1916	..	..	3,107,004
1917	..	..	3,323,865
1918	..	..	3,381,758
1919	..	..	5,085,615
1920	..	..	10,313,282

46. After however discounting all the factors peculiar to the times, there can be no doubt that there was an actual increase of trade particularly in the first nine months of the year, a year which bids fair to stand alone for many years in many of the statistics relating to trade in Jamaica. There have been a few changes with regard to sources of supply, and destination of our products. In the case of Imports the United Kingdom shows a substantial increase in percentage while the United States of America shows a decided decrease. As regards the Exports, Canada absorbed 21.9% of the total, as compared with 6.9% the year before, a very appreciable increase. On the other hand there was a decrease of about 20% in the case of the United Kingdom, which points to the fact that her loss was Canada's gain for the most part, while the United States' share of the Exports increased by 4.4%. Canada's gain was mostly in respect of Sugar and Rum. There was also a slight increase of Exports to "Other Countries" due mainly to France taking the largest quantity of our Logwood and to the Bahamas which took a larger quantity of Spirits.

47. The wave of prosperity referred to in the last report (although not amongst all classes) continued throughout the Colony in the first half of the year now under review. The peasantry received highly remunerative prices for their products and during this period large sums of money steadily flowed into the Island from the labourers who had emigrated to the cane fields of the neighbouring Republic of Cuba. The slump in the prices of native grown products, however, and the collapse of the Cuban Sugar Industry somewhat altered this condition of affairs as is referred to elsewhere in this Report.

Agriculture and Industry.

48. *The Year* 1920 was remarkable for the serious lack of rainfall which was the lowest average recorded for the past 48 years. The agriculture of the Island therefore experienced a serious set-back. Coincident with this bad fortune for the producers of the Colony, however, arose a condition of unprecedented inflation in the world's markets for all descriptions of tropical produce, whereby the export trade of the Colony achieved a record in value.

A year that would otherwise have been one of very low returns, has thus stood out as the banner year in the trade of the Colony. Sugar, Rum, Logwood, Cacao, Coffee, Coconuts, Bananas and an array of

minor products all sold at high prices, and every class of the agricultural community shared in this good fortune. The natural reaction on the value of land resulted from this era of high prices, and properties, both great and small, changed hands at large increases over former values.

49. *The Sugar Industry* suffered somewhat severely from the drought, so that the exports did not exceed 37,000 tons of Sugar, which was a good deal below the original estimates for the crop, and even less than that for 1919 despite a large increase in cultivation and factory capacity. So high was the price of Sugar, however, that this reduced crop, after providing for local consumption, brought in three million pounds (£3,000,000), while 7,400 puncheons of rum were exported to the value of £290,000.

The capacity of the factories now in existence, or in process of erection, is sufficient to maintain an export of about 60,000 tons of Sugar per annum, if a remunerative market can be assured. The recent revival in the prosperity of the Banana Industry has checked the transfer of Banana Cultivaton to Sugar Cane, and, under present conditions, the tendency is rather to extend the production of Bananas in Jamaica than to plunge too deeply into Sugar.

50. The *Bananas* exported during the year amounted to over nine million stems, valued at £1,630,000. Fortunately, no serious storm visited the Island, and this result, when the drought conditions are considered, must be regarded as remarkable.

The incidence of 'Panama Disease' shows an increase, due mainly to the discovery of neglected areas of small settlers' Bananas in the parish of St. Ann. In the main commercial areas this disease has been kept under reasonable control by the strict system of inspection and qurantine th t has been maintained during the past ten years. Owing to the shortage of fruit the trade in Evaporated Bananas fell off, and only 8,000 boxes were shipped, as against 20,000 boxes in 1919.

51. The *Coconut* crop showed an increase in Exports of four million nuts over that for 1919. Copra stood steady at 700 tons. The value of Coconuts and Copra exported in 1920 was £356,000, as against £300,000 for the previous year. The health of the trees has remained good in the main Coconut areas, and it is considered that the Coconut trees in Jamaica have ne er been so free from dangerous diseases as at the present time. A strict system of inspection by Inspectors of Plant Diseases has assisted in securing this favourable situation.

52. The *Logwood* Industry experienced a year of great prosperity, with an Export trade to the value of £700,000.

53. *Orange Oil* sold at very high prices, and a revenue of £90,000, was received by the owners of wild oranges for this product. Citrus fruits remained an unimportant feature of the trade of the Colony. It is hoped that the trade arrangements with Canada will serve to encourage a revival in the cultivation of Oranges and Grape Fruit in the near future.

54. *Cacao* showed a reduction of about 30 per cent. in quantity over the records of 1919. Prices, however, ruled high, and the Exports during 1920 were valued at £212,000. The new Cacao nurseries established by the Department of Agriculture in Portland, St. Mary, and Hanover were the means of distributing a large number of plants, which were eagerly accepted by the public.

55. *Coffee* suffered from the unfavourable season, but with about half a crop a financial return higher than the average was received. The high-class "Blue-Mountain" Coffee sold for record prices in England, and a favourable stimulus was afforded to the resuscitation of this old staple.

56. *Cotton* was under a cloud during the year, and the small revival recorded in 1919 failed to restore this staple to the status of a minor industry.

57. *Pimento* was in demand, but the supply was only about half that exported in 1919.

58. The Industrial Chemist has carried out researches on the preparation of Oil from Pimento leaves and the manufacture of Eugenol, Iso-Eugenol, and Vanillin therefrom. The yield of oil and content of Eugenol have been found to vary considerably with the season of the year and the source of the pimento leaves. Experimental shipments of Pimento Leaf Oil—about 130 lbs. in all—have been made from the Government Laboratory, and sales have been effected in London and New York at 10/ per lb. The state of the market, however, was such that it was not possible to place large forward contracts for Pimento Leaf Oil that would justify the erection of a factory to produce this oil on a large scale. The Industrial Chemist has succeeded in making Vanillin from Pimento Leaf Oil, and an organised effort is being made to explore thoroughly the possibilities of the new industry.

59. *Sisal Hemp* is now beginning to figure in the list of Exports of the Colony. Two Factories have already commenced to manufacture fibre in Clarendon. The machinery for the Government Co-operative Sisal Factory at Lititz in St. Elizabeth, with a capacity of 500 tons of fibre per annum, has been landed, and the Factory is expected to operate in 1922.

60. *Jamaica Cigars* were in strong demand, and shipments to the value of £119,000 were made in 1920. This industry continues to progress, and is one of considerable promise for the future.

61. *Live Stock.*—The chief event in the records of the Department of Agriculture has been the purchase of "Grove Place," a Cattle pen of 3,362 acres, situated on the Railway line in Manchester, for the purpose of a Public Stud Farm, and its equipment with an impressive array of imported sires. This enterprise has become an immediate success, and the response of the public has been quite remarkable, all classes of the community having sent cows and mares to the Stud Farm in numbers far exceeding all expectations.

The Department of Agriculture organised a co-operative importation of Zebu bulls from India, whereby 56 bulls of the Hissar, Gujerat, Ongole, Mysore (Amrit Mahal) and Montgomery (Sihawal) breeds were purchased in India through the Crown Agents, the Government of India and His Highness the Maharajah of Mysore. Eleven of these bulls were landed during the year.

It is considered that in 1920 the cattle industry made the greatest progress in its history in the importation of fresh blood of the finest breeds of cattle for Beef, Milk and Draught.

62. The establishment of Dipping Tanks has steadily progressed so that already 51 have been registered with the Department of Agriculture which supplies the Paranaph and Arsenite of Soda and the testing solutions required to keep the dipping liquid at the correct strength. But for the high cost of Cement in 1920 the Order under the new Law would have been issued whereby some 350 dipping tanks would have been constructed so as substantially to deal with the larger herds of cattle in the Colony for purposes of tick destruction.

IV.—PROGRESS IN THE INVESTIGATION AND DEVELOPMENT OF NATURAL RESOURCES.

63. With the exception of a small amount of triangulation survey work which has within recent years been carried out by the Military Authorities for their own information, the Island has never been pro-

perly surveyed, and therefore its area cannot be said to have been accurately determined. It is however estimated to contain 2,692,480 acres, of which 2,410,429 acres have been alienated, leaving 282,051 neither alienated nor in process of alienation, about 10,000 acres of which is morass land.

64. Alienation began immediately after the Spaniards were driven out of Jamaica in 1655, for in the month of October of that year, under the Cromwellian regime, the Protector issued a Proclamation with regard to the settlement of the Island in which it was provided, inter alia, that, "Those who shall transport themselves (i.e to Jamaica) as aforesaid shall have land set forth unto them according to the proportion of 20 acres besides lakes and rivers for every male of 12 years and upwards and ten acres for every other male or female, etc., etc., etc."

The process of alienation, rather slow at first, was considerably accelerated during the earlier part of the eighteenth century, on account of the development of the sugar and rum industries, and the cultivation of coffee, with the result that, at the close of the century, the total acreage of estates had increased to an extent more than commensurate with their requirements.

65. The abolition of slavery in 1838 and the adverse fortunes of Sugar, caused abandonment of large number of properties, and in process of time these were squatted on by persons having no equitable claim to them.

66. Between the years 1867 and 1887 the Government by successive legislative enactments became trustees of all lands in the possession of persons without any legal or equitable title, and in this way upwards of 27,000 acres were recovered from 1,600 squatters. The lands so recovered are scattered all over the Island. Some of it has been restored to its rightful owners, some has been sold, and some still remains in possession of the Government.

67. During the year 1899 the Jamaica Railway was sold to the West India Improvement Co., one of the conditions of the purchase being that the Government should give them one square mile of Government land for every mile of Railroad constructed, and about the year 1894, 74,443 acres were conveyed to the Company, leaving 2,367 acres to be conveyed later on. In 1911, this large acreage passed back into the hands of the Government, who then purchased it for £18,500.

68. Within recent years, Government has granted to 297 time-expired East Indian Immigrants 3,300 acres in lieu of return passage to India, each adult receiving 10 acres, with an additional acre for each child born in the Island.

69. The scheme for the sale of Crown lands to small settlers, which was inaugurated in 1897, is still in operation, and up to the 31st Decr., 1920, 46,954 acres have been sold, and put in possession of instalment and outright purchasers. The most notable grant made during the past twelve months, is 4,182 acres in Clarendon to one purchaser. In all cases in which the full amount of purchase money has been paid the purchasers have received title from the Government.

70. There is a large number of praedial tenants on the Crown lands who pay rent at from 12/ to 16/ per nominal acre per annum.

71. While the value of private property has greatly increased during the past three years, Crown lands are still being sold at from £1 to £4 per acre, according to their situation. These prices were in existence long before the outbreak of War, the lands being for the most part in remote situations and difficult of access.

72. As regards progress in the investigation and development of the natural resources of the Island, little has been done by Government

beyond the publication of a Report by James G. Sawkins, F.G.S., on "The Geology of Jamaica" in 1869; and a Report upon "The Forests of Jamaica" by E.D.M. Hooper of the Indian Forestry Department in 1886.

73. There is no Forestry Department in this Island, and the cultivation of timber trees is an unknown industry. Almost all the timber which clothed the plains, and much of that which clothed the hill slopes up to 2,500 feet above sea level, and in some places up to 4,500 feet has been destroyed. In a few places destruction has extended to a higher elevation than 5,000 feet.

74. The history of forest denudation may be described as the history of peasant cultivation and goes back to the days of slavery, during which it was decided by an Act of the local Legislature that an acre of yams was to be grown for every ten slaves. We have it on the authority of Mr. Hooper that "It is an undoubted fact that the forests are becoming poorer and the area under hardwoods smaller, and this without the woods being utilized for their timber, or the area under cultivation or pasture, materially increased by the clearing of the land." Mr. Hooper's remarks are of the same cogency to-day as when they were written 34 years ago.

75. With reference to mining, it appears that attempts at exploiting this industry were made from the earliest times in the known history of the Island, and it might not be out of place here to state that in 1511, the King of Spain in a despatch to Diego Colon, the son of the discoverer of Jamaica, wrote as follows:

"Juan de Esquivel (the first Governor of Jamaica) and the Christians "in Xaymaca should endeavour to find gold." In 1519 the King ordered the "Controller" of Jamaica to "report every year as to the "gold smelteries" and in 1521 the Spanish Sovereign announced that, "colonists should only pay "one-tenth instead of one-fifth of the gold "smelted for the next 8 years." In 1601 Melgarejo de Cordova, the then Governor, wrote that he was informed that "in the Bastidas "Mountains" (eastern part of the Blue Mountains) there was "a large "amount of gold."

76. At this time, it appears that the existence of copper in the Island was well known, because in 1597 Pedro de Acuna, the Governor of Cartagena, wrote to Melgarejo suggesting that he should send him some Jamaica copper ore to be tested, and in the following year the Governor of Jamaica in writing home referred to the copper which he was sending to Cartagena "for the founding of artillery." He refers to "mines situ-"ated at sea ports" and wanted the artillery forging done in Jamaica. The location of these mines appears to have been completely lost on account of the extermination of the native Indians through Spanish cruelty, an epidemic of small pox, and wholesale suicides caused by drinking cassava water.

77. Individuals and Companies have, during the past 70 years, endeavoured to emulate the efforts of the Spanish miners of the 16th century, but none of those efforts were, so far as is known, directed towards prospecting on the Crown lands, but on properties long since alienated from the Crown.

78. Although not connected with the Crown lands, it might be of some interest here to state that gold was found in the Charing Cross copper mine in Clarendon 60 years ago, and having been mistaken for pyrites, was actually thrown away. In 1857, the Wheal Copper Co. extracted from the Charing Cross mine, 208 tons of copper ore which was shipped to the English and American markets and sold for £2,817, the highest price paid being £24 15s. 0d. per ton and the lowest £9 2s. 9d.; the average figure being £13 1s. 3d. per ton.

79. Recent experiments have shown that, by means of a carbonizing process, half-formed coal called "lignite" may be used largely as a substitute for coal, and in this connection it is interesting to recall that about 35 years ago, certain deposits, declared to be "lignite" were found at Lichfield in the parish of Trelawny. The greater portion of Lichfield was in 1915 sold by Government in lots to small settlers, who had resided on the property for many years.

80. The geological formations of Jamaica being in many respects similar to those of Cuba, where iron and copper mines have long been successfully worked, there is some reason for entertaining the hope that scientific research may result in the discovery of valuable deposits in this Island.

Fishing.

81. It is to be regretted that this Industry still continues to languish notwithstanding the fact that the value of imported saltfish of all descriptions has gone up from £249,014 in 1918 to £337,323 in 1919.

82. The hope was expressed in last year's report that some effort would be made to establish a fish curing industry, but nothing has yet been done, and it is feared that without some outside subvention or encouragement, matters are likely to remain as at present. The supply of fresh fish has been up to the average, but this has little or no effect on the importation of "salt" fish, as owing to climate and the absence of refrigerating facilities the former cannot be conserved for distributing purposes and must be consumed shortly after it is landed within a restricted area.

83. Shark-fishing, on account of the value of the skin and oil and the bye-products for other purposes, has been in existence at Port Antonio for some time and is being worked successfully. This is understood to be a branch of a very large enterprise started in the U. S. of America with unlimited possibilities for the utilisation of fish "hides," fish oils, fertilisers, etc.

84. The capture of large seafish for these and other purposes promises to become, in the near future, of world-wide significance, and is expected to revolutionise the manufacture and uses of leather obtained from land animals. Our tropical seas teem with this class of fish, and it remains to be seen how far advantage will be taken of the opportunity to develop this industry.

Manufactures.

85. The principal Items of our manufactures are Sugar, Rum, Copra, Banana Figs, Orange Oil, Cigars and Cigarettes, Aerated Waters, Ice and Leather.

86. *Sugar*:—Previous to the War the bounty fed sugar had crippled our industry so that we find in 1914 an output of only 20,820 hogsheads, while in 1920 there was an Output of 40,212 hogsheads, with a tendency to a still further increase. The general trend is towards centralization, resulting in large Central Factories with the most modern machinery being established in many localities and many of the smaller estates dismantling their machinery and becoming Cane Farms, to feed the Centrals. The largest of these Centrals already established is the Bernard Lodge Central in St. Catherine.

87. *Rum*:—This valuable by-product of the sugar industry has also made rapid strides since the outbreak of War, as the following figures shew. Output in 1914, 13,788 puncheons. Output in 1919, 18,415 puncheons; but owing to the desire to manufacture as much sugar as possible the output in 1920 fell to 14,439 puncheons.

88. *Copra*:—This industry has only been developed in the past few years. It is one which is largely dependent on the market value of the coconut. If the price is high in the market of the United States of America, it pays better to ship the nuts than to make Copra, certainly the large nuts, and then the small nuts are made into Copra.

89. *Banana Figs*:—This is an industry in its infancy, but considerable improvement developed in 1919 and several factories have been established.

90. *Orange Oil*:—This industry is proving of great value and is a means of getting Revenue from the Oranges which formerly went to waste.

91. *Cigars and Cigarettes*:—This is an important industry which has been greatly developed in recent years as the exports of these items indicate.

92. *Ice and Aerated Waters*:—May be regarded as manufactures for local consumption chiefly.

93. *Leather*:—There are tanneries at various centres in the Island and sole and harness leather form an item of our exports. Latterly the finer grades of leather have been manufactured to a small extent.

Water Power.

94. There has been little progress in the development of Water Power. The only plant of importance in the Island, which is operated by water power, is that of the West India Electric Company, Ltd., for the purpose of operating the tramways and electric lighting of Kingston and lower St. Andrew.

There is, however, a scheme under consideration for utilizing the water power from two or more rivers with a view to operate the Government Railway by electrical energy in place of the present system of steam locomotion. A careful investigation of many of the water courses in the Island has recently been carried out with this object in view, but no decision has yet been arrived at in the matter.

95. A small private plant, developing about 250 H.P. by means of dam and reservoir, has been installed at Serge Island Sugar Estate in St. Thomas. Power is transmitted some 1½ miles to the Sugar Factory, Saw Mills, etc.

V. BANKS AND BANKING FACILITIES.

96. The Commercial Banks doing business in the Island are the Colonial Bank, the Bank of Nova Scotia, the Royal Bank of Canada and the Canadian Bank of Commerce. The Jamaica Head Offices are all in Kingston.

97. The Colonial Bank was established and Incorporated by Royal Charter in 1836.

Subscribed Capital	..	£3,000,000
Paid up Capital	..	900,000
Reserve Fund	..	400,000

Head Office.—29 Gracechurch Street, London, E.C. 3.

This Bank has sub-branches at the following town of the Island:—

Annotto Bay	Montego Bay
Falmouth	Morant Bay
Linstead	Port Antonio
Lucea	Port Maria
May Pen	Port Morant
Sav.-la-Mar	St. Ann's Bay

The Colonial Bank also has Branches in most of the other West Indian Islands, in British Guiana, and on the West Coast of Africa.

The average weekly note circulation rose from £53,261 in 1915 to £127,004 in 1920.

98. The Bank of Nova Scotia was incorporated in 1832, and holds its charter under the Canadian Banking Act. The number of branches in Jamaica is 12; they are established at Kingston, Black River, Mandeville, Montego Bay, Morant Bay, Port Antonio, Port Maria, St. Ann's Bay, Sav.-la-Mar, Spanish Town, Brown's Town and Linstead. The amount of notes outstanding increased from £96,814 at the end of March quarter, 1914, to £211,706 at the end of December quarter, 1919, following the increased demand for circulating media in the Colony. The notes outstanding at this date (July 31) 1921 have been reduced to £121,438. The issue of this Bank's notes is governed by the Canadian Bank Act and the amendments thereto. The notes of any Canadian Chartered Bank are a first charge on all the assets of all the Canadian Chartered Banks. A Canadian Bank may issue notes up to the amount of its paid up capital. Notes issued in excess of this figure are secured by gold deposited with the Canadian Government in a Central Gold Reserve.

On June 30, 1921, the Bank's paid up Capital was	$9,700,000
Reserve Fund	18,000,000
Total Assets	228,428,471

99. The Royal Bank of Canada (incorporated in 1869) is, comparatively, a new comer to Jamaica.

Capital authorized ..	$25,000,000
Capital paid up ..	20,350,000
Reserve Funds ..	20,789,000

This Bank has sub-branches at Cross Roads, Montego Bay, Annotto Bay, Spanish Town.

The average circulation at the end of March quarter, 1918, was £27,127, and at the end of December quarter 1920, £86,430.

100. The Canadian Bank of Commerce (Incorporated in 1867) has recently opened a Branch in Kingston.

Paid up Capital	£3,082,191
Reserve	3,082,191

101. The Government Savings Bank was started in 1870. On the commencial Banks entering the field, starting Savings Branches, and giving higher rates of interest and more facilities, the deposits in the Government Savings Bank declined. By Law 7 of 1917, the management was entrusted to a Board. New Regulations were drawn up and approved by the Governor in Privy Council on the 4th February, 1919. The renewed activities of the Bank may be said to date from the beginning of 1919, in which year the deposits increased by 71%, and during 1920 by 34%. The deposits on 31st Dec., 1920 amounted to £573,497. The policy of the Board is that the savings of the people should be used to develop the Island. The telegraphic address 'Our bank, Kingston," sufficiently indicates the lines followed to obtain the support of the public. Under Law 7 of 1917, the funds of the Bank may be invested (1) In British and Colonial securities, (2) in loans to Agricultural Loan Societies, (3) in real securities in Jamaica, (4) on deposit in Banks (5) in any other manner authorised by the Governor in Privy Council. Funds for financing land settlement schemes, whereby Loan Banks are enabled to buy large properties, cut them up, and sell the lots to small settlers, have been provided by the Bank. Funds for making loans to Loan Banks, to be lent to members for developing their holdings, have also been provided.

102. There are 54 Branches and Postal Agencies throughout the Island, 19 of the latter having been opened in 1920. Stamp Savings Cards have induced many children and adults to open accounts. Savings Certificates are issued for 16/6, maturing to £1 in five years. Postage and registration to the Bank are free; and no revenue stamp is required on receipts. The Same rate of interest as that given by the Commercial Banks, viz., 3% per annum, compounded half yearly, is allowed on deposits. There are 42 Co-operative Loan Banks on the Register under the Industrial and Provident Societies Law (33 of 1902). The greater number of these were started early in 1913, in order to handle loans made by the Government for the resuscitation of cultivations damaged by the drought and hurricane of the previous year. Loans were also made through Loan Banks in 1916-17 and 1918, in consequence of the hurricanes of 1916 and 1917. These loans were made through the Agricultural Loan Societies Board under the provisions of Statutes giving the Banks extraordinary powers of recovering loans. Loans have also been made to the Banks under Law 6 of 1912, "A Law for the encouragement of Agricultural Loan Societies," such monies being used with their own funds for the purpose of making loans to their members for short periods on personal security, note of hand, mortgage, etc. for agricultural and industrial purposes; e.g., for the purchase of stock, cane mills, tools, and the like. These Banks have supplied a long-felt want among the small settlers.

103. The following figures, referring to the 31 Banks which obtained loans from Government funds will serve to show the extent of their operations:—

Loans made and repaid prior to 31.12.19	£17,972	8	6
Loans made on which balances amounting to £25,490 18s. 5d. were outstanding on 31.12.20.	81,013	18	10
	98,986	7	4

104. The Co-operative Loan Banks also collected to 31st December, 1919, a sum of nearly £24,000 share capital. It is evident, therefore, that they have come to stay; and it is expected that the more ambitious of them will extend their sphere of usefulness. The Legislative Council voted a sum of £50,000 for the purpose of making loans to the Banks for the purchase of properties for re-sale in lots to small settlers. In 1920, £38,734 was advanced to 4 Banks under this head; and during the current year this has increased to £47,116 to 7 banks. This scheme was hailed with delight; and promises to be successful.

VI.—LEGISLATION.

105. A brief summary is given below of those Laws passed during the calendar year 1920, which might be considered of general interest:

(1.) Law 2 of 1920—Currency Note Amendment Law, 1920—Provides that Currency Notes issued under The Currency Note Laws 1904 and 1908 may be issued and re-issued in exchange for British Treasury notes and also providing that British Treasury notes to be deemed to be current coin for the purposes of the Currency Note Laws 1904 and 1908.

(2.) Law 3 of 1920—War Emergency Laws (Continuance) Law, 1920—To continue temporarily certain emergency enactments and regulations made during the War.

(3.) Law 7 of 1920—A Law to continue various expiring Laws

dealing with Excise Duties and to impose an Excise Duty upon Sugar manufactured in the Island.

(4.) Law 8 of 1920—A Law to increase the Excise Duty on Cigarettes.

(5.) Law 9 of 1920—A Law to increase temporarily Duties of Excise on Rum Duty, Beer Duty, Cigars and Pipe tobacco, Matches and King's Warehouse Fees.

(6.) Law 10 of 1920—Prices and Profits Regulation Law, 1920. A Law to prevent profiteering.

(7.) Law 11 of 1920—Food Control Law, 1920. Enables the Governor to appoint some person, who shall hold office during the pleasure of the Governor, to regulate the supply and consumption of food and to encourage the production of food. It also continues certain Regulations made under the Defence of the Island Law, 1915 (Law 9 of 1915). Repeals the Food Control Law, 1919 (Law 1 of 1919.)

(8.) Law 14 of 1920—A Law to amend the Laws relating to Praedial Larceny (Law 4 of 1909 and Law 10 of 1915). This Law gives power to an Authorised Person to call on any one to assist him in the execution of his duty. It also provides for civil actions brought against an Authorised Person for any act done in pursuance or execution or intended execution of this or any enactment.

(9.) Law 15 of 1920—This Law amends and makes permanent the duty imposed on Entertainments by Law 14 of 1919.

(10.) Law 17 of 1920—Tariff Amendment Law, 1920. To make provision for a Preferential Tariff in respect of goods the growth, produce or manufacture of any part of the British Empire.

(11.) Law 18 of 1920—Local Clearing Office Law, 1920. To establish a Local Clearing Office in respect of the collection and payment of enemy debts.

(12.) Law 28 of 1920—Foreign Banks Laws, 1920. A Law to regulate the carrying on of banking business in the colony by Aliens.

(13.) Law 37 of 1920—Firearms (license to keep) Law, 1920. A Law to regulate the grant of Licenses to keep and use Firearms.

(14.) Law 38 of 1920—Boy Scouts Association Law, 1920. To further and protect the activities and interests of the Boy Scouts Association.

(15.) Law 39 of 1920—A Law to amend the Income Tax Law, 1919. (Law 24 of 1919).

(16.) Law 40 of 1920—This Law amends the Law to provide for the payment of Estate Duty on property passing on the death of any person (Law 21 of 1916).

(17.) Law 41 of 1920—Tick (control and eradication) Law, 1920. Provides for the control and eradication of ticks among cattle.

(18.) Law 42 of 1920—Aliens (Expulsion) Law 1920. Provides for the expulsion of Undesirable Aliens out of the Colony.

(19.) Law 45 of 1920—Census Law, 1920. Provides for the taking of the Census in the year, 1921.

(20.) Law 48 of 1920—A Law in aid of the Public Health Law, 1867. This Law repeals section twenty-one of Law 6 of 1867 as amended by Law 30 of 1908 and substitutes a new section dealing with contagious or infectious diseases when they become prevalent.

(21.) Law 5 of 1920—A Law further to amend the Income Tax Laws. The amendment deals with Income Tax on Insurance Companies.

VII. EDUCATION.

Elementary.

106. During the year under review many of the schools were affected by the epidemics of Alastrim or Kaffir Pox and Measles, several being closed for some weeks by order of the Health Authorities, whilst others were seriously affected in attendance. This resulted in a slight fall in the total average attendance for the year, although the average number on the registers showed an increase of over 2,000.

107. The staff of Inspectors continued to be incomplete, with two vacancies, but the provision for nine Assistant Inspectors, five of whom were appointed during the year (1920), enabled the Department to exercise much more supervision over the schools than had been possible formerly.

108. The new system of classification and grading of schools and teachers received legislative sanction during the year with financial effect as from 1st January. This should result in great improvement in elementary education throughout the island when the rather drastic changes have had time to take full effect. At present the greatly increased importance of school garden and nature study work in correlation with other subjects is hardly appreciated by many of the teachers.

109. The vacancies on the staffs of the Training Colleges, mentioned in the last report, were filled during the year.

110. The Departmental expenditure on Education was £123,012 as compared with £93,935 during the previous year.

Secondary.

111. The Secondary Schools after the war-period of straitened means and weakness in staffing, received timely help in the Michaelmas Term from Government grants-in-aid. The increase in salaries made possible by the grant still leaves them below those under the Burnham Scale and the difficulty of obtaining competen masters and mistresses, though lessened, is still serious.

112. The question of making adequate provision for pensions is (necessary and the subject is) under consideration: it is anticipated also that the services in Jamaica of Teachers coming from England will be made qualifying service under the School Teachers (Superannuation) Act. 1918.

Technical.

113. The Government Technical and Continuation School, Kingston, was able, on the return from war-service of the head of the Boys' Technical Department, to resume its normal courses and a short course in Woodwork for Elementary School Teachers was held towards the end of the year. The classes for disabled men of the B.W.I. Regiment were continued and in addition a special course of vocational training for time-expiring soldiers was started. Provision was made for improvement in both staff and equipment.

114. The Manual Training (Woodwork) centres were all in operation during the year, most of them doing some very useful work.

Industrial.

115. The Industrial Schools continue to do good work, though in some the accommodation is taxed to the utmost. The boys get useful training in Agriculture, Carpentry and Joinery, Tailoring &c. and

the girls in Domestic subjects, but the much needed improvement in equipment referred to in last year's report has not yet been effected.

116. Towards the close of the year steps were being taken for the establishment of two new Industrial Schools, one for boys and the other for girls in the country parishies.

VIII.—METEOROLOGICAL.

117. For the year 1920 the total actual rainfall for the Island was was 51.10 inches, and the average may be taken as 76.26 inches, so that the deficiency shews 25.16 ins., or about 67 per cent. of the average. The total rainfall for Kingston, for the year was 9.11 inches.

Temperature.

118. The records for Kingston show that the mean temperature for the year was half a degree above the average: similar to the year 1919. The highest maximum was 95.4 degrees in July, and the lowest minimum 63.9 degrees in February.

Weather Disturbances.

119. No hurricane passed over the Island during 1920. A small depression passed to the far west of the Island in April, occasioning a little rain. Another small depression passed between Jamaica and Cuba about the 26th May, moving from West to East, also causing precipitation. Then the U.S. Weather Bureau notified, on 28th October, indications of a weather disturbance some distance E.S.E. of Jamaica, but the depression appeared to have passed by. Rains and high winds were experienced.

Hailstorms.

120. Hailstorms occurred in Kingston and Newport on 5th Aug., also at Gilnock in St. Elizabeth on 9th Sept. and at Cabbage Valley on 5th Oct.

Earthquake.

121. No earthquakes of any degree of intensity were reported from any part of the Island.

IX. COMMUNICATIONS.

Railway.

122. The Jamaica Government Railway traverses the Island of Jamaica by two main branches:—

(a) Kingston to Montego Bay.

(b) Spanish Town to Port Antonio.

In both cases, from the south to the north side of the Island, the line runs across the high mountains which form the backbone of the Island. In addition, there are also two minor branches running into the interior

of the Island, viz., from May Pen to Chapelton off the Montego Bay Branch; and from Bog Walk to Ewarton off the other main branch, Spanish Town to Port Antonio. The total length of the Railway track at present is 197¼ miles. The gauge is Standard, 4 feet 8½ inches. The ruling gradient is 1 in 30 combined with 5 chain curves.

123. The Revenue for the year ended 31st Dec., 1920, was £404,257, and the Expenditure £393,469: no provision is made for depreciation.

124. The total goods carried during the year were 263,967 tons, as compared with 199,389 for the year ended 31st December 1914; the number of passengers carried increased from 590,050 in 1914, to 703,650 in 1920.

125. During the current year the following Locomotives and Rolling-stock which had been ordered during 1919-1920 were erected and put into service, viz:

16 Locomotives, 60 Cane Wagons, 12 Flat Waggons and 30 Covered Waggons. The balance, consisting of 30 Cane Waggons and 50 Covered Waggons, will be put into service during 1921. Three of the eight Passenger Coaches referred to in par. 131 of the last Annual General Report were constructed in the Kingston Works and put into service during this year.

126. A survey of the proposed extension of the Railway from Chapelton to Frankfield, a distance of about 9 miles, has been made; and reconnaissances of the proposed extensions from Chapelton to Falmouth and Montego Bay, and from Highgate to Gayle, have also been made.

127. On account of the excessive rise in the price of coal, and the difficulties experienced in obtaining adequate supplies, an Expert from the Westinghouse General Electric Company visited Jamaica during 1919, and he went very thoroughly into the question of Electrification of the Railway and submitted a favourable report. Since then, two English Experts arrived towards the end of the year to advise on the same project, but their reports had not been received at the time of writing.

128. Oil Fuel fittings were ordered to enable tests to be made as to the suitabillity of oil fuel for Jamaica Railway conditions but they had not arrived by the end of the year.

129. It was found necessary during the year to augment materially the wages of employees, and to meet this increased expenditure, it was decided to increase the rates.

130. So as to meet the growing demands of the public it will be necessary in the near future to carry out a large programme of new works, chargeable to Capital Account, and it is hoped that provision will be made for this during the coming year by raising a loan.

131. The management of the Railway is assisted by an Advisory Board of 10 members, consisting of the Director and nine others, chiefly local business men, who advise the Government when necessary in matters of policy.

SHIPPING.

132. During the year 1920, 1,307 vessels, steam and sail, of 1,778,256 tons entered at ports in the colony and 1,285 vessels, steam and sail, of 1,755,532 tons cleared at Ports in the Colony. In 1919, 1,152 vessels, steam and sail, of 1,046,961 tons entered and 1,148 of 1,037,981 tons cleared; 1920 shews therefore the following appreciable increases:—

Vessels, steam and sail—entered 155 of 731,295 tons.

Vessels, steam and sail—cleared 137 of 717,551 tons.

133. The following are the figures for the past seven years:—

1914	entered 1,434—2,164,185 tons
1915	entered 914—1,251,722 tons.
1916	entered 977—1,230,803 tons.
1917	entered 901—1,045,443. tons.
1918	entered 772—593,328 tons.
1919	entered 1,152—1,046,961 tons.
1920	entered 1,307—1,778,256 tons.
1914	cleared 1,424—2,142,663 tons.
1915	cleared 931—1,304,687 tons.
1916	cleared 948—1,208,775 tons.
1917	cleared 874—1,019,490 tons.
1918	cleared 746—583,697 tons.
1919	cleared 1,148—1,037,981 tons.
1920	cleared 1,285—1,755,532 tons.

These figures point to the fact that shipping is on the high road to recovery.

134. The following well-established Steamship Lines are now serving the Colony, viz:—The Royal Mail Steam Packet Company, Leyland Line, Elders and Fyffes, Harrison Line, New Zealand Shipping Company, Pickford and Black; Canadian Government Mercantile Marine and Pacific Steam Navigation Company; these are British Companies.

United Fruit Company, Atlantic Fruit Company, Clyde Steamship Company, Pacific Mail Steamship Company, Caribbean Steamship Company., Jamaica Fruit and Shipping Company, Windward Island Line, United Steamship Company, these are U.S.A. Companies.

The Royal Dutch West India Mail; A Dutch Company.

135. It will be interesting to observe that there were in 1913 the following nine Steamship Lines engaged in business with this Colony:

The Royal Mail Steam Packet Company. the Leyland Line, Elders and Fyffes, Harrison Line, Pickford and Black; British Companies.

Hamburg American Line, Atlas Service and Hamburg American Line (European Service); German Companies.

United Fruit Company; Atlantic Fruit Company, U.S.A. Companies.

136. In 1920 there were, as enumerated above, seventeen Steamship Lines—an increase of eight Lines, made up of four British and four Foreign.

137. A word may be said on the subject of ship-building activities in a small way. The following are the figures:—

Ships Built.

1913	1	21 tons
1914	1	62 tons
1915	1	33 tons
1916	3	110 tons
1917	Nil	
1918	2	64 tons
1919	2	355 tons
1920	2	88 tons

A growing trade, requiring additional craft around the coast of the Island and the call for vessels to go to the neighbouring Islands, accounts for the increase noted above.

Roads.

138. The Island is intersected by a system of good water-bound macadam roads. They are divided into two classes: (a) Main Roads, of a total length of 2,226 miles, which are maintained from the General Revenue of the Colony; and (b) Parochial Roads amounting to 4,341 miles, of which 1,301 miles are suitable for motor traffic and 3,040 miles which may be described as cart or bridle roads. The latter class of roads are maintained by the Parochial Boards from funds derived from local rates.

139. During 1920-21, the main roads were maintained at an average cost of £66 per mile, but on account of the large increase in traffic generally, and more particularly to the large number of heavy mechanically propelled vehicles now operating on the roads the cost of maintenance will in future be very much greater.

140. With few exceptions, these roads were originally constructed without any proper foundation, and are therefore suitable only for light wheeled traffic, but this type of construction is totally inadequate to meet the increased traffic requirements of the present day. Many new roads are being constructed and existing roads improved, with a view to develop the industrial and natural resources of the Island. For this purpose a loan of £50,000 was raised and the expenditure up to the end of the year under review amounted to £37,920.

Canals.

141. There are no navigable canals in the Island. There is, however, a system of canals which convey water from the Rio Cobre River to the plains of the Parish of St. Catherine for irrigation purposes. The main canal carries 18,000 cubic yards per hour and is, approximately, 6 miles long: subsidiary channels of which there is a total length of 42 miles, convey the water over an area of 50,000 ares, of which about 20,000 acres are now under irrigation.

142. In the Parish of Clarendon an irrigation scheme has recently been constructed. Water is pumped from the Cockpit River to a height of 70 feet and discharged into channels which convey the water by gravity to irrigate the various Sugar Estates. The main channel carries 5,000 cubic yards per hour, but is capable of being extended to carry 10,000 cubic yards per hour.

Postal, Telegraph, Telephone and Aerial Services.

143. The Government Island Postal Telegraph System was inaugurated in 1879, with a complement of 47 offices. At the close of the Calendar year 1920 there were 927 miles of telegraph and telephone lines, with 60 and 54 telegraph and telephone Offices, respectively. Further extensions of lines and the opening of new offices have been authorised for the current year.

144. The charge at the inception of the Telegraph System was one shilling for the first 20 words, and three pence for every additional five words, addresses of sender and receiver not being included.

145. In 1911 the popular sixpenny telegram was introduced and remained effective until 1918, when, due to war conditions, the rate was increased to nine pence for the first twelve words or under, and half penny for each additional word, including the address, at which it still remains.

146. The Railway Telegraphs, in connection with which there are 38 Offices, assist considerably towards placing communication within the reach of all. These Offices work in collaboration with the Island Tele-

graph System, but are controlled by the management of the Jamaica Government Railway. The public avail themselves increasingly of this public utility as is evidenced by the following comparisons:—

147. During the year 1909-1910, with, approximately, 100 offices 112,515 messages were signalled, and in 1919-20 the number of messages had increased to 299,879, which was further increased to 332,965, during the Calendar year 1920. The receipts in 1914-15 totalled £8,255 in 1919-20 £15,020, while during the Calendar year 1920, £18,391 was collected.

148. There are two Wireless Stations in the Island, one of which is situated at Christiana, and is owned and controlled by the Royal Navy. This Station does not communicate with Merchant Shipping, but handles traffic for Trans-Atlantic points, and North America, also for British Guiana.

149. The other Wireless Station is situated in Kingston and is controlled and operated by the Direct West India Cable Co., Ltd., under Government licenses. This Station communicates with Merchant Shipping on a 600 Metre Wave. The Company is putting down a more powerful installation which, when completed, will give a greater radius of communication than obtains at present.

150 There is at present no Aerial Service in connection with this Colony.

X. PUBLIC WORKS.

151. No public works that might be considered of special interest to persons outside the Colony were carried out during the year under review.

XI. OFFICIAL PUBLICATIONS.

152. A list of Official publications relating to Jamaica, which are likely to be of general interest, is given below:—

	Price.	Where obtainable.
Handbook of Jamaica	8s.	Edward Stanford, 12, 13 & 14 Long Acre, London, W.C.
Jamaica in 1920*	1s.	H. Sotheran & Co., Strand, London, W.C.
Annual Report of the Collector General of Internal Revenue, Customs and Excise	1s.	Superintendent of the Government Printing Office, Kingston, Jamaica.
Annual Report of the Director of Agriculture	1s.	do do

H. Bryan,
Colonial Secretary.

11th February, 1922.

COLONIAL REPORTS, ETC.

The following recent reports, etc., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page:—

JAMAICA.

ANNUAL GENERAL REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1921.

GEOGRAPHICAL.

1. Jamaica is an island in the Caribbean Sea, to the southward of the eastern extremity of the Island of Cuba, within N. lat. 17° 42′ 20″ and 18° 32′ 30″ and W. long. 76° 11′ 55″ and 78° 23′ 35″. It is the largest island of the British West Indies, the extreme length being 144 miles and the greatest width 49 miles.

2. The island is divided into three counties and fourteen parishes, namely:—

Surrey.	Sq. Mls.	*Middlesex.*	Sq. Mls.	*Cornwall.*	Sq. Mls.
Kingston	7	St. Catherine	470	St. Elizabeth	462
St. Andrew	166	St. Mary	249	Trelawny	333
St. Thomas	274	Clarendon	474	St. James	234
Portland	285	St. Ann	476	Hanover	157
		Manchester	302	Westmoreland	308
Total	732		1,971		1,504

giving a total of 4,207 square miles, equal to 2,692,587 acres, of which approximately, 646 square miles or 413,440 acres, are flat, consisting of alluvium, marl and swamps. For purposes of comparison, it may be observed that 2,692,587 acres is slightly larger than the total area of the six Welsh Counties:—Cardigan, Brecon, Radnor, Montgomery, Merioneth, Denbigh. Jamaica is more mountainous than Wales, the hills being more precipitous, and the Blue Mountain Peak (7,388 feet) is rather more than double the height of Snowdon (3,571 feet). Oddly enough, the population is also double that of the six Welsh Counties.

3. A great diversity of climate is obtainable. From a tropical temperature of 80° to 86° at the sea coast the thermometer falls to 45° and 50° on the tops of the highest mountains, and with a dryness of atmosphere that renders the climate of the mountains of Jamaica particularly delightful and suitable to the most delicate constitution.

The midland parts of the island are the highest. Through the County of Surrey, and partly through Middlesex, there runs the great central chain which trends generally in an east and west direction, the highest part of which is the Blue Mountain Peak, attaining an elevation of 7,360 feet.

From this range subordinate ridges or spurs run northerly to the northside of the island and southerly to the southside; these ridges in their turn are the parents of other smaller ridges, which branch off in every direction with considerable regularity and method; and they again throw off other ridges, until the whole surface of the country is cut up into a series of ridges, with intervening gullies.

4. There are numerous rivers and streams, from which Jamaica derived its aboriginal Arawak name of Xaymaca, which is supposed

to imply an overflowing abundance of rivers. The majority have a rapid fall and are not, to any extent, navigable.

5. There are many mineral springs in Jamaica, some of them possessing valuable qualities for the cure of various diseases and infirmities of the body.

The two principal are, the spring at Bath, in St. Thomas in the East, and the spring at Milk River in Clarendon.

6. Jamaica possesses several good harbours in the Island, the largest and most important being that of Kingston, the Capital, which is considered one of the finest natural harbours in the world.

7. The following are dependencies of Jamaica, viz.—The Turks and Caicos Islands and the Cayman Islands, also the Guano Islands, Pedro and Morant Cays.

HISTORICAL.

8. Jamaica was discovered by Columbus on the 3rd May, 1494. He called it St. Jago, after the Patron Saint of Spain, but the new name was soon dropped in favour of the native one of Jamaica (Xaymaca— well watered.) The first settlement on it was effected on the shores of St. Ann's Bay, by Esquivel in 1509, under the direction of Diego, the son of Columbus, while Governor of Hispaniola. Although invaded by Sir Anthony Shirley in 1596, and by Colonel Jackson in 1643, it remained in the possession of the Spaniards for 161 years, when it was again attacked by a force sent by Cromwell, under Admiral Penn and General Venables, against Hispaniola, and capitulated, after a trifling resistance, on the 11th May, 1655. Until the Restoration, Jamaica remained under military jurisdiction, but in 1660 a regular civil government was estalished by Charles II, who appointed General Edward Doyley Governor-in-chief with an Elective Council. In 1670 peace was made with Spain, and the title of England to Jamaica was recognised by the Treaty of Madrid. The colony grew fast, stimulated by the wealth brought into it by the bucaneers, who made Port Royal their headquarters and storehouse. This town was engulfed in the great great earthquake of 1692. Kingston then consisted of a few sheds and St. Jago de la Vega (Spanish Town) became practically the capital. During the 18th century the island suffered from hurricanes, earthquakes, numerous slave insurrections, as well as wars with the maroons, or mountaineers, the descendants of African slaves left by the Spaniards, who inhabited mainly the east of the island, among the Blue Mountains. When the Slave Trade was abolished, in 1807, there were 323,827 slaves in Jamaica. During the last eight years of the trade, 86,821 slaves were imported. On the abolition of slavery in 1833, Jamaica received 6,161,927*l.* of the 20,000,000*l.*, granted by the Imperial Government as compensation to the slave-owners. A serious rebellion among the black population in 1865 was suppressed by Governor Eyre with unnecessary violence, and he was recalled. In January, 1907, Kingston was devastated by a terrible earthquake, which caused great loss of life and immense destruction of property. A Mansion House Fund was opened and contributions poured in from all parts of the Empire for the relief of distress. A free grant of 150,000*l.* was voted by Parliament, and a loan of 800,000*l.* chiefly in aid of re-building, was authorised from the Home Exchequer. Two buildings, the General Post Office and Treasury, and the King's House, the official residence of the Governor, were completed in 1910, and the Law Courts in 1913.

Constitution.

9. The original Constitution granted by Charles II., in 1662, which which after existing for nearly 200 years, was surrendered in 1866, was a representative one, consisting of a Governor, a Privy Council, a Legislative Council, and an Assembly of 47 elected members. The depression caused by the abolition of slavery led to a grave constitutional crisis, the Assembly refusing to vote supplies, and endeavouring to enforce sweeping reductions in establishments, without compensation to the displaced officers. Lord Melbourne's Government, in 1829, actually introduced a Bill into Parliament for the suspension of the constitution, but was defeated and it was not till 1854 that, by a change in the constitution of the Council, harmony was temporarily restored.

After the suppression of the rebellion in 1865, Governor Eyre, at the meeting of the Legislature, urged the unsuitability of the then existing form of Government to meet the circumstances of the community, and the necessity of making some sweeping change, by which a strong Government might be created. The Legislature willingly responded, abrogated all the existing machinery of legislation, and left it to Her Majesty's Government to substitute any other form of Government which might be better suited to the altered circumstances of the Colony.

A Legislative Council was, by Orders in Council of the 11th June, 1866, and 11 November, 1869. established, consisting of such numbers of official and unofficial members as Her Majesty might think fit. The numbers of each were six until 1878, when they were enlarged to eight, and a ninth was added in 1881.

By Order in Council dated 19th May, 1884, and Amending Order of 3rd October, 1895, the constitution was fixed in the following manner:—

The Council to consist of the Governor (with only a casting vote) and five *ex-officio* members, viz. the Senior Military Officer, the Colonial Secretary, Attorney-General, Director of Public Works and Collector General, and such other persons, not exceeding ten in number, as Her Majesty may from time to time appoint or as the Governor may from time to time provisionally appoint, and fouteen persons to be elected as therein provided. The Council shall be dissolved at the end of five years from the last preceding general election, if it shall not have been previously dissolved.

There is also a Privy Council, with the usual powers and functions of an executive council. It consists of the Lieutenant-Governor, if any, the Senior Military Officer in command, the Colonial Secretary and Attorney-General and such other persons as may be named by the King, or provisionally appointed by the Governor subject to the approval of His Majesty, but the number of members is not to exceed eight. The Governor is to preside at each meeting, and the Governor and two members form a quorum.

10. The first registration under Law 22 of 1886 was in August, 1887. The revised lists showed that there was one elector to every 25 persons in the island.

Local Administration.

11. There are elective Parochial Boards in the town of Kingston and 14 other parishes, under Laws 13 of 1900 and 17 of 1901, with jurisdiction over roads, markets, sanitation, poor relief, water works, and pounds. The chief towns are Kingston (population in 1921, 62,707, Port Royal (population, 1,004), Spanish Town (population 8,694), Port Antonio (population 6,272), Montego Bay (population 6,580), Falmouth (popu-

lation 2,136), Port Maria (population 2,481), and Savanna-la-Mar (population 3,442).

12. The parish is the unit of local Government, and each parish has its own parochial Institutions viz: poor-houses, etc., etc., managed by the Parochial Board of the parish, the members of which are elected by the persons entitled to vote for the election of members of the Legislative Council. The administration of poor relief by the Parochial Boards is controlled by a Board of Supervision. The total number of registered poor was 7,713, being a decrease of 332 as compared with last year, and 704 less than in the year 1919. The present figures are slightly below the total of 1917, and indicate that the upward tendency of pauperism has been broken. The several direct taxes received on property, horses, carriages, etc., etc., are devoted mainly to the parish in which they are collected, with the exception of a few items which go to the credit of the general revenue of the Colony.

13. There is a Supreme Court of Judicature together with Resident Magistrate Courts and Petty Sessions of Justices of the Peace throughout the Island. The Resident Magistrates, besides holding courts of their own, preside in the Courts of Petty Sessions.

1.—GENERAL OBSERVATIONS.

14. During the year under review Jamaica in common with other portions of the world, experienced difficultiy and stress due to economic conditions brought about by the aftermath of the Great War. The sudden, and generallly unexpected, drop from the high prices realized in the previous year for cane sugar and other staple products of the Island affected adversely the financial prospects of planters, merchants, labourers and others engaged in agricultural industries. This depression was inevitably reflected in trade statistics generally and in the Revenue of the Colony. The price paid for sugar dropped from £75 to £14 per ton; that for bananas from £20 to £8 per 100 stems; that for coconuts from £14 to £4 per 1,000 nuts, and that for rum from 8/ to 1/9 per gallon. On the other hand, as regards quantities, the exports compare not unfavourably with the preceding year; e.g., 24,000,000 coconuts were exported, as against 28,000,000 in the previous year; bananas show an increase of nearly 1,000,000 stems, the total exportation being nearly 10,000,000; cocoa an increase of 14,000 cwt. coffee of 21,000 cwt.; Pimento of 12,000 cwt.; and Rum of 215,200 gallons. On the whole, the trade results of the year proved better than was anticipated, a result which is due in great measure to the seasonable weather that obtained in most parts of the Island, and to increased shipping facilities.

15. The Sugar Industry, which had been enjoying comparative prosperity since the year 1915, suffered more severely than any other, and it was found necessary to enact legislation in order that temporary financial aid might be afforded for its preservation and to enable loans to be raised and used for the purpose. The Governor accordingly appointed a Board, termed the Sugar Industry Aid Board, with the Attorney General of the Colony as Chairman, to make loans under the provisions of Law 10 of 1921, to such owners of Sugar Plantations and cane farmers as were in need of assistance.

16. So far as Jamaica is concerned the year 1920 should be regarded as abnormal from an economic point of view, and the year 1921 showed a tendency to a return to more normal conditions. As an illustration, it should be noted that the amount collected for Import Duties during 1921-22 was nearly £297,000 below the amount collected in 1920-21;

while compared with the year 1919-20, which marked the beginning of abnormal conditions, the Import Duties collected during the year under review were less by some £30,000, but exceeded the amount collected in 1918-19 by over £268,000. Factors responsible for this decrease as compared with the previous year, were the decline in value of advalorem goods; the imporvement in the rate of exchange between this Colony and the United States of America, which rose from 3.36 in November, 1920, to 4.21 in December, 1921, and diminished purchasing power following the decrease in the value of agricultural products.

17. Jamaica did not, during the year 1921, give preference to Canada, although the Dominion extended to this Colony, during the greater portion of the year, the preference enjoyed by British West Indian Colonies under the Canada-West Indies Trade Agreement, 1920. It might here be mentioned that a law was passed in this Colony during the early part of the year 1922 (Law 2 of 1922) to give a preference, generally speaking, of 25% to the United Kingdom and Canada, and to provide for the extension of this preference to other portions of the British Empire, subject to Resolution by the Legislative Council.

18. In keeping with the desire expressed by the Home Government that a census should be taken throughout the British Empire on the same date, a Census was taken in this Island on the 25th April, 1921. The result shows that the population of Jamaica has increased by 26,735 since the last census in 1911; the figures being 858,118 in 1921, as against 831,383 in 1911; the intercensal rate of increase being 3.215. The average number of persons to a square mile was 193 in 1921, as against 186 in 1911; 143 in 1891, and 138 in 1881. Apart from Kingston and Port Royal, the most thickly populated parish is St. Andrew, with 299 persons to the square mile; and Trelawny with 99 persons to the square mile is the most thinly populated parish.

19. As regards distribution, one tenth of the population lives within the metropolitan area of the Port of Kingston and the vicinity: in addition, the chief country towns (12 in all) account for 38,000 people: whilst the remainder are scattered throughout the Island; indeed, wherever the mountain land is rich, there you are likely to find a cottage the door of which is flanked with flowering shrubs, and, not far away, you will probably find a spring.

20. The Census of 1921 is illuminating with respect to the character of the people's dwellings:—

	1911.	1921.
(1) Number of dwellings with shingle metal or concrete roof and floored	91,183	109,876
(2) Number of dwellings with thatch roof and floored	47,637	46,748
(3) Number of dwellings unfloored and mostly with roofs of thatch .	42,214	32,785
(4) Unspecified	2,873	1,894
(5) Number of dwellings ..	183,934	191,303
(6) Number of "windowed rooms" in the dwellings—		
(a) 1 room only ..	75,670	80,654
(b) 2 rooms	72,671	74,681
(c) more than 2	35,593	35,968
Total	183,934	191,303

These statistics show that some progress has been made during the last decade, and that resolute efforts must be made during the present decade to induce builders to make the utmost use of local materials, thereby lessening the cost of poviding hygienic dwellings for the less weathly classes. On this account the Government has been, and still is, making experiments with a view to finding out how far it is possible to make walls and floors out of local material, in lieu of imported timber. Thus far, it has been found that a strong wall can be made by mixing the local "marl" with cement in the proportion of 15 to 1. Three buildings have been erected the walls of which are of "terre pise." The "red earth" of Jamaica is another promising material in fact, its value was brought to notice by the Royal Society of Arts as far back as the eighteenth century. A difficult problem is to construct a cheap hygienic floor. Thus, a roughly made wooden floor is certain to harbour insects: and a concrete floor is objected to because it is a cold and chilly. By way of compromise and experiment, the Government is making some floors of marl-concrete mixed with charcoal.

21. Towards the latter part of the year 1921, the Government of of Canada appointed a resident Trade Commissioner for the Dominion in Jamaica. This step has already been instrumental in fostering mutual commercial relations, and it is confidently expected that, in future, the practical outcome will be the steady development of trade between the two countries. The Canadian Trade Commissioner also took over the duties of Imperial Trade Correspondent which had hitherto been performed by the Colonial Secretary.

22. During the latter part of the year Jamaica and other British West Indian Colonies were visited by the Right Honourable Major E. F. L. Wood, M.P., Parliamentary under Secretary of State for the Colonies, accompanied by Captain the Honourable W. G. A. Ormsby-Gore, M.P., and Mr. R. A. Wiseman of the Colonial Office, for the purpose of enquiring into constitutional, administrative, economic, and ancillary questions affecting the West Indies.

The members of this Mission undertook extended tours throughout the Island in order to enquire at first hand into local conditions; and they also granted numerous interviews to deputations and individuals representative of all classes and sections of the community. The visit has been highly appreciated by the loyal inhabitants of Jamaica, as indicating that the Secretary of State for the Colonies is desirous of establishing closer relations with this and other ancient possessions of the Crown.

The following Resolution, which was passed unanimously by the Legislative Council, fitly expresses popular feeling on the subject:—

"That the Legislative Council of Jamaica desires to place on record its appreciation of the recent visit to the Island of the Honourable "E. F. L. Wood, Parliamentary Under Secretary of State for the "Colonies, Honourable W. Ormsby-Gore, M.P., and Mr. R. Wiseman, "of the Colonial Office, to investigate conditions on behalf of His "Majesty's Principal Secretary of State for the Colonies.

"This Council feels that the survey of some phases of conditions "which exist in this Colony by Mr.. Wood and Party will give Ja-"maica that contact at the Colonial Office which will enable those "in authority more readily to appreciate the aims and aspirations of "the poeple of the Island.

"This Council further desires to accord its thanks to the Right "Honourable the Secretryjof State for the Colonies, for the prompt "manner in which he granted the request of Parliamentarians and "others that a Mission be sent to the West Indies to gather first-hand "information on matters which have been agitating the minds of "loyal subjects of His Majesty the King in these colonies for some "time. It is the hope of this Council that the recent visit of the "Colonial Office Mission to Jamaica will be the forerunner of similar "visits in the years to come for the development of closer intercourse "between the Colonial Office and this ancient outpost of Empire."

Emigration and Immigration.

23. The Departures in 1919, were 23,618; in 1920, 21,343; in 1921, 15,777, which number includes 578 Immigrants who were repatriated to India.

The arrivals in 1919, were 8,786; in 1920, 23,783; in 1921, 17,463.

24. On account of the conditions in Cuba arising out of the sudden drop in the price of sugar it was represented that great distress prevailed among the Jamaican and other West Indian labourers who had emigrated to that Republic to work on Sugar Estates, as they suddenly found themselves not only without empoyment but unable to obtain payment of wages due to them, on account of the declaration of a local moratorium. It was accordingly decided, with the concurrence of the British Minister at Hanana, to send to Cuba an Officer of the Jamaica Government for the purpose of assisting in the repatriation of those Jamaicans who might wish to return.

Mr. J. W. Sheridan, who was selected, left for Cuba in July, 1921, where he was associated with the British Consul at Santiago one of his duties being so supervise the embarkation of natives of this Colony in conjunction with the Consular Officer, Agent for the local authorities of Eastern Cuba. Mr. Sheridan was also instructed to assist as far as practicable, the men returning to Jamaidea to obtain payment of promissory notes, etc., or to secure for them before they left Cuba, acknowledgment of debts due; in the alternative, to obtain from each person written authority to act on his behalf.

Mr. Sheridan remained in Cuba for about four months and reported that conditions were not as bad as rumour had indicated.

Altogether some 300 persons were repatriated by vessels specially provided for the purpose; and in addition about 100 free passages were secured on the ordinary ships plying between Cuba and Jamaica.

Public Health and Sanitation.

25. Matters in connection with the health and sanitation of the island have been receiving, for some time past, the earnest attention of the Government, and active steps were taken during the year under review for dealing with such matters.

26. The Rockefeller Foundation continued their operations in Jamaica in connection with the treatment of Hookworm (ankylostomiasis) and the United Fruit Company carried on the system for medical attendance on their empolyees. Both these organisations have materially contributed to improve general health conditions in the island. During the year under review the Government instituted a Sanitary Survey in the parish of St. Catherine and the parish was divided into 4 areas. After Sanitation by the Government, the Rockefeller Fundation instituted a system of active treatment.

27. It is contemplated to appoint a Senior Sanitary Medical Officer and to obtain for the Island a general Sanitary Service. With this service in operation, general sanitation will receive considerable impetus.

28. The epidemide of Alastrim or Kaffir Milk Pox, which occurred during last year, still existed in the year under review, but to a much milder extent.

General Vaccination as a protective measure was largely carried out during the year.

Vital Statistics.

29. The estimated population of Jamaica at the close of the year 1921 was 871.114 which is arrived at by taking the actual Census count of 24th April, 1921, adding thereto the Births and Arrivals and deducting therefrom the Deaths and Departures in the intervening period to 31st December, 1921.

30. 3,047 marriages were registered during 1921, the rate being 3.5 per 1,000 of population, as compared with 4.8 for 1920. During the same period 30,064 births were registered, of which 15,276 were boys and 14,788 were girls. The birth rate works out at 34.9 per 1000 as against 40.8 during 1920.

31. 24,383 deaths were registered of which 12,044 were males and 12,399 females, the death rate being 28.3 per thousand. That for 1920 was 25.3

During 1921, 8,337 or 34.2 of the total deaths, were those of children under two years of age; and of these 5,924 or 24.3 were those of children under one year of age.

The corresponding figures in 1920 were 35.2 and 27.8 The total infantile death-rate under one year was 19.7 as compared with 17.2 in 1920.

The principal causes of death among the inhabitants of Kingston, the Capital, were:—

Diarrhoea and Enteritis, 14.8; Atrophy, Icterus and Scleroma of the new born, 8.5; Phthisis, 8.2; Enteric Fever, 7.1 Pneumonia, 6.8; Heart Disease, 4.6. Chronic Brights Disease, 3.7. Cerebral Haemorrhage, Apoplexy, 3.3.

Imports and Exports.

32. As was to be expected conditions in the year 1921 were gradually getting back to the normal. The amount of Import Duties collected during 1921-22 was £660,700 being £296,600 below that of the previous year which was £957,300. When compared with the yield in 1919-20, a semi-abnormal year, that of the present year is found to be only £30,400 less, while it was £268,800 over that in 1918-19. The value of the Imports in 1921 was £5,473,800 as against £10,313,309 in 1920, £5,085,600 in 1919 and £2,837,000 in the pre-war year 1913, so that in the year 1921 the value was nearly twice as much as that of the pre-war year 1913. The factors responsible for the decrease in 1921 were practically the reverse of those resulting in the increase of 1920. The soaring values of the advalorem goods came to a sudden stop at the beginning of the year and a decline set in and there being still a large amount of unconsumed merchandise there was a noticeable falling off of fresh importations. The rise in the rate of exchange between the Colony and the United States of America also had a lowering effect on the values of the Advalorem Goods from that Country and hence on the duties collected on them. Greater decreases may have resulted had not the

quantities of the rated articles imported kept up to the mark and even shown the following appreciable increases:

Fish Dried, Salted	.. ..	3,611,400 lbs. increase
Oils	.. .. ..	826,300 galls. "
Salt, fine	.. ..	2,628,100 lbs. "
Sugar, refined	.. ..	897,200 lbs. "

33. Duties collected in respect of Harbour and Light Fees realized the sum of £6,800 being slightly below the yield in 1919-20. During the year concessions were granted by Law to vessels belonging to the Canadian Government Merchant Marine, Ltd. and vessels plying between Australia and Europe.

34. The Special Customs Duties imposed temporarily, viz: Additional Import Duties and Export Duties, were again imposed, the former for the year and the latter, however, in a reduced form and for two months only as from the 1st April, 1921. They realized the sums of £48,530 and £675, respectively. The abolition in the case of the Export tax on Logwood and Logwood Extracts had a stimulating effect on the Logwood Extract Industry and in the case of that on Hides brought to life again the export trade in Hides which was quite dead. The Package Tax Law 9 of 1919, again continued by Law 2 of 1921, resulted in a total of £49,219. Three -fourths, as heretofore is allocated by Law to General Revenue, viz: £36,914, and the remaining one-fourth to Parochial Revenue.

35. The decline in the prices of our products mentioned in last year's report had the effect in reduc ng the value of the Exports to less than h lf that of the previous year, being £3,357,700 in 1921 as against £7,146,000 in 1920 and £5,627,300 in 1919. It was however £672,900 over the value for 1918, a fairly normal year, which showed £2,684,800. It was noted in last year's report that seven items were responsible for £6,148,700 or 86% of the total value, these being Sugar, Bananas, Logwood Extract, Coconuts, Logwood, Rum and Cocoa. These items in 1921 amounted to £2,625,200, being 78% of the total value showing a decrease of £3,523,500 of which decrease Sugar accounted for £2,485,400, Logwood Extract for £322,300, Logwoo l £240,700 and Cocoa for £114,400. The decrease in value is illustrated by the following details. Taking extremes we find that Sugar dropped from £75 to £14 per ton, Bananas from £20 to £8 p r 100 stems, Coconuts from £14 to £4 per thousand nuts, and Rum from 8/ to 1/9 per gallon. Quantities, on the other hand, are not to be despised, Coconuts reaching the 24 million mark, as against 28 millons the year before, while Bananas reached the total of 9,959,200 stems, being nearly a million more than the year before; Cocoa, Coffee, Pimento and Rum also showed appreciable increases in quantity.

36. The preference granted in respect of Cotton Piece-goods in 1920 to the British Empire remained in force during 1921 and although there was only a slight shifting of trade in these goods, it is evident that had there been no preference the foreign goods would have been in greater favour, being very much cheaper than the British articles. The proportion of British Trade in this commodity was 38% in 1921 as against 36% in 1920 and 16% in 1919. Although the Canadian Trade Agreement between Canada and the British West Indian Colonies had been ratified, this Colony had not yet given the Dominion a Preference. Canada had on the other hand extended to Jamaica for the greater portion of the year the Preference she was giving to the other Colonies.

37. For the purpose of comparison there is set out beow the valuel of the Imports and Exports of the Island during the last 40 years and the amount collected as Import Duties.

	1881. £	1891. £	1901. £	1911. £	1921. £
Value of Imports	1,392,700	1,759,900	1,755,900	2,865,600	5,473,800
Value of Exports	1,178,600	1,722,100	1,939,100	2,948,100	3,357,700
Import Duties	253,900	319,800	350,100	494,400	660,700

38. It will be seen that during the forty years the value of the Imports increased 298%, the value of the Exports 185% and the amount of Import Duties 150%, the majority of these increases taking place in the last two decades and particularly in the last one. It is also seen that in respect of the years compared above the value of the Exports was from four and a half to six times the value of the Import Duties, the variation being from 4.6 to 5.9 times. If the thirty years from 1881 to 1911 are taken as more or less normal times, it is found that on the average the Import Duties were 18.4% of the value of the Exports and that for the year 1921 there was very little difference, the percentage being 18.8%. This shows a distinct tendency to return to normal times, although had it not been for the sudden slump in the prices of our products the value would have been greater and consequently the percentage lower.

39. It is not advisable to gauge the value of the Imports from the amount of the Import Duties collected as the former include goods which pay a specific rate of duty and goods on which no duty is paid. During 1921 Government mportations amounted to £389,500, being an increase of 715% in twenty years. The articles mainly responsible for the very large increase were Railway Materials, Metals, Coal and Paper (Printing and Stationery—).

40. On the whole the year 1921 turned out much better than was expected and what with increased Shippi g facilities to the Dominion of Canada, prospects of closer trade with that country, expectations of better prices for our porducts and the prayed-for absence of our dreaded enemy the hurricane (from which we had a providential escape during the year) the outlook for the coming year is far from discouraging. The exceedingly low prices dealt heavy blows to our Cane Industry but the Banana Trade is again coming to the rescue. Further, since the close of the year, Sugar has increased in price and hopes are entertained of a still further advance

II. Government Finance.

41. The following statement shows totals of Revenue and Expenditure of the Colony during the past five years:—

Revenue.

1917–18.	1918–19.	1919–20.	1920–21.	1921–22.
£	£	£	£	£
1,052,485	1,157,304	1,802,778	2,347,362	*1,920,807

*These figures are subject to audit.

Expenditure.

1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
£	£	£	£	£
1,098,409	1,228,608	1,444,818	2,332,635	*2,247,231

The approximate total Expenditure during the year 1921-22 was *£326,424 more than the approximate total Revenue.

42. The Assets and Liabilities were *£1,258,610 and *£1,240,733, respectively. The credit balance at the close of the year was therefore *£17,877.

43. The amount of Public Debt outstanding at 31st March, 1922, was *£4,063,124.

Taxation.

44. Law 2 of 1921 "A Law to continue various expiring Laws either wholly or as amended hereby." This Law repeals Section 3 of and the Schedule to the Export (Temporary War Duties) Law 1919 (Law 2 of 1919) and substitutes for Section 3 an Export Duty on Logwood Extracts liquid and solid of £5 per ton to be levied during April and May 1921.

The Law also repeals Sections 2 and 3 and the first and second Schedules of Law 3 of 1916 (The Tariff Temporary Increase) Law 1916), as also Laws 4 and 6 of 1919; whilst there were continued from the 1st April 1921 to the 31st March, 1922 the following laws:

(1) The Export (Temporary War Duties) Law 1919 (Law 2 of 1919) as affected by the repeal in the First Schedule.

(2) The Tariff (Temporary Increase) Law 1916 (Law 3 of 1916) as amended by the Tariff (Temporary Increase) Law 1919 (Law 11 of 1919), and as affected by the repeal of certain portions of Law 3 of 1916 above referred to.

(3) The Post Office (War Tax) Law 1919, (Law 7 of 1919).

(4) The Package Tax (Temporary) Law 1919 (Law 9 of 1919) and

(5) The Excise Duties (Temporary Increase) Law 1920 (Law 9 of 1920.)

Law 15 of 1921. A Law to amend the Coast and Harbour Lights Law 1900 (Law 8 of 1900). This Law (Section 2) exempts steamers plying regularly from New Zealand, Australia or Tasmania to the Atlantic via Jamaica, and Steamers belonging to the Canadain Government Merchant Marine from the payment of any dues, imposed under Law 8 of 1900 for the years 1921-23.

Law 20 of 1921. A Law to amend "The Civil Service Widows and Orphans Pension Law 1904 (Law 21 of 1904.)

This Law makes provisions in case an officer appointed to the Civil Service of Jamaica from another Colony desires to contribute to pension fund in such Colony.

Law 21 of 1921. A Law further to amend the Income Tax Laws.

This Law is referred to in the remarks under the head of "Income Tax."

Law 23 of 1921. A Law to provide an allowance for Military Officers, Non-commissioned Officers and Men in lieu of exemption from certain Import Duties.

Law 13 of 1873 is repealed by this Law and a fixed scale of allowances is allowed to certain ranks in the Army in lieu of the exemption from Import Duty of provisions, wines, spirits and malt liquors, imported for the use of the Military Staff and Regimental Messes in this Island.

*These figures are subject to audit.

Income Tax.

45. As soon as the original Income Tax Law No. 24 of 1919 reached the stage of practical working, it was found to require amendment in certain respects. The following Laws designed to effect the required purpose were accordingly enacted, viz:

Income Tax Amendment Law No. 39 *of* 1920.—In addition to strengthening existing provisions, and introducing new sections to cover liabilities not dealt with, or fully dealt with in the original Law, the amendment law extended exemption from duty to the incomes of Parochial Boards, the Kingston General Commissioners, and any Government Institutions, also to the pay and allowances of members of His Majesty's Regular Forces on the Active List, wounds and disability pensions and War gratuities.

No provision was made in the original law for repayment of duty, except (under section 13) in the case of incomes "doubly assessed." This omission was remedied in the Amendment Law.

Income Tax Amendment Law 1920—(No. 2) No. 50-1920—This consisted of only one section, introduced at the instance of the Insurance Companies doing business in this Island, in order to lay down the precise basis on which the returns of the assessable incomes of life and other Insurance Companies should be rendered.

Income Tax Amendment Law (1921 No. 3) No. 21-1921—This amendment contains several important provisions, the principal being the repeal, at the instance of the Secretary of State for the Colonies, of Section 39 of the Original Law, which dealt with "double Income Tax within the Empire." By such repeal a large amount of duty estimated at £27,000 has been auomattically added to the Jamaica Income Tax Revenue entirely at the expense of the Home Government the total *aggregate* duty payable by persons assessed to Income Tax both in this Island and the United Kingdom remaining unaltered.

Another important provision is the assessment on a non-resident person in the name of his Attorney, Agent, Branch or Manager *whether such Attorney, Agent, Branch or Manager has the receipts of the profits or gains or not.*

Provision is also made for assessment on such non-resident person on a percentage basis where the true amount of the profits or gains cannot be readily ascertained.

Other provisions are (a) where a trade or profession is carried on by partners, a Return of the profits of such partnership to be rendered by the precedent partner, (b) relieving sections permitting the trade, etc., losses of one year to be carried forward and set against the profits of the three following years, and a deduction in respect of "Obsolescence" in cases where plant and machinery are replaced by that of an improved type, (c) the repeal of Section 27 of the original Law by which Interest was charged on Income Tax in arrear.

Currency.

46. Under Law 27 of 1904, local Currency Notes, which are made legal tender under Section 5, have been issued to the extent of £111,960 15/ in denominations of 2/6, 5/ and 10/.

2/6 notes.			5/ notes.			10/ notes.			Total.		
£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
2,614	10	0	55,706	5	0	53,640	0	0	111,960	15	0

III—ANNUAL PROGRESS OF TRADE, AGRICULTURE AND INDUSTRY.

Trade.

47. The year 1921 discloses that there was a balance of trade against Jamaica thus.

Value of Imports ..	..	£5,473,800
Value of Exports ..	..	3,357,700
Balance	..	£2,116,100

This seems a large sum but it is considerably less than that of 1920 which was £3,167,300 or over a million pounds more. It must, however, be renembered that the still fairly high prices of Advalorem Goods, increased quantities of foodstuffs imported, and a rate of exchange yet far below the standard rate helped greatly to keep up the value of the Imports, while the small prices of our products, particularly Sugar, forced down the value of the Exports.

48. In four years the net balance of trade against Jamaica was over four and a half million pounds (£4,586,600) and this has to be met from capital, interest on capital and loans, a large portion of which in 1921 consisted of Government loans, to the sugar planters. However, with prospects of better prices for our Sugar, Rum and other products, the assurance of successful Fruit Trade, and the knowledge that there is no prospect of the values of imports being again inflated to the extent that occurred in 1920, there is every reason to hope that in a year or two we may be able to show a more favourable balance of trade. In this connection it is to be remembered that the value of the Imports is the value C.I.F. and that the value of the Exports is the value F.O.B.

49. There has been again changes in the sources of supply, and the destination of our products. In the case of the Imports the United States of America still supply the major portions of our foodstuffs and nearly all of our Raw Materials, while in Manufactured Articles the United Kingdom has succeeded in drawing level, each country capturing 45% of that trade. Canada on the other hand, has shown a slight increase all round and during the coming year (the preference having been granted to her at the end of the first quarter) it can be safely expected that she will furnish a large percentage of our supply, especially Foodstuffs. The importations from 'Other Countries' also showed a slight increase, due probably to the efforts of German manufacturers to re-establish their trade with the Colony. With regard to the Exports there was a decrease of 13.1% in the value of the Exports to the United Kingdom, while the United States of America shows an increase of 20.2%, Canada on the other hand showing a decrease of 9.5%, the price of Sugar being mainly responsible. It is however interesting to note that, so far as quantities are concerned, Canada took 51.4% of our Coffee and 54.6% of our Sugar, while the United Kingdom 60.6% of our Cocoa, and 82.9% of our Rum and the United States of America took 66.7% of our Coconuts and 82.9% of our Bananas. In the case of 'Other Countries' there was again a slight increase of 2.4% due mainly to the fact of markets being found in Germany, Holland and other continental countries for our products, chief among them being Cocoa, Coffee and Pimento.

Agriculture and Industry.

50. Agriculturally 1921 was a good year for Jamaica, the rainfall for the island was nearly 84 inches over the average, while the distribution was good. It is true that the consequences of the great drought of 1920 were still in evidence in the case of some crops.

51. The drought of 1920 was reflected in the Sugar crop of 1921, so that the Exports fell to 26,000 tons, or a reduction of 8,000 tons on those of 1920. The loss in value, however, was enormous and without precedent in the history of the Colony's Sugar Industry, for the value of the Exports of Sugar last year was only a little more than one-sixth of that in 1920 when it stood at £3,000,000. Jamaica is now favoured with preferential treatment for her Sugar both in the United Kingdom and the Dominion of Canada. It is interesting to note that 55 per cent. of the sugar in 1921 went to the Canadian Market, while 41 per cent. was sold in the English Market. The position of Rum has been indeed a difficult one for the producers in Jamaica. The Export records show that in 1921, 9,500 puncheons of Rum were shipped, as against 7,400 puncheons in the previous year, but it is unfortunately true that a good deal of this Rum remains still unsold in English and Scottish bonded stores with small prospects of immediate sale.

52. The severe blow which the Sugar Industry has so suddenly received in the violent swing of the pendulum from a period of high prices to one below the present cost of production has reacted adversely on the activity of planters as regards improved methods of Sugar cultivation, new varieties and the treatment of the Mosaic Disease.

The North Indian "Uba" cane which was obtained from Natal in 1916 has been found to be a valuable cane for many purposes in Jamaica.

The Experiment Station has been freed from Mosaic Disease by persistent destruction of infected plants and a good collection of the best canes from Barbados has been established for trial.

The Hope Nursery broke the previous record in the distribution of canes by the issue to the public of nearly 200,000 tops of selected varieties in 1921.

53. The Banana Industry has continued to prosper and although the records show that only ten million stems were exported, or one million more than in 1920, this by no means represents the true state of the Industry which is rapidly recovering its pre-war standard. Panama Disease has extended its incidence during the year and in some areas has shown signs of spontaneous activity apart from direct infection. Two more Inspectors were appointed in December and a further increase of staff to a total of 8 Inspectors has been authorised. The utmost efforts of the Government and the planters of all grades are required to control this dangerous disease of the banana.

54. The Coconut Industry has suffered from glutted markets. The Export of nuts was 24 million only, as against 28 million nuts in 1920. Copra shows a slight increase in quantity but a reduction in value. The resuscitation of the European Markets is a vital factor affecting the success of the Coconut Industry and it is hoped that some improvement may be felt during the coming year. At the moment coconuts are almost unmerchantable and the planters are suffering from loss of sales.

55. Logwood, from a position of absolute stagnation, has recently made a moderate recovery. Logwood Extract brought in 1921 £109,000 as against £431,000 in 1920. The Exports of Logwood were valued at

£28,000 as against the fine total of £269,000 in the previous year. With the recovery to normal of the textile and leather industries logwood should again revert to a position of real value and stability as an asset of the Colony.

56. Orange Oil sold fairly well and brought in about £40,000. The small export trade in Citrus fruits remained steady at the same standard as in 1920

57. Cocao showed a welcome recovery in quantity, but the prices were poor and the value of this staple was only £97,000 as against the high record of £212,000 in the previous year.

58. Coffee greatly increased in quantity due to a more favourable season, to 3,200 tons, as against 2,000 tons in the previous year. Blue Mountain Coffee has continued to sell at high prices in England while the ordinary coffees, suffered from the general drop in values.

59. Pimento was for a long time quite unsaleable and this staple has been greatly depressed in value. Over 4,000 tons of pimento were exported in 1921 of the declared value of £11 per ton. In 1920, 3,000 tons of Pimento fetched over three times this price.

60. The Pimento Oil industry has been further investigated by the Industrial Chemist who has during the year distilled leaves from male and female trees collected in every month of the year from various pimento-growing centres. The outcome of this investigation is that, where pimento leaves and wood fuel are available, the industry of making pimento leaf oil would be a profitable one under present conditions, in which such oil is worth 8/ to 10/ per lb. in the world's markets. A local capitalist has announced his intention of supplying the funds for establishing a factory capable of producing 10,000, lbs. of oil per annum on a large property where the conditions for the pimento oil industry are favourable. The data obtained by the Department as to yields, composition of the oil and sale value abroad, which have resulted from these researches, are the basis upon which the new industry will be founded.

61. The Sisal Hemp Industry is now commencing the era of manufacture and export. Three Factories in Clarendon and the Government Enterprize at Lititz will all be in operation during the coming year so as to produce an appreciable output of fibre.

The third trial of the experimental acre of Sisal at Lititz was most encouraging. The fibre recovered rose to 5.7 per cent and a total yield 1,433 lbs. of fibre per acre was obtained. Within two years this experimental plot has yielded at the rate of 3,390 lbs. per acre from 93 leaves per plant harvested during the trial period. The fibre grown at Lititz is very fine in texture and yet strong, with an average breaking strain of 3 lbs per fibre.

62. The trade in hides has suffered from the general stagnation of industries and the penkeepers have lost in the sale of their cattle to butchers through the reduced value obtainable for the hides. Goat skins, however, have kept up very well, and an export value of £21,000 for goat skins was recorded for the year

63. Cigars show a decrease of 30 per cent in quantity and a reduction of £40,000 in value over the exports of the previous year. The Tobacco industry is suffering seriously from unfavourable conditions and a considerable reduction in the area planted in tobacco has recently taken place.

64. The Government Stud Farm at Grove Place was opened to the public in April, and has achieved a remarkable success. All the stud animals have been established without loss and have each worked

satisfactorily and been retained in first class condition. The record shows that 480 cows were sent to the bulls by the public, of which 443 were actually served during the year, and that the revenue from Stud Fees was £414, as against the budget estimate of £200.

Favourable reports have been received of the progeny of these imported Sires, and it is clear that the Farm will soon produce appreciable results in improving stock all over the island.

The co-operative importation of 46 Zebu Cattle from India was at length completed in March, 1922.

The results of this enterprise are as follows:—

Gugerats	6 Bulls
Hissars	16 Bulls
Montgomerys	2 Bulls
Nellores	12 Bulls
Nellores	6 Heifers
Mysores (Amrit Mahal)	9 Bulls

65. An order was issued in December making it compulsory for all owners of 100 head of stock to construct a dipping tank before the 1st May, 1922. This has now been mod fied so as to allow of an extension of time to the 1st August. There are 74 dipping tanks now registered with the Department which use the Departmental dip of Faranaph and Arsenite of Soda. This Service saved the planters over £1,000 for the supply of dipping material during the year and it is now clear that as soon as all the new dipping tanks required by the Order are completed the Laboratory will be saving the public over £5,000 per annum by supplying a cheap and effective dip which replaces the proprietary article at about one-third the cost of the latter.

66. The experimental plant for the manufacture of condensed milk was erected during the year. This is capable of making 25 tins in a batch, and will enable a reliable test of the possibility of making condensed milk in Jamaica to be carried out.

IV.—PROGRESS IN THE INVESTIGATION AND DEVELOPMENT OF NATURAL RESOURCES.

67. With the exception of a small amount of triangulation survey work which has within recent years been carried out by the Military Authorities for their own information, the Island has never been properly surveyed, and therefore its area cannot be said to have been accurately determined. It is however estimated to contain 2,692,480 acres, of which 2,411,580 acres have been alienated, leaving 280,900 neither alienated nor in process of alienation, about 10,000 acres of which is morass land.

68. Alienation began immediately after the Spaniards were driven out of Jamaica in 1655, for in the month of October of that year, under the Cromwellian regime, the Protector issued a Proclamation with regard to the settlement of the Island in which it was provided, inter alia, that, "Those who shall transport themselves (i.e. to Jamaica) as aforesaid shall have land set forth unto them according to the proportion of 20 acres besides lakes and rivers for every male of 12 years and upwards and ten acres for every other male or female, etc., etc."

The process of alienation, rather slow at first, was considerably accelerated during the earlier part of the eighteenth century on account of the development of the sugar and rum industries, and the cultivation

of Coffee, with the result that, at the close of the century, the total acreage of estates had increased to an extent more than commensurate with their requirements.

69. The abolition of slavery in 1838 and the adverse fortunes of Sugar caused abandonment of a large number of properties, and in process of time these were squatted on by persons having no equitable claim to them.

70. Between the years 1867 and 1887 the Government by successive legislative enactments became trustees of all lands in the possession of persons without any legal or equitable title, and in this way upwards of 27,000 acres were recovered from 1,600 squatters. The lands so recovered are scattered all over the Island. Some of it has been restored to its rightful owners, some has been sold, and some still remains in possession of the Government.

71. During the year 1899 the Jamaica Railway was sold to the West India Improvement Co., one of the conditions of the purchase being that the Government should give them one square mile of Government land for every mile of Rail oad constructed, and about the year 1894, 74,443 acres were conveyed to the Company, leaving 2,367 acres to be conveyed later on. In 1911 this large acreage passed back into the hands of the Government, who then purchased it for £18,500.

72. Within recent years, the Government has granted to 297 time-expired East Indian Immigrants 3,300 acres in lieu of return passage to India, each adult receiving 10 acres, with an additional acre for each child born in the Island.

73. The scheme for the sale of Crown lands to small settlers, which was inaugruated in 1897, is still in operation, and up to the 31st Decr., 1921, 47,465 acres have been sold, and put in possession of instalment and outright purchasers. The most notable grant made during the past twelve months, is 31 acres to one purchaser for £151. In all cases in which the full amount of purchase money has been paid the purchasers have received title from the Government.

74. There is a large number of praedial tenants on the Crown lands who pay rent at from 12/ to 16/ per nominal acre per annum.

75. While the value of private property has greatly increased during the past three years, Crown lands are still being sold at from £1 to £4 per acre, according to their situation. These prices were in existence long before the outbreak of War, the lands being for the most part in remote situations and difficult of access.

76. As regards progress in the investigation and development of the natural resources of the Island, little has been done by the Government beyond the publication of a Report by James G. Sawkins, F.G.S. on "The Geology of Jamaica" in 1869; and a Report upon "The Forests of Jamaica" by E. D .M. Hooper of the Indian Forestry Department in 1886.

77. There is no Forestry Department in this Island, and the cultivation of timber trees is an unknown industry. Almost all the timber which clothed the plains and much of that which clothed the hill slopes up to 2,500 feet above sea level, and in some places up to 4,500 feet has been destroyed. In a few places destruction has extended to a higher elevation than 5,000 feet.

78. The history of forest denudaton may be described as the history of peasant cultivation and goes back to the days of slavery, during which it was decided by an Act of the local Legislature that an acre of yam

was to be grown for every ten slaves. We have it on the authority of Mr. Hooper that "It is an undoubted fact that the forests are becoming poorer and the area under hardwoods smaller, and this without the woods being utilized for their timber, or the area under cultivation or pasture, materially increased by the clearing of the land." Mr. Hooper's remarks are of the same cogency to-day as when they were written 34 years ago.

79. With reference to mining, it appears that attempts at exploiting this industry were made from the earliest times in the known history of the Island, and it might not be out of place here to state that in 1511, the King of Spain in a despatch to Diego Colon, the son of the discoverer of Jamaica, wrote as follows:

"Juan de Esquivel (the first Governor of Jamaica) and the Christians in Xaymaca should endeavour to find gold." In 1519 the King "ordered the "Controller" of Jamaica to "report every year as to the "gold smelteries" and in 1521 the Spanish Sovereign announced that "colonists should only pay one-tenth instead of one-fifth of the gold "smelted for the next 8 years." In 1601 Melgarejo de Cordova, the then Governor wrote that he was informed that "in the Bastidas Mountains" (eastern part of the Blue Mountain) there was "a large amount of gold."

80. At this time it appears that the existence of copper in the Island was well known, because, in 1597 Pedro d'Acuna, the Governor of Cartagena, wrote to Melgarejo suggesting that he should send him some Jamaica copper ore to be tested, and in the following year the Governor of Jamaica in writing home referred to the copper which he was sending to Cartagena "for the founding of artillery." He refers to "mines situated at sea ports" and wanted the artillery forging done in Jamaica.

The location of these mines appears to have been completely lost on account of the extermination of the native Indians through Spanish cruelty, an epidemic of small pox, and wholesale suicides caused by drinking cassava water.

81. Individuals and Companies have, during the past 70 years, endeavoured to emulate the efforts of the Spanish miners of the 16th century, but none of those efforts were, so far as is known, directed towards, prospecting on the Crown lands, but on properties long since alienated from the Crown.

82. Although not connected with the Crown lands, it might be of some interest here to state that gold was found in the Charing Cross copper mine in Clarendon 60 years ago, and having been mistaken for pyrites, was actually thrown away. In 1857, the Wheal Copper Co. extracted from the Charing Cross mine, 208 tons of copper ore which was shipped to the English and American markets and sold for £2,817 the highest price paid being £24 15s. 0d per ton and the lowest £9 2s. 9d.; the average figure being £13 1s 3d. per ton.

83. Recent experiments have shown that, by means of a carbonizing process, half-formed coal called "lignite" may be used largely as a substitute for coal, and in this connection it is interesting to recall that about 35 years ago, certain deposits, declared to be "lignite" were found at Lichfield in the parish of Trelawny. The greater portion of Lichfield was in 1915 sold by Government in lots to small settlers who had resided on the property for many years.

84. The geological formations of Jamaica being in many respects similar to those of Cuba, where iron and copper mines have long been successfully worked, there is some reason for entertaining the hope that

scientific research may result in the discovery of valuable deposits in this Island.

Fishing.

85. The condition of the Fishing Industry has not improved since the date of the last report, and it is difficult to account for the reason, in view of the fact that the price of fresh fish has increased considerably and also that the supply is not equal to the demand. The retail price for the better varieties of fresh fish during the year was 1/3d. per lb., which is a record not even equalled during war time, and one would naturally have expected that this, in itself, would have been sufficient reason for attracting more intelligent interest in this lucrative undertaking.

The fishing, however, is till being pursued on primitive lines, by a class of persons who do not display much business enterprise, the result being a short supply and high prices. In the meantime, the money expended for the importation of salted fish, the greater portion of which could and should be circulated in the colony, continues to find its way abroad to the extent of £440,460 in 1920, which does not include the value of cured salmon.

It is hoped that the possibilities of fishing as a fixed industry will soon be realized and that it will be properly financed and controlled. It is a matter for regret that the wealth in the sea, which is so accessible, is not better utilized for the benefit of the Island generally.

Sharkfishing is still being carried on, apparently with success, by the American Company at Port Antonio.

Manufactures.

86. The principal items of our manufactures are Sugar, Rum, Copra, Banana Figs, Orange Oil, Cigars and Cigarettes, Aerated Waters, Ice and Leather.

87. *Sugar*—Previous to the war the bounty fed sugar had cripplied our industry so that we find in 1914 an output of only 20,820 hogsheads, while in 1921 there was an output of 32,384 hogsheads with a tendency to a still further increase. The general trend is towards centralization, resulting in large Central Factories with the most modern machinery being established in many localities and many of the smaller Estates dismantling their machinery and becoming Cane Farms to feed the Centrals. The largest of these Centrals already established is the Bernard Lodge Central in St. Catherine.

88. *Rum*—This valuable by-product of the Sugar Industry made rapid strides from the outbreak of war to 1919 as the following figures show. Output in 1914, 13,788 puncheons; output in 1919, 18,415 puncheons; but owing to the desire to manufacture as much sugar as possible the output in 1920 fell to 14,439 puncheons, and a fall in price caused a further decrease in 1921 to 11,978 puncheons.

89. *Copra*—This industry has only been developed in the past few years. It is one which is largely dependent on the market value of the coconut. If the price is high in the market of the United States of America, it pays better to ship the nuts than to make Copra, certainly the large nuts, and then the small nuts are made into Copra.

90. *Banana Figs*—This is an industry in its infancy, but considerable improvement developed in 1919 and several Factories bave been established.

91. *Orange Oil*—This industry is proving of great value and is a means of getting Revenue from the Oranges which formerly went to waste.

92. *Cigars and Cigarettes*—This is an important industry which has been greatly developed in recent years as the exports of these items indicate.

93. *Ice and Aerated Waters*—May be regarded as manufactures for local consumption chiefly.

94. *Leather*—There are tanneries at various centres in the Island and sole and harness leather form an item of our exports. Latterly the finer grades of leather have been manufactured to a small extent.

Water Power.

95 There has been little progress in the development of Water Power. The only plant of importance in the Island, which is operated by water power, is that of the West India Electric Company, Ltd., for the purpose of operating the tramways and electric lighting of Kingston and lower St. Andrew.

96. The desirability of utilizing the water power from some of the rivers for the development of Electric energy has been under consideration and an investigation of many of the rivers in the island has recently been made with this object in view, but no definite schemes have yet materialized.

It is proposed to introduce legislation to control and regulate the use of water for public and private purposes.

97. A small private plant, developing about 250 H.P. by means of dam and reservoir has been installed at Serge Island Sugar Estate in St.Thomas. Power is transmitted some 1½ miles to the Sugar Factory, Saw Mills, etc.

V.—BANKS AND BANKING FACILITIES.

98. The Commercial Banks doing business in the Island are the Colonial Bank, the Bank of Nova Scotia, the Royal Bank of Canada and the Canadian Bank of Commerce. The Jamaica Head Offices are all in Kingston.

99. The Colonial Bank was established and incorporated by Royal Charter in 1836.

Subscribed Capital	:	..	£3,000,000
Paid up Capital	..	..	900,000
Reserve Fund	..	..	400,000

Head Office—29 Gracechurch Street, London, E.C. 3.

This Bank has sub-branches at the following towns of the Island:—

Annotto Bay	Montego Bay
Falmouth	Morant Bay
Black River	Port Antonio
Lucea	Port Maria
May Pen	Port Morant
Savanna-la-Mar	St. Ann's Bay

The Colonial Bank also has Branches in most of the other West Indian Islands, in British Guiana, and on the West Coast of Africa.

100. The Bank of Nova Scotia was incorporated in 1832, and holds its Charter under the Canadian Banking Act. The number of branches in Jamaica is 11; they are established at Kingston, Black River, Mandeville, Montego Bay, Morant Bay, Port Antonio, Port Maria, St. Ann's Bay, Savanna-la-Mar, Spanish Town, and Brown's Town. The amount of notes outstanding increased from £96,814 at the end of the March quarter, 1914, to £211,706 at the end of December quarter, 1919, following the increased demand for circulating media in the Colony. The notes outstanding at this date (July 31st) 1922, have been reduced to £66,712. The issue of this Bank's notes is governed by the Canadian Bank Act and the amendments thereto. The notes of any Canadian Chartered Bank are a first charge on all the assets of all the Canadian Chartered Banks. A Canadian Bank may issue notes up to the amount of its paid up capital. Notes issued in excess of this figure are secured by gold deposited with the Canadian government in a Central Gold Reserve.

On June 30, 1922, the Bank's paid up Capital was	$9,700,000
Reserve Fund	$19,000,000
Total Assets	$219,642,994

101. The Royal Bank of Canada (incorporated in 1869) began business in Jamaica in 1911.

Capital authorized	$25,000,000
Capital paid up	$20,400,000
Reserve Funds	$20,400,000

This Bank has sub-branches at Cross Roads, Montego Bay, Spanish Town.

The average circulation at the end of March quarter, 1918, was £27,127, and at the end of July, 1922, £83,200.

102. The Canadian Bank of Commerce (Incorporated in 1867) whose Head Office is in Toronto, Canada, opened a branch in Kingston on 1st Nov., 1920.

Paid up Capital	£3,082,191
Reserve	3,082,191

103. The Government Savings Bank was started in 1870. On the Commercial Banks entering the field, starting Savings Branches, and giving higher rates of interest and more facilities, the deposits in the Government Savings Bank declined. By Law 7 of 1917, the management was entrusted to a Board. New Regulations were drawn up and approved by the Governor in Privy Council on the 4th February, 1919. The renewed activities of the Bank may be said to date from the beginning of 1919, in which year the deposits increased by 71%., and during 1920 by 34%. The deposits on 31st Dec., 1921 amounted to £533,960. The policy of the Board is that the savings of the people should be used to develop the Island. The telegraphic address "Our Bank, Kingston," sufficiently indicates the lines followed to obtain the support of the public. Under Law 7 of 1917, the funds of the Bank may be invested (1) In British and Colonial securities, (2) in loans to Agricultural Loan Societies, (3) in real securities in Jamaica, (4) on deposit in Banks (5) in any other manner authorised by the Governor in Privy Council. Funds for financing land settlement schemes, whereby Loan Banks are enabled to buy large properties, cut them up, and sell the lots to small settlers, have been provided by the Bank. Funds for making loans to Loan Banks to be lent to members for developing their holdings, have also been provided. There are 54 Branches and Postal Agencies

throughout the Island, 19 of the latter having been opened in 1920. Stamp Savings Cards have induced many children and adults to open accounts. Savings Certificates are issued for 16/6, maturing to £1 in five years. Postage and registration to the Bank are free; and no revenue stamp is required on receipts. The same rate of interest as that given by the Commercial Banks, viz. 3% per annum, compounded half-yearly, is allowed on deposits.

104. There are 46 Co-operative Loan Banks on the Register under the Industrial and Provident Societies Law (33 of 1902.) The greater number of these were started early in 1913, in order to handle loans made by the Government for the resuscitation of cultivations damaged by the drought and hurricane of the previous year. Loans were also made through Loan Banks in 1916-17 and 1918, in consequence of the hurricanes of 1916 and 1917. These loans were made through the Agricultural Loan Societies Board under the provisions of Statutes giving the Banks extraordinary powers of recovering loans. Loans have also been made to the Banks under Law 6 of 1912, "A Law for the encouragement of Agricultural Loan Societies," such moneys being used with their own funds for the purpose of making loans to their members for short periods on personal security, note-of hand, mortgage, etc., for agricultural and industrial purposes, e.g., for the purchase of stock, cane mills, tools, and the like These Banks have supplied a long felt want among the small settlers.

105. The following figures, referring to the 33 Banks which obtained loans from Government funds will serve to show the extent of their operations:—

Loans made on which balances amounting to £24,576 12s 6d were outstanding on 31.12.21	£103,456 1 4

106. The Co-operative Loan Banks also collected to 31st December, 1921 a sum of nearly £29,000 share capital. It is evident, therefore, that they have come to stay; and it is expected that the more ambitious of them will extend their sphere of usefulness. The Legislative Council voted a sum of £50,000 for the purpose of making loans to the Banks for the purchase of properties for resale in lots to small settlers. In 1920, £38,734 was advanced to 4 Banks under this head; and this has increased to £47,724 to 6 banks. This scheme was hailed with delight; and promises to be successful.

VI.—LEGISLATION.

107 A brief summary is given below of those Laws passed during the year 1921 which might be of general interest.

(1) Law 2 of 1921—The expiring Laws Continuance Law 1921, continues certain temporary duties.

(2) Law 4 of 1921—The War Expenses (Jamaica Contribution) Law. 1921, provides for the payment to the Lords Commissioners of His Majesty's Treasury of the sum of sixty thousand pounds a year for forty years as a contribution from this Island in reduction of the United Kingdom's War Debt.

(3) Law 10 of 1921—The Sugar Industry Aid Loans Law, 1921, for affording temporary aid for the preservation of the Sugar Industry of the Island.

(4) Law 12 of 1921—The General Loan and Inscribed Stock Law, 1921. A Law to declare the terms and conditions applicable to loans authorised to be raised by the Government of Jamaica and to provide for the creation of Inscribed Stock.

(5) Law 16 of 1921—The Judicature Law 1919 Amendment Law, 1921.

(6) Law 17 of 1921—The Insurance Fund Law 1921 provides for the creation and application of a fund to be called the Insurance Fund which shall be available to provide for extraordinary expenditure rendered necessary by the occurrence of any public calamity in this Island.

(7) Law 18 of 1921—The Indictments Law 1921, amends the Law relating to Indictments in criminal cases and matters incidental or similar thereto.

(8) Law 21 of 1921—The Income Tax Amendment Law, 1921.

(9) Law 22 of 1921—The Jamaica Government Railway and Miscellaneous Works Loan Law, 1921. A Law to make provision for certain capital works necessary for the working of the Jamaica Government Railway and also to make provision for certain public works and for raising a loan for the purpose.

(10) Law 23 of 1921—The Import Duties (Military Allowances) Law, 1921 provides an allowance for Military Officers, non-commissioned officers and men in lieu of exemption from certain import duties.

(11) Law 24 of 1921—The Deceased Wife's sister Marriage Law Amendment Law, 1921. A Law to remove doubts as to the validity of marriages contracted between a man and his deceased brother's wife.

(12) Law 25 of 1921—The Fruit Inspection Law, 1921—provides, for the inspection of fruit intended for exportation and also to prevent the exportation of immature and unfit fruit.

(13.) Law 27 of 1921—The Statute Law (Revised Edition) Law, 1921, makes provision for the preparation and publication of a new and revised edition of the Laws of the Island.

(14) Law 28 of 1921—The Local Clearing Office (Austria & Bulgaria) Law 1921. A Law to establish the existing Local Clearing Office as the Local Clearing Office for the settlement of Austrian debts and to appoint an Administrator for the settlement of Bulgarian debts.

VII.—EDUCATION.

Elementary.

108. During the early part of the year the attendance at many schools appears to have been affected by the epidemics of Alastrim and Measles, though no schools were reported as closed in consequence. The average attendance for the year shows an increase of over 1,500 and the number on registers of over 7,000, the numbers being 61,447 and 99,956 as compared with 59,930 and 92,176 in 1920.

109. The staff of Inspectors was still incomplete at the end of the year, but the number of Assistant Inspectors was completed by four new appointments.

110. A revision of the new system of classification and grading of schools and teachers, the number of grades being reduced from eight to five, received Legislative sanction in July with effect as from 1st January. The consequent necessity for more regular supervision is yet not fully appreciated by many of the Managers and many Teachers appear to have not yet realized that Garden or Nature Study work and Friday Sessions are essential parts of the new system.

111. The Departmental expenditure on Education was £143,455 as compared with £123,053 during the previous year.

Secondary.

112. The Government grants-in-aid have enabled the Secondary Schools to increase their staffs and to offer better salaries. Some of them have raised their fees to enable them to go further in this direction.

113. The question of making adequate provision for pensions is still under consideration and a Pension Bill has been drafted.

114. The available accommodation in the Secondary Schools is inadequate. There are waiting lists in many Schools, even though some of these are already over-crowded and districts at long distances from any School feel the need of further provision for boys and girls whose parents cannot afford boarding fees. The subject is being carefully studied, regard being had to the needs of the whole Island rather than to particular cases.

Technical.

115. The Government Technical and Continuation School, Kingston continued its normal courses of instruction throughout the year and a more advanced course of instruction in Woodwork for Teachers was in progress during the Christmas holidays.

116. The Manual Training (woodwork) centres attached to Elementary Schools in some of the chief towns were all in operation throughout the year, most of them doing useful work.

Industrial.

117. The Industrial Schools continued their usual good work, the boys getting useful training in Agriculture, Carpentry and Joinery, Tailoring, etc., and the girls in Domestic work. The enlargement of the Broughton Home in Manchester was completed and the new Industrial School for Boys near Montego Bay was ready for immates before the close of the year, whilst satisfactory progress was made in providing buildings for the new Girls' Home at Carron Hall in St. Mary.

VIII.—METEOROLOGICAL.

118. The rainfall for the year 1921 was 83.74 inches, a little above the average 76.46 inches. Excessive rains fell in January and May. The rainfall was above the average during the first part of the year and below during the latter part.

Temperature.

119. In Kingston the mean temperature for the year was the average viz: 78.06. The highest maximum was 92.8 degrees in September, and the lowest minimum 65.5 degrees in March.

Weather Disturbances.

120. There was a hurricane to the east of Jamaica in September but it travelled northward over Haiti, and though the barometers at the East end fell the weather was not affected. Another disturbance developed to the south-west in October, but moved north-westerly on to Cuba.

Hailstorms.

121. There were falls of hail at Santa Cruz on the 5th and 26th of September.

Earthquakes.

122. There were seven shocks of earthquake recorded during the latter half of the year; none, however, were of any great intensity. The shock in November was heavier than any that occurred for some time but fortunately no damage was done.

IX.—COMMUNICATIONS.

Railway.

123. The Jamaica Government Railway traverses the Island of Jamaica by two main branches:—

(a) Kingston to Montego Bay.

(b) Spanish Town to Port Antonio.

In both cases, from the south to the north side of the Island, the line runs across the high mountains which form the backbone of the Island. In addition, there are also two minor branches running into the interior of the Island, viz:, from May Pen to Chapelton off the Montego Bay Branch; and from Bog Walk to Ewarton off the other main branch, Spanish Town to Port Antonio. The total length of the Railway track at present is 200 miles. The guage is standard, 4 feet 8½ inches. The ruling gradient is 1 in 30 combined with 5 chain curves.

124. The Revenue for the year ended 31st Dec., 1921, was £356,839 and the expenditure £384,594, no provision is made for depreciation.

125. The total goods carried during the year were 221,861 tons, as compared with 199,389 for the year ended 31st December, 1914; the number of passengers carried increased from 590,050 in 1914, to 639,638 in 1921.

126. During the current year the follwing Rolling Stock, part of that which had been ordered during 1920, was erected and put into service, viz:

28 Covered wagons and 1 new passenger coach.

127. A survey of the extension of the Railway from Chapelton to Frankfield, a distance of 10 miles, was carried out, and the extension of the line has now been sanctioned. This extension will traverse a settled area, and it will form a part of the eventual line to Cascade, or beyond, a distance of 23 miles from the present terminus at Chapelton. There will be two or three Sidings between Chapelton and Frankfield, to meet local requirements in the handling of Sugar Canes, Bananas, Ground provisions, and Passenger Traffic.

Reconnaissances of the proposed extensions from Chapelton to Falmouth and Montego Bay and from Highgate to Gayle, have also been made.

128. Trials were carried out during the year under review with the set of Oil Fuel fittings referred to in paragraph 128 of last Annual General Report. Successful results were obtained on Passenger Train work but some difficulty was found in hauling maximum loads in the Hill Section; the latter difficulty was being overcome when the trials had to be suspended owing to the comparatively high price of Fuel Oil.

129. So as to meet the growing demands of the public it will be necessary in the near future to carry out a large programme of new works, chargeable to Capital Account, and it is hoped that provision will be made for this during the coming year by raising a loan.

130. The management of the Railway is assisted by an Advisory Board of 10 members, consisting of the Director and nine others, chiefly local business men who advise the Government when necessary in matters of policy.

Shipping.

131. In 1921, 1,339 vessels, steam and sail, of 1,753,242 tons entered and 1,271 of 1,719,496 tons cleared. During the year 1920, 1,307 vessels, steam and, sail of 1,778,256 tons entered at Ports in the Colony and 1,285 vessels, steam and sail, of 1,755,532 tons cleared at Ports in the Colony.

132. The following are the figures for the past seven years:—

1915	Entered	914—1,251,722 tons
1916	"	977—1,230,803 tons
1917	"	901—1,045,443 tons
1918	"	772—593,328 tons
1919	"	1,152—1,046,961 tons
1920	"	1,307—1,778,256 tons
1921	"	1,339—1,753,262 tons
1915	"	931—1,304,687 tons
1916	Cleared	948—1,208,775 tons
1917	"	874—1,019,490 tons
1918	"	746—583,697 tons
1919	"	1,148—1,037,981 tons
1920	"	1,285—1,755,532 tons
1921	"	1,271—1,719,496 tons

133. The following well-established Steamship Lines are now serving the Colony, viz: The Royal Mail Steam Packet Company, Leyland Line, Elders and Fyffes, Harrison Line, Pickford and Black, Canadian Government Mercantile Marine; these are British Companies.

United Fruit Company, Atlantic Fruit Company, Clyde Steamship Company, Caribbean Steamship Company, Jamaica Fruit and Shipping Company, and Windward Island Line; these are U.S.A. Companies.

The Royal Dutch West India Mail; a Dutch Company.

134. It will be interesting to observe that there were in 1913 the following nine Steamship Lines engaged in business with this Colony.

The Royal Mail Steam Packet Company, the Leyland Line, Elders & Fyffes, Harrison Line, Pickford & Black, British Companies, Hamburg-American Line, Atlas Service and Hamburg-American Line, (European Service); German Companies; United Fruit Company, Atlantic Fruit Company, U.S.A. Companies.

135. In 1921 there were, as enumerated above, thirteen Steamship Lines—an increase of 4 Lines, made up of two British and two Foreign.

136. A word may be said on the subject of ship-building activities in a small way. The following are the figures:—

Ships Built.

1913	..	..	1—21 tons
1914	..	..	1—62 tons
1915	..	..	1—33 tons
1916	..	..	3—110 tons
1917	..	..	Nil
1918	..	..	2—64 tons
1919	..	..	2—355 tons
1920	..	..	2—88 tons
1921	..	..	1—66 tons.

Roads.

137. The Island is intersected by a system of water-bound macadam roads. They are divided into two classes: (a) Main Roads, of a total length of 2,242 miles, which are maintained from the General Revenue of the Colony; and (b) Parochial Roads amounting to 4,341 miles of which 1,301 miles are suitable for motor traffic and 3,040 miles which may be described as cart or bridle roads. The latter class of roads are maintained by the Parochial Boards from funds derived from local rates.

138. During the Calendar Year 1921 the Main Roads were maintained at an average cost of £105 per mile, an increase of 59% over the average cost for the previous year—due chiefly to heavier maintenance necessitated by the increase in mechinical transport.

139. With few exceptions, these roads were originally constructed of limestone, without any proper foundation and are therefore suitable only for light wheeled traffic, but this type of construction is inadequate to meet the ever-increasing motor traffic requirements of the present-day.

It is proposed to introduce legislation prohibiting the importation and use of motor vehicles weighing more than 2½ tons unladen. The existing roads will be gradually improved so as to enable them to carry loads of 6 tons with safety.

Canals.

140. There are no navigable canals in the Island.

Irrigation.

141. There is a system of irrigation canals which convey water from the Rio Cobre River to the plains of the parish of St. Catherine for irrigation purposes. The main canal carries 18,000 cubic yards per hour and is, approximately, 6 miles long; subsidiary channels of which there is a total length of 42 miles, convey the water over an area of 50,000 acres, of which about 20,000 acres are now under irrigation.

142. In the parish of Clarendon an irrigation scheme has been constructed. Water is pumped from the Cockpit River to a height of 70 feet and discharged into channels which convey the water by gravity to irrigate the various Sugar Estates. The main channel carries 5,000 cubic yards per hour, but is capable of being extended to carry 10,000 cubic yards per hour.

Postal, Telegraph, Telephone, and Aerial Services.

143. The Government Island Postal Telegraph system was inaugurated in 1879, with a complement of 47 Offices. At the close of the Calendar year 1921, there were 951 miles of telegraph and telephone lines, with 62 and 64 Telegraph and Telephone Offices, respectively. Further extensions of lines and the opening of new offices have been authorised for the current year.

144. The charge at the inception of the telegraph system was one shilling for the first 20 words, and threepence for every additional five words, addresses of sender and receiver not being included.

145. In 1911 the popular sixpenny telegram was introduced and remained effective until 1918, when, due to war conditions, the rate was increased to ninepence for the first twelve words or under, and half-penny for each additional word, inc'uding the address at which it still remains.

146. The Railway Telegraphs, in connection with which there are 38 Offices, assist considerably towards placing communication within the reach of all. These Offices work in collaboration with the Island Telegraph system, but are controlled by the Management of the Jamaica Government Railway.

The public avail themselves increasingly of this public utility as is evidenced by the following comparisons.

147. During the year 1909-10, with approximtely, 100 Offices, 112,515 messages were signalled and in 1919-20, the number of messages had increased to 299,879, which was further increased to 341,876, during the Calendar Year 1921. The receipts in 1914-15 totalled £8,255, in 1919-20 £15,020; while during the Calendar year 1921, £18,188, was collected.

148. There are two Wireless Stations in the Island, one of which is situated at Christiana, and is owned and controlled by the Royal Navy. This Station does not communicate with Merchant Shipping but handles traffic for Trans-Atlantic points, and North America, also for British Guiana.**

The other Wireless Station is situated in Kingston and is controlled and operated by the Direct West India Cable Co., Ltd. under Government License. This station communicates with Merchant Shipping on a 600 metre wave. The Company proposes to put down a more powerful installation, which, when completed, will give a greater radius of communication than obtains at present.

149. There is at present no Aerial Service in connection with this Colony.

150. Efficient and speedy communication with all parts of the outside world is furnished by two Cable Companies, viz: the Direct West India Cable Co., Ltd. and the West India & Panama Telegraph Co., Ltd.

151. The cable of the first named Company runs from Jamaica through Turks Island to Bermuda and thence to Halifax, N.S. at which point connection is made with all the important Trans-Atlantic Lines Eastward and with the Canadian Pacific Railroad Commercial Cable Companies, and Western Union Lines Inland and Westward. This Company also connects at Halifax, N.S., with the Imperial route to Great Britian and Australia, and with the Marc ni Company's Trans-Atlantic Service.

152. The West India & Panama Telegraph Co., Ltd. maintains communication with Foreign Countries by means of Cables to Cuba, where

**Ceased to operate as from 31st May, 1922.

they transfer their cablegrams to their connecting Company who have cables connecting with different parts of the United States of America. In addition, this Company has a net work of cables touching at practically every West Indian Island.

X.—PUBLIC WORKS.

153. No Public Works that might be considered of special interest to persons outside the Colony were carried out during the year under review.

XI.—OFFICIAL PUBLICATIONS.

154. A list of Official Publications relating to Jamaica, which are likely to be of interest, is given below:—

	Price.	Where obtainable.
Handbook of Jamaica	8s.	Edward Stanford, 12, 13 & 14 Long Acre, London, W.C.
Jamaica in 1920	1s.	H. Sotheran & Co., Strand, London, W.C.
Annual Report of the Collector General of Internal Revenue, Customs and Excise.	1s.	Superintendent of the Government Printing Office, Kingston, Jamaica.
Annual Report of the Director of Agriculture.	1s.	do do
The Rainfall of Jamaica, 1911	2/6	Superintendent of the Government Printing Office, Kingston, Jamaica.
Itinerary of the Main Roads of the Island of Jamaica, 1908.	2s.	Superintendent of the Government Printing Office, Kingston, Jamaica.
Notes on the Geology of Jamaica	1s.	Superintendent of the Government Printing Office, Kingston, Jamaica.

No. 1147.

TURKS AND CAICOS ISLANDS.

ANNUAL GENERAL REPORT FOR THE YEAR 1921.*

GEOGRAPHICAL.

Owing to their geographical position—at the extreme south-east end of the Bahamas Archipelago, and to the absence of direct communication with the Mother Country, less is known about this Dependency than most other West Indian Colonies; while the absence of any literature dealing with its early history, except such as may be gleaned from official papers and records, renders it difficult for anyone in quest of information concerning these interesting, but little known, islands to ascertain exactly from what source to obtain it.

As nothing could supersede the value of the reports† of Mr. F. H. Watkins, I.S.O. (Commissioner of the Dependency during the years 1906–14), concerning the Salt and Sisal Industries of these islands (in which is included everything that is reliable concerning the early history of the Dependency), it is not considered necessary to repeat what has been so lucidly described by this gentleman; but, on the other hand, it is proposed to quote freely from the information supplied by Mr. Watkins whenever it is necessary to do so.

SITUATION AND AREA.

The Dependency of the Turks and Caicos Islands, according to Mr. Watkins, belongs geographically (and ecclesiastically) to the Bahamas; officially to Jamaica; and socially to Bermuda. They lie between 21° and 22° N. latitude and 71° 50′ and 72° 50′ W. longitude, and are therefore just on the edge of the Tropics. They really consist of two distinct groups, the Turks Islands proper and the Caicos Islands. The two groups are separated by a channel, 21 miles in width—the Turks Island passage, or Le débouquement des Isles Turques, of the old French cartographists. The entire area is stated officially to be 166 square miles, but as no survey of the group has ever been made, these figures are probably below the mark. The islands are

* Sketch Maps will be found in the Report for 1914, No. 846; Cd. 7622–37].

† Colonial Reports—Miscellaneous Nos. 43 and 56.

distant about 720 miles from Bermuda on the north, about 450 miles from Jamaica on the south-west, and about the same distance from Nassau, Bahamas, on the north-west.

As the Dependency of the Turks and Caicos Islands really consists of two distinct groups, it will be convenient to review the character of each group separately. The Turks Islands group proper consists of two inhabited cays, Grand Turk and Salt Cay, four uninhabited cays, and a large number of rocks. A three-pointed bank surrounds the group and offers serious dangers to navigation. This bank has been the scene of frequent shipwrecks for many years. The islands derive their name from the Turks Head Cactus (*Melocactus communis*), found abundantly on the rocky shores, the scarlet head of which is supposed to represent a Turkish fez.

On the western side of the Turks Island passage lie the Caicos Islands. These surround the Caicos Bank, a triangular expanse of shallow white water, 58 miles long on its northern side, and 56 miles long on its eastern and western sides respectively. The northern and eastern sides of the bank are bounded by a chain of islands, separated from each other by narrow channels, in most cases only a few feet deep, while the western edge is fringed by a series of reefs and rocks. There can be no doubt that the bank will, in course of time, become a large island, since its " interior is already represented by a low salty plain only a few feet below sea-level." (De Booy.)

The principal islands of the Caicos group are South Caicos, East Caicos, Middle Caicos, North Caicos, Providenciales Island, and West Caicos. The group of islands forming the Dependency extends for a distance 75 miles from east to west, and 50 miles from north to south, and constitutes part of the long chain of low islands and banks, extending from off the Florida coast to the Navidad bank, lying north of the east end of Haiti. The banks and islands forming this archipelago rest on a vast submarine platform, those portions above sea-level representing the last that have risen above the surface. Beyond the Turks and Caicos Islands to the south-east lie three of these banks. Two of them, Mouchoir (the handkerchief) and Silver Bank, are in some places awash, while the third, the Navidad Bank, is entirely submerged. Although accurate data is not available to prove that these banks are being gradually uplifted, the fact that the Caicos Islands bank, and other banks in the Bahamas, are constantly building up, " warrants the conjecture that the same tidal and geological conditions govern them all, and that in course of time three additional island groups will come into being." (De Booy, *Geographical Review*, Vol. No. 1.)

HISTORICAL.

The Turks and Caicos Islands, together with the Bahamas, were probably discovered by Columbus in the year 1492.

(8433) Wt. 24344/1294 625 1/23 Harrow G. 75/2

The archæological researches of De Booy demonstrate that the Turks Islands proper—that is, Grand Turk and Salt Cay, with their adjacent islets—were uninhabited, probably on account of the sterility of the soil, the scanty rainfall, and other difficulties in the way of agriculture which obtain in the easternmost group of islands.

The Turks and Caicos Islands would appear to owe their existence as a British Colony entirely to the Salt Ponds that are found at Grand Turk, Salt Cay, and South Caicos, as from the time of their discovery up to the year 1678 they remained unclaimed and uncolonised by any nation. In that year a party of Bermudians, attracted by the advantages to be derived by establishing a salt industry to supply the demands of the fisheries in the New England States, came to the Turks Islands, and inaugurated the first systematic attempt at salt raking. From that date onwards parties of Bermudians used to resort annually to Turks Islands to rake salt. "They returned to Bermuda about November, where they remained until February or March, because salt could not be raked at that time of the year; and other industries were out of the question on islands composed of little more than burning sands and barren rocks. The salt industry, in the absence of the present flourishing vegetable export trade of Bermuda with the United States, afforded the Bermudians with little capital the staple so necessary for maintaining their carrying trade, and allowed sufficient time in each year for the cultivation of vegetables (at Bermuda) for their own consumption." (Watkins.)

The conditions of life under which the industry was pursued, and the circumstances of their existence, are graphically portrayed in the Annual Register of 1764, which, in alluding to the recent invasion of Grand Turk by the French, states, "These islands are many in number, most of them being low, sandy, and barren, with very little, if any, fresh water, without any vegetation except lizards, iguanas, and land-crabs, but the coast abounds with fish and turtle and the beach is covered with sea-fowl. . . ."

"The business of salt raking is chiefly carried on by Bermudians who come here in the month of March and continue during the dry season, leading a life that the idea of liberty only can render preferable to slavery itself. They live in little huts . . . they have a knife in their pockets and a kettle in their kitchens; their wardrobe consists of nothing but a straw hat, a check shirt, and a pair of oznaburg trousers; their food is salt pork, and now and then an iguana (a sort of large lizard), when they have time to catch them, and very often they are without bread; yet in this way of life they enjoy health, nor do they ever differ about property or religion, for they have neither priest, lawyer, or physician among them. The New Englanders come here with sloops and schooners in great numbers to load salt for their fisheries; they buy it from 4d. to 6d. sterling the bushel, and they pay the poor Bermudians a small part in money, the

rest in stinking rum, rotten pork, and musty biscuits, now and then throwing them a cask of sour water into the bargain."

Those wishing to follow in detail the varying fortunes of the salt industry in these islands are referred to the report by Mr. Watkins already mentioned.

It need only be stated here that, while the Turks Islands proper (Grand Turk and Salt Cay) were from the first used solely for the exploitation of salt, the Caicos group owed their settlement to the American War of Independence and to the agricultural establishment of loyalist refugees to whom lands were granted after the loss of their holdings in Georgia and the other Southern States. These refugees, together with their slaves, devoted their energies almost exclusively to the raising of cotton. The loyalist settlers have long since disappeared, but the remains of their substantial stone houses and the roads which they traced out remain to this day. Successive hurricanes, together with the havoc wrought among the cotton plants by destructive insects, put an end to the prosperity of the planters, and caused all systematic agriculture to be abolished during the early part of the nineteenth century.

Shortly after this, in the year 1838, we learn that the salt ponds at Cockburn Harbour (South Caicos) were brought under cultivation. These ponds, under careful management, have now developed to such an extent as completely to overshadow all other salt-producing settlements of the Dependency.

From the year 1799 to the year 1848 the Turks and Caicos Islands were incorporated with the Bahamas Government.

In 1848, at the earnest request of the inhabitants, they were separated from the Bahamas and placed under the supervision of the Government of Jamaica, where they still remain. The first President (since changed to that of Commissioner) of the Dependency under the new arrangement was Captain Forth, and under his capable administration, we are told by Mr. Watkins, vigorous efforts were made to develop and extend the salt industry of the Caicos Islands.

Constitution.

The Legislature consists of a Legislative Board, comprising the Commissioner as President, two official members, and three unofficial members appointed by the Governor of Jamaica. Taxation and expenditure and all local matters are regulated by this Board. Laws passed by the Legislative Council of Jamaica, which are in express terms made applicable to the Turks Islands, take effect there. The subjects of currency, bills of exchange, patents, and the custody of prisoners and lunatics have been so dealt with.

Climate and Meteorology.

The climate is equable and healthy and rarely unpleasantly hot, owing to the strong and never-failing sea breezes which

sweep across the islands. The average temperatures taken from the records of five years disclose a maximum of 90° and a minimum of 61·5°.

July to October are the hottest months of the year and of nearly equal temperature.

January, February, and March are the coldest months and of nearly equal temperature.

As the Turks and Caicos Islands lie within the Tropics, atmospheric pressure acts upon the same principle as is observed in other places similarly situated ; that is to say, there is a regular rise and fall of about one-tenth of an inch every six hours, except in case of a hurricane, when a considerably increased falling of the mercury results.

Generally, however, it may be said that the mean height of the barometer, from daily readings taken from the Grand Turk Weather Bureau Station—11 ft. above sea-level—is almost exactly 30 inches. As a general rule, the barometer rises for northerly and falls for southerly winds.

Lying within the Tropics, the Turks and Caicos Islands are within the influence of the trade winds, but in the winter months, *i.e.*, from about the end of November to the end of March, the trade wind is frequently interrupted by north-east and north winds. Indeed, in December and January this change may be expected almost weekly.

Previous to the change, the wind will draw round to the south and south-east. About 24 hours after, or less, dark masses of cloud will be seen rising from the westward, and in a short time the wind will rush suddenly from that quarter with the force of a stiff breeze. It soon veers round to the north-east and north, with clear weather, and remains within these points sometimes two or three days. It will then veer gradually to the north-east and wear itself out east, in the course of a few days. (*West Indian Pilot*, Vol. II.)

The barometer is scarcely any guide at such times, but so regular and so certain is the action of the wind, that vessels can seek shelter with easy confidence in the change that will follow.

The rainfall for the year 1921 is recorded as being 26·40 inches. The Turks and Caicos Islands share in the delightful winter climate of the Bahama Islands and in the attractiveness of the sea water round their shores. Few people who visit these islands but are charmed by the wonderful sea bathing and express the desire to return, a wish, however, which will never materialize until hotels or hostelries of some kind, with an adequate and suitable food supply, are provided for their accommodation.

It goes without saying in such low-lying coral islands, with a scanty rainfall, constantly swept by sea breezes, and where no freshwater swamps are found, that malaria, that is, as it is known in other islands of the West Indies, does not exist. The few cases which occur from time to time, chiefly in the island

of North Caicos, and the origin of which can usually be traced to the neighbouring republic of Haiti, are of the mildest description.

This is conclusively proved by the small death-rate in these islands from diseases of this character.

There are no freshwater ponds in these islands, and the inhabitants in the Settlements at Grand Turk, Salt Cay, and Cockburn Harbour depend entirely on rainwater tanks with which most houses are provided. Scattered throughout the Caicos Islands are wells of more or less brackish water, in most cases potable to those accustomed for generations to water of this character.

GRAND TURK.

Grand Turk, formerly known as Grand Cay, is situated on the eastern boundary edge of the Turks Island passage. In shape it is said to resemble the blade of a butter knife, and it contains an area of 10 square miles, with a population of 1,581 souls, of whom about three-fourths are of African descent. Grand Turk is the seat of government, and it is here that the Commissioner of the Dependency resides. The only settlement at Grand Turk is Cockburn Town, situated on the western side of the island, and it contains the entire population.

There is no harbour, and vessels are obliged to lie in an open roadstead at some distance from the shore. In stormy weather, with the wind from the north-west, such an exposed anchorage presents grave danger to shipping, and during a "norther" the loading and unloading of cargo become impossible. At such times vessels engaged in work of this character have no alternative but to seek safety in the open sea. The greatest elevation at Grand Turk is about 70 feet above sea-level, and the scanty vegetation is typical of the flora of the adjacent Bahama Islands. Here and there one finds stunted specimens of such hardy trees as corkwood (*Thespesia populuca*), tamarind, cordia (*Cordea sebestena*), and casuarinas; but, for the most part, the island is covered with a low scrubby vegetation, in which plants of the cactus and euphorbia families largely predominate.

At Grand Turk there is a lighthouse, erected on a bluff at the north point of the island. It exhibits, at an elevation of 108 feet above sea-level, a white flash-light every half-minute. This light can be seen for a distance of 15 miles in clear weather.

The "Victoria Jubilee Library and Free Reading Room" ministers adequately to the tastes of the reading public, and, as its name implies, is an institution commemorative of the year 1887, the Jubilee year of Her late Majesty Queen Victoria.

Grand Turk is fairly well supplied with churches, for such a small population, there being two Anglican, one Wesleyan, and one Baptist places of worship. Baptists are in the majority among the lower classes, but the attendance at the churches of all the denominations is exceedingly poor.

At Grand Turk is located, beside the usual public offices, the Council Chamber, the Court House, the Hospital, and the Gaol.

A telephone system, inaugurated in 1915, gives connection between the various stores and residences of the island, and a wireless telephone installation, now in course of erection, will shortly connect the seat of government with the district Treasuries at Salt Cay and South Caicos, eight and twenty-one miles away respectively.

The "Manning Hospital," affording accommodation for six patients in the public wards and two in the private wards, was opened in October, 1918. This institution possesses a well-equipped operating theatre, and is up to date in other respects. The hospital, which ministered to the wants of no less than 65 patients in the year 1919, is fulfilling a most useful purpose in relieving the needs of suffering humanity.

The only industry at Grand Turk is the production and manufacture of salt, and although there are several localities on the island where cotton could successfully be grown no attempt at systematic cultivation has ever been attempted. Owing to a scarcity of labour, it is unlikely that agriculture of any kind will ever make much headway in Grand Turk.

The salt of the Turks Islands is of exceptional purity, and is therefore greatly in demand in the United States and Canada for meat-packing and fish-curing purposes. On account of its good name, a considerable quantity of the salt imported from other places is sold in the northern markets under the name of Turks Island salt.

The various stages in the process of salt manufacture have been so very carefully and fully described by Mr. Watkins in his report already referred to that it is unnecessary in a general report of this nature to do more than give a broad outline of the industry.

The salt ponds, or salinas, vary in size, and are anywhere from five to 25 acres in extent, but the "making pans"—that is, the pans where final evaporation takes place—are usually from one-half to one acre in size.

The method of making salt from sea-water by solar evaporation (the method pursued in the Turks Island) is simple in the extreme, and may be thus briefly described: sea-water, having a density of 10, is let in through sluices or canals into the common or storage reservoirs, situated at or slightly below sea-level. Here it remains until it reaches 30 by the salinometer. From the common reservoir it is run off into what may be described as the Number 1 pond, a shallow pan, which may be anywhere from five to 15 acres in extent. There it remains until the salinometer indicates 60. In the main pond a great many impurities of the sea-water, such as vegetable matter, magnesia, and lime, are precipitated, and the water now assumes a saffron hue. At this stage the "pickle," as it is now called, has been reduced in quantity by evaporation to about one-half of the original volume of sea-water.

From the main pond the "pickle" is next passed into pond Number 2, or "strong pond." Here it remains for about 20 days, until, by further evaporation, its strength has been reduced to 90. The water is now pink in colour, and only about one-sixth of the original volume of sea-water. Being by this time freed of the lime it contained, the pure brine is next passed into the "making pans," where, after about 10 to 15 days' further evaporation, the salt commences to granulate on the sides and bottoms of the pond. After two weeks more, according to the weather, the salt is ready to be gathered, or raked, as it is called. Wooden rakes are used for the purpose, and by means of these and scuffle hoes, the salt is raked up into small heaps on the level floor of the "making pans," from whence it is carted to the "depositing ground." These are usually situated in close proximity to the shipping place, and here the salt is piled up in huge mounds awaiting shipment.

The average quantity of salt raked annually from an acre of pans varies from 3,000 to 8,000 bushels. At Salt Cay and Cockburn Harbour, where the pans are carefully worked, an average of 5,000 bushels per acre is the usual crop under favourable weather conditions, but at Grand Turk, where through careless management the industry is steadily declining, it is doubtful if even an average of 2,000 bushels per acre can be counted on.

The annual output of salt from the entire Dependency varies between 1½ million bushels, in poor seasons, to 2½ million bushels in good years.

Salt Cay.

Salt Cay, situated about eight miles to the south-west of Grand Turk, is the only other inhabited island of the Turks Island group. In area it is about four square miles, with a population of about 300 souls. The output of salt from this island averages 450,000 bushels annually.

South Caicos.

This island is situated at the extreme south-east end of the Caicos Islands, and it is the only island of the group on which the salt industry is conducted. There are about 400 acres of salt ponds (including reservoirs), and the annual output varies between 700,000 and 800,000 bushels.

East Caicos.

This island, up to the year 1919, was the centre of the sisal industry of the Dependency. In this year the East Caicos Company, who had conducted the cultivation of sisal on a large scale since 1891, were compelled for various reasons to shut down their factory and abandon the plantation. It would seem that the rocky and barren soil of this island, together with the

cost of labour, proved an effective bar to the prosecution of the sisal industry on a remunerative scale. Thus an enterprise, which afforded employment to upwards of 200 hands, has been scrapped.

Middle Caicos.

Separated by a narrow passage from East Caicos lies Middle Caicos, or, as it is sometimes called, Grand Caicos. This island, the largest of the Caicos group, is 25 miles long, with an extreme breadth of 12 miles. On it are situated the villages of Lorimers, Bombarra, and Conch Bar, with an aggregate population of 500 souls.

At or near Lorimers is the Haulover Estate, where there has been in operation since 1918 the very promising cotton cultivation of the Caicos Development Company of New York. This Company, composed mainly of Americans, has upwards of 500 acres under cultivation, and it would seem that only careful handling is necessary to ensure successful results. At Conch Bar there is situated the cotton plantations of Mrs. Robert O'Reilly (200 acres in extent), while round the settlements above mentioned there is quite a large area of this product in the hands of the peasant cultivators.

North Caicos.

To the north-west of Middle Caicos lies North Caicos, an island about 12 miles east and west, and eight miles north by south. In comparison with the other islands of the Caicos group, North Caicos is fertile, and the remains of old sugar factories indicate that it evidently in the past was divided into large plantations.

"The inhabitants, 366 in number, probably owing to having more to do with the soil, preserve more than elsewhere in the group the traditions of 'Old Massa' and the Southern States traditions. The principal settlements are Kew and Bottle Creek; the former near the middle of the island, three miles from 'Belfield Landing,' on the southern shore, and the latter on the eastern side, on a broad and picturesque creek of that name. Near to Kew is 'Wade's Green,' the former residence of the Magistrate of the Caicos Islands. In the neighbourhood of Kew is a considerable area of good soil, and the remains of the old sugar works are still to be seen." (Watkins.) Bottle Creek, a settlement of about 300 inhabitants, is approached from the north side in light-draught boats by a narrow channel connecting the creek with the open sea. In the vicinity of this settlement are to be seen the ruins of the old estate mansions belonging to the Bellevue, Windsor, and Richmond estates. These plantations all date their origin from the time of the War of American Independence, and were granted by the British Government of that day to loyalist refugees from Georgia and other Southern States.

PARROT CAY, DELLIS CAY, AND OTHERS.

Lying to the west of Middle Caicos are several small cays, the most deserving of mention being Parrot Cay and Dellis Cay. At Parrot Cay, in the hands of the " Parrot Cay Cotton Company " (another American concern), there are under cultivation upwards of 250 acres of cotton ; while at Dellis Cay is situated the sponge-buying enterprise of Mr. George Dellis, a gentleman of Greek extraction.

PROVIDENCIALES OR BLUE HILLS.

Continuing the chain of islands, which in the form of a semi-circle encloses the eastern and western sides of the Caicos bank, and to the westward of the islands just mentioned, is the island of Providenciales or Blue Hills, one of the largest of the Caicos group. This island is 17 miles long by 12 miles in width, and contains a population of about 900 inhabitants.

The settlements are Blue Hills about the middle of the north shore, Five Cays to the south-east, and The Bight on the northern shore, about three miles to the east end of Blue Hills.

On the southern side of Providenciales is Chalk Sound, an immense shallow-water creek, extending over an area of about nine to ten square miles. Here is situated the promising sponge-rearing and lobster-canning enterprises of Mr. George Silly (deceased). The sudden death of Mr. Silly in 1917 has caused a temporary closing down of the lobster-canning factory, but the artificial rearing of sponges is still prosecuted by Mr. C. W. Kursteiner, Mr. Silly's partner. At the time of writing there are upwards of half a million sponges under cultivation.

WEST CAICOS.

West Caicos, also known as Belle Isle, is situated about 12 miles to the south-west of Providenciales. In area it is about eight miles from north to south, with an average breadth of two miles. In the middle of the island is Lake Catherine, a large salt-water expanse nearly two miles long.

This island, as the name " Belle Isle " implies, is probably the most attractive of the Caicos group, and this fact probably accounts for the immense and wasteful expenditure of capital which has taken place on it during the past 60 years.

The West Caicos Company, the last of the many companies which from time to time have buried fortunes on this little island, passed out of existence in 1916. For some years prior to this, however, the island had been practically abandoned. Fine buildings, erected at great cost, had been demolished and spoliated by passing sloops ; and to-day there is the pitiable spectacle of roofless buildings and valuable machinery, representing thousands of pounds, gone to ruin amid the scrub—striking testimony to incompetent management.

The island of West Caicos is free from malaria, contains probably the finest salinas in the Dependency, and possesses the best shipping facilities of any island in the group. On the western side of West Caicos vessels can load and discharge in deep water within a cable's length of the shore. There seems every reason to anticipate therefore that, if ever this island falls into capable hands, the resources thereof can be most successfully developed.

I.—GENERAL OBSERVATIONS.

Vital Statistics.

The estimated population of the Turks and Caicos Islands at 31st December, 1921, was 5,612. The white population, numbering 210, is composed almost entirely of the descendants of Bermudians.

The birth-rate was 40·5 per 1,000, and the death-rate 19·5 per 1,000.

A mild outbreak of Alastrim, introduced from Santo Domingo and Haiti, occurred during the year. There were no deaths from this disease. Fifty-two marriages were recorded.

Hospitals.

The following hospital accommodation is provided :—

The Manning Emergency Hospital—Grand Turk ..	8 beds.
The Cottage Hospital—Cockburn Harbour	4 ,,

Imports and Exports.

The following figures disclose the extent of the Import and Export Trade of the Dependency during the year under review.

Customs receipts during 1921 amounted to £4,934, as compared with £4,815 in the year 1920.

The total value of imports amounted to £55,937. Of these, goods to the value of £13,755 were admitted free of duty. The Free List of Customs Tariff of the Turks and Caicos Islands is probably the most extensive in the British West Indies.

Domestic exports were valued at £33,093, as against £44,492 in 1920. The revenue and expenditure in 1921 were :—

	£
Revenue	11,733
Expenditure	11,000
Surplus Revenue	£733

The Commissioner was absent from the Dependency on official duty in Jamaica and Canada for two months (September–October) during the year. His duties were performed by Mr. L. Lea Smith, the Assistant Commissioner.

II.—GOVERNMENT FINANCE.

The revenue for the Dependency for the year 1921 amounted to £11,733, exceeding the estimate by £2,703.

The total expenditure for the year amounted to £11,000, being £2,279 in excess of the estimate, but was £733 less than the revenue for the same period.

The balance sheet of the Dependency on the 31st December, 1921, showed a surplus of assets over liabilities of £12,492, or £736 more than the figure given at the close of the year 1920.

There is no direct taxation.

There is no public debt.

The current coins are British gold and silver. United States gold and silver are accepted at a discount of 1½ per cent. on their face value.

There are no banks doing business in the Dependency.

III.—ANNUAL PROGRESS OF TRADE, AGRICULTURE AND INDUSTRY.

TRADE.

The export trade of the Dependency as compared with the year 1920 may be summarized as follows :—

Articles.	1920.	1921.
	£	£
Salt (coarse)	21,187	10,951
,, (fishery)	17,148	17,220
Sisal	3	—
Sponges	2,027	2,093
Conchs	2,383	841
Conch Shells	1,077	—
Cotton and Cotton Seed ..	382	1,711
Tortoise Shell	263	267
Dried Fish	18	8
Miscellaneous	2,377	2,565
Totals	£46,865	£35,656

The direction of trade, as regards imports and exports, during the years 1920 and 1921 was as follows :—

Countries.	*Year.*	*Imports.*	*Exports.*
		£	£
United Kingdom ..	1920	3,610	382
British Colonies ..	,,	7,021	20,995
Foreign Countries ..	,,	49,122	25,490
Totals..		£59,753	£46,867

Countries.		*Year.*	*Imports.*	*Exports.*
			£	£
United Kingdom	..	1921	4,924	1,400
British Colonies	..	,,	5,866	19,244
Foreign Countries	..	,,	45,147	15,012
Totals..	..	..	£55,937	£35,656

SALT.

The year again closed with a firm demand from purchasers along the Atlantic sea-board of the United States and Canada, and although the selling price of salt shows a slight falling off, it may still be regarded as fairly remunerative. Weather conditions were again ideal for the manufacture of salt.

SPONGES.

At present there are three sponging establishments in the Caicos Islands. At Cockburn Harbour, Dellis Cay, and Five Cays, sponges are purchased, cured, sorted, baled, and shipped. The gathering of the sponges from the Caicos banks is carried on by more than fifty local sloops, belonging mostly to Blue Hills, each of which employs three to nine men, according to the number of boats on board. The best months for sponging are April, May, September, November, and December. After being cured, the sponges, carefully graded, are pressed in bales, averaging 50 lb. in weight, and exported. They are bought at the three stations in two strands of 15 pieces each, the total weight being 1½ to 2 lb. Although inferior to those imported from the Mediterranean, these sponges find ready sale, at remunerative prices, in the United States.

Grade.	*Local Prices per double strand.*	*Prices in New York per double strand.*
	Cents.	Cents.
Sheep's Wool	50–125	70–250
Reef (local)	20–25	75–120
Yellow and Hard Head ..	11–15	30–40
Velvet	10–12	40
Grass	10–12	20–40

CONCHS.

Owing chiefly to high charges levied on foreign craft in Haitien ports, exports in this direction, which amounted in 1919 to over 3,000,000 conchs, valued at £3,000, have now dwindled down to 857,850 conchs, valued at £841. On the conch trade with Haiti,

the inhabitants of the Caicos Islands largely depend for a livelihood, and the cessation of their principal industry has caused much suffering among the inhabitants.

COTTON.

Exports for the year amounted to 66 bales of cotton, and 56 bags of seed, valued at £1,711. But for the unusually dry season, which told heavily on the bearing trees, the output would have been much larger.

Turtle shell to the value of £267 was exported. This trade is entirely in the hands of turtling crews and sloops from the Bahamas.

The sea shells trade, which had dwindled down to £122 in 1920, has now entirely ceased, owing to the high rate of exchange between New York and these Islands.

IV.—LEGISLATION.

Seven ordinances were passed during the year 1921.

The more important of these were the Savings Bank Amendment Ordinance and the Leper Ordinance. The last-mentioned provides for the transference of these unfortunates (happily few in number) to the Leper Asylum in Jamaica.

V.—EDUCATION.

The sum of £700 is placed annually at the disposal of the Board of Education for the upkeep of primary schools throughout the Dependency. There are eight Government schools maintained in this manner.

SECONDARY EDUCATION.

This school, which, after the departure for Jamaica of the Reverend T. Stanley Cannon, was closed for several months, was opened in July as a Government institution, under the charge of Mr. C. Earle Crawford, B.A.(Durham). At the close of the year 36 pupils were in attendance.

VI.—METEOROLOGY.

The readings taken at the Weather Bureau Station at Grand Turk, in latitude 21° 22′ N. and longitude 71° 27′ W., at a height of 11·3 feet above sea-level, were as follows:—

Rainfall	26·40 in.
Maximum temperature	91°
Minimum ,, ...	61·5°

VII.—SHIPPING.

The number of vessels that entered at various ports in the Dependency during the year was 342, with a tonnage of 213,750, as compared with 379 vessels and a tonnage of 279,067 in the previous year.

The following steamship lines now maintain a regular service between the Dependency and New York :—

The Clyde and Santo Domingo Line—an American Company.
The Columbus Steamship Line " "
The Bull Insular Line Inc. " "

VIII.—COMMUNICATION.

Mail Service.

Mails to and from the United Kingdom and other parts of the world are transmitted and received on an average four times a month by steamers of the Clyde and Columbus Lines, *via* New York.

The Dependency still suffers from the great disadvantage of being unable to send parcels to any other country than the United States, except when the opportunity offers of a sailing vessel direct to Jamaica. This happens about three or four times a year.

The telephone service inaugurated in 1918, with 28 miles of lines, continues to give satisfactory service.

The cable of the Direct West India Cable Company, Limited, between Halifax and Bermuda and Jamaica, touches at Grand Turk, and connects the Dependency with other telegraphic systems of the world. The Company supplies a News Bulletin daily, for which a yearly subsidy of £120 is paid.

G. WHITFIELD SMITH,
Commissioner.

Grand Turk,
21*st August*, 1922.

JAMAICA.

ANNUAL GENERAL REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1922.

GEOGRAPHICAL.

1. Jamaica is an island in the Caribbean Sea, to the southward of the eastern extremity of the Island of Cuba, within N. lat. 17° 42′ 20″ and 18° 32′ 30″ and W. long. 76° 11′ 55″ and 78° 23′ 35″. It is the largest island of the British West Indies, the extreme length being 144 miles and the greatest width 49 miles.

2. The island is divided into three counties and fourteen parishes, namely:—

Surrey.	Sq. Mls.	*Middlesex.*	Sq. Mls.	*Cornwall.*	Sq. Mls.
Kingston	7	St. Catherine	470	St. Elizabeth	462
St. Andrew	166	St. Mary	249	Trelawny	333
St. Thomas	274	Clarendon	474	St. James	234
Portland	285	St. Ann	476	Hanover	157
		Manchester	302	Westmoreland	308
Total	732		1,971		1,504

giving a total of 4,207 square miles, equal to 2,692,587 acres, of which, approximately, 646 square miles or 413,440 acres, are flat, consisting of alluvium, marl and swamps. For purposes of comparison, it may be observed that 2,692,587 acres is slightly larger than the total area of the six Welsh Counties:— Cardigan, Brecon, Radnor, Montgomery, Merioneth, Denbigh. Jamaica is more mountainous than Wales, the hills being more precipitous, and the Blue Mountain Peak (7,388 feet) is rather more than double the height of Snowdon (3,571 feet). Oddly enough, the population is also double that of the six Welsh Counties.

3. A great diversity of climate is obtainable. From a tropical temperature of 80° to 86° at the sea coast the thermometer falls to 45° and 50° on the tops of the highest mountains, and with a dryness of atmosphere that renders the climate of the mountains of Jamaica particularly delightful and suitable to the most delicate constitution.

The eastern parts of the island are the highest. Through the County of Surrey, and partly through Middlesex, there runs the great central chain which trends generally in an east and west direction, the highest part of which is the Blue Mountain Peak, attaining an elevation of 7,388 feet.

From this range subordinate ridges or spurs run northerly to the northside of the island and southerly to the southside; these ridges in their turn are the parents of other smaller ridges, which branch off in every direction with considerable regularity and method; and they again throw off other ridges, until the whole surface of the country is cut up into a series of ridges, with intervening gullies.

4. There are numerous rivers and streams, from which Jamaica derived its aboriginal Arawak name of Xaymaca, which is supposed to imply an overflowing abundance of rivers. The majority have a rapid fall and are not, to any extent, navigable.

5. There are many mineral springs in Jamaica, some of them possessing valuable qualities for the cure of various diseases and infirmities of the body.

The two principal are, the spring at Bath, in St. Thomas in the East, and the spring at Milk River in Clarendon.

6. Jamaica possesses several good harbours in the Island, the largest and most important being that of Kingston, the Capital, which is considered one of the finest natural harbours in the world.

7. The following are dependencies of Jamaica, viz:—The Turks and Caicos Islands and the Cayman Islands; also the Pedro and Morant Cays, (Guano Islands.)

HISTORICAL.

8. Jamaica was discovered by Columbus on the 3rd May, 1494. He called it St. Jago, after the Patron Saint of Spain, but the new name was soon dropped in favour of the native one of Jamaica (Xaymaca—well watered.) The first settlement on it was effected on the shores, of St. Ann's Bay, by Esquivel in 1509, under the direction of Diego, the son of Columbus, while Governor of Hispaniola. Although invaded by Sir Anthony Shirley in 1596, and by Colonel Jackson in 1643, it remained in the possession of the Spaniards for 161 years, when it was again attacked by a force sent by Cromwell, under Admiral Penn and General Venables, against Hispaniola, and capitulated, after a trifling resistance, on the 11th May, 1655. Until the Restoration, Jamaica remained under military jurisdiction, but in 1661 a regular civil government was established by Charles II, who appointed General Edward Doyley, Governor-in-chief with an Elective Council. In 1670 peace was made with Spain, and the title of England to Jamaica was recognised by the Treaty of Madrid. The colony grew fast, stimulated by the wealth brought into it by the bucaneers, who made Port Royal their headquarters and storehouse. This town was engulfed in the great earthquake of 1692. Kingston then consisted of a few sheds and St. Jago de la Vega (Spanish Town) became practically the capital. During the 18th century the island suffered from hurricanes, earthquakes, numerous slave insurrections, as well as wars with the maroons, or mountaineers, the descendants of African slaves left by the Spaniards, who inhabited mainly the east of the island, among the Blue Mountains. When the Slave Trade was abolished, in 1807, there were 323,827 slaves in Jamaica. During the last eight years of the trade, 86,821 slaves were imported. On the abolition of slavery in 1833, Jamaica received 6,161,927*l.* of the 20,000,000*l.* granted by the Imperial Government as compensation to the slave owners. A serious rebellion among the black population in 1865 was suppressed by Governor Eyre with unnecessary violence, and he was recalled.

In January, 1907, Kingston was devastated by a terrible earthquake, which caused great loss of life and immense destruction of property. A Mansion House Fund was opened and contributions poured in from all parts of the Empire for the relief of distress. A free grant of 150,000*l*. was voted by Parliament, and a loan of 800,000*l* chiefly in aid of re-building, was authorised from the Home Exchequer. Two buildings, the General Post Office and Treasury, and the King's House, the official residence of the Governor, were completed in 1910, and the Law Courts in 1913.

Constitution.

9. The original Constitution granted by Charles II., which, after existing for over 200 years, was surrendered in 1866, was a representative one, consisting of a Governor, nominated Council, and an Elected Assembly which on its first meeting in 1664 consisted of 30 members but fluctuated in numbers from time to time. The depression caused by the abolition of slavery led to a grave constitutional crisis, the Assembly refusing to vote supplies and endeavouring to enforce sweeping reductions in establishments without compensation to the displaced officers. Lord Melbourne's Government, in 1839, actually introduced a Bill into Parliament for the suspension of the constitution but was defeated; and it was not till 1854 that, by a change in the constitution of the Council, harmony was temporarily restored.

After the suppression of the rebellion in 1865, Governor Eyre, at the meeting of the Legislature, urged the unsuitability of the then existing form of Government to meet the circumstances of the community and the necessity of making some sweeping change by which a strong Government might be created. The Legislature willingly responded, abrogated all the existing machinery of legislation and left it to Her Majesty's Government to substitute any other form of Government which might be better suited to the altered circumstances of the Colony.

A Legislative Council was, by Orders in Council of the 11th June, 1866, and 11th November, 1869, established, consisting of such numbers of official and unofficial members as Her Majesty might think fit. The numbers of each were six until 1878 when they were enlarged to eight and a ninth was added in 1881.

By Order in Council dated 19th May, 1884, and Amending Order of 3rd October, 1895, the constitution was fixed in the following manner:

The Council to consist of the Governor (with only a casting vote) and five *ex-officio* members, viz.: the Senior Military Officer, the Colonial Secretary, Attorney-General, Director of Public Works and Collector General, and such other persons, not exceeding ten in number, as Her Majesty may from time to time appoint or as the Governor may from time to time provisionally appoint, and fourteen persons to be elected as therein provided. The Council shall be dissolved at the end of five years from the last preceding general election, if it shall not have been previously dissolved.

There is also a Privy Council, with the usual powers and functions of an executive council. It consists of the Lieutenant-Governor, if any, the Senior Military Officer in command, the Colonial Secretary and Attorney-General and such other persons as may be named by the King, or provisionally appointed by the Governor, subject to the approval of His Majesty, but the number of members is not to

exceed eight. The Governor is to preside at each meeting, and the Governor and two members form a quorum.

10. The first registration under Law 22 of 1886 was in August, 1887. The revised lists showed that there was one elector to every 25 persons in the island. At the last election held in 1920, the number of voters on the list was 42,267. There were five contested elections, the total number of votes cast being 3,858.

Local Administration.

11. There are elective Parochial Boards in the town of Kingston and 14 other parishes, under Laws 13 of 1900 and 17 of 1901, with jurisdiction over roads, markets, sanitation, poor relief, water works, and pounds. The chief towns are Kingston (population in 1921) 62,707, Port Royal (population, 1,004), Spanish Town (population, 8,694), Port Antonio (population, 6,272), Montego Bay (population, 6,580), Falmouth (population, 2,136), Port Maria (population, 2,481) and Savanna-la-Mar (population, 3,442).

12. The parish is the unit of local Government, and each parish has its own Parochial Institutions, viz: poor houses, etc., etc., managed by the Parochial Board of the parish, the members of which are elected by the persons entitled to vote for the election of members of the Legislative Council. The administration of poor relief by the Parochial Boards is controlled by a Board of Supervision. The total number of registered poor in 1922 was 7,633 being a decrease of 80 as compared with last year. The present figures are below the total of 1917 and indicate that the upward tendency of pauperism during the last ten years has been broken. The several direct taxes received on property, horses, carriages, etc., etc., are devoted mainly to the parish in which they are collected, with the exception of a few items which go to the credit of the general revenue of the Colony.

13. There is a Supreme Court of Judicature together with Resident Magistrate Courts and Petty Sessions of Justices of the Peace throughout the Island. The Resident Magistrates, besides holding courts of their own, preside in the Courts of Petty Sessions.

I.—General Observations.

14. The prosperity of the Colony during the year under review, as gauged by the increase in Customs Duties collected on articles imported and the value of native products exported, shows a marked improvement on the year 1921, in spite of the prolonged period of drought through which the Colony passed. As will be seen from the Sub-head "Imports and Exports," the Import Duties collected during 1922-23 amounted to £799,200, as against £660,700 in the previous year, an increase of £138,500. This increase, however, is partly due to the increased rates of duty imposed by Law 2 of 1922 on certain articles with the object of protecting native industry.

15. The value of the exports from the Island during 1922, was £4,623,700, an increase of £1,266,000 over the previous year. This appreciable increase in value is due partly to the greater volume of export of the chief staple products and partly to the increase in prices obtained for those products. By way of illustration the following increases over 1921 in the quantities exported are given:—

Bananas—2,754,700 stems.
Coconuts—6,176,500 nuts.
Sugar—476,400 cwt.

The prices obtained for certain products exported also increased considerably; *c.g.*—

Bananas from £8 to £22 per 100 stems.
Cocoa from 28s. to 39s. per cwt.
Coffee from 44s. to 66s. per cwt.
Sugar from £14 to £20 per ton.

16. It is reasonable to suppose that, had the Island as a whole not suffered from such a prolonged drought, the average precipitation being 52.38 inches, or 24 inches below the average rainfall for the past fifty years—the volume of exports would have been considerably increased.

17. The Legislative Council voted a sum of £500 for the representation, on a small scale, of this Colony at the exhibition held at Toronto, Canada, in August and September, 1922.

18. An outbreak of Foot and Mouth Disease among cattle unfortunately occurred in July, 1922, in the western parishes of the Island. The malady was at first diagnosed as Necrotic Stomatitis; but in September it was pronounced to be Foot and Mouth Disease.

The services of an expert were secured from the United Kingdom to take charge of the situation and to institute measures for the control and eradication of the disease. A Quarantine Area was defined and disinfecting stations were established; thanks to the energetic measures adopted; to the drought that existed and to the co-operation of stock owners, the disease has not spread beyond the western parishes. There has been only one recurrence of the disease, viz: on the 22nd February, 1923, and it is hoped, at the time of writing, that the disease has exhausted itself. It has been decided to raise the quarantine on the 1st of November, 1923, except in respect of the properties on which the last outbreak of the disease occurred, where quarantine will remain in force until the 30th November.

19. On the 11th November, 1922 "Armistice Day," a ceremony unique in the history of the Colony took place, when the Island War Memorial was unveiled in Kingston, the capital, by the Acting Governor, and dedicated by the Acting Bishop of Jamaica with ceremonial befitting such an occasion. His Majesty's Navy and Army, the Local Forces, and Jamaica Constabulary were represented.

The Memorial Cross is made from Island stone quarried, worked and erected by native craftsmen; the plinth bears the inscription:—"In Memory of the men of Jamaica who fell in the Great War."

20. It might not be out of place here to mention that during the year under review a home was established in the parish of Kingston for the housing of a limited number of ex-soldiers of the British West Indies Regiment who served during the Great War. The bronze tablet at the entrance of the home contains the following inscription: "This Home has been erected out of funds given conjointly by the "British Red Cross Society and The Order of Saint John of Jerusalem "in England."

21. From the 4th September to the 14th November, 1922, the Governor, Sir Leslie Probyn, K.C.M.G., was absent on leave from the Colony in the United Kingdom. During this period the Government was administered by Colonel, the Hon. H. Bryan, C.M.G., D.S.O., Colonial Secretary, while Mr. D. H. Hall, Second Assistant Colonial Secretary, acted as Colonial Secretary.

22. Mr. C. W. Doorly, formerly Government Emigration Agent at Madras, India, was selected by the Secretary of State for the Colonies, for the office of Assistant Colonial Secretary, Jamaica, rendered vacant by the appointment of Mr. R. Nosworthy as Island Treasurer. Mr. Doorly assumed duty in the Colony on the 29th November, 1922.

Emigration and Immigration.

23. The Departures in 1920 were 21,343; in 1921, 15,777; in 1922, 6,733.

The arrivals in 1920 were 23,783; in 1921, 17,463; in 1922, 6,931.

24. The marked decrease in the number of persons who emigrated during the year 1922, as compared with 1921, is attributed, in large measure, to economic conditions that existed on many sugar estates in Cuba during the former year, due to the considerable drop in the price of sugar that occurred in 1921.

PUBLIC HEALTH AND SANITATION.

25. Matters in connection with the health and sanitation of the Island continue to receive the earnest attention of the Government.

26. The International Health Board of the Rockefeller Foundation are actively engaged in the treatment of Hookworm (ankylostomiasis) in the parish of St. Catherine where sanitation has been carried out prior to treatment.

It is proposed to continue the treatment of Hookworm in other parishes, and it is hoped that in time all the parishes will be made sanitary for the treatment of this disease.
